Whole Number 1485

TOPICS · OF · THE · DAY

SMASHING "THE MINOR BEELZEBUBS"

WITH PRUSSIANISM everywhere on the retreat, with autoeracy's defenses cracking all along the line, with Serbia reconquered and Bulgaria driven out of the war, with the Turkish forces in Palestine virtually annihilated, with the Japanese winning victories in Siberia, with the Americans and French pressing on victoriously in Champagne, with the British entering Cambrai, with the Belgians recovering a large strip of their coast-land, the Allied nations now see the turn toward victory of the long lane through which the free peoples of the world have been struggling these four years. They see Germany's military might at last beginning to crumble. And while Berlin trembles, the reverberation of Allied blows "thrills the enemies of Germany with joyous expectation." Truly do the French call the present season the "Autumn of Vengeance," says a Paris correspondent of the *New York Times*, as he notes, besides the surrender and elimination of Bulgaria,

"Austria pleading for peace and confessing that only enough flour is left to last till January; Turkey disastrously defeated, with the loss of two of her best armies and two of her richest provinces; Germany suffering the accumulated bitterness of ten consecutive weeks of continuous defeats along the whole extent of what she regarded as the most impregnable part of her front at the hands of armies she believed at her mercy, and looking forward with ever-growing terror to the vengeance for all her crimes that awaits her at the hands of an American army stronger than her own."

The Allied advance on the West Front, from Dixmude to Verdun, with the capture of 40,000 German prisoners in the first three days, threatened not only the Hindenburg line but the very existence of the Quadruple Alliance. It meant that the Bulgarians and Turks, whose armies were crushed during the preceding fortnight, could expect no help from Berlin. And the first consequence of this was the quick collapse and surrender of Bulgaria. In just fifteen days, from September 15 to September 30, the forces under Gen. Franchet d'Esperey pierced the Bulgarian center, split the Bulgarian armies, drove far up the Vardar Valley in southern Serbia, invaded Bulgarian territory, and stormed Bulgarian frontier strongholds, taking prisoners by the thousands and guns by the hundreds. After the "slippery and slipping" Ferdinand's vain appeal to Field-Marshal von Mackensen to save the day, the Bulgarian Government saw that the game was up. An armistice was demanded and on September 30 it was reported that Bulgaria's representatives had accepted the Allied terms offered by Gen. Franchet d'Esperey, which included the giving up of all invaded territory, the surrender of all Bulgarian forces outside Bulgarian territory and demobilization of all within, the complete breaking of relations with Germany, Austria, and Turkey, and free access of Allied forces to Bulgarian soil. Just as Ferdinand was learning that his great ally could not succor him, there was fleeing through Constantinople, toward Germany and safety, a German Field-Marshal who had promised the Turkish Sultan an easy conquest of Egypt, but who had barely saved his own skin after the

crushing defeat of the Turkish armies he commanded on the old battle-field of Armageddon. The war-lord in Berlin can spare no aid from his own hard-pressed lines in France. Our editors are convinced that Teutonic prestige in the East has been forever shattered, and that the evidence that Germany is no longer able to give effective support to her subordinate accomplices, Turkey and Bulgaria—"the minor Beelzebubs," as some one calls them—has ended forever Germany's middle-European dream.

These simultaneous Allied successes in Palestine and Macedonia, "with their prolonged, patient, silent, but consummate preparation," says the *New York Evening Sun*, "constitute a wonderful feat of generalship and they vindicate climactically the principle of unified command." Marshal Foch, as the *Philadelphia Press* notes, has kept almost every sector of the Western Front busy, "and now one by one he is raising the curtain on the several 'side shows.'" The Foch plan of hitting the foe "hard in quick succession at point after point" is now triumphantly in action, others point out, even on the outer edges of the conflict.

America, tho supposedly at peace with both Turkey and Bulgaria, hailed the reconquest of southern Serbia as tho it were an American victory, while the news that Allenby had driven the Turk from the Holy Land and "regained Palestine" thrilled every heart. In the words of the *Newark News*, "with one of the great cavalry-rides of history" Allenby "swept north over the plains of Sharon to Nazareth, from Judea across Samaria into Galilee, and, in three days, pocketed the Turkish main army between the Dead Sea and the Sea of Galilee." If Allenby makes the most of his brilliant success, continues *The News*, "Damascus will fall, opening the road to Aleppo and making it possible to effect a junction with General Marshall in Mesopotamia, which would put the British on the frontier of Asia Minor from the Mediterranean to the Persian frontier." Turkey is now threatened by an Allied advance through Bulgaria. The *Washington Post* foresees the complete defeat and elimination of Turkey, the opening of the Black Sea to the Allies, and an open path into Hungary; Germany can only meet this "by weakening the Western Front, where she is already outnumbered."

Allied military and political objects are the same in Palestine and the Balkans, says the military critic, Mr. Sidebotham, in a *London Times* dispatch to the *New York Sun*—

"They are, first, to redeem for the rightful owners countries oppressed by alien domination. Secondly, to defeat the enemy's Oriental policy and discourage his people, as well as to take in time guarantees for future peace and freedom which, if left to the final peace conference, might be skimmed. Thirdly, if possible, gain fresh points of attack against our enemies."

The Eastern victories naturally revive the old debate between "Easterners" and "Westerners." A distinguished representative of the latter, General Maurice, warns us, in a dispatch to the *New York Times*, not to make too much of these successes:

"Let us have no illusions. We can not defeat Germany, Turkey, and Bulgaria decisively in the field at one and the same

time, and there is no way round which leads to the defeat of Germany. If we are led into attempting these excursions we are prolonging the war."

The same view is taken by the *New York Evening Post*,

RELATION OF THE BALKAN FRONT TO ADJACENT LANDS.

which argues that successes in Palestine and Macedonia were made possible by Foch's offensive in France, and observes:

"It is not minimizing the importance of the victories in the East to say that the Allies are working for a swifter victory than could be obtained by the crushing of Turkey and Bulgaria and their separation from the Central Alliance. If we were content to stand for two years on the defensive in France, the war might be so won. But that is precisely what the great Allied effort, and principally America's effort, is intended to avoid. . . . If the war were to be won by negotiation the Allies would be justified in concentrating on the policy of piecemeal Eastern conquest and the break-up of the Teuton alliance. But as it is, Foch will still prepare himself to break the German line once for all between the North Sea and the Vosges."

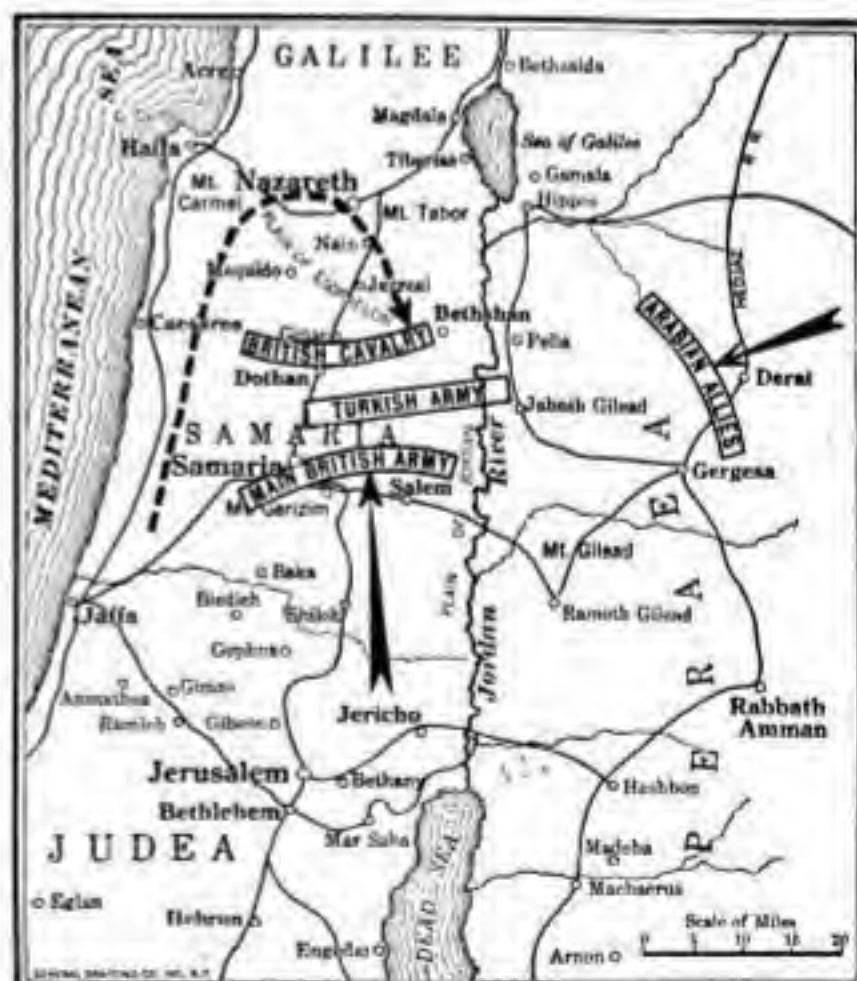

On the other hand, it seems to the military expert of the *New York Times* that these successes in the East have certainly "justified in full measure the British judgment in continuing their forces in what would on the surface appear to be but subsidiary fields." The *Washington Post* laments the long ascendancy of the "Westerners" in Allied councils. It believes them largely responsible for the fact that the Central Powers were enabled "without let or hindrance" to consolidate their positions in Roumania, Asia Minor, and the Russian Black Sea littoral. The results in Macedonia and Palestine have, in the opinion of this newspaper, more than justified the expectations of the "Easterners," and "the only pity is" that their views "were so long opposed and that the present success was not obtained eighteen long months ago, which, in the opinion of competent observers, could have been done." The *Brooklyn Eagle* is of much the same opinion and declares that "a destroyed Turkey, an emancipated Serbia, a revived Roumania, and a Greece infused with new vitality and power are objects that can and ought to be secured while the waning strength of Germany is concentrated for the defense of her menaced frontiers."

The Macedonian campaign, as the *Philadelphia Inquirer* points out, began on August 14, when Servian artillery opened

fire on the strongest Bulgarian positions along the Saloniki front. Two weeks later some of these positions were carried by assault with the capture of 800 prisoners and considerable booty. On September 15, after several days' bombardment, the great advance was begun by the French and the reconstituted Servian Army. The first day's fighting saw the Bulgarians driven back nine miles with a loss of a thousand prisoners. Day after day the offensive went on, the front broadening, the spear-head thrusting further north into Servia. In a week the fighting was general from Monastir to the Struma. On the left the Italians helped against the first Bulgarian Army. On the right the British and the new Greek Army struck north, driving the second Bulgarian Army beyond its own frontier. By the 26th there was continuous fighting on a 150-mile front, and the Allied center had advanced until Prilep and Ishtib were taken and the Bulgarian armies on either side of the Vardar were in grave danger of being cut off from each other and encircled in turn. The first week's fighting brought in as many as 10,000 prisoners and hundreds of guns. The Bulgarian positions were strong, being well fortified and situated in a land of steep mountains, but fell easily before the irrepressible Servians who were reconquering their fatherland. At some points, particularly near their own frontier, the Bulgarians held well, but on many sectors, according to the dispatches, they retreated helter-skelter, abandoning guns, supplies, and wounded soldiers; several regiments mutinied. The Servians, says the *London Daily Mail*, "performed one of the most difficult military feats, a deed comparable to the breaking of the Wotan line." A Jugo-Slav division also gave a good account of itself in the early part of this campaign.

The immediate purposes of the Macedonian campaign are set forth by Mr. Frank H. Simonds in the *New York Tribune*:

"First, to exert upon the Bulgar Army, weakened by transfer of divisions to the West Front, such pressure as will recall the divisions sent away, produce defeat before the divisions can be recalled, and add to the discontent and apprehension already existing in Bulgaria; secondly, by thrusting up the Cerna Valley, to cut the Bulgar communications in the lower Vardar Valley, compelling a withdrawal from all the strong positions near the Greek

HOW ALLENBY TRAPT THE TURKISH ARMY IN PALESTINE.

frontier which have been occupied for more than two years; finally, by breaking the communications between the Vardar Valley and Monastir by way of Prilep, to compel the Bulgars to retire out of all of Macedonia west of the Vardar, thus

ONE MORE RIVER TO CROSS.

—Brown in the Chicago Daily News.

disengaging Monastir and thrusting a wedge between the Bulgars in Macedonia and the Austrians in Albania.

"So much for the military purpose. In addition, the Allies are now striving to get north and into communication with the Servians of the conquered regions of Serbia and with the restless and disloyal Jugo-Slavs of the Austrian and Hungarian Adriatic provinces to enable these to make a successful rising against the Austro-Hungarian Government. . . . An Allied advance through Serbia might rouse Roumania, brutally oppressed by the German invaders and already showing signs of resentment."

Even before the crushing attacks on their forces in Macedonia, the morale of the Bulgarians was not at its best, according to several authorities. There is much difficult country between Saloniki and Sofia, and the armies of the Central Powers have had time to construct powerful lines. But, observes the *New York Times*, "no line can hold if there are not men enough to hold it, or if the men holding it have lost their morale." Bulgarian eagerness for peace is noticed by this newspaper, which believes that it is genuine, but asks Americans to remember that the Bulgarian "renunciation" of conquests did not come until the Bulgarian armies in Macedonia were broken by the Servians. Similarly, the *New York Journal of Commerce* quotes André Chéradame as declaring that Serbia is a great graveyard and "her population has been systematically butchered by the Bulgarians with German approval," and declares that "it would be to trifle with one of the gravest of war-issues to make it easy for Bulgaria to find a place of repentance by providing a light penalty for her flagrant treachery and entirely Teutonic contempt for the dictates of humanity." But the *Boston Globe* believes there are reasons for considering Bulgaria "less a member of the international criminal band than one of its tools."

The destruction of Turkish power in Palestine has naturally captured the imagination of our editorial writers, especially since the fighting was done on historic fields and since the strategy of the victor was so brilliant. After several months of apparent inactivity, but actually of incessant preparation, General Allenby struck on the morning of September 19. His troops, as the *Boston Transcript* notes, pushed "across the plain of Armageddon, where Deborah and Barak hurled Sisera and his nine hundred chariots of iron into the River Kishon and the stars in their courses fought against Sisera." While the main British army fought its way northward through the Turkish lines over the Samarian hills, we read in the *New York Times*, "a flanking force, headed by cavalry brilliantly used by a commander who is himself a cavalry officer, drove up the coast and cut across the enemy's rear by a maneuver which seems to have been as notably successful as any that has ever been seen

in the long history of strategy in that region since the days when Pharaoh Necho went up to fight against Sennacherib, and beat the armies of Judah on the way." The Turkish defeat was crushing. In all, 45,000 men were taken prisoners and 265 guns were captured. The huge captures were due to the remarkable work of the British cavalry and their Arabian allies in cutting off the retreat of the disorganized remnants of the Turkish host at the fords of the Jordan and in the desert to the west. On the 24th Allenby followed up his victory by taking Haifa and Acre on the Mediterranean coast. Further advances have carried the British to the sea of Galilee and to important points on the Hejaz railroad. The victory of General Allenby has been hailed in London as a model in conception and execution. The use of both cavalry and infantry is called by General Maurice "as perfect an example of cooperation of two arms in a decisive battle as is to be found in the pages of history." Of the three Turkish armies in Palestine, amounting in all to about a hundred thousand men, the Seventh and Eighth, west of the Jordan, were completely destroyed in the main battle. The Fourth army was driven from several of its bases on the Hejaz railway and is menaced by the Arabs on one side and the British forces on the other. The German Field-Marshal Liman von Sanders, commanding these armies, barely escaped with his staff.

There is a Teutonic touch in the official statement from the Constantinople War Office that "the English follow us only step by step." But these steps, editors and war-correspondents note, are bringing the British forces near to Aleppo and Damascus. Allenby's attack, the *New York Evening Sun* believes, will soon be followed by an advance up the Euphrates of the forces under General Marshall, and "the ultimate purpose of these commanders is to form a junction at Aleppo, at present some 300 miles from each." Aleppo "might be called the key to both Syria and Mesopotamia," we read in the *New York Evening Post*. A British force landed at Alexandretta could easily march to that railroad center and sever communications between Constantinople and Syria and Mesopotamia. The Turkish armies could then only escape, in *The Evening Post's* opinion, by completely abandoning Syria and Mesopotamia.

The fact that the United States is not officially at war with Turkey or Bulgaria irks some of our editors. The Republican *Philadelphia Public Ledger*, *Boston Transcript*, and *Omaha Bee* are inclined to agree with the *New York Tribune* (Rep.), which says: "Let us get into the Eastern battle-line before it is too late." Other dailies, however, believe that the President has sufficient reason for not asking for a declaration of war.

INDEX TO MAP OF THE BALKAN FRONT. LETTERS AND FIGURES REFER TO SQUARES ON MAP OPPOSITE.

In looking for names mentioned in the press dispatches the reader should allow for variations in spelling due to radical differences between the English and various Balkan usages. Spellings used here follow the British official staff maps.

GOMPERS DEFEATS THE DEFEATISTS

A DELICATE SITUATION confronted Mr. Samuel Gompers, President of the American Federation of Labor and chief American delegate at the fourth Inter-Allied Labor and Socialist Conference in England, but the London dispatches tell us that he met and managed it triumphantly. The Gompers party had to meet spokesmen for the British workingmen who are sharply divided on the question of peace terms, and particularly on the question whether British labor representatives should meet representatives of the German Majority Socialists at some neutral capital to discuss war-questions. While there is no doubt, we are told, that a large majority of British workingmen are with the Americans on the main issue, there were pacifist and defeatist members at the conference, to whom Mr. Gompers administered a thorough drubbing. As a London correspondent of the *New York World* puts it, "he took off the gloves and let himself go in striking style," with the result that the pacifists were deprived of the support of the waverers and found themselves sharply isolated. The Socialist pacifists of Bolshevik tendencies, we read, were regarded with even greater antipathy by the majority of British Laborites than the Simon-pure pacifists. The general result of the conference is to make the attitude of British and Allied Labor toward German militarism plainer than ever, and to rout completely its small international pacifist Bolshevik faction, and "the completeness of this victory was largely due to Gompers's dominant will and powerful eloquence." Of his determined stand not to meet enemy representatives, the *Chicago Tribune* says it is "wholly in accord with the excellent judgment he and other American labor-leaders have generally displayed during the course of the war," and its influence on pacifist and defeatist leaders is of especial importance. In pacifist and Socialist circles, remarks the *Chicago Daily News*, Mr. Gompers has been misrepresented "as a jingo and arch reactionary, a victim of too close personal and political intercourse with American captains of industry and finance." He has made it his business to refute such charges, and this journal goes on to say that

"The war-aims committee of the Inter-Allied Labor Conference in London has presented a report recommending that the conference 'subscribe to the fourteen points formulated by President Wilson, thus adopting a policy of clearness and moderation as opposed to a policy dictated exclusively by changes on the war-map.' This report in effect approves the suggestions made to the conference by Mr. Gompers and his fellow delegates, who declared that the armies of the Central Powers 'should be opposed so long as they respond to the orders and control of their militaristic and autocratic governments, which now threaten the existence of all self-governing peoples.' This is the only position that a genuine labor conference can adopt without stultifying itself."

The fourteen proposals of President Wilson may be thus summarized from his address to Congress of January 8, 1918:

Days of private international understandings are gone and covenants of peace must be reached in the open.

Freedom of the seas in peace or war.

Removal of economic barriers among nations associating themselves to maintain peace.

Guaranties of the reduction of armaments.

Impartial adjustment of colonial claims, based on popular rights.

Evacuation of and opportunity for Russia.

Evacuation of Belgium.

Evacuation of French territory, and righting of the Alsace-Lorraine wrong.

Readjustment of Italy's frontiers along lines of nationality.

Free opportunity for autonomous development of the peoples of Austria-Hungary.

Evacuation of Roumania, Servia, and Montenegro, and guaranties for all the Balkan states.

Sovereignty for Turkey's portion of the Ottoman Empire and autonomy for other nationalities.

An independent Poland with access to the sea.

General association of nations for mutual guaranties of independence and territorial integrity to large and small states alike.

YOUR SHARE OF THAT \$6,000,000,000

WHEN SWEETLY SOLEMN THOUGHTS concerning Liberty Bonds come to you, as they are probably doing with great frequency these days, certain statisticians employed by the Bankers Trust Company of New York may be appealed to for the settlement of some fundamental questions. These gentlemen have prepared figures showing, on

A SOCIALIST RAP AT MR. GOMPERS.

OUR MODERN CANUTE—"Back, Tides!"

—Chamberlain in *The Liberator* (New York).

the basis of your family income, about how much you ought to receive of that \$6,000,000,000 in gilt-edged securities which the Government is offering to beat the Hun, and, incidentally, to inculcate habits of saving in these extravagant States.

It is stated that the responsibility for the success of the Liberty Loans to be raised this year rests largely on families receiving incomes of \$10,000 and under. Such families receive over eighty per cent. of the entire national income, which is conservatively estimated at \$60,000,000,000. Still more striking is the fact that of the 23,500,000 family groups into which our population naturally falls, 23,140,000, having incomes of \$5,000 or less, receive seventy-six per cent. of the national income, and 21,175,000 of these families, receiving incomes of \$2,000 or less, are credited with over two-thirds of the national income.

In the preparation of the table at the end of this article, we are told, the fact should be borne in mind that the calculations are based upon the requirements of the Government for a full year; the table, therefore, indicates the approximate amount of a family's yearly income which should be set aside. The average number of persons in a family is assumed to be 4.5, on the basis of the census calculations. In using the table, it is to be remembered that it is a table of averages, similar to the longevity tables issued by insurance companies, and is therefore to be corrected to fit individual cases. If the head of a family has few calls upon his income, he should plan to invest more heavily than the man who has debts to liquidate, or many dependents.

Contributions to war-charities, assuming that the large organizations will require perhaps \$300,000,000 during the year, are shown in the right-hand column of the table. Systematic giving is recommended as preferable to hit-or-miss methods.

In applying the table to the present issue of \$6,000,000,000 in

Liberty Bonds, probably the forerunner of other issues to the total amount of \$10,000,000,000 more during the fiscal year ending next June, there must first be deducted from the amount indicated by the table the estimated amount of the Federal income tax, which must be paid on June 15, 1918. This amount should be set aside as income is received, and, if the sum is large enough, invested in United States four per cent. certifi-

SLACKERS AIDING THE "U"-BOATS

THE SHIPYARD SLACKER, "as shameful a creature as a coward in the Army in France," as Colonel Roosevelt calls him, is held responsible by the press for the fact that the greatest ship-building yard in the world is not doing half that is expected of it. While the enormous majority

of American shipyard-workers are given credit for breaking all the world's ship-building records in August and putting American ship-production ahead of all Allied losses that month, rather bitter comment is leveled at labor conditions in some of the Delaware River yards, and there is uneasiness lest a similar state of affairs may be found in the other yards. As Vice-President Piez, of the Emergency Fleet Corporation, candidly confessed: "The Hog Island yard expected to turn out forty-eight ships. It will do well to turn out twenty." As proof of slacking, newspaper writers note that while on September 13 the Hog Island riveters, spurred on by wagers or prizes or a desire to celebrate General Pershing's birthday, drove

Copyright, 1918, by Harper & Brothers. From a sketch by Thomas Hart Benton.

"THE LARGEST HOPE OF THE SHIPPING BOARD."

The sky-line of Hog Island, where the world's greatest shipyard was erected in ten months on a barren marsh. The first ship was launched on August 5. Labor troubles are now said to be delaying operations.

cates of indebtedness, which may be purchased of any banking institution. The balance of the amount indicated by the table should be invested in Liberty Bonds, say one-third in the bonds of the Fourth Liberty Loan and the remainder in the bonds of subsequent Liberty Loans as offered during the fiscal year.

EVERY MAN'S WAR-FINANCE CHART

Estimated Average Share of Yearly Family Incomes Contributable in Bond Purchases and War-Charities, for the Fiscal Year Ending June 30, 1919. This might be cut out and pasted up in a corner of your war-map as a reminder of your share in advancing the battle-lines.

GOVERNMENT WAR-EXPENSES		WAR-CHARITIES	
Family Income Group	Average Amount Contributable by Each Family in Group	Average Amount Contributable by Each Family in Group	
\$1,000 — \$2,000	\$209	\$7.00

195,242 rivets, only 89,407 were driven on September 17. Says the New York Sun:

"The trouble comes from slackers of different types. Some are inefficient men, wholly incapable of doing a good day's work, who have wormed their way into the shipyards in order to pick up high wages and escape the draft. Ball-players, actors, pugilists—men from every non-essential walk—have found the shipyards the place for soft living. Their employment has incensed some of the men who really know how to work. In the Cramps' shipyards some of the workers have quit because these impossible fellows were put over them as bosses. The hiring of these dodgers of the draft, these creatures who come to 'work' with flowers in their coat-lapels and whisky on their breath, has been the worst evil of shipyard labor. . . .

"The other evil in the yards comes from a common human weakness, the desire to loaf, that has afflicted man since Adam's time. In a great many men that desire finds accomplishment when wages are abnormally high. When a workman is able to make three or four times as much money as he made before the war he often succumbs to the temptation to work only half as long. This weakness has been observed for a year, not only in the shipyards, but in almost every industry where war-prices and the cost of labor have fattened the pay-envelops. . . . This, we say, is a human weakness, but it is not easily pardonable. . . . Real labor, the kind that America depends on, will have no sympathy for the loafer who, with a yellow heart and a spaghetti spine, has cut in two the production of ships at Hog Island."

Patriotic shipyard workers along the Delaware—and they are a vast majority, the Philadelphia *Inquirer* insists—have no use for the "easy-job" slackers, we gather from the Philadelphia newspapers and press dispatches. One complaint is voiced as a slogan: "It's not what you know; it's who you know." At the Cramps' yard 2,000 men went on a brief strike as a protest against the presence of actors, ball-players, friends of politicians, and others, who, to escape army service, were being given jobs they were utterly incompetent to fill. Admiral Bowles, in charge of the Delaware River district, has admitted that "there

are slackers" at Hog Island, tho the large majority are doing their best. He has suggested that the fundamental trouble with them is that "they are getting too much money." But Mr. Piez has a remedy both for the "soft jobs" and for the "loafing." For one thing, he has announced that after November 1 no Class I men are to be employed at Fleet Corporation shipyards, unless they are skilled men of exceptional ability. Then the "work-or-fight" rule will be applied to shipyards in this way, the *Washington Post* hears: "If any workman is absent from duty more than three days in a month, without a reasonable excuse for such, as illness, he will be adjudged a slacker, his exemption will be withdrawn, and he will be shoved up into Class I, from which he will be quickly inducted into the military service."

In the Newburg speech containing the already quoted denunciation of shipyard slackers, Colonel Roosevelt also spoke of the good worker in the shipyards as standing "honorably forward like a good soldier in the Army." Such men speak for themselves in the *Pusey and Jones Shipbuilder*, published by shipyard workers at Gloucester City, New Jersey. The editor declares that with comparatively few exceptions the workmen in this most essential industry "have been loyally at their posts all through the war." Of course, he adds, there have been some causes for dissatisfaction, but "with the present facilities for a fair adjustment there is no excuse for holding up the flow of ships while these differences are being settled."

Hog Island, "the ideal shipping plant of the war," suffers from "hacking labor" as well as "slacking labor," the *New York Tribune* remarks, since it "has never been able to obtain more than half the number of riveters required to complete the forty-eight ships on schedule time." Mr. Judson C. Welliver notes in the *New York Globe* that there are only 29,000 workers at Hog Island, where there should be 38,000. He points out that a great many of them are necessarily inexperienced men, and that only a little over half of them are native Americans. He reminds us of the charges of graft and extravagance in connection with building the Hog Island yard, and concludes that in the general opinion of those best informed "Hog Island is too big a plant for a single management to handle efficiently." It does not seem to the *New York Evening Post* that there has been much real slacking at Hog Island. It points out that one of the low riveting records was made on a rainy day when comparatively few men were at work, and is inclined to think that Hog Island has been the chief victim of our "good old American optimism" as to what we would achieve in ship-building "because it was the pet project of the Emergency Fleet Corporation, and as such the center of a mass of sanguine publicity." But "if we expect too much in advance we are not disheartened by the discovery that we must revise our hopes downward," and, *The Evening Post* concludes, "the total figures for our new shipping are anything but disappointing."

In fact, so far from disappointing are the figures that the Shipping Board announces that last May Allied construction passed destruction for the first time, while in August ship construction in the United States alone was greater than the total Allied and neutral destruction for the month. "Never again will they catch us," says Chairman Hurley; "from now on we will be overcoming the early losses they inflicted upon us." Now that the yard construction is about completed, our energies can be centered on the building of the ships themselves, and the Washington correspondent of the *Brooklyn Eagle* notes the

confident prediction by those in authority that by the first of next year American yards will be delivering ships at the rate of 500,000 tons a month. Even on the basis of present construction, say shipping officials quoted in the *New York Journal of Commerce*, after the first six months of next year the United States will be independent in the matter of shipping and will not have to charter British and other European vessels, as at

A PRIZE-WINNING POSTER APPEALING TO OUR SHIP-BUILDERS.

present, in order to transport and supply its forces in France. According to a statement of the Shipping Board, the United States in August took rank as the world's greatest ship-building nation. There are now 203 shipyards with 1,020 shipways in the United States. The Hog Island yard with its fifty ways is equipped to produce more tonnage annually than the prewar output of all the shipyards of Great Britain. Our yards have been constantly gaining on British yards since the beginning of the year and now lead by 90,000 tons. During the past twelve months total launchings have reached 3,000,000 tons dead-weight, and more than 2,000,000 tons of new ships have been completed and delivered to the Shipping Board. The status of world tonnage to the first of September, excluding Germany and Austria, is thus set forth by the Shipping Board:

	Dead-Weight Tons
Total losses (Allied and neutral), August, 1914-Sept. 1, 1918, .	21,404,913
Total construction (Allied and neutral), August, 1914-Sept. 1, 1918, .	14,247,825
Total enemy tonnage captured (to end of 1917) .	3,795,000
Excess of losses over gains .	3,362,088
Estimated normal increase in world's tonnage if war had not occurred (based on rate of increase, 1905-1914) .	14,700,000
Net deficit due to war .	18,062,088
	Gross Actual Tons
Deliveries to the Shipping Board in August .	244,121
Other construction over 1,000 gross .	16,918
Total .	261,039
Losses (Allied and neutral) .	259,400
America alone surpassed losses for month by .	1,639

NOTE—World's merchant tonnage as of June 30, 1914, totaled 49,089,552 gross tons, or, roughly, 73,634,328 dead-weight tons. (Lloyd's Register.)

WHO OWNS THE WASHINGTON "TIMES"?

THAT BREWERS SHOULD BUY A NEWSPAPER to favor their business interests seems no more reprehensible to some editorial observers than that any other industry should invest in a newspaper enterprise. But the charge of Mr. A. Mitchell Palmer, Alien Property Custodian, that "twelve or fifteen German brewers of America, in association with the United States Brewers' Association," furnished the money to buy a great newspaper "in the shadow of the Capitol itself," and that the organized liquor traffic of the country is "a vicious interest because it has been unpatriotic, because it has been pro-German in its sympathies and its conduct," excites the wrath of others. The newspaper in question, the *Washington Times*, has been declared to be owned by Mr. Arthur Brisbane, chief editorial writer for the Hearst papers, and reputedly the highest salaried editor in the United States. Let nobody forget, remarks the *Richmond Journal*, that this same Arthur Brisbane is the "same precious editor-in-chief of the Hearst publications, whose virulent anti-British and pro-German utterances, published by and with the approval of his principal, have been a stench in the nostrils of all true Americans." The *Washington Herald* reprints at the head of its editorial column one of Mr. Brisbane's editorials from *The Times* of February 23, 1918, which is entitled "The Law Compels Editors to Tell Who Owns the Newspaper." The gist of Mr. Brisbane's comment is that the law, "good as far as it goes, doesn't go far enough," and while "it is well enough to know who owns the newspaper, it is even more important to know who and what owns the man that owns the newspaper." Meanwhile it is rather humorously noted in some quarters that fortune has played a grim joke on the brewers if they had hoped to influence Congress, because since Mr. Brisbane took over *The Times* Congress has passed the National Prohibition Amendment, which is without example in the history of liquor legislation, and has voted the nation dry on July 1, 1919. Mr. Brisbane's chief offending, as some see it, is that following the law requiring an affidavit on the ownership of a newspaper, he averred that he and his wife were the sole owners and that there were no known bondholders, mortgagees, or other security-holders. Furthermore, as the *Newark News* points out, he took oath that he had "no reason to believe that any other person, association, or corporation has any interest, direct or indirect, in the said stock, bonds, or other securities." Referring to the Senate investigation into Mr. A. Mitchell Palmer's charges, the *Newark* daily says that the public is entitled to all the facts that can be produced, and "ought not to be satisfied with partizan statements by either overenthusiastic dries or self-interested wets." In giving the story of the transaction through which he acquired *The Times*, Mr. Brisbane relates that he bought the paper from its previous owner, Mr. Frank A. Munsey, paying half cash and allowing Mr. Munsey to keep all the stock of the company in security for the payment of the other \$250,000. To finance the paper and put it on a paying basis, Mr. Brisbane arranged for a credit of any amount up to \$500,000 with Mr. Christian W. Feigenspan, of Newark, a brewer. Of the amount borrowed it was found necessary to use only \$375,000, and the loan was made without security, altho Mr. Brisbane

says he had offered real estate as collateral. At first no interest was asked by Mr. Feigenspan, altho Brisbane says he insisted on paying interest on the loan, which was made for five years. Since *The Times* has come under the control of Mr. Brisbane, we are advised by a Washington correspondent of the *New York Evening Sun*, it has frequently published editorials and news articles supporting the sale of beer and light wines, but opposing the sale of whisky, and this informant quotes from a Brisbane editorial as follows:

"My attitude on the temperance question is well known. For more than twenty years opposing the sale of whisky, I have advocated temperance, which I believe can best be promoted by forbidding the sale of all alcoholic spirits, permitting only the manufacture and distribution of light wine and beer in which the alcohol content is reduced to an innocuous percentage."

In a statement to the press Mr. Brisbane confesses that the thing he is chiefly concerned about is the "false accusation that I and my paper are, or have been at any time, in any way, pro-German," and he proceeds:

"I have never written one line in favor of Germany, and I have written hundreds of columns in denunciation of Germany and her methods and purposes in this war."

"I do not think there is any paper in the United States or any editor in the United States who has been as bitterly, as violently, and as persistently pro-Ally and anti-German as I have been."

"And I know that the accusations made against me, therefore, are not only untruthful, but wholly insincere."

"I believe that every unprejudiced newspaper editor in the country will know that this is a fact."

"ARTHUR BRISBANE."

MR. ARTHUR BRISBANE.

More important than knowing who owns a newspaper, its editors, is to know "who and what owns the man that owns the newspaper."

Mr. Christian W. Feigenspan, of Newark, who was trustee for the pool of brewers that advanced the money to Mr. Brisbane, has asked to be called as a witness before the Senate Judiciary Committee, which is to investigate the activities of the brewers in legislative matters. As to the loyalty of the brewers, Mr. Feigenspan is quoted in the *New York Evening Post* as saying the charge is "a dastardly and outrageous libel, unworthy of the representatives of this

Republic." Also in defense of the patriotism of the brewers, we have large advertisements in the daily press, from which we quote in part:

"More than 95 per cent. of all the brewers in the United States are American-born. And in a very large proportion of cases their parents were American-born."

"What money they have has been made in American business and invested in America. Since the beginning of the war brewers have been among the largest purchasers of every Liberty Bond issue, the total of their subscriptions amounting to many millions of dollars. They have contributed in large amounts to the Red Cross and other war-activities."

"Brewers themselves are wearing the uniform of service and the sons and grandsons of brewers are fighting under the Stars and Stripes."

"Much publicity has been given to the fact that before the war commenced brewers of the country contributed money to the German-American Alliance for the purpose of contesting prohibition. Not one single dollar was ever paid to the German-American Alliance by any brewer after the declaration of war between Germany and our country, and this fact is well known to every man who has investigated this subject."

"It has never been shown and can never be shown that any American brewer has contributed, directly or indirectly, to the dissemination of any unpatriotic propaganda!"

In the *Washington Herald* we are reminded that Mr. Brisbane said in his anniversary number:

"This newspaper was purchased to tell the news as accurately as possible, to reflect in editorial columns the thoughts and feelings of good citizens, to entertain and inform in the evening the working people, rich and poor, to support the President and the Government of the United States, from the first to the last word through every hour of the war.

"The owner of this paper may truly say in a very small way, to his readers, what Michelangelo said to the Pope for whom he built St. Peter's:

"I have made nothing from the building unless it be by adding to my reputation and my soul's salvation."

The *Herald* follows this with a statement in the *Washington Post* in which Mr. Brisbane quotes from a letter received by him from Mr. Feigenspan, who wrote:

"I write this note to define a business arrangement existing between us. I and a number of my friends, all of whom I am authorized to represent, have for years felt very strongly that the public welfare and our own industry—because of your well-known convictions—would be benefited by your personal ownership of a newspaper.

"We agreed to supply you with a capital of five hundred thousand dollars (\$500,000) for the purchase and establishment of a newspaper by you. We have at this time supplied two hundred and ninety-five thousand dollars (\$295,000), and we shall, as soon as possible, supply the balance—"

The Government itself has "indicted" Mr. Brisbane and the *Washington Times*, *The Herald* observes. Now the people will judge, and their verdict and actions will be interesting.

According to the *New York Globe* the "really sinister purpose" suggested by the *Times* transaction, "from which the veil has been only partly torn," lies embedded in the letter of Mr. Alexander Konta to Dr. Dernburg, discussing possibilities of purchasing New York papers for German propaganda. Here

is outlined, *The Globe* tells us, an ingenious plan, to understand the possible significance of which it is necessary to read Mr. Konta's own description of the plan, which it quotes as follows:

"A paper that would not be hostile to the personal liberty of the citizen who drinks in moderation what he pleases could count upon the powerful support of the brewers and distillers, who command almost illimitable capital, and, what is more, means of giving the paper in question a circulation large enough to attract advertisers.

"Add to this a discreet appeal to every German society in the country for support by its members, and we could easily count upon a national daily circulation of 500,000 copies. This, to be sure, would be a circulation among Germans and German-Americans, whereas what is wanted is native American readers, but if this German circulation is built up discreetly as I suggest, the men in the street will be impressed by numbers.

"A large circulation widely advertised would impress the native American and lead him to take the paper. And meanwhile a deficit would be changed into a profit to be used for further propaganda. The interests to which I refer have repeatedly consulted me on this very subject, of a newspaper not hostile to their industry, and I know they would be more than ready to give their support to the plan now in hand."

Copyrighted by the Evening Post Company.

PUBLIC OPINION.

—Cesare in the *New York Evening Post*.

A Senate investigation may find out whether Mr. Konta was "the impresario of a show that was staged in Washington and also played to large houses in New York and Chicago," or whether his is "merely one of those fertile minds that dream dreams of great enterprises while men of action are busy with similar affairs of moment," and *The Globe* points out that—

"Meanwhile those who are not favored with glimpses behind the scenes know only that the newspapers Mr. Brisbane has been active in, the Hearst newspapers, did what they could to keep England and America apart before our entrance into the war and labored unceasingly to arouse in this country a feeling of apprehension of Japanese designs upon our shores."

SHALL GERMANY HAVE HER COLONIES BACK?

ONE DEMAND BY GERMANY sure to be made at the peace-table is that her colonies be restored to her, and she is especially keen about her former African possessions, we are told, but some British editorial observers feel that England will never yield to her wish. They quote from Mr. Lloyd George's war-aim speech of last January, in which he said that "the German colonies are held at the disposal of a conference whose decision must have primary regard to the wishes and interests of the native inhabitants of such colonies," and he spoke also of applying to them "the general principle of self-determination." Before the war Germany had four colonies in Africa, one in Asia, and nine islands or groups of islands in the Pacific Ocean, we are reminded, and their entire estimated area was 1,027,820 square miles. What may be considered an official statement of her colonial aspirations is found in a speech of Dr. W. S. Solf, German Secretary of State for the Colonies, who declared that "the safeguarding of our colonial future is not only the aim of our Government and certain groups of individuals, but it has become an aim of the German people." Dr. Solf said further:

"A lively consciousness now extends far into the workers' circles that the retention of our colonies is a vital question for the honor of Germany as a great Power. Our colonial war-aims are second to no other in national importance. The growing realization of German workers as to Germany's position is especially gratifying in view of the plans of our enemies."

Turning then to an address of Mr. Arthur J. Balfour, British Secretary of State for Foreign Affairs, Dr. Solf charged him with having "formally announced Great Britain's claim for the annexation of our colonies," and speaking of Mr. Balfour's reference to improved conditions in colonies taken from Germany, Dr. Solf stated:

"This means that England conquers land and asserts that she can govern it better than its lawful owners, and from this derives the claim to annex it. Does the British Foreign Secretary know nothing of the decimation of the colored populations of the various African colonies by the Entente's action? Nothing of the enforced recruiting in British East Africa? Nothing of the gigantic armies of warriors and workers from the British and French colonies?"

"Has he any idea of the immeasurable damage to the colonial mission of all civilized races which must result from the use of black armies in battle against the white races and the bringing of the former to Europe?"

"The short history of our colonies shows that neither in Africa nor in the Pacific have we pursued an aggressive policy. We strive for no supremacy, no preponderance of power. We wish for a compromise between the colonial possessions which shall correspond to the economic strength of the European nations and to the merits they have shown in the protection of the colored races entrusted to their care. Economic energy alone is not a sufficient claim."

A flat denial of Dr. Solf's foregoing utterance is made in the London press by Lord Robert Cecil, who declares that when Dr. Solf says Mr. Balfour or any British statesman has "definitely proposed the annexation of the African colonies to the British Empire, that is inaccurate." No such proposal has ever been made, according to Lord Robert Cecil, who is further quoted as follows:

"Mr. Balfour and others have said that it is impossible for Germany to resume control of her colonies. Beyond that, neither Mr. Balfour nor Mr. Lloyd George has gone. The Prime Minister said that the future of the German colonies would be decided at the peace conference. Clearly a great world issue can not be settled by this country alone. It has to be settled in concert with her Allies. . . ."

"Dr. Solf is very indignant at the suggestion that German rule is inhumane. I do not believe that any one knowing the facts will accept that opinion. The British Government has collected information on that subject, and in a short time there will be a Blue Book about German rule in the colonies. Some of the evidence is a fearful record of brutality. I can not accept Dr. Solf's doctrine that the Germans wanted a peaceful African Empire. On the contrary, we know, at any rate, one important section of German thought advocated a German African Empire, to dominate Africa militarily and furnish a great store for the military purposes of the German Empire. That is quite apart from the fact that the possession of coastal ports would be the greatest danger to the British Empire and of importance to Germany."

In the London press also Prime Minister Massey, of New Zealand, states that he has no personal knowledge as to the German African colonies, but he does know something of the Pacific Islands, and—

"I am able to say that Germany is hated and detested by the native races there,

who, on the other hand, have shown in the most practical form their sympathy with Britain and Britain's Allies. Natives of New Zealand, Fiji, Niue, Rarotonga, the Gilbert Islands, and other places have made the supreme sacrifice for the great cause which has drawn British citizens to the different theaters of war from every corner of the earth. I have never heard, however, of a native of any of the islands occupied by Germany prior to the war who wants to fight for Germany and against Britain."

Herr von Lindequist, who was German Colonial Secretary after Dr. Dernburg, and before Dr. Solf, startlingly discloses in the Berlin *Tägliche Rundschau* some German reasons why Germany should recover Southwest Africa, and we read that

"For the position of power of our chief enemy, England, in South Africa, it is a matter of decisive importance whether Southwest Africa comes under English sovereignty or not. With this question stand or fall General Botha, the chief pillar of Great Britain in the Union, and his evil spirit, General Smuts."

Herr von Lindequist avers that a rebel movement in South Africa is gaining in strength, and adds:

"Even if Botha once more maintains his position by force,

Canadian official photo from Western Newspaper Union.

A GERMAN IN ARMOR.

This prisoner, taken by the Canadians, shows how modern war is bringing the old medieval idea of armor back into use.

he will certainly fall with the evacuation of German Southwest Africa, and a Nationalist Afrikaner Ministry will take the place of the English Botha. That means for England the loss of her position of 'power at the Cape; for German Southwest Africa it means a good neighbor; and for Germany it means a well-wisher with whom to bargain in all South-African questions.

"If, on the other hand, German Southwest Africa were to become English, that would confirm the accuracy of the policy of Botha and Smuts, and their position and the power of the English party, whose tools they are, would be so greatly strengthened that even a German Central Africa would be imperiled. . . . The loss of German Southwest Africa would not only strengthen very considerably England's position in South Africa, but would also create from the outset a strong and dangerous enemy for the German possessions in the north."

It is noted in some quarters that while the German Government professes to be opposed to the "militarization" of Africa, the Berlin *Kreuzzeitung* is responsible for the following:

"Of necessity Germany will follow the example of her enemies in militarization. The natives of Kamerun and German East Africa are by no means inferior to the Senegalese or Kongo niggers in military qualities and efficiency. In Southwest Africa the Hereros, and especially the Hottentots, will supply splendid military material. In the military training of colored troops Germany will march at the head of all the nations. Our enemies will have to realize this quite clearly. And France will hardly be able in a future war to fill up her regiments with African reserves.

"Among the demands upon which Germany must insist in a victorious peace is the rounding off of her colonial territory in Africa. East Africa, Togo, and Southwest Africa will form the corner-stones of a united German Central Africa. A victorious Germany will be able to demand, as indemnity from England, France, Belgium, and Portugal those cessions of territory which she needs for the building up of her Central African colonial empire. German Africa, from the Atlantic to the Indian Ocean, must be our watchword. . . .

"A self-contained German Central Africa, equipped with a strong white and colored army, will never permit her neighbors to transfer a single man from Africa to the European theater of war. New Germany in Central Africa will not only be invincible, but will also permanently fetter the forces of her neighbors in Europe."

The London *Saturday Review* voices the opinion that British South Africa has "resolutely made up its mind not again to tolerate a German Africa on its frontiers," and the grounds for this, briefly, are that—

"The Germans have proved themselves impossible as neighbors. So far as the natives are concerned, South-Africans have had bitter experience, before and since the war, of the kind of sedition-mongering that the Germans have fostered among them, and of the depths to which these exponents of *Kultur* will descend on the chance of securing a political advantage. South Africa knows, too, the meaning of German militarism as applied to native races: how Germany has trained, and would continue to train, her black armies in the German tradition—the tradition that was responsible for the murderous horrors of the Herero war and other campaigns of brutal repression undertaken by Germany in Africa, no less than for the late tragedies in France and Belgium."

THE SUCCESS OF ALLIED PROPAGANDA

THE MIRAGE OF VICTORY has buoyed up the rank and file of the German people for four full years—the Kaiser, Hindenburg, the various Chancellors had all promised it to them "on their German honor"—yet by the middle of summer the average Hun had slowly begun to realize that this dazzling vision of victory was, after all, a mirage that retreated the more he prest on after it. This produced an obvious restlessness in the public mind which the series of unconcealable defeats inflicted by Marshal Foch has changed into

something very like panic. There is a veritable nostalgia for peace, and the papers are beginning to demand that the Government take the public into its confidence and tell them the truth. This in turn is reacting upon the leaders themselves, who are frightened at the evidence of public discontent. "The morale of the Germans must be stimulated," they cry and urge propaganda at home as a cure. Here are some significant extracts from an article in the Berlin *Vossische Zeitung* from the pen of Siegfried Heckscher, the head of the Hamburg-Amerika Line's publicity department and a member of the Reichstag. He writes:

"One may doubt whether speeches by statesmen and discussions in the Parliaments of the world bring peace nearer. But it is quite another question whether the German practise of silence in face of all the pronouncements of enemy statesmen can be borne any longer. Anybody who follows the effect of the Northcliffe propaganda in foreign countries and in Germany can have only one opinion—that this silence is equivalent to a failure of German statesmanship.

"With masterly skill every single speech of the English leaders is adapted not only to its effect in England, but also to its influencing of public opinion among the neutrals, and quite especially to its effect in Germany. Let people but listen in the country, and even at the front, and note the effect when the plain man has read the picturesque phrases, filled with an apparently genuine idealism, of a Lloyd George, a Balfour, an Asquith, or a Wilson, who has successfully imitated the well-proved methods of the English.

"Hundreds of thousands of Germans, when they have read a pronouncement by the President of the United States, ask themselves in despondency and bitterness what the German Government says; so there is formed a cloud of discontent and dull doubt, which, in great part, thanks to this Northcliffe propaganda, spreads itself more and more over the German people. Against this, of what use is it that the Supreme Command publishes its excellent commentaries on the official Army reports? Of what good is it that the Admiralty Staff adds its most skilful explanations to the report on the German submarine successes? And of what use is it that the Wolff Bureau appends a lifeless and sober remark to the English, American, and even the French ministerial speeches?

"We try to shut our country off from enemy espionage and from the work of agents and rascals, but with open eyes we leave it defenseless while a stream of poisonous speeches pours over our people.

"Now, it will not do for enemy pronouncements of any weight to be withheld from our people. But it is as necessary for our people as their daily bread that the English-American-French influence should be opposed by the German view, and that the

justice and the greatness of the German cause and of the German idea should be brought into the full, clear light of day. But defense is not sufficient. In attack also we must champion our cause before the forum of the civilized world, without any anxious pedantic fear of repetitions."

This tribute to the excellence of Allied propaganda is comforting, but better is to come. Mr. Heckscher assures us that our propaganda has penetrated so deeply into Germany that to

THE BOLSHEVIEK—"Of course, if you were Boches I would not kill you."
—*La Victoire* (Paris)

it is due Dr. von Kühlmann's "victory-by-the-sword-impossible" speech. He proceeds:

"My conviction of the penetrating effect of the Northcliffe propaganda goes so far that I declare Herr von Kühlmann would not have delivered his last unhappy speech if he had not unconsciously been subject to the emanations of the Northcliffe work."

"I repeat to-day what I have said for years, that Reuter and the English news propaganda are mightier than the English Fleet and more dangerous than the English Army. A people which looks back, as the German people does, on four years of war with such unparalleled achievements and successes has of a truth every right to look to its future with pride and confidence. Is this confidence to be artificially undermined by the refined cunning of the enemy, in league with the hopeless inactivity of German statesmanship? I am speaking only of propaganda, and do not want to deny that even the war has seen successful individual achievements on the part of the Wilhelmstrasse."

"Time presses. Just as the enemy has learned many things from us during the war, so we ought not to shrink from going to the enemy's school if his teachings and his methods have stood the test. So let us create a propaganda ministry—a ministry in which all the threads of German defensive and offensive propaganda will come together."

The semiofficial *Kölnische Zeitung* cries aloud for vengeance:

"As our good name has been stolen from us and made despicable throughout the world, one of our peace demands—as indispensably necessary as the guaranteeing of our national future—must be that our enemies publicly and officially confess that they have circulated nothing but lies and slanders. . . . We proclaim here and now before the whole world that the hour of reckoning for this contemptible agitation is coming."

The *Kölnische Volkszeitung* is strong on the need of propaganda at home. It writes:

"The greatest need of the moment is a campaign of enlightenment, organized by all the competent authorities, to hammer into German heads, if further sacrifices and exertions are required of us, that it is not the hobby of some dozens of people in Germany, nor German obstinacy, but the enemy's impulse to destruction that imposes them on the people at home and at the front."

"Dishonorable and stupid is the man who toys with the idea of a cowardly surrender of the exalted treasures which for four years we have successfully defended or who toys with still worse ideas, which our pen refuses to describe."

CANADA TO RUN HER OWN RAILWAYS

THE LARGEST RAILWAY PROPRIETOR in Canada with one exception is the Canadian People, and the day may come when there will be no exception, said Premier Borden in an address delivered at the Toronto National Exhibition. The country has embarked on a wide policy of state ownership under very favorable conditions, the Premier said further, and if the policy of state ownership is to be successful, certain conditions are essential and the people must resolutely support the Government in maintaining them. As a means toward profitable control, the *Toronto Globe* notes with satisfaction that all the lines owned by the Government are to be operated as one system and under one management. The Government has hitherto given the impression, we are told, that each of the state-owned roads would be separately operated with its own staff of officials and all the paraphernalia of an independent system, and the *Toronto* daily observes:

"The superfluity of offices and officials in the transportation services, especially as compared with the new order of things in the United States, is a reproach in these times, when waste and extravagance are crimes. It is reassuring to know that the Government has resolved to bring the public railways under a single administration. Apparently the reconstituted Canadian Northern board is to control the unified roads, an added reason why its personnel should represent railway experience and ability of the highest order."

"The acquisition of the Grand Trunk and Grand Trunk Pacific should be the next step, to be followed as soon as possible by the nationalization of the Canadian Pacific."

The state-owned railways of Canada comprise a system of about 14,000 miles, including the 10,000 miles of the Canadian Northern, the 1,941 miles of the Intercolonial, the Prince Edward Island, and other small railways, and the 1,811 miles of the National Transcontinental, and Premier Borden explained in his speech that

"The acquisition of the Canadian Northern Railway system was brought about by conditions arising out of the war, and, in my judgment, it was the wisest solution of existing difficulties. The system comprises about ten thousand miles of railway, of which more than 9,700 miles are in actual operation; and, including the \$10,000,000 to be paid for the capital stock, the total cost to the country will be between \$44,000 and \$45,000 per mile."

"The greater portion of the line runs through a country which must develop rapidly in the early future. For this reason its future prospects are more favorable than those of the Intercolonial or the Transcontinental."

"But if we take into account capitalization the comparison is still more favorable to the recently acquired system. The government system of railways, comprising the Intercolonial Railway, the Prince Edward Island railways, and other small railways in the maritime provinces, embraces a total of 1,941 miles, hitherto known as the Government System of Railways. It represents a capitalization of more than \$137,000,000, without including interest. That means a capitalization per mile of \$70,666."

"If, however, interest were included (as it has been included in the capitalization of the Canadian Northern system), the capitalization would exceed \$100,000 per mile. Comparison with the Grand Trunk Pacific is equally striking. It embraces a total of 1,748 miles. The total expenditure upon the road, equipment, and rolling-stock amounts to about \$180,000,000, or more than \$100,000 per mile."

"The Transcontinental Railway comprises 1,811 miles, from Moncton to Winnipeg. The actual cash paid out for its construction, without including a dollar for interest, is nearly \$164,000,000, and if interest is added the amount exceeds \$200,000,000 for 1,811 miles. This represents a capitalization of \$92,000 per mile if interest is omitted, and of more than \$112,000 per mile if interest is included. . . ."

"The total mileage owned by Canada is very large, comprising nearly 14,000 miles, and reaching from the Atlantic to the Pacific. All the lines included in this mileage should be operated as one system and under one management; this system should not be administered by a department of the Government; it should be connected, as soon as practicable, with

steamship-lines on both the Atlantic and the Pacific; and last, but not least, its operation should be kept absolutely free from party political interference."

WORSE ANARCHY DUE IN RUSSIA

AN INCREASE OF ANARCHY must ensue on the crumbling of the Bolshevik Government in Russia, because there is nobody ready to take its place; but meanwhile the Allied expeditionary forces act as centers of crystallization of the next stable Government, which almost certainly will be Socialist, according to a Russian correspondent of *The New Statesman* (London). The reason for this is that the greatest factor in Russian political life is the peasant, and the peasant has good reason for refusing to support any *bourgeois* Government or party. The peasant has helped himself to much land during the last year and destroyed a vast amount of landowners' property, we are told, and no party which dares to include compensation in its program will receive his support. What is more, the peasant is to be reckoned with very seriously in these days, for he has brought rifles and machine guns back with him from the front and has learned from experience that "the world does not come to an end when you shoot your former social superiors and that the village priest can not change you into a rabbit." It is possible that some one may attempt a monarchist restoration, but it is unlikely that it will succeed, for the "next Czars of Russia will be shot—early and often." *The New Statesman's* correspondent adds:

"The third phase of the Russian Revolution will be marked by plague, famine, and anarchy. From a military point of view, however, it will be more satisfactory than its predecessors. Before 1917 the Russian front was a simple thing. You could see it (if you were the German Army), and if you fired at it, it either withdrew or came out and chased you. The Russian front is now less tangible, but far deadlier. It mocks at the German troops, putting them at the disadvantage of men who are trying to fight shadows. Germany is in the position of a man who, knocking down the wall into his neighbor's garden, finds that he has let a swamp drain into his own."

Political history in Russia has been such a whirligig since the downfall of the Czar that one notes with interest the recollection that the first phase of the revolution was the period of Provisional Governments—"five of them—each more provisional than its predecessor." This phase lasted more than eight months, and the Bolsheviks were able to carry through their revolution because by the end of the Kerensky régime nobody quite knew what its intentions were with regard to the war and the land questions, and "nobody, consequently, thought it worth defending." The weakness of the Bolsheviks lay in their personnel, and it was a fatal weakness. The departments of State were crowded with ex-police officials, criminals, monarchists who came to work sabotage, and German agents. Our informant relates that—

"Dibenko, a sailor of bad character, who became First Lord of the Leninite Admiralty, bolted with the cash-box and a lady Commissioner of the People. The few just Bolsheviks who sincerely strove to elevate the life of their times were completely swamped by those unjust adherents who were satisfied with having the time of their lives."

"That the Bolsheviks should have been able, in these circumstances, to have a longer innings than the Provisional Governments is explicable on psychological rather than on physical grounds. Perhaps the simplest way of putting it is that the Russian Slav—particularly when uneducated—is generally a Bolshevik (or an Anarchist) at the bottom of his heart. He is still in that pseudo-childish state of development when sport is synonymous with smashing things up."

Such were the people who sold Russia to the Germans. Yet—
 boy With all their corruption, the fall of the Bolsheviks is not so rather inglorious. In spite of the fact that Trotzky com-
 rade lost his nerve at Brest-Litovsk, and has since behaved, sent as one can judge from his reported utterances, as if he is at

were completely under the thumb of Germany, it is clear that the Soviet Government might have gained a new lease of life by accepting the "protection" of the Central Powers. If the Bolsheviks had allowed the enemy to reorganize Russian industry in order to make the commercial clauses of the Brest Treaty effective, the Germans would have defended the Bolsheviks against all comers. It can not be too strongly insisted upon that these clauses represent the greater part of Germany's hopes of Russia. But the Bolsheviks, altho prepared to do almost anything for a quiet life, nevertheless laid considerable emphasis on the quietness. Germany could have anything she

THE END OF A CHAPTER.

MADAME BOLSHÉVİK:—Well, it has been grand while it lasted. Now the game is up, the only thing to do is to desert him as I betrayed Russia.
 —*Passing Show* (London)

liked, but Moscow and the other large towns must remain Russian and Bolshevik. If the Germans came and began reconstructing—well, Bolshevism might as well subside straight off into tame, constitutional monarchy. This, in substance, appears to have been the chief point at issue between Moscow and Berlin during the last few months."

Always with a view to a commercial exploitation of Russia, we are told, the Germans began months ago to seek elements of a more manageable government. The Social Revolutionaries were the obvious successors of the Bolsheviks, and by all the laws of gravitation and equilibrium they stood to gain by whatever the Bolsheviks lost, but—

"The Social Revolutionaries, apparently largely forsaking the differences which divided them into Right, Center, and Left, replied to the German suggestion by killing Mirbach and Eichhorn. The Mensheviks do not count nowadays. The Germans had to go outside the Socialist parties, and approached the Cadets. The Central Committee of the party was given to understand that it might appoint a government, so long as it accepted German protection. The majority of the party indignantly refused to accept the offer. Miliukoff, wearied by many months spent in hiding, impatient of the slowness of Allied intervention, furious with the Bolsheviks (the murderers of his best friends), a bitter opponent of the Soviet idea and of the Socialist parties in general, led the Cadet Minority. Here, according to him, was a mess to be cleared up, and only Germany could clear it up. By going over to the Germans, and by asking them for support against the Socialists, Miliukoff naturally has done much to bring the Socialists over to the Allied side."

SCIENCE - AND - INVENTION

FIGHTING THE "COOTIE"

GOVERNMENT SCIENTISTS of the Department of Agriculture, working under the Council of National Defense, are at work trying to find preventives and exterminators practicable for extensive use in Europe for the well-known "cooties" of our war-zone. The announcement is

MR. AND MRS. COOTIE (MUCH LARGER THAN LIFE)

made by the United States Department of Agriculture's *Weekly News Letter* in an article that gives first attention to a former Chicago official who "is cooperating, in a very personal and intimate degree, with entomologists of the Department" by serving as a host for "cooties":

"This man formerly served the city of Chicago in a public capacity. He has a son with the American Expeditionary Forces in France, and when he volunteered to be a subject in the experimental work of the entomologists he said he was willing to do anything that would help out the boys over there. Valuable data in regard to the control of the 'cootie' have been obtained from the parasites living on his body, and moving pictures of them have been taken through a microscope. The pictures are to be magnified and shown at army camps before scientists and army officers engaged in delousing work."

But the Chicago man is not the only volunteer entertainer for the pests that annoy, irritate, and spread trench-fever and other diseases among American soldiers. As we read:

"One of the scientists of the Bureau of Entomology also is serving as a host for the parasites, but in a more restricted sense. His 'cooties' are confined under the glass top of a wristlet, much like a wrist-watch, and they pass their existence, from the egg stage to the dead adult, on the skin of his arm, and can not move to any other spot. Through the glass cover the entomologist can watch the 'cooties' as they emerge from their shells and go through all the stages of their life cycle."

It required the war, according to *The Weekly News Letter*, to get for these pests as much attention "as scientists believe they deserve." The Department of Agriculture entomologists are "testing chemicals to learn their destructive action on lice, their effect on human bodies, and their penetration of clothing. Also, they are cooperating with army officers in testing laundering and delousing processes." True,

"The 'cootie' has not yet appeared in numbers at the camps in this country, but if it should do so military authorities expect to be ready to deal with it. Men serving for long periods in the trenches, or at other places where bathing and disinfecting facilities are not available, are the principal sufferers. Delousing stations, where thorough bathing, hair-clipping, and disinfection can be done, have been established in the war-zone."

POWDERED FUEL TO RELIEVE THE COAL SHORTAGE

RELIEF from the threatened coal shortage may be largely obtained by making use of the low-grade fuels hitherto regarded as too poor to burn; and these may be utilized to advantage by using them in pulverized form. This is, in effect, the conclusion reached by W. G. Wilcox in a paper read before the American Chemical Society (Western New York Section) and printed in *Chemical and Metallurgical Engineering* (New York). There are only three ways to combat fuel shortage, he says—stimulation of production and transportation, utilization of low-grade fuels, and increase in the efficiency of combustion. The use of powdered fuel, he points out, will meet the second and third of these requirements; for pulverizing the coal will so greatly increase efficiency in burning that fuel hitherto discarded may be made to fill all reasonable requirements. The efficiency of powdered coal is largely due, it appears, to the ability of the fireman to maintain at will the particular length of flame and type of combustion for which the design of his furnace is best suited. The saving in coal, Mr. Wilcox asserts, is 30 to 40 per cent. He says:

"The simplest way to regard the combustion of coal is that it is a reaction between solid fuel and oxygen. . . . The velocity of the reaction and its completeness will depend upon the surface exposed by the solid, the pressure of the reacting gas, and the intimacy of the mixture. By grinding an inch cube of coal so fine that 85 per cent. will pass a 200-mesh screen, we have increased the surface exposure from 6 square inches to approximately 1,800 square inches. We have, therefore, increased the velocity of combustion approximately three-hundredfold. By doing so we have immediately changed the characteristics of the fuel. We now have a fuel relatively three hundred times more active than the inch cube of coal, a new type of fuel which has in it inherent possibilities not met in lump or slack fuel. By increasing the surface exposure three-hundredfold, we have speeded up combus-

NOT A WRIST-WATCH.

But a cage of "cooties" under glass, worn by a self-sacrificing government scientist for experiment and observation.

tion proportionately. This carries with it a further effect. The increase in combustion velocity also increases the rapidity of heat evolution, and consequently quickly raises the temperature of the rest of the material. This temperature rise, which is much more rapid than in the normal combustion of coal, will double the velocity of combustion each rise of 10°C , with

increased velocity due to greater surface exposure and that due to temperature rise are superimposed on each other so that we have with pulverized fuel a combustion which is hundreds of times faster than when burning lump coal.

"Having a finely divided fuel, it is possible to form a mixture of fuel and air so intimate that each small particle of coal is surrounded by the proper amount of air. In this condition, by maintaining the proper velocity of the air-current, the fuel can be carried into the furnace in suspension and there burned completely, efficiently, and rapidly.

"It is of course a simple matter to control mechanically the amount of powdered coal delivered to the furnace in a given time. It is also quite possible to control the amount of air delivered with the coal. If, then, we deliver to the furnace an intimate mixture of air and powdered coal and have control of the amount of coal-dust and air delivered, we have the prime essentials for highest combustion efficiency. These are the possibilities in utilizing coal in powdered form. The degree to which they are attained depends entirely upon how carefully we study the characteristics of the fuel before and during combustion.

"The amount of coal-dust delivered to the furnace can be controlled simply and positively by using as a feeder a properly designed screw, operated at variable speeds. It is also a simple matter to control the volume of air admitted with the fuel. But the highest efficiency possible with this type of fuel will not be obtained unless we work out a correct way in which to mix a finely divided solid with air.

"A study of the methods for making such a mixture immediately shows that the methods commonly used in making uniform mixture of two miscible liquids or a uniform solution of a solid in a liquid, or the methods used in mixing finely ground solids, are not only useless in this case, but will actually separate the coal-dust from the air. Ordinary mixing is done by agitation. . . . Any mixing device along these lines must necessarily fail to give an intimate, perfect mixture."

Mr. Wilcox devotes much attention to recent improvements in mixing-devices, which are now made and operated, he says, on new principles, with such success that the rapidity of combustion in a furnace using powdered fuel may be perfectly controlled. He goes on to say:

"We have changed entirely the characteristics of coal as commonly known. Powdered coal is a fuel of extreme flexibility in that the amount burned can be varied within wide limits. It is a fuel which develops a flame the length of which can be adjusted. The character of the flame can be altered to suit the metallurgical operation. In short, the basic fuel, coal, has acquired the characteristics of oil or gas, but with better and closer control than in the case of oil or gas. Furthermore, the possibilities of this fuel are not only capable of realization, but are actually being utilized in commercial practice to-day. To the flame characteristics of a rich fuel, developing a flame like oil or gas, is added a degree of control not yet obtainable in burning either oil or gas. This statement is made advisedly. The possibilities of such combustion for the improvement of processes, for fuel economy, for increasing output, through its ease of control and elimination of heavy labor, are to-day realized by few. Due to the psychological attitude of labor and the scarcity of skilled operatives, it is far more difficult than ever before to secure high efficiency and good operation in hand-firing, stoker-firing, or in producers—in short, wherever such efficiency depends upon constant watchfulness and hot, heavy, disagreeable work. For these conditions powdered coal substitutes an ease of control such that the equipment can be handled by an old man or boy; while it is so simple that a man of ordinary intelligence can soon be taught all that is necessary for good efficiency in operation. The possibilities of such control in the place of present-day combustion methods is certain of great importance at the present time."

KEEPING TAB ON SLACKING TRUCKS

THE WORK A MAN DOES and the time he takes to do it sometimes show a sad discrepancy. Motor-trucks, too, have this regrettable failing. The foreman in charge of a gang can estimate the faithfulness of his men by results, but there is no device that will report to him their busy and lazy periods, *seriatim*. The owner of a motor-truck is now in a vastly better position for the boss. Using a recent device, described and illustrated in *The Scientific American* (New York), he can read off a record of the truck's daily performance and can tell whether it was busy or idle at any given

moment, and for how long. If the driver stops to refresh himself at a corner saloon and remains thirty minutes, the record reports the stoppage and the boss may infer the cause. Says the writer:

"The principle involved is the familiar one of side-sway in moving vehicles. It is a well-known fact that even a Pullman car traveling over a relatively smooth and straight stretch of track exhibits a certain amount of side-sway. In a trolley-car approaching along a straight track an almost regular lurching from side to side can be detected, amounting often to as much as three or four inches. In the motion of the motor-truck this side-sway is very pronounced, and is present no matter how smooth the road or how straight the line of travel. It is entirely distinct from vibration, and should not be confounded with the latter.

"This side-sway, then, tells us that a vehicle, whether motor-truck, horse-drawn wagon, locomotive, or even motor-cycle, is in travel motion; absence of side-sway indicates that the vehicle is standing. The problem suggested by this is then to make an instrument which will record side-sway and record when it occurs.

"The device pictured consists fundamentally of but two elements: a pendulum mass which will swing from side to side in response to this side sway of the moving vehicle, and a chart rotating at clock speed, upon which the pendulum can mark a record which indicates that side-sway, and hence travel, is going on. Of course, the absence of this record means that the vehicle is standing. The pendulum itself records its oscillations on the chart, by means of a stylus set in it near the point of suspension.

"An idea of the record which is made by this device may be obtained from the fragment of the circular dial pictured. To a person not acquainted with the truck or vehicle in question, a chart of this kind seems to present merely a succession of periods of running and standing time. But the truck superintendent or dispatcher knows in advance the work which the truck has had to do, and finds no difficulty in identifying the various trips and stops, and describing them as shown in the chart already referred to. The next and obvious step is to cut down those delays which are not warranted, and thus increase the running time of the truck to a maximum.

"While the commercial utility of this device is very apparent,

it is possible that, during the war, its military use may be even more important. Any one who is acquainted with military affairs knows that the average officer spends an important part of his time in making out reports of various kinds, giving a time-record of his activities during the day. Officers in charge of motor-vehicles are generally required to make reports covering the movements of those vehicles, with special reference to the exact periods of time in which the trucks, passenger-cars, motor-cycles, etc., are running and standing, when they started and stopped, and the total running and standing time for the day and night. To assemble this information by human means is laborious and often inaccurate. This recording device, on the other hand, gives all this information accurate to the minute, and not only relieves the officer of the burden of getting the data together, but enables him to render accurate and complete reports of his operations."

U. S. A. POTASH TO ROUT GERMANY'S

THAT ENOUGH POTASH to make us forever independent of Germany in this important particular may be obtained as a by-product of our present manufacture of Portland cement, and that our Government should encourage the cement men to put in plants for this purpose, or possibly take up this branch of industry itself in some way, are the theses of an open letter to President Wilson written by Richard H. Edmonds and printed in *The Manufacturers' Record* (Baltimore, August 29), of which he is the editor. Mr. Edmonds tells us that the cement industry is, in fact, the longed-for source of potash for which Government and private experts have been seeking for years. It has now been found, but not in a way that was expected. He goes on:

"We have not found any great bed of potash from which we can draw our supplies, but we have found that potash can be produced as a by-product in the manufacture of Portland cement, in the making of pig iron, and in a number of other industries. . . ."

"A few years ago a Portland-cement company in California found that it was feasible to save a considerable amount of potash as a by-product in the making of cement. A Maryland company sent experts to California, and their investigations were so satisfactory that this company spent \$100,000 in putting up a by-product potash plant. This has now been in operation for several years and has been so successful in making potash that a large number of other cement companies are preparing to establish by-product potash plants in connection with cement-making. It has also been proved that potash can be recovered as a by-product in the manufacture of pig iron."

"If every Portland-cement plant and every pig-iron furnace in the country could establish, in connection with their present plants, potash-recovery systems, we would be able to make ourselves entirely independent forever of Germany's potash. In doing this we would give new impetus to all the agricultural interests of the country and fundamentally stimulate the production of foodstuffs."

"In thus becoming absolutely independent of Germany's potash we would take from that country the power which it thinks it now holds to trade and barter in the final peace terms, with its potash as a dominant power."

"We would be able to make ourselves wholly independent, as I have said, of German potash and forever establish an industry which would increase in proportion as we increased our output of cement and iron. The establishment of this industry on so large a scale would at the same time stimulate the utilization of the waste materials in other industries for potash production."

"But there are difficulties in the way. A few days ago Secretary Lane, in a letter to Congressman Kitchin, pointed out that one cement plant which had expected to spend \$100,000 on the establishment of a potash by-product system had been unable to do so because the proposed income-tax bill would make the margin of safety too narrow to justify the investment of new capital. Mr. Lane very strongly urged that in the creation of new industries of this kind they should be free from

heavy taxation on profits until their net profits enabled them to amortize their capital thus invested. The suggestion is certainly a wise one."

"It can hardly be expected that new capital will go into enterprises of this kind, taking the chances of the uncertainties of after-war conditions, unless there is some assurance that the capital thus invested can be amortized before heavy taxation is laid upon its earnings, or unless assurance can be given that industries such, for instance, as that of potash will after the war be protected against the inroads which Germany would seek to make by breaking down the market for American potash."

"It is possible to bring about the development of a potash industry which would make us entirely independent of German potash, and thus take from Germany the club which it now holds over the agricultural world in the possession of vast potash resources. The matter is one of such tremendous moment, involving our agricultural independence, our freedom from any power of the German potash monopoly, and our ability to make peace terms without for a moment having to consider German potash, that I feel justified in bringing this matter directly to your attention in this way."

"If assurance could be given by you to all of the Portland-cement makers and to the iron-producers of the country that the establishment of by-product potash plants would have the heartiest encouragement by the Administration and would be

regarded as vitally important to the United States now and hereafter, I am sure you would be rendering a service of inestimable value to all civilization."

"It is quite possible that the Government itself should take hold of this potash development, and on some satisfactory basis establish by-product plants at all the Portland-cement plants and all the iron furnaces, or at least at every furnace where the test of the raw materials shows

that potash can be recovered as a by-product. In the aggregate, an immense amount of capital would be involved, but the Government could well afford to cooperate with individual concerns in establishing such plants on a basis which would be fair to the Government, fair to the owners of existing plants, and which would give to the farmers of America an abundant supply of potash and forever protect them and this country from the power of the German potash industry."

"GERMAN DEVICE" ON OUR CHEMICAL SERVICE UNIFORMS

GERMAN SYMBOLS ON AMERICAN UNIFORMS—The collar insignia for the Chemical Service Section of the National Army consists of two retorts and a graphic structure known as the "benzol ring," a hexagonal device proposed by Kekule, a German chemist, to represent the structural relationship of the atoms forming the benzin molecule, and to account for the chemical properties and reactions of benzin. In a letter to *The Manufacturers' Record* (Baltimore, September 5), Prof. Townes R. Leigh, of Georgetown College, Kentucky, protests against the use of what he considers a German device upon the collar insignia of our soldiers of chemistry. He says, among other things:

"The structure which the German, Kekule, assigned to benzin does not account for all of the reactions and properties of that compound. . . . There are upward of twenty structures for benzin, and I would not object to any one of them being used, even if it did not account for all of the reactions, if it were not the one proposed by a German chemist."

"To my mind it would be a distinct travesty upon our patriotism for some of our soldiers of chemistry to fall into the hands of the Huns and let the latter see upon the insignia of the former the well-known German device."

"Now, for the newly organized Chemical Warfare Service, with which the Chemical Service Section has been merged, it has been proposed to adopt the insignia of the latter. This must not be done. American chemists have too much to their credit and we despise the mental attitude of the German too much to allow a German device to be impressed upon our insignia. Let us use something American and something worth while."

AMERICAN MACHINERY FOR RUSSIA

AGRICULTURAL TOOLS AND MACHINES are needed in Russia to prevent the most terrible famine in history, which she is now facing, according to Sterling H. Bunnell, a New York engineer, who writes on the subject in *The American Machinist* (New York). To manufacturers of machinery no country offers such opportunities as are now presented by Russia. Besides her need of it for agricultural purposes, she has even now immense quantities of raw material without the equipment to manufacture them. Are we to leave these opportunities for Germany to exploit? She has already begun; and after the war, if the field is left open to her, she will control Russia industrially, whatever treaties may say about political organization and administration. Mr. Bunnell writes:

"Russia is in desperate need of supplies for the civilian population. The necessities begin with clothes and boots and continue with farm and trade tools, mining equipment, railway locomotives and cars, machine tools and every kind of industrial and factory machinery. The quantities required to refit the population of 170,000,000 will tax our utmost production for several years to come. These things can not be supplied by the Germans until the pressure of war is removed. But if in the interval before our final victory we should refuse to the Russians the supplies which the Germans profess to be ready to furnish, we should find at the close of the war a pro-German sentiment in Russia so strong as to make Russia nothing but a huge extension of Germany, in spite of any power we may then possess to dictate forms of government or annul German-Russian treaties. We might win the war and yet leave the world absolutely powerless to resist German commercial domination supported by Russian coal, oil, metals, and agriculture.

"We hear and think much about the importance of export trade and the profit it brings to a nation. The greatest opportunity ever offered is now *waiving* for us. Russia possesses even now immense quantities of raw material without the equipment to manufacture them. These materials, comprising hides, flax, bristles, furs, minerals, and agricultural products, are at present in the hands of individuals and corporative societies wanting to sell them and buy manufactured goods from abroad. The shortage of these raw materials is acute, and it only needs that working arrangements be made between financial groups in Russia and America in order that these materials may be shipped here and sold for dollars in our markets, and those dollars used to purchase the machinery and supplies needed in Russia. The Russian materials are to be delivered by their owners at seaports, consigned to an American agent. The American machinery and supplies are to be bought with the money received from selling the Russian materials here. The details of the plan are being worked out by those interested, in connection with representatives of machinery and other houses concerned in sales to Russia. Care will of course be taken to ship goods only to such parts of Russia as are able to maintain their rights in their purchases and keep them out of German hands and free of military seizure.

"To manufacturers of machinery no country in the world presents such enormous opportunities as the lands of the former Russian Empire. Under the Imperial Government it was the policy of the ruling class to trade with foreign countries for the major part of the manufactured goods required and pay in grain raised by cheap labor at small cost. The trade was profitable, and the leaders therefore saw no object in improving their own country by education and the introduction of better methods of work. Germany was situated in a position to take full advantage of the opportunity. Most of the machinery bought by Russia came from Germany. Not all, however, was made in Germany; large numbers of American-made machines were bought by German firms and supplied with German trade-marks in place of the American names. In many cases when such machines sold well in Russia they were copied in Germany by the German selling agents, who continued to buy a few in America so as to keep the original manufacturers from suspecting that their trade was being stolen. The Russians are, there-

fore, not unfamiliar with American machine tools and manufacturing equipment, tho they suppose much of it to be German.

"While Russian industries are largely undeveloped, and meager and primitive equipment is common, a good deal of the introduction work has already been done, and many proprietors and managers of factories have decided to install modern machinery as soon as they can get it. As these plans are carried out, the newly equipped industries will naturally follow the practices of the nations making machinery. We and our Allies must not allow the industries of nearly two hundred million people to be dominated by Germany and directed toward the support of a mighty German-Austrian-Russian empire in that 'next war' which the Prussian leaders openly plan and discuss to-day."

A GRENADE-TESTER—An exhaustive test of grenades, says Rudolf C. Lang in *The American Machinist* (New York), must be made before adopting any specific type, and even after one has been passed on it is tried from time to time to insure a uniform product. He goes on:

"The usual procedure in testing these grenades is first for penetration; secondly, for distribution of fragments, and last, if both the former warrant further investigation, the jolt test.

"The figure shows one of the chambers used at the Bethlehem Steel Corporation for testing grenades. It is a steel chamber approximately 10 feet square, 15 feet high, with wall 12 inches thick and a square opening on top used as a vent for the gases that have been developed. A narrow door opening from a short passageway leading from the chamber completes the entire structure, which is anchored on a heavy reinforced concrete foundation; covering the entire interior is a layer of heavy coarse wood, over which are placed large sheets of paper. These sheets are renewed after each test, as the following will explain. The reason for all these is to ascertain the true fraction, both as to the number of pieces or slugs as well as their

STEEL ROOM FOR TESTING GRENADES.
It is 10 feet square and 15 feet high.

scattering effect. The penetration is then clearly seen in the wooden lining, which also prevents the pieces, or slugs, from rebounding through the paper, on which the scattering effect is clearly shown. When the grenades have thus far proved satisfactory they are submitted to a jolt test, which is nothing more than putting a few of them in a box to which is fastened at one end a long pole. The examiner then places himself behind a barricade and grasps the other end of the pole which passes through a small aperture of the barricade. He then shakes the box vigorously, subjecting the grenades to a severe jolting not only against the wood, but also against one another. When he has shaken them in this manner about a dozen times they are then passed as safe for delivery."

MAKING OUR OWN CASTOR-OIL—The scarcity of castor-oil, which for a time threatened to block our airplane program and also the production of important leather substitutes, has been successfully overcome, according to a recent government announcement. Says a press bulletin of the Du Pont Company:

"When the insufficiency of the castor-oil supply became apparent, 6,000 tons of castor-beans were imported and planted last spring in sections of eight Southern States, California, Cuba, Haiti, and Santo Domingo on government contracts. The result has been exceedingly gratifying, as the crop to be harvested next month will net more than 2,000,000 gallons of first-grade oil. This amount added to the supply on hand will fill all industrial and medicinal needs for a year. Castor-oil is an essential factor in the building of airplanes equipped with rotary motors. Hundreds of such machines are on the building schedule and motors of this type must have castor-oil for a lubricant. Thousands of gallons of castor-oil are used yearly in the making of leather substitutes of the pyroxylin-coated type, which, since the outbreak of the war, have performed invaluable service in releasing leather for the country's vital military requirements. The success of the experiment of planting castor-beans in this country adds another paying crop to the list in the sections named and, in all probability, in adjoining areas. It also relieves the United States of the necessity of depending on imports for its supply of castor-oil."

COL. ROOSEVELT ON SOLDIERLY LIFE AND DEATH

BESIDES DYING FOR HIS COUNTRY, Lieut. Quentin Roosevelt may be said to have left an imperishable message, for so is the interpretation placed upon the editorial written by Colonel Roosevelt, his father, in the October *Metropolitan*. As a purely literary expression the Colonel has

high happiness of family life, who dare not beget and bear and rear the life that is to last when they are in their graves, have broken the chain of creation, and have shown that they are unfit for companionship with the souls ready for the Great Adventure.

"The wife of a fighting soldier at the front recently wrote as follows to the mother of a gallant boy, who at the front had fought in high air like an eagle, and, like an eagle, fighting had died: 'I write these few lines—not of condolence, for who would dare to pity you?—but of deepest sympathy to you and yours as you stand in the shadow which is the earthly side of those clouds of glory in which your son's life has just passed. Many will envy you that when the call to sacrifice came you were not found among the paupers to whom no gift of life worth offering had been entrusted. They are the ones to be pitied, not we whose dearest are jeopardizing their lives unto the death in the high places of the field. I hope my two sons will live as worthily and die as greatly as yours.'

"There spoke one dauntless soul to another! America is safe while her daughters are of this kind; for their lovers and their sons can not fail as long as beside the hearthstones stand such wives and mothers. And we have many, many such women; and their men are like unto them.

"No nation can be great unless its sons and daughters have in them the quality to rise level to the needs of heroic days. No army was ever great unless its soldiers possess the fighting edge. So likewise the citizenship of any country is worthless unless in a crisis it shows the

spirit of the two million Americans who in this mighty war have eagerly come forward to serve under the banner of the Stars, aloft and ashore, and of the other millions who would now be beside them overseas if the chance had been given them; and yet such spirit will in the long run avail nothing unless in the years of peace the average man and average woman of the duty-performing type realize that the highest of all duties, the one essential duty, is the duty of perpetuating the family life, based on the mutual love and respect of the one man and the one woman and on their purpose to rear the healthy and fine-souled children whose coming into life means that the family, and therefore the nation, shall continue in life and shall not end in a sterile death."

With the implicit duty to die for country which accompanies all citizenship, the Colonel rates the other duty to provide the men upon whom the burden is laid. And here again he reverts to his often-preached doctrine of the family:

"Unless men are willing to fight and die for great ideals, including love of country, ideals will vanish, and the world will become one huge sty of materialism. And unless the women of ideals bring forth the men who are ready thus to live and die, the world of the future will be filled by the spawn of the unfit. Alone of human beings the good and wise mother stands on a plane of equal honor with the bravest soldier, for she has gladly gone down to the brink of the chasm of darkness to bring back the children in whose hap rests the future of the years. But the

HERE RESTS ON THE FIELD OF HONOR,
1st LIEUT. QUENTIN ROOSEVELT,
AIR SERVICE.

This grave here shown has been rediscovered by Americans, and will be so guarded, until the end of the war.

perhaps rarely risen higher, and so, in a literary sense, too, his effort, as the content of his message, is "The Great Adventure." "Only these are fit to live," he writes, "who do not fear to die; and none are fit to die who have shrunk from the joy of life and the duty of life." His words are not only an interpretation of the soul of the soldier, but they are a revelation of the hearts of those who are making an equal sacrifice in seeing their best-beloved go to fight and perhaps to die, and take the sacrifice as a part of the proof of the fitness to live. The Colonel proceeds:

"Both life and death are parts of the same Great Adventure. Never yet was worthy adventure worthily carried through by the man who put his personal safety first. Never yet was a country worth living in unless its sons and daughters were of that stern stuff which bade them die for it at need; and never yet was a country worth dying for unless its sons and daughters thought of life not as something concerned only with the selfish evanescence of the individual, but as a link in the great chain of creation and causation, so that each person is seen in his true relations as an essential part of the whole, whose life must be made to serve the larger and continuing life of the whole. Therefore it is that the man who is not willing to die, and the woman who is not willing to send her man to die, in a war for a great cause, are not worthy to live. Therefore it is that the man and woman who in peace time fear or ignore the primary and vital duties and the

mother, and far more the father, who flinch from the vital task earn the scorn visited on the soldier who flinches in battle. And the nation should by action mark its attitude alike toward the fighter in war and toward the child-bearer in peace and war. The vital need of the nation is that its men and women of the future shall be the sons and daughters of the soldiers of the present. Excuse no man from going to war because he is married, but put all unmarried men above a fixt age at the hardest and most dangerous tasks, and provide amply for the children of soldiers, so as to give their wives the assurance of material safety.

"In such a matter one can only speak in general terms. At this moment there are hundreds of thousands of gallant men eating out their hearts because the privilege of facing death in battle is denied them. So there are innumerable women and men whose undeserved misfortune it is that they have no children, or but one child. These soldiers, denied the perilous honor they seek, these men and women, heart-hungry for the children of their longing dreams, are as worthy of honor as the men who are warriors in fact, as the women whose children are of flesh and blood. If the only son who is killed at the front has no brother because his parents coldly dreaded to play their part in the Great Adventure of Life, then our sorrow is not for them, but solely for the son who himself dared the Great Adventure of Death. If, however, he is the only son because the Unseen Powers denied others to the love of his father and mother, then we mourn doubly with them because their darling went up to the sword of Azrael, because he drank the dark drink proffered by the Death Angel.

"In America to-day all our people are summoned to service and sacrifice. Pride is the portion only of those who know bitter sorrow or the foreboding of bitter sorrow. But all of us who give service and stand ready for sacrifice are the torch-bearers. We run with the torches until we fall, content if we can then pass them to the hands of other runners. The torches whose flame is brightest are borne by the gallant men at the front and by the gallant women whose husbands and lovers, whose sons and brothers are at the front. These men are high of soul as they face their fate on the shell-shattered earth or in the skies above or in the waters beneath; and no less high of soul are the women with torn hearts and shining eyes, the girls whose boy lovers have been struck down in their golden morning, and the mothers and wives to whom word has been brought that henceforth they must walk in the shadow."

HISTORY IN THE MAKING—Nothing will be left to the chance recollections of capricious memories for the records of this war. While history is making, it is also being recorded, as this London dispatch to the *New York Times* shows:

"It was Canada which first set the example of how to glean history from the débris of the battle-field. . . . Photography, sketching, and painting have a big share in the task of recording the war, France having set an example for pictorial efficiency with its *Mission des Beaux-Arts*.

"Up and down the front among the battalions go special officers, giving instructions to battalion headquarters how to write their official war-diaries, which are supposed to be accurate chronicles of the doings of the battalion month by month. If a big event occurs the battalions concerned chronicle their part in it, the narrative being signed by the commanding officer. Then the diaries are sent to headquarters, where they are filed, tabulated, and preserved by the historical section."

A LEGAL STATUS FOR POETS

PERSONS WRITING POETRY, fiction, and advertisements are officially classified as engaged in "essential industries." Hence their dreams are not to be disturbed by the "work or fight" rules. The *New York Tribune* looks to the paragrapher to breed "many a merry quip"; yet it finds a settled satisfaction in the fact that "for once the official definition agrees with critical judgment." And it defends the point steadfastly. It might be left for literary historians to determine whether poets were given a legal status before. Other points have been freely debated:

"Much ink has been wasted in debating whether war is a

AS THE GERMANS LEFT THE GRAVE.

When the tide of war fell back from the Marne, these tributes to a fallen adversary were left. Some of the remnants of the machine in which Quentin Roosevelt met his death were strewn on the grave.

stimulus to poetry, whether it inspires great poetry. It is often hard in these cases to trace cause and effect. Yet it is plain that an epoch characterized by an awakening of national consciousness feeds the imagination. Thus the Great Armada preceded and in some sense was responsible for the great Elizabethans. But we need not consider the matter too curiously. 'Tis verse that gives immortal youth to mortal maids' and to many other mortal things besides. Whether the poets themselves live in war-time or peace time, they write much of war.

"Whether the present conflict will produce a 'Battle of Agincourt' or even a 'Battle of the Baltic' (we can hardly expect an 'Iliad') is a question that only the future can answer. But it has already produced some excellent verse. In fact, without attempting to say how large a part of this crosses the intangible and often imaginary line between verse and poetry, it must be admitted that many even of the fugitive contributions of this sort to the newspapers reach a high degree of merit. In sincerity of feeling, in felicity of construction, in beauty of expression, these utterances of poets known and unknown reveal a widely diffused talent, if no transcendent genius. And it is to be said that even where technical skill has been lacking the reality of the emotion behind the words has had a very genuine effect in uplifting the hearts or stiffening the courage of thousands of readers.

"Nor is this all. The craftsmen in this essential industry have not asked for exemption from the burdens of the time. Some of the best of this poetry of war has come from camp and field. Such brave examples of youth ready to sacrifice all

as Rupert Brooke and Joyce Kilmer are easily paralleled among other poets in khaki, living and dead. A recent English anthology of verse written by soldiers contains much that reaches an extraordinarily high level. Indeed, the poet, by very reason of his imagination, is the least apt of men to linger behind when duty calls. No slackers surely will be added to the list because poetry is an essential industry with claims of consideration to correspond."

POETRY THAT IS LIVED

THE POET SEES ONLY POETRY. Rupert Brooke is quoted as saying that there were three things in life worth living for. "One was to read poetry; the second was to write poetry; the third was to live poetry." A confirmation of this absorption of the poet is found by the London

May we not say that this flight to Vienna, this hovering over the city, this rain, not of explosive bombs, but of white leaflets, gently fluttering down through the blue mist, was one of the supreme flourishes of the war? For a parallel let us go to d'Annunzio's own record. He flew over Trieste just three years ago. Then also he carried leaflets. 'Courage, my brothers,' they began; 'courage and constancy! . . . The Italian flag will be placed on the arsenal and the Col San Giusto. The end of your grievances is near, and joy is imminent.' Not so imminent as the poet thought, but the day will come even yet. And he carried with him leaflets on yet another occasion. That was early in the present year, when three motor-launches and three seaplanes forced their way into the narrow Bay of Buccari, torpedoed a ship at anchor, and left floating on the water three bottles, flaming with the gay colors of Italy. The bottles contained a message: 'The Italian Navy laughs at every kind of net and barricade, and is always ready to dare the impossible. With

them has come as companion one whom you well know, your principal enemy and the most bitter; to laugh at the price you have placed on his head—Gabriele d'Annunzio.' Again the unmistakable flourish, the true sign-manual of the temperamentalist who lives for his emotions and for the sense of living, and asks that every moment shall be fully charged with consciousness. Contrast the British affair of the Mole at Zeebrugge! The British way is to underline the wordless message with a parting shot; but the Italian flourish has a picturesque favor of its own.

Moreover, they tell stories in Italy of d'Annunzio's exploits in the field at the beginning of the war, when he sought death and found it not as a junior officer with his regiment, Infantryman, motor-boat passenger, indomitable flier—there is a superb record for a luxury-loving poet, who, when the war broke out, had passed his fiftieth birthday. D'Annunzio is now fifty-four years of age, and he said to a friend the other day: 'Every time I go off on an expedition I hope it will be my last. That is the reason of my fearlessness. The finest end I wish for is to die for my country.'

The Telegraph is made happy by the reflection that men who dare to speak out their inmost thoughts like that are often denied the boon they crave. It sees the poet's mission in behalf of his countrymen still unfinished:

"D'Annunzio will surely find that he has a message for his countrymen after the war as well worth saying and hearing as when Italy's decision still hung in the balance. It is probably true to say that the burning words which he addressed to his countrymen and countrywomen during those critical days wielded a far more profound influence in Italy than the words of any of her statesmen. A poet in Italy may still be a true maker. There must be many in this country who remember the lyrical frenzy with which he denounced the historic crimes of Austria against Italy at the Garibaldi celebrations at Genoa, and the wild excitement which they created throughout the length and breadth of the Peninsula. And ever since that hour it has been d'Annunzio's high mission to be an example of daring and contempt of death, to keep bright the vision of the Greater Italy in the eyes of those of his countrymen who may have been tempted to despondency by hope long deferred and by unlooked-for misfortunes. To the Italian nation throughout the war d'Annunzio has been a perpetual inspiration. True, he is still looked askance at in certain quarters. Some of his novels figure, we believe, on the 'Index'—but there is brave company even there. Moralists used to shake their heads over much of his work, and, to be quite frank, they could often make out a good case for some of their objections. D'Annunzio was once

VIENNA PHOTOGRAPHED FROM D'ANNUNZIO'S PLANE.

The building marked A is the Ministry of War; B, the Church of St. Peter. In the upper right hand corner are seen the fluttering leaflets bearing the poet's message to earth.

Daily Telegraph in the case of Capt. Gabriele d'Annunzio. His flight over Vienna was noted with American comment in our issue of August 31, and the message he dropt from the skies was given in a translation from *Il Progresso Italo-Americano* (New York). The London *Telegraph* hails d'Annunzio's exploit as "Brooke's phrase translated into action—poetic action—a true theme for an exultant outburst of lyrical song." The mere triumph over nature—"seven hundred miles, with two crossings of the snowy Alps and the head of the stormy Adriatic"—is achievement enough, remarks the astonished writer; but "it is the airman himself and the idea of the exploit, and its perfect finish and artistry, which raise it to its peculiar pinnacle." We read:

"Others went with him and shared the dangers. But it is to d'Annunzio's name that the legend will be attached; the feat will be his for all time. It is a great thing for a poet to have personality; it is a great thing also for a poet with personality to belong to a nation like the Italian, which adores temperament, enthusiasm, and what to our more phlegmatic race seems sheer theatricality. D'Annunzio is a master of the ground flourish.

classed among the Decadents! At least he has outlived that temporary phase. There is nothing suggestive of Decadence in a flight to and from Vienna through seven hundred miles of air. The critics have said of him that he is supreme in his art, but along the lower levels; that his genius does not carry him to the holy places and to the sanctuaries of life; that he is an idealist only of what is seen and heard. But they grant him a magical style, an irresistible eloquence, a wondrous color, and a flaming passion, and since Italy entered the war he has placed all these gifts unreservedly at the service of the land which is still a great mother of men. What our stolid British authorities would have done with a d'Annunzio, if one had happened to be born among us, we do not know. Nor will we speculate. But happy Italy! whose supreme living master of the spoken word is permitted to 'live poetry,' as d'Annunzio has been living it, and to thrill with glorious bursts of patriotic song other nations than his own."

GERMAN WAR-SLANG

IT IS SAID THAT GERMANS listening in on the lines of the American forces in some sectors would think that the Americans were an army of lunatics, granting that the eavesdroppers had only a knowledge of straight English. The language overheard is a deliberate fabrication and makes sheer nonsense without the key. It is intended to lead "Heinie" astray. This is not, of course, the language of slang, which grows up spontaneously and is full of imaginative color. The German, too, has also evolved a language since the war began, and a scrutiny of the new words gives an interesting insight into the psychology of the inventors. The largest collection of these words has been made by a Frenchman, Mr. René Delecourt, interpreter of the first class and regional interpreter of the eleventh region. His accumulations, made from prisoners and from war-time newspapers and books, is published in Paris under a title which may be translated as "Expressions of German and Austrian Slang." Some weeks ago we gave in this department some specimens of "gun slang"; but from the new work Mr. Solomon Eagle has gleaned for *The New Statesman* (London) many curious terms in this and in other fields. The book, we are told, divides its subject matter into (1) French Slang, (2) Prewar Barrack Slang, (3) Student Slang, (4) Popular Expressions of Berlin and Alsace, (5) Expressions from Prisoners of War Depots. Mr. Eagle says:

"We begin, for instance, with surnames for various branches of the service. The *chasseur* is 'der Quak-Quak'; telephonists are 'Bruder von der Quasselstrippe' (chatter-line); automobilists are 'Stinksacke' and 'Benzinhusaren.' Engineers are called, among other things, 'Stinktiere,' 'Stachelschweine,' and 'Erdmännchen'; the gunners are 'die Bummsköpfe.' There is a special name for Landsturmiers with many children: 'Armeo-lieferanten' (army contractors), and for men in the clothing office there is the cumbersome title of 'Nähmaschinen gewehr-abteilung.' Among equipment slang is 'der Maulkorb' (jaw-basket) for the gas-mask, and 'die Gewittertulpe' (storm-tulip) for the steel helmet; and the numerous nicknames for superior officers include 'der Kommissjesus' for chaplain and 'Lieber Gott' for lieutenant. The Iron Cross is 'das Vereinabzeichen.'

"The *Zeppelin* is known as 'England's Schrecken' (England's Terror). Entente airmen are 'die Habichte' (the hawks), and an airman who comes regularly over the German lines is 'der Stammgast' and 'der Abonnent' (the regular subscriber). . . . Where our men use words like 'crump' and 'Jack Johnson,' the Germans speak of 'schwarze Biester,' 'schwarze Säue,' and 'Marmeladeneimer.' For shrapnel the Germans use 'Tsching-bum'; and they have onomatopoeic words in great plenty for every sort of missile, starting, in flight, and landing. Our own modern 'whiz-bang' and older 'pompom' are put in the shade by 'Ratsche-bum,' 'Huhle-huhle,' and others. Our 'Archie' is known as a 'Wau-Wau'; and 'die Bulldogge,' surprisingly, is nothing English, but an Italian gun in southern Tyrol. The many names for a machine gun include 'alte Weibergosehe' (gossiping hag), 'Totenorgel' (death-organ), 'Mähmaschine' (mowing-machine), 'Fleischhackmaschine,' and 'Kaffeemühle' (coffee-mill), a list which illustrates both German romanticism and German realism. A dugout is 'Heldenkeller'

—hero-cellar. To die is 'Krepieren.' The veterinary surgeon is 'der Pferdeschlächter,' and a man who reports himself sick has the extremely epigrammatic title of 'der Aspirinaspirant.'

Heinie, we are told, has slang names for every sort of troops:

"The English soldier is 'Tommy' and 'the footballindian,' which is pretty clumsy. The Russian is known as Ivan and 'the running association'; the French are, among other things, the Ohlalas (derived from the cries of their wounded), the Wulewuls and the Parlewuls, which last is a traditional English name for them. The German soldier's descriptions of his food draw freely on words like 'shrapnel' and 'granite'; he calls a

THE ROYAL PALACE AT VIENNA.

On which d'Annunzio could as easily have dropped a bomb as his leaflets. This view was taken during the flight.

potato a 'field-gray.' (In several of these phrases about food the word 'napf' appears, which is the German version of 'napoo,' both English and Germans having collared the same French term.) A cigar is a 'gas-bomb,' and cigarettes are 'Spreitzen' and 'Stäbechen.'

"For our own 'arm-chair strategist' the Germans have 'beer-table strategist'; they would. Their soldiers have transformed some French place-names. As ours speak of Wipers and Plugstreet, so theirs speak of Genua (Quesnoy), Neuschrapnell (Neufchâtel), and Bärenschiss (Pérenchis). The chalky positions on the Western Front are called 'white-works.' The cavalry call the infantry 'Hurrahkanaille,' another name for the infantry being 'Kilometerschwein.' The infantry retort with 'Flying Dutchmen.' Companies of small men (the analogy is to our own 1914 bantam battalions) are called 'Fummelkork'; also 'Brotbeutelhupser.' Galicia is called Galilee on account of the number of Jews there. To shirk is 'sieh aalen.' Naval officers are called—this is queer—'die Nelsons'; and, according to Mr. Delecourt, if a German soldier wants to say 'you won't come it over me with your airs,' he says (or did in the barracks before the war) 'du militärisches Kulturschwein.' This phrase might have been concocted by an Englishman knowing no other German words than those, and sounds too good to be true. For the rest I observe that no other two syllables occur as long like so frequently as 'stink' and 'schwein.'"

RELIGION-AND-SOCIAL-SERVICE

THE KIND OF RELIGION THE SOLDIERS WANT

OUR FIGHTING MEN are keen to talk about religion, says a chaplain who has seen service with them; but they want the real kind of talk. "You can not fool the boys with pulpit camouflage," he avers, and backs this up by the statement that boys will leave a "hut" in flocks if they are

unmanly actions which bring defeat, and praise the practical and virile virtues. As one chaplain writes: "I believe nearly all live partly by faith in a good God. I have never found men afraid to die, even tho they were afraid before battle. As to the standards by which they live, I should say they are the sanctions of group morality. They have very lax ideas about drunkenness

and sexual irregularity, but they have very strict ideas about the sacredness of social obligations within the groups to which they belong. I would mention sheer fear of public opinion as one of the great weaknesses of the men. They would rather be in the fashion than be right. And most of them have been hardened—the not necessarily in a bad sense."

A letter from a son to his mother published in the *New York Sun* may give some insight into the religious status of this majority. The writer is obviously of the Catholic faith:

DEAR MOTHER: FRANCE.
Just back from the front line after ten days of it, and must say that I believe that only the prayers that have been said for my benefit are responsible for my coming out safe and sound. I was just missed by a hair by no less than a score of bullets, and a grenade broke a foot away from me and wounded a couple of men farther away than myself, but we succeeded in breaking up a raid without losing any of our men. I learned that ducking was useless, and now can keep my head up and let them whiz by as fast as they like, all the while saying that the enemy could not hit the side of a house from fifty yards away. . . .

"From the time night falls until dawn there's no telling what pain or blaze of death is waiting for those who tensely watch and listen; and if ever prayers were said with fervor and sincerity, those that I said just before going on watch at night and those at daybreak in thanksgiving for having been spared my life surely were. God was with me all right, and I seemed to know it, for I was not overawed or very nervous at any time and was confident I had been endowed with the courage and cool-headedness necessary to get me through safely.

"I will drop a line to Fr. G. and tell him how much his prayers are appreciated.

"Your signature was as steady as ever. Well, that's the way to keep it, for what's the use of grieving for one far away but who is beside you in spirit all the time, acting upon what seems to be your good judgment.

"Tell the boys I'm the same guy as ever, but a lot tougher than my letters show, and I could put a German to sleep for keeps for just showing himself, and any further promotion I get will be for what I did under fire.

"With best wishes for good health and luck to all, I am your loving
"Son."

The revelations that clergymen and camp-workers are getting of the boys is regarded by the *Minneapolis Journal* as a "rediscovery of religion." And this rediscovery carries the hint to

Copyrighted by Eastman & Eastman, New York.

LOOT OF FRENCH CHURCHES.

Altar candlesticks, crucifixes, and bells removed by Germans and assembled near Oulchy-le-Château for shipment into Germany to be melted down for munitions. The hasty retreat frustrated this purpose.

not given the real thing. From such and other signs, writers on the religious status of the soldier come to conclusions of a various nature. Religious papers are hesitant about granting too much to appearances. Mr. G. Sherwood Eddy, writing in *The Christian Work* (New York), thinks that "one-tenth of the total number in the Army would probably be out-and-out Christians, strengthened by the severe discipline of war and living under distinctly Christian standards." He also finds that the "rotters," the men who "set the evil standards of the camp and whose conduct is almost altogether selfish and materialistic," number also about one-tenth. Between these two extremes are the great majority whom he finds it difficult to classify. He adds that if these men are not saved, they are at least salvable, and he thus appraises their "moral standards."

"They are not definitely Christian. Rather, they have a military, material standard of the type of a somewhat primitive social group. Their expressions unconsciously reveal their judgments. Their constant demand of one another is 'to play the game,' that is, to play fair and to do one's part in order to win the game for the good of all. Anything which harms, hinders, or endangers another, which brings suffering to one's fellows or to one's side, is not playing the game. They condemn

church people that real religion, and not entertainment, is what is desired in the pulpit. *The Journal* also draws upon the experiences of an army chaplain:

"One of the religious services they had been accustomed to open with fifteen minutes of 'movies,' on the assumption that the boys would not attend if they were not entertained. Noticing an uneasiness during the 'movie' time, a preacher decided one day to try an experiment. He put the question to the men themselves:

"Boys, I'm here to tell you something about religion. Would you like to have me begin right away, or will you have a 'movie' film first?"

"A tall, raw-boned soldier boy stood up in the audience.

"To hell with 'movies,'" he said. 'Let's hear about religion.'

"Another less discriminating preacher was scheduled for a twenty-minute address. A splendid 'atmosphere' had been created for him. Half a dozen rousing hymns had been sung, a lad from the service had made a manly prayer for divine guidance and assistance, and the 'set-up' was perfect. Five hundred boys waited eagerly to hear something live and genuine, something that would brace and strengthen them in their homesickness and in their sacrifice.

"Then the preacher arose and spent the first ten minutes of his twenty in telling the boys funny stories! Funny stories for hearts that were yearning for reality! He was annoyed, too, because so many of the boys 'walked out on him.' They had not gone there to be entertained. They longed to hear the simple, sincere, and elemental truth of religion from a real man who had suffered, thought, and won his way to sincere conviction.

"This American chaplain finally came to the conclusion that his boys did not need to hear warnings about drink, gambling, or women. Those warnings came with better grace from other instructors. They did not go to service to be entertained or to be flattered and told how fine they were, or to listen to stories. These things they had heard till they were tired of them. Strange to say, what they did want was religion, the real things of the soul, without camouflage of any kind.

"Considering it in the pauses of his work, this chaplain has come to the conclusion that the reason so many persons do not

CLEARING THE CHURCH OF SLACKERS

SLACKING IS NOT IN FAVOR within the ministry of to-day. President Stewart, of Auburn Theological Seminary, would post a notice over the gateway of every seminary, "No Slackers Need Apply." This, too, is in face of the fact that there is a notable shortage of men for the ministry.

THE GOLD VASE OF ST. CRÈME.

go to church is because of the attempts to entertain them, to camouflage religion with stories, with professional singing, with 'social activities.' Personally he says that his preaching after the war will not be the same. He will tell the pure story of undefiled religion so far as in him is."

Methodists evidently share this Presbyterian sentiment, for the members of the Southern New Jersey Conference in Philadelphia resolved that they do not wish to be exempted from military service because of their calling. They pay tribute to the Government for offering them the chance to stand apart, and admit the need of "sustaining moral and spiritual forces at home." But their souls cry out "to share with all men of all professions full partnership in the task of making the world safe for democracy and little children." As Dr. Stewart puts it, "Better that there be no students for the ministry than that the sacred office be filled with moral and physical cowards." *The Presbyterian Advance* (Nashville), commenting on this, says:

"The fundamental need of the Church is not ministers, but men. It needs, badly needs, men who give themselves to the gospel ministry; but it does not need, and we are reasonably sure that it does not want, ministers who are not men. The Church should be exceedingly careful these days about accepting as candidates for the ministry any physically able men that come under the draft age. Let there be no encouragement of mollycoddism."

The *New York Tribune*, noting the action of the Methodists, assures them that no one would say that the clergy have not been doing their share:

"The long list of Army chaplains and Y. M. C. A. workers would give the lie to such an assertion. Nor are these by any means without the danger-line, as many tales of simple heroism have shown. But the Methodist brethren are quite obviously very militant members of the church militant. That reference to 'little children' shows what they are thinking of. It is the dearest wish of their hearts to play a personal part in visiting vengeance upon the murderers."

ravishers who have sent hundreds of little children to death in sinking ships or open boats and who have made a shambles of Belgium. At ordinary times they would shrink from the shedding of blood. They would think it unbecoming to the cloth. They would not appeal to the example of Leonidas Polk, the fighting bishop of our Civil War, or to the remoter one of Henry Spencer, Bishop of Norwich, who took arms to put down Wat Tyler's rebellion. He met and defeated the rebels in the field, took them prisoners, gave them absolution, and sent them to the gallows.

"This combination of the spiritual and the secular arm was unusual even in those days, tho more than one medieval prelate served his time as a soldier. No doubt the fighting parsons of Philadelphia will be willing to pray for the Huns, but the character of their resolution seems to show that they are far more anxious to kill them."

The Monitor (Catholic, Newark) looks from quite another angle:

"We have not heard any great outcry on the part of the lay brethren against the desire of their brothers of the pulpit, nor have we read of any unusual accession of clerical-clad recruits to the Army or Navy. We imagine that the resolution was a piece of patriotic camouflage which accomplished its object by publication. It was hot air served in cold print.

"We find it difficult to imagine just how our Methodist brethren regard their vocation and mission. Has religion so declined in their churches that they no longer need any authoritative representatives? Is Methodism so dead that it will not hear the voice of the exhorter? Have the ministers lost faith in their own teachings, or have the people lost confidence in the ministers? Can the churches get along without the ministers? Or may the churches be as well closed as open?

"Suppose that all the Methodist ministers, appreciating the generous spirit of the South Jersey Conference, went to the war as common soldiers, would not the Methodist forces at home scatter, the membership decline, the spiritual life of the people suffer, the whole Methodist system crumble? Or did the resolute ministers feel that the churches on the whole could get along just as well without them?

"Their resolution has certainly raised a deadly dilemma for them to face.

"We are of opinion that there are chaplaincies in the Army and in the Navy where a zealous Methodist minister might do good. There are many thousand earnest Methodists enrolled in the American service. Are the Methodist ministers following their soldiers and sailors like the American priests? A zealous chaplain in the trenches and where the bombs break and scatter is worth his weight in gold. His value far exceeds that of the ordinary fighting man, for he can put spirit into a whole company or an entire section of the line. We are reading every day of Catholic priests with the men right on the firing-line. They are gathering precious crosses of honor and valor every day and winning the love and reverence of the soldiers irrespective of their religious beliefs and the praise and commendations of the officers in command.

"Or are the Methodist ministers satisfied to be swallowed up as assistants in the Y. M. C. A.?

"How we would admire that patriotic conference of Methodist ministers down Jersey if they had forwarded a resolution to Washington, asking that at the earliest moment they be sent to the trenches in France as bearers of spiritual comfort to the Methodist boys fighting, dying for their country!

"But unless Methodism is bankrupt, there is still work at home even for a Methodist minister."

AUTOCRATIC TREND IN RELIGION—While the world is being made safe for democracy, the Church is taking a contrary tendency. No proposal of Church union, such as seems most imminent in England, involves the dropping of episcopacy, points out *The Christian Century* (Chicago). This organ, which describes itself as "an undenominational journal of religion," looks upon episcopacy as "standing in the road of the democracy which characterized Jesus Christ and his apostles." It goes further:

"In England to-day there is the greatest opportunity since the time of Cromwell of uniting the Christian forces. The non-conformist denominations, tho as prosperous as the state church in most regards, and numerically about as strong, are

yet willing to merge their individuality in the state church. . . . In the name of efficiency, many denominations are getting more centralization of ecclesiastical power. In recent years Disciples, Baptists, and Congregationalists have organized national conventions, and to these conventions are being accorded more and more leadership in the life of the denomination. How easy it is for a seeming democracy in religion to become an oligarchy and at last a tyranny is only too well illustrated by the history of the Church.

"Those who hold the social view of religion insist that religion shall always embody the highest ideals of the social structure. Should the Church of Jesus Christ these days fail to convince the world that it is a truly democratic institution, then we may look for new religious organizations to arise (as proposed even now by some literary men), and if these were democratic and in other ways serviceable, one could imagine an era of eclipse for Christianity.

"Our task is to define what true democracy in religion is. Certainly it could involve no coercion of opinion. There must be room for the free expression and activity of lay as well as clerical elements in the Church. There must be the respect for human life of every sort and the sympathy without which no individual and no church can claim to be democratic in spirit."

PREPARING THE "NEW ERA"

THAT THE PRESENT CRISIS is more than military is realized by most. The Presbyterians see it as the beginning of a "new era," and they have already set in motion the wheels of a "movement" bearing this phrase for a title. It is a "harmonizing of all the agencies" of the Church—dealing first with "the fundamental teachings and motives of Christianity." After this it is promotive—"seeking to arouse the Church to the needs of the age, and to do her duty to meet these needs, and to arouse her to furnish the means required." "The New Era," says *The Presbyterian* (Philadelphia), "is a challenge to the whole Church to renew her faith and knowledge of her Lord, and enter upon a new obedience to his will, new fellowship in his suffering, and a new sense of the power of his resurrection." The Presbyterian Church invites her evangelical sisters to join her, the Philadelphia organ observing:

"After the war is over a new era will be upon the world. Men everywhere are endeavoring to forecast this era, and determine its needs, and the means and measures of meeting these needs. No man or set of men are competent to make an accurate analysis of the forces and conditions which all feel confident are now approaching and about to assert themselves. Some are confident that it will be chiefly political, and its leading questions will be those of Nationalism and Internationalism. Others speak of it as fundamentally a question of righteousness. But the conception of righteousness presented is rather that of the Jew, 'the righteousness which is of the law,' not the righteousness of the Christian, which is 'the righteousness of God by faith in Jesus Christ'; it is rather an indefinite abstract—righteousness growing out of the faculty of conscience, which recognizes the existence of right and wrong, without any law or knowledge of the will of God to determine what is right and what is wrong. But the more rational and comprehensive view of the crisis and the coming era is that of a renewed conflict between Christianity and heathenism. The outburst of heathenism has manifested itself in its terrible atrocities and its determination to rob mankind of liberty and to subject them to the cruel powers of a world-imperialism. Christian states have risen in the divinely appointed use of the sword to check and subdue these physical and military outrages. When this is accomplished it will be the duty of the Christian Church to reconstruct in faith and morals the new age on the basis and through the power of the fundamental truths revealed by Jesus Christ. This will require the development in the Church of a renewed knowledge of the fundamentals of the faith. The generation which is now passing neglects the work of instruction in these fundamentals, and gave itself to mechanical administration and nervous action, with weak convictions. When the Church is thus renewed in her faith and knowledge of her Lord, she will be ready for response to the pressing appeal of the New Era. Then she must be shown the great needs of the age and the world, and her duty to meet them."

Now more than ever the Styleplus idea helps you

Now every dollar bulks big in Uncle Sam's war program.

Now every dollar must do double duty—one for you—one for the country.

Styleplus have always been made on the thrift plan for men who know style and their money's worth.

By concentrating on a few grades of clothing and manufacturing them in big volume, we avoid wastage and produce an exceptional value at each price.

This Styleplus idea means:

- correct style, models designed by experts
- good materials and workmanship telling in faithful wear
- prices that permit *intelligent economy*.

Two grades in Styleplus suits: \$25 and \$30.

Three grades in Styleplus overcoats: \$25, \$30 and \$35.

Each grade one price the nation over. Each grade the standard of value at the price.

Put the Styleplus idea to work for you *now*! Select your suit or overcoat at the local Styleplus store.

Sold by one leading clothing merchant in most cities and towns. Write us (Dept. 5) for Styleplus booklet and name of local dealer.

WAR-TIME-FOOD-PROBLEMS

Prepared for THE LITERARY DIGEST by the UNITED STATES FOOD ADMINISTRATION
and especially designed for High School Use

THE SUGAR SITUATION

IN THE PAST, when any one has given you a lump of sugar, what have you always done with it?

Exactly so. And yet the school children of Paris found a different way to behave one day last winter. These boys and girls had been invited to a luncheon-party by the Red Cross, and at the end of it each was given a lump of sugar—a rare treat for them. But did they eat it? Not they. Those lumps of sugar were carefully tucked away and taken home to be sent later to their heroes—bearded and brave fathers and uncles and big brothers—who were at the front fighting for France.

Can any one—boy or girl, or father or mother—have that incident in the back of his head and still say:

"I realize that I can have two pounds of sugar a month, or what amounts to six level teaspoons of it every day. But that's not enough. I want more!"

Can any one say that and still claim to be a patriotic American, trying to do his share toward winning the war?

Learn the facts in the case and see what you think.

FORMER SOURCES OF ALLIED SUGAR—Two thousand one hundred and ninety teaspoons of sugar a year! That's what the two-pound-a-month allowance gives one. Such an intake of sugar for the human system does not seem like any great sacrifice in these war-days. To one who really understands all the circumstances it seems generous.

But "circumstances" is a dull and colorless word to describe anything so interesting and important as the reasons why this country has to be sparing in the use of sugar.

To understand why we must go without sugar and ship it overseas instead, it is necessary first to know where the Allies used to get their sugar-supply before the war.

It was not from us. France and Italy used to raise their own sugar. England got some from the British West Indies, and imported large quantities from Java; but more than half England's total came from the German Empire.

That was before the war. How do matters stand now? *The sugar-production in France and Italy has dropped to less than a third of what it used to be, owing to crop failures, labor shortage, the inroads of the German hordes and their destruction of the sugar-beet fields and factories in northern France and Italy. Thus France and Italy must get sugar from us. Nor does England fare better, for obviously her German channels of supply are closed.*

THE PROBLEM TO-DAY—But why—asks the person who realizes the fact that there is a quantity of sugar in Java—why can not the Allies get all the sugar they need from Java and the East Indies? Why must they depend on the United States?

There are two reasons: *The ship shortage and the need for speed.*

Imagine a parallel. A large lumber-camp, located on a great lake and hemmed in by woods, must get all its food-supplies by water. It can go to one of two points: a town five miles away or another fifteen miles distant. There are only a certain number of boats in the camp, and most of these are sorely needed to bring in lumbermen and all sorts of tools and machinery. In such an emergency the lumber-camp naturally turns to the town five miles across the water for food instead of to the one fifteen miles away. But suppose that nearer town refuses to share its food. It then becomes necessary to go three times as far for the provisions and, because of the extra time involved, to use three times as many boats to get the food needed for any given month. This means that the lumber-camp will have just that number of boats less to use in bringing men and machinery.

Such, in a rough sense, is the Allies' position to-day. They correspond to the lumber-camp. We are the town five miles

across the water, while Java is the one three times as far off. If we, through our thoughtlessness or greed, force the Allies to send ships all the way to Java for sugar there will be just that much less shipping available to carry soldiers and guns and ammunition across the ocean.

In short, in the time a ship would take to bring a ship-load of sugar from Java to England, it could be carrying one load of sugar, one of soldiers, and one of guns from New York to England or France.

AMERICA THE SOLUTION—Because of the shipping situation we must share sugar with the Allies as we have been sharing our wheat. To deny them this sugar is not merely to withhold the sugar; it also means the slowing up of troop movement and necessary equipment.

Shall we fail in this, merely because as a nation we have drifted along year after year indulging to our fill an appetite for sweets?

We have only a limited amount of sugar to share. Most of our cane-sugar comes from Cuba and Hawaii. That fact alone puts a tax on our shipping, without permitting us to turn to the East Indies.

So we must share the sugar we have.

And we must do it by keeping inside a limit of two pounds of sugar a month to each person. It would be possible to put every man, woman, and child in the country on such an obligatory sugar ration. But how much better—how much more fitting in a country which claims to be heart and soul for aiding the Allies—to have this a voluntary ration, an honor ration.

Such a sacrifice—or rather, such a privilege—will entitle us to sit at a common table with England, France, and Italy. Altho, even so, France and Italy will be eating less sugar than we.

THE PROBLEM AND THE PRIVILEGE—Such is the sugar situation to-day. Of course, this is not the whole story. For instance, there is the submarine menace, which has destroyed more than 50,000,000 pounds of sugar off our coast. There are the 50,000 tons of sugar shipping diverted from that business in order that Belgium may have food. And finally, there is the fact that our own sugar-crop was less than expected.

But these are only incidents which intensify the world situation. The big problem for us is to get the sugar and ship it abroad. The methods of distributing to sugar trades and dealers in this country, the small necessary increase in price, the thousand-and-one ways sugar may be saved at home, even the reasons why soldiers need more sugar than civilians, are all, comparatively speaking, details, tho they will be distinct later.

The American people did what was needed to provide wheat for the Allies last winter and spring. They can do it with sugar, provided they will adhere to the necessary program with patriotism, honor, and an unflinching spirit of cooperation. The whole matter is summed up by the incident of the French children and their lumps of sugar. *They did not eat it; they sent it instead.*

QUESTIONS FOR DISCUSSION

1. From what two plants is sugar chiefly made? Which is used to a greater extent in this country?
2. Write a brief paper on the sources and manufacture of sugar.
3. Where are the West Indies? The East Indies? Java?
4. Are you and all your family living strictly inside the two-pounds-a-month honor ration?
5. Do you know of any one who is exceeding his two-pound limit? Has he failed to understand the sugar situation, or is he merely selfish and greedy?

"You'll Sell Him This Time"

"He's a hard proposition," says your salesman, explaining why he didn't get an order from Stubbs, of Stubbs & Co.

Not much satisfaction there, even though you know the salesman worked hard. The fact remains that he didn't sell Stubbs, and naturally is inclined to blame Stubbs rather than himself.

Perhaps neither was to blame. Stubbs may be a hard proposition for a salesman who takes a wrong political slant or who talks golf when Stubbs' game is pinochle. He might be quite the opposite, if differently approached.

Two things are necessary to insure a good prospect of selling Stubbs next time. First, a correct line of information covering not only his business, but also his politics, religion, amusements, and hobbies. Second, a railroad ticket. With this equipment, an alert salesman will bring home the bacon.

That is the purpose of the form shown here. It has spaces for filling in every essential fact that a salesman should know, in order to deal with a customer intelligently.

Among the forms contained in the Hammermill Portfolios of Printing Suggestions is a report sheet for just this purpose. It is only one of many valuable methods of increasing office and factory energy which these portfolios present in concrete form. Write us, and we will send you the portfolio which will be of most help to you.

The forms you receive will show you what Hammermill co-operation means to users of Hammermill Bond, and will also enable you to see and feel the quality of this high-grade paper. More and more, big business houses are standardizing their printing on one dependable paper. It pays, in the saving of printing worries and the assurance of maintained quality. Our watermark is your guarantee.

We will send the entire set of Hammermill Portfolios to any printer who writes us.

CURRENT POETRY

POETS may sing of the men at the front with understanding and admiration, but unless they be at the front themselves something of the actual must necessarily be lacking from their lines. How the poet who is also the fighting man senses war is revealed in a group of poems in *The English Review* (London, September), all of which are written by men either in the army or navy service. A note of resignation to the lot that menaces the fighting man any hour is found in the following verses that have the quality of sincere prayer.

BEFORE BATTLE

C. NEVILLE BRAND, SUB-LIEUT., R.N.V.R.

Shall God, who planned the seasons, let me die!
Then, if it must be so
Let me go willingly,
Feeling no hatred for my foe;
Only content to know
That there awaits me, somewhere far away,
A happy band of friends
Who died before me, who will say
Sweet words of welcome when my anguish ends.

Mr. Lawrence Binyon contributes to the *London Times* lines that show how those who have "gone west" are linked with us who here remain.

THE DEAD TO THE LIVING

BY LAWRENCE BINYON

O you that still have rain and sun,
Kisses of children and of wife,
And the good earth to tread upon,
And the mere sweetness that is life,
Forget us not, who gave all these
For something dearer, and for you!
Think in what cause we crossed the seas!
Remember, he who fails the challenge
Fails us too.

Now in the hour that shows the strong—
The soul no evil powers affray—
Drive straight against embattled Wrong:
Faith knows but one, the hardest, way.
Endure; the end is worth the throes.
Give, give; and dare, and again dare!
On, to that Wrong's great overthrow!
We are with you, of you; we the pain and
Victory share.

Macaulay, we all remember, said that in writing the "Lays of Ancient Rome" he had copied the manner of the penny ballads of London streets. Some captious critics refuse to consider the lays as genuine poetry, but as ringing verse they hold their place in English letters. An echo of them is found in the following lines that oddly enough constitute a lesson in war-geography:

THE RIVERS OF FRANCE

BY H. J. M.

The rivers of France are ten score and twain,
But five are the names that we know,
The Marne, the Vesle, the Oureq, and the Aisne,
And the Somme of the swampy flow.

The rivers of France, from source to the sea,
Are nourished by many a rill,
But these five, if ever a drought there be,
The fountains of sorrow would fill.

The rivers of France shine silvery white,
But the waters of five are red
With the richest blood, in the fiercest fight
For Freedom, that ever was shed.

The rivers of France sing soft as they run,
But five have a song of their own,
That hymns the fall of the arrogant one
And the proud cast down from his throne.

The rivers of France, all quietly take
To sleep in the house of their birth,
But the carnal wave of five shall break
On the uttermost strands of Earth.

Five rivers of France, see their names are writ
On a banner of crimson and gold,
And the glory of those who fashioned it
Shall nevermore cease to be told.

Active-service verse of varied quality makes up the body of a new volume by Ford Madox Hueffer, entitled "On Heaven" (John Lane Company). From the Ypres salient he sends us these lines:

YPRES SALIENT

BY FORD MADOX HUEFFER

O quiet peoples sleeping bed by bed
Beneath gray roof-trees in the glimmering west,
We who can see the silver-gray and red
Rise over No Man's Land—salute your rest.
O quiet comrades, sleeping in the clay
Beneath a turmoil you need no more mark,
We who have lived through yet another day
Salute your graves at setting in of dark.
And rising from your beds or from the clay,
You, dead, or far from lines of slain and slayers,
Through your eternal or your finite day,
Give us your prayers!

A striking contrast of the things seen day by day by the men at the front to the pictures that rise in their memories is presented in these very musical lines:

THE IRON MUSIC

BY FORD MADOX HUEFFER

The French guns roll continuously
And our guns, heavy, slow;
Along the Ancre, sinuously,
The transport wagons go,
And the dust is on the thistles
And the larks sing up on high,
But I see the Golden Valley
Down by Tintern on the Wye.

For it's just nine weeks last Sunday
Since we took the Chepstow train,
And I'm wondering if one day
We shall do the like again;
For the four-point-two's come screaming
Through the sawgates on high;
So there's little use in dreaming
How we walked above the Wye.

Dust and corpses in the thistles
Where the gas-shells burst like snow,
And the shrapnel screams and whistles
On the Becourt road below,
And the High Wood bursts and bristles
Where the mine-clouds foul the sky,
But I'm with you at Wyndcroft,
Over Tintern on the Wye.

The ruined windows and battered walls of Flanders are gracefully memorialized by Mr. Hueffer in the medium of poetry so frequently abused and supposed a modern discovery, free verse:

THE OLD HOUSES OF FLANDERS

BY FORD MADOX HUEFFER

The old houses of Flanders,
They watch by the high cathedrals;
They overtop the high town-halls;
They have eyes, mournful, tolerant, and sardonic,
for the ways of men
In the high, white, tiled gables.

The rain and the night have settled down on Flanders;
It is all wet darkness; you can see nothing.

Then those old eyes, mournful, tolerant, and sardonic,
Look at great, sudden, red lights,
Look upon the shades of the cathedrals;
And the golden rods of the illuminated rain,
For a second. . . .

And those old eyes,
Very old eyes that have watched the ways of men
for generations,
Close for ever.

The high, white shoulders of the gables
Slouch together for a consultation,
Slant drunkenly over in the lee of the flaming
cathedrals.

They are no more, the old houses of Flanders.

Ditchling is not a world-famous town,
but it must be a very attractive one to

Saves Time and Labor

THESE high tension days, when information is needed, figures are wanted quickly and with the assurance that they are absolutely accurate.

Elliott-Fisher The Bookkeeping Machine will keep your accounting work balanced all the time. It saves time and labor and does away with mistakes which cause exasperating delays.

Because Elliott-Fisher The Bookkeeping Machine automatically provides a *proof sheet* of all entries it classifies the statistical information as it posts to the accounts.

The Bookkeeping Machine is easy to operate. It is a time saver on order entering, billing, accounts receivable, accounts payable, payrolls, costs, expense or other accounting or statistical information of the kind and nature you require. Thousands are in use now in all lines and sizes of business.

It will cost you nothing to get full particulars about Elliott-Fisher The Bookkeeping Machine and how it will help you get better results in your accounting department—write direct or telephone our nearest office.

The Pen
the world
depends upon

Waterman's
Ideal
Fountain Pen

For
Quality
Durability
Convenience
and
Unfailing
Service

To meet perfectly the requirements of each individual user, Waterman's Ideal Fountain Pen is made in three types—Regular, Safety and Self-Filling.

The Regular type, particularly in the larger sizes, is for those who do a great deal of writing, such as book-keepers and other clerical workers.

The Safety type for soldiers, sailors, salesmen and women, as it may be carried in kit, grip or purse without spilling or danger of leakage.

The Self-Filling type is the same reliable Waterman's Ideal with the added convenience of filling automatically from any ink supply.

Even the smaller sizes in all types carry a sufficient ink supply to write several thousand words before refilling.

Waterman's Ideal is the most useful of all presents because the gold point may be changed until the owner is entirely suited.

judge from the verses it has inspired in Mr. Theodore Maynard's graceful and hearty muse. We quote it from *The New Witness* (London):

DITCHLING

BY THEODORE MAYNARD

If, after having lived in many towns,
Such goodness comes to me
That I might house beneath the noble Downs
Beside an apple-tree:

Then would I find in moon and candle-light
A supper-table spread
With Ditchling ham and ale for my delight,
And honest Ditchling bread;

And open to the kindly Sussex air
My heart and window wide,
That gentle thoughts might find me sleeping there,
And I be satisfied.

Among publications that war has brought into being is *The Anglo-Italian Review* (London), a monthly miscellany of prose and verse. The prose contributions are designed to strengthen the friendly relations between England and Italy and to convey useful information on various topics to readers in both countries. As is meet, the verse consists of songs for the song's sake, and a charming specimen in the August issue is most likely the product of the editor, Mr. Edward Hutton, altho it is signed with initials only.

EVENING AT VALLOMBROSA

BY E. H.

The woods are very still.
Dear, let us lie,
Here or here, where you will,
Just you and I.
Here or here, where you will,
'Twixt the woods and the sky

The woods are very still.
The valleys old
The setting sun shall fill
With glory and gold;
And each beloved hill
He shall enfold.

The little old cities rare,
Hidden at noon,
Shall each shine forth and share
His blessing soon;
While over Florence fair
Low sets the moon.

The lingering day its sweet
Its last light strews,
And heaven with silence meek
The earth endues,
While faint far towers repeat
An angel's news.

The woods are very still.
Here let us lie,
Forgetting all the ill,
Just you and I,
Forgetting all the ill,
'Twixt the earth and the sky

One of the most ambitious efforts of Miss Florence Nash in "June Dusk, and Other Poems" (Doran), and not by any means the least successful, is presented in the following—

LINES TO A DEAD POET

BY FLORENCE NASH

Come, hold my hand across the space of death.
Dear, gentle singer whom I read so well,
Surely mine anguish does inform you now
Of all that love I had no chance to tell.

Gather me close within your spirit's arms,
Soothing my fears with your enchanted hands,
Whisper some song there was no time to sing
Before your journey to the shadow-lands.

Flowers were laid upon your last low bed,
Soft-petaled violets of dusk-time hue,
I have no knowledge where your grave may be,
I only know it has not prisoned you.

So hold my hand across the space of death,
Soothing my fears with your enchanted hands,
Tho in this life you knew not of my love,
Such love must triumph in the shadow-lands.

REVIEWS OF NEW BOOKS

NOTABLE NEW WAR-BOOKS

I

PROF. LAUGHLIN ON ECONOMIC AND FINANCIAL ASPECTS OF THE CONFLICT

Laughlin, J. Laurence (Ph.D.). *Credit of the Nations. A Study of the European War.* 8vo, pp. xiv+406. New York: Charles Scribner's Sons. \$3.50. Postage, 16 cents.

The nations considered in this volume are naturally Great Britain, France, Germany, and the United States. Austria, Bulgaria, Turkey, and Russia are left out of account. The thesis of the book is that the ultimate causes of the war are to be found in economic conditions. The period 1880-1910 was one of "unparalleled industrial revolution," which developed into a race for the foremost position. Power was created and manufactures grew, transportation by land and sea cheapened as science, industry, and commerce united their forces. The extension of commerce gave rise to an extension of credit, and this latter became dependent not on the amount of money available, but on the amount of goods produced or producible. Great Britain led in the development. Germany followed and was overtaking her rival, partly because government and business were allies. But she made the mistake of assuming that she must own the territories from which raw materials were drawn and the markets where products were sold. Hence her desire for colonies. Ambitions grew out of her amazing success, the cry of "freedom of the seas" was raised, altho to the freedom which she already enjoyed—and this was complete—she owed in great part her advance during the last thirty years, an advance greater in proportion than that of any other nation. So that the present-day militarism of the Teutons is the result of industrial growth and power. Expansion south and east was the only vent before the war, hence the Central-Europe-Balkan-Turkey scheme—and the war considered solely as a means of economic aggression.

That is Professor Laughlin's diagnosis in his first chapter. In his second he shows that Lord Kitchener's "men, munitions, and money," as the basis of war-prosecution, must be read "men, munitions, and credit." One hundred billions at least are already spent, but no such amount of money existed, and there is more money in existence now than when the war began. Not money but wealth ("goods in some form") has been destroyed. So that "goods are primary; money and credit secondary," and credit is present purchasing power. A government, in borrowing, transmutes its future production into present means of payment, employing private credit organizations and its citizens. The three factors of the huge financial operations of the war are (1) money, (2) credit and banking, and (3) national fiscal operations (taxes, etc.). In peace waste lies in consumption that is superfluous—use of means beyond the actual necessities for sustaining life. In war the waste is in the destruction not merely of wealth but of capital (i.e., productive wealth). When the loss of goods depresses the amount available below the necessities of life, below surplus wealth and the possibility of reproduction, credit falls and ultimately fails—unless the borrower can go elsewhere (as France and Great Britain to the United States). Hence huge debts alone will not end war; credit (which "depends on normal productive power") must vanish.

Now, how is it with Germany? Her

OUTLINE OF JUMP SAW DRIVE

Saving \$347.98 on One Drive—Through the G.T.M

It was the jump-saw drive. The Planters Lumber Company of Jeanerette, Louisiana, had tried all kinds of belts on it. But it was a very hard drive and it ate them up at an expensive rate. They grew hopeless after much experiment, continued to buy the expensive belt that gave a maximum of eight months' service, and let it go at that. One day Mr. DeVerges called. He is a G.T.M.—Goodyear Technical Man. They asked him what price he could quote on belting for the jump-saw drive. He said he didn't sell belts as a grocer sells sugar.

They asked him what he meant. He explained the Goodyear Plan of Plant Analysis—of having a G. T. M. study each drive carefully and prescribe for it the Goodyear Belt especially manufactured to meet the conditions. They were interested—and took him to the jump-saw.

He studied that drive. He noted the r.p.m.'s of the pulleys, the position of the idlers, the speed of the belt, the distance between centers, and the fluctuations of load when the saw was sawing or just running. Then he prescribed an 8-inch 4-ply Goodyear Blue Streak. At present prices the amount required would cost \$40.82. The double-belt they had been using would cost \$129.60. And the real saving is far more than the difference between prices.

The Blue Streak has already given three times the service of the expensive belts formerly used. Eight months used to be the maximum; the Blue Streak has already given two years—three times as much. If they were buying the old belts at present prices, enough to last two years would cost \$388.80—showing a net saving of belting costs of \$347.98 in two years on one drive.

Much of this saving is due to the G. T. M.'s service, to his careful analysis of conditions and accurate prescription of the right construction to meet them. He has since been asked to analyze other drives—has done it—has effected very real savings on them. He and many other G. T. M.'s can do the same for you. All of them have been trained in the Goodyear Technical School, all have had exacting experience in plants similar to yours. The G. T. M. service is free—for the economies it effects for purchasers are an unfailing assurance of continuously increasing business for us. Write today to make arrangements for a G. T. M. to analyze your worst belt-devourer. He will call on his next trip through your vicinity.

WHEN TO SMOKE

If you smoke 6 cigars a day—

Smoke 1 about 10:30 A. M.
3 from 1 P. M. (after meal) to 5 P. M.
2 from 7 P. M. (after meal) to 10 P. M.

If you smoke 5 cigars a day—

Smoke 1 about 10:30 A. M.
2 from 1 P. M. (after meal) to 5 P. M.
2 from 7 P. M. (after meal) to 10 P. M.

If you smoke 4 cigars a day—

Smoke 1 about 10:30 A. M.
1 about 1 P. M. (after meal).
1 about 4:30 P. M.
1 about 7 P. M. (after meal).

If you smoke 3 cigars a day—

Smoke none in the morning.
1 about 1 P. M. (after meal).
1 about 4:30 P. M.
1 about 7 P. M. (after meal).

If you smoke 2 cigars a day—

Smoke 1 about 1 P. M. (after meal).
1 about 7 P. M. (after meal).

If you smoke 1 cigar a day—

Smoke it after your heavy meal.

- (1) Don't smoke continuously.
- (2) —nor immediately before meals.
- (3) —nor immediately before retiring.
- (4) Always smoke slowly; it increases your enjoyment and is better for you.
- (5) *Never smoke the heavy, oily type of cigar at any time.*

A good many cigar smokers smoke the wrong kind of cigar. A good many smoke at the wrong times of day. Some men do both. If smoking makes you nervous, it is most likely due to these practices. To help men smoke at the *right* time of day and to smoke the *right* kind of cigar, we have prepared the above suggestions. Keep them handy, and follow them as closely as you can.

The Girard cigar, which we manufacture, is the most famous cigar in America today, because it "*never gets on your nerves*." And at the same time, it is a mellow, ripe, rich, delicious Havana smoke—satisfying down to the last puff.

Real Havana **11c** To retain its

Never gets on your nerves

total debts surpass thirty billion dollars. Her gross income in normal times was ten billions and net income two billions. Her normal budget was eight hundred million. Annual interest on debts before the last loan was one and a half billions. So that budget and interest already demand three hundred millions more annually than her net income when trade and industry were normal. When skilful management of present wealth fails, or present demand exceeds prospective production, or surplus above necessities is exhausted, that Germany must yield is the inference on this basis of calculation.

The wealth of the United Kingdom (Great Britain) was put at eighty-two and one-half billions, and of the whole Empire at one hundred and twenty-five billions, with gross incomes of 10.6 billions and 17 billions, respectively. How has Great Britain financed the war? Chapter III is an illuminating discussion of the whole system of Great Britain's huge financial and fiscal machinery, with her great bank in the foreground. And in connection with this goes a discussion of the rise in price of commodities. An analysis of this chapter would take much space. Sufficient to say, that power has mingled short-term obligations with long-term obligations, so that funding will commence soon after the war, with a corresponding gradual reduction of fixt charges. The conclusion is: "Of the ability of the English to carry this colossal war-debt there can be little doubt."

Chapter IV deals with French money and credit. A clear account is given of the entire body of agencies, with the resources, present and prospective, that lie behind the financing of the war, including the Bank of France. And the conclusion is that France is psychologically and economically able to carry her huge burden.

Chapter V, on Germany, shows that her financial preparedness for a sudden war was a part of the whole scheme. She started with the advantage of knowing that war was coming. And her entire credit system was fitted to the immediate emergency. But she did not expect so long a war. She has little support from the sale abroad of products of industry and capital. The duration of the war depends upon psychological factors—the willingness of Germans to reduce consumption to the minimum of existence—and the probabilities here are favorable to Germany through the settled dominance of government over individual initiative.

Chapter VI deals with the United States. The analysis covers wealth, production, exports and imports, and the entire financial machinery employed in carrying on the operations just prior to and during the war, with the story of fluctuations in credits, balances, rates of exchange, and trade in general. The national wealth in 1912 was estimated at one hundred and eighty-seven billions. We loaned to foreign Powers between August, 1914, and October, 1917, over four billions, and have not felt it. The possibility of financing the finish to a victory seems evident.

The conclusion, then, seems to be (so far as general economic conditions indicate): the Allies (with the United States) are in a greatly superior condition. But the ultimate failure of Germany depends in part on the failure of psychological stamina in her people. If they endure a state of sustaining life nearly primitive, they may pull through. Military means are not here taken into account.

One may not presume to praise Professor

Laughlin's volume. All one can say is that it is indispensable to those who study the war from the financial angle. The appendix of documents, tables, etc., and the charts liberally supplied throughout the text are of the highest value.

II

MUNROE SMITH ON GERMANY'S GUILT

Smith, Munroe. *Militarism and Statecraft*. 12mo, pp. 286. New York: G. P. Putnam's Sons. \$1.50. Postage, 12 cents.

That Bismarck has been known as the man of "blood and iron," in the sense that he was a militaristic instigator of wars, is due to regarding externals rather than to consideration of realities in his fixt policies, as shown in his diplomatic and political procedure. That his diplomacy had for its purpose to avoid wars when possible, that it was essentially non-aggressive, and that in contrast with it German diplomacy in post-Bismarckian Germany has tended consciously toward war under militaristic pressure, is Professor Smith's principal thesis. The "Iron Chancellor," he says, distinguished between "a policy that aimed to realize or defend national interests" (*Interessenpolitik*) and one which "aimed at power" (*Machtpolitik*), and he consistently "employed the latter term as one of censure." "Working for prestige" (*auf Prestige wirtschaften*) was a phrase which he often used, and carried "a still stronger note of censure." Indeed, he constantly took account of "the imponderables," i.e., of national or world-wide sentiment, conscience, resentment at aggressiveness, and the like. His "most famous saying" was:

"If we attack, the whole weight of the imponderables, which weigh much heavier than material weights, will be on the side of our adversaries whom we have attacked. . . . Success depends essentially upon the impressions that are produced in our own and other countries by the origin of the war; it is important that we be the ones attacked."

His constant efforts, therefore, made for the control of the militarists by the diplomatic-political staffs, since the former are one-sided in their views and look only at immediate advantages. Had this wise rule been observed in 1914, Dr. Dernburg would not have been compelled to admit as early as 1915 that "Germany has few friends in the world."

Professor Smith's volume contains four essays: *Military Strategy versus Diplomacy in Bismarck's Time and Afterward*; *Diplomacy versus Military Strategy*; *How the Central Empires Might Have Played the Diplomatic Game*; *The German Theory of Warfare and the Results of its Application*, and *German Land-Hunger and Other Underlying Causes of the War*. The first develops the positions indicated above. The second we may call the final clinching of the proof of Germany's guilt before the world in producing the blood-bath of the nations. The third is an examination from the standpoint of international law of the Teutonic theory of frightfulness and its normal consequences:

"In treating international law as negligible; in ignoring the opinions, the sentiments, and the conscience of neutral nations which express material and spiritual interests that are superior to the selfish interests of any single state and are the reservoir from which new international law is steadily drawn—the German theory of warfare leaves out of its calculations no less a factor than the world."

The last essay is a keen analysis of motives as proved by claims and events.

Nettleton

Shoe Beauty is more than skin deep

Forty long years of unremitting pursuit of the highest shoemaking ideals have resulted in Nettleton shoes being something better, something beyond the usual footwear of commerce.

We say there is a demonstrable higher quality in Nettleton leathers, welts, insoles, lining, shank, counter, heel and findings. There is a demonstrable greater skill in the cutting and fitting of Nettleton uppers, in the lasting, inseaming, stitching and finishing. This care in selecting materials, this exact workmanship is reflected in the utmost foot comfort, a recognized superendurance and the great genteelness of Nettleton appearance.

The perfection of these details is lost in the quiet refinement of Nettleton elegance, but a careful appraisal will multiply your genuine appreciation of the minute thoroughness of our shoemanship.

A trip to the Nettleton dealer in your city will acquaint you with the wide range of Nettleton styles.

Where Does Your Pencil Money Go?

A Message for You and Your Office

A LEAD pencil costs anywhere from five to fifteen cents. Half of it is thrown away as a stub. Half the balance is lost in whittling. And a big part of what's left vanishes in broken points.

Time also is lost in sharpening. Thought is interrupted. Hands are soiled. Loss every way.

That's a big expense per pencil, and a tremendous loss wherever pencils are bought for a complete office force. Just figure it out.

An Eversharp Pencil requires no whittling. There is no broken point, no discarded stub, no lost motion or lost money anywhere.

A wooden pencil has but seven inches of lead, half of which must be wasted. The Eversharp has *eighteen*—enough for a quarter million

words—one cent per ten thousand words—and a point for every word.

And the Eversharp is *always* sharp, *never* sharpened. Every stroke is clean and to the point. Every vestige of lead is used.

A handy eraser and a built-in pocket clip add further to Eversharp utility. And the Eversharp is beautifully made.

Stop pencil shaving with Eversharp saving, whether for yourself or your establishment—not forgetting the prestige an Eversharp lends to every writing hand.

Eversharp prices, \$1 and up. If unable to get one nearby, write for descriptive circular to aid in selection direct.

What the present duty is to Professor Smith's mind, in face of these facts and the inevitable inferences, is set forth in a single sentence:

"Nothing short of a decisive defeat of Germany will secure the existence and development of the society of free nations. So often as this is imperiled by the ambition of a single Power, there must be a general war; and every such war must be fought to a finish."

This volume and the works of Chéradame, James M. Boek, and James Brown Scott are among the most essential, convincing, and important books we have had on the origin of the war. None can read Professor Smith's with an open mind and hold Germany other than the great sinner among nations. But, apart from this, the book is a ripe fruit of scholarship. The author's mind is infused with knowledge of European history, political, military, and international, to which are joined a felicity of style and grasp of essentials in elucidation and analysis that will charm and convince other minds acute and well enough equipped to follow him into regions which he makes fascinating to readers of the highly intellectual sort. All of which is another way of saying the Professor of Roman Law and Comparative Jurisprudence at Columbia has not written a book for the man in the street.

III

THE ISSUE IN THIS WAR A MORAL ONE ONLY

Jastrow, Jr., Morris. *The War and the Coming Peace.* The Moral Issue. Pp. 144. Philadelphia and London: J. B. Lippincott Company. \$1 net. Postage, 10 cents.

Writing in 1881 about "The World at War," Georg Brandes declared that the love of liberty was to be found in Germany "only among men of the generation which, within ten years, will have disappeared." And then he prophesied:

"When that time comes, Germany will be alone, isolated, hated by neighboring countries; a stronghold of conservatism in the center of Europe. Around it, in Italy, in France, in Russia, in the north, there will rise a generation imbued with international ideas and eager to carry them out in life. But Germany will lie there, old and half-stifled in her coat of mail, armed to the teeth and protected by all the weapons of murder and defense which science can invent. And there will come great struggles and greater wars."

It was a remarkable prophecy. Professor Jastrow makes it the motto of this book; and the book, he says, was written "to show that the essential issue involved in this war is not political nor economic, but moral." This issue he defines as "the recognition on the part of the world that an attempt to carry out national policies through the appeal to force, or even by the threat of force, is a cardinal sin against the moral conscience of mankind." In other phrase, he says that this war is "a struggle of the civilized world against the systematic plan" of the German Government to oppose the currents of the age by the exhibition of force." Two thoughtful essays make up the two sections of an unusual volume—"The War as a Moral Issue" and "The Problem of Peace." They complement each other. Their spirit is revealed in this quotation from the first essay:

"We are witnessing a great movement, and a movement that needs to be interpreted by a worthy motive. Is it patriotism? Yes, but not that alone. Back of patriotism—perhaps unconscious to many—is the feeling of the higher cause involved

"Daddy! Want some of *my* Klenzo?"

THERE'S a *real reason* why Klenzo makes children lose their dislike of teeth-cleaning, and become actually *eager* to brush their teeth. The same reason, too, why grown-ups have better appetites, and *breakfast tastes better* after using Klenzo.

Here's the reason: The Cool, Clean Klenzo Feeling. The feeling which is convincing testimony of *thorough cleanness*; the testimony of tiny taste-nerves which Klenzo has freed from the stale secretions that gave the mouth its hot, sticky feeling.

Klenzo aims to protect the teeth in the *natural* way—by keeping the mouth free of the substances that foster germs, acids and decay.

Klenzo's *snowy whiteness* is inviting. Its *soft creaminess* makes Klenzo stay on the brush to be distributed into every corner and crevice of the mouth.

Stop at the nearest Rexall Store and carry home a tube of Klenzo—with its Cool, Clean Klenzo Feeling and wonderful cleansing effect—today.

The 8000 Rexall Stores

Quality Papers

In the war, a cause nobler than mere preservation of self, higher even than mere preservation of one's country."

When he comes to consider the peace problem, Professor Jastrow declares that "There is no half-way victory in the case of a moral issue"; that "it must be carried on to a complete triumph"; and one of the fundamental conditions to such a victory is that "never again shall it be left in the hands of a few, in any country, to bring on a war or to dictate the terms of peace." His idea is that "a peace treaty should never contain the seeds of another war." Another of his conclusions is that "There can be no lasting peace if at the end of the war Germany still maintains its present system." In his opinion "a new political education of the people of Germany must come about," and such "new education will represent the triumph of the moral issue."

Adam, Juliette. *The Schemes of the Kaiser*. From the French, by J. O. P. Bland. Pp. 216. New York: E. P. Dutton & Co. 1918. \$1.50 net. Postage, 12 cents.

Perhaps the most distinguished female figure in contemporary French history is Madame Adam. She founded *La Nouvelle Revue*, and for more than a generation, through its columns and otherwise, she has been the boldest enemy of Germanism: during all his reign she has denounced the German Emperor in terms bitterly unsparing. And here comes a volume made up from her articles in the paper named, which would be too much like "ancient history" if not so remarkably in proof of her prophetic power. The articles bear dates running all the way from April 12, 1890, to August 9, 1899; and they refer to Wilhelm II. in terms varying from "an all-pervading nuisance" to "an eccentric freak," "a Machiavelli and a Mephistopheles combined." How truly prophetic Madame Adam was as early as 1897, these words, written in December of that year, make plain:

"Germanism, which up till 1870 had a certain sense of decent restraint, and took the trouble to disguise itself skilfully under Bismarck, no longer knows either limitations or scruples. . . . Everything is a matter of exclusive right for the German. There are no other rights but German rights, and when Germany claims the exercise of a right, neither numbers, nor nationalism, nor races have any existence, confronted by the individuality, the nationalism, of the German race."

Warren, Maude Radford. *The White Flame of France*. Illustrated. Pp. 358. Boston: Small, Maynard & Co. \$1.50. Postage, 15 cents.

Vivid and thrilling pictures of events and experiences in the daily life of the author as she pursued her daily investigations in France, visiting the villages which were under fire and describing their determined efforts at reclamation. She writes of Nancy, Reims, Paris, and Verdun, relating stories which reveal the indomitable character of the French soldier, "the man in horizon blue," and which cast a bright light on details of war-life not often mentioned in our daily news. The title was suggested by a French soldier's enthusiastic cry: "We all burn for France, any one who loves her, is for her a tongue of flame—Vive, Vive la France!" Mrs. Warren's style is unusually brilliant and inspiring, her descriptions so realistic as to make one visualize the scenes of terror, sorrow, or pathos, touching each with the tender hand of sympathy, and able to see the bits of humor that crop out even in scenes of compelling tragedy. Perhaps that which

A Four-Inch Shelf of Health-Books

Here are four splendid books on health. Stand them up together and they take four inches of space on your shelf, but they will bulk a thousand times larger than that in your life. To own and study these four books is the best life insurance policy a

man or woman can take out. They are filled with sanity and wisdom and will save their cost over and over again in doctor's bills. Read them, mold your life on them, and watch yourself gaining in health and strength from day to day.

How to Live

By Prof. Irving Fisher and Dr. Eugene Lyman Fisk. Authorized by the Hygiene Reference Board of the Life Extension Institute. Endorsed by physicians and health authorities everywhere. Will make you over and add years to your life. Over 100,000 copies sold.

By mail, \$1.12

The Influence of the Mind on the Body

By Dr. Paul Dubois, the eminent neurologist. An intimate and clearly expressed talk on this much discussed subject, that contains a wealth of inspiration and help. Points the way to health and happiness. By mail, 64 cents

The Heart and Blood Vessels

By Dr. I. H. Hirschfeld. Tells the story of the heart and its ailments, shows you how to care for and cure all disorders of the circulation by right living and careful eating, and how to reach a healthy old age.

By mail, \$1.37

Nerves in Order

By Alfred T. Schofield, M.D., M.R.C.S.E. A sane, practical book on the causes of nervous troubles and the means by which they may be avoided. Will do wonders for you physically and mentally.

By mail, \$1.67

FUNK & WAGNALLS COMPANY, 354 Fourth Avenue, New York

impresses us most is her portrayal of the grimness and determination of the French soldier—"The eyes of the French wounded may be infinitely weary or dulled with pain, but in their depths is always a glint of spiritual light." Deeds of self-sacrifice, tragedy, loyalty, patience, and patriotism are described with graphic power, tribute paid to all who have achieved in any way, and truths set down with sorrow, indignation, and regret, but never with hatred nor hysterical exaggeration. It is a sweet, sad story of war's terrors, inspirations, and probable results.

RECENT FICTION

Hough, Emerson. The Way Out. Pp. 313. New York: D. Appleton & Co. \$1.50. Postage, 12 cents.

This is a romance of the Cumberlands of Kentucky, in the mountains where feuds thrive, ignorance reigns, and a "fine race has gone to seed." Mr. Hough pictures the Kentucky mountaineers with power. He makes vivid their shut-offness, their consequent stunted growth in mentality and morals. His portrayal of the hero, David Joslin, is very satisfactory. When David revolts against the constant killing, intermarrying, poverty, and ignorance, and goes "outside" to get an education, the author seems less sincere and convincing. Thrilling and dramatic scenes lead up to David's departure. Then come events out in the world when David meets Jim Haddon, owner of vast mountain interests, his wife Marcia, and Polly Pendleton, the pretty little actress. David's part in the regeneration of the mountaineers and his building of the college on the hill, after placating his lifelong enemies, seems natural and simple, as Mr. Hough relates it, but he exaggerates his "sin" and suffers unduly. Jim Haddon's tragic death and natural events clear the path for Marcia Haddon's awakening. When David finds his "way out" by the call of the Government for soldiers, he leaves Marcia determined to use her wealth and strength in helping the men and women of the picturesque Cumberlands, looking forward hopefully to the life that is to dawn on David's return.

Bianchi, Martha Gilbert Dickinson. The Point of View. Pp. 330. New York: Duffield & Co. \$1.50. Postage, 14 cents.

This book gives us many points of view but never the point of view of the author. It never satisfies the curiosity of the reader as to why it was written. Two people, Sapphira Myles Dangler and Mark Jayne, are the principal characters, but, tho they talk much and discuss every subject possible and impossible, they are indefinite. They impress us as neither vital nor particularly interesting. The author is rather witty and brilliant in her conversations, but we feel as tho the characters and situations were created merely to give her a chance to say certain things. The discussions never get anywhere nor settle anything. Mark was a writer who had loved and lost Sapphira as a girl, so in their later meeting he likes to spend his hours with her, but shies at any definite chains. He believes in third marriage, "but not in first or second." Sapphira was a widow, about whom there was some deep, mysterious secret, but even the reader does not share the secret, tho he suspects hereditary insanity. After many pages of ravings and rhapsodies, both find engrossing work in the Great War. It is an incoherent, vague, and indirect story, lacking purpose and charm.

15,000 Names—Every One

In Plain Sight

Instantly Available

—Any name found in less time with KARDEX than it takes to pull out the proper box and start to look for the card in the "card-in-the-box" system. This is true whether with 50 cards or 150,000.

KARDEX

MAKE CARD RECORDS VISIBLE

There is a style of KARDEX built for every business requirement. All KARDEX frames are interchangeable, and the system if started with a few cards easily expands to take care of 150,000 or more with equal rapidity of reference.

One Clerk Does the Work of Four!

One clerk with KARDEX can make more references in a day—week—month—year—with greater accuracy than four clerks using the "card-in-the-box" system. This is a clear saving of the salary of three clerks—a saving which starts when you install KARDEX and continues indefinitely. It soon pays the entire cost of KARDEX and turns your pay roll into profit; or it releases the services of 3 out of 4 clerks for other important duties.

Transfer Present Cards to KARDEX

KARDEX machines are used with any standard card—5x3, 6x4, or 8x5. Cards are held in translucent holders which overlap, exposing the name or index item on every card—always visible, yet fully protected from damage or soiling. (Cards not so protected deteriorate 50% per year.) "Out" warns of cards removed. Color signals easily attached give instantaneous analysis of results or conditions and furnish easy method of visible classification.

Who Uses KARDEX?

KARDEX is used to handle the largest Government, municipal and corporation records with ease, accuracy and great rapidity; for pay rolls, mailing lists, sales records, purchase records, etc.; for perpetual inventory and stock records; in the army or navy for regimental and company rosters; for bank signature cards, credit telephone, reference lists of every description. KARDEX Ledger Desks are used by United States Treasury and hundreds of business institutions. KARDEX in different forms is used by manufacturing plants, department stores, telephone exchanges and many other lines of business.

PERSONAL GLIMPSSES

BEYOND ST. MIHIEL WITH THE CONQUERING YANKS

A FEW days ago it was a German stronghold; now it is an old curiosity-shop; and "many and strange things are discoverable in the old curiosity-shop of the St. Mihiel salient," remarks a New York Times correspondent. Odd human material, no less than peculiar mechanical devices, fell into the hands of the American troops who pinched that salient out with record neatness and dispatch.

Among the mechanical curiosities are mentioned whole batteries of make-believe artillery, stovepipes and logs painted in camouflage designs, mounted in former German positions, threatening the former American lines. Papier-mâché mortars have been hauled out of the old entrenchments.

Another, and more remarkable evidence of the enemy's ingenuity—and possible impoverishment of materials—is an imitation tank, a bizarre construction which the Times correspondent dubs a "Trojan horse of the Western Front":

It is a wooden tank equipped inside with nothing save eight handle-bars by which it could be propelled. It was found abandoned no great distance from Thiaucourt.

American shell-fire had sadly ruined it, but nevertheless it was still an eloquent witness to what it must have meant to the Germans to give up the vast supplies of every kind that they were compelled by the Americans in the course of recent operations to surrender.

The same correspondent tells this story of an American battery that turned up where no American battery was supposed to be:

Yesterday our observers saw a battery in action near the front line which was not on our records. The puzzled commander sent out a detachment to investigate. They found that seven doughboys, mopping up the woods, had come upon a battery of German 77s with piles of ammunition. They had turned them around, and, not knowing how to get ranges or anything of the sort, were just shooting them northward. They explained that they were shooting into Germany, and that satisfied them.

That general bombardment of Germany would have struck sympathetic chords in the bosom of a French boy, aged twelve years, whom an American correspondent met in St. Mihiel, soon after the little city had become French soil again. The youngster was bedecked with tricolor cockades and carried one of the many French flags that appeared from nowhere as soon as the detested Boche disappeared. He gave this genuinely "inside" story of one phase of the big event:

"We heard the guns very loud on Wednesday night. Thursday morning they came much nearer and the Boches were running away. That evening none of them were left in town.

"In the afternoon I climbed up into the

Since 1847

garret of a house on the hillside with my father, and through his glasses we could see the French troops. I wanted to cheer, but father wouldn't let me, for fear that the Boches might hear. Before it was dark we could see the blue uniforms quite close on St. Jeremy Hill (southwest of the town), and on Friday morning at seven o'clock they were in the streets. Then we could cheer all we liked, and we did.

"Every one got out the flags that we had hidden for four years and hung them from the windows. And my little sister gave a bunch of flowers to a French captain, and he kissed her in front of everybody. We were very happy, especially, as we'd spent all night in the cellars because every one was afraid there would be fighting and the town would be hit by shells."

Further east, both to the north and south, Pershing's men and guns had broken down the sides of the salient, releasing the little city on the Meuse; the victory was theirs, and was so recognized by the townspeople, even the French troops were the first to set foot in St. Mihiel's streets.

The clocklike regularity with which the American machine functioned is nowhere better indicated than in the time-table of a famous regiment, which an enterprising correspondent secured and cabled to the *New York World*. One gets a bird's-eye view of modern war in the following timed outline of this regiment's activity on the day of the battle:

5:15 A.M.—Attack was begun punctually at five o'clock; advanced elements have penetrated the German wire entanglements.

5:35—Enemy front line is entirely in our hands; we have taken prisoners; enemy is retreating in haste all along the line.

6:05—Battalion is approaching Mad Brook (a small marshy rivulet meandering between St. Bausant and Maizerais); we have established a liaison with the artillery by means of flags and lights. Our artillery is pouring heavy fire upon the organized German defense at Maizerais.

6:30—Our 1st Battalion under (name deleted) reports encountering outbursts of machine-gun resistance from Maizerais; have taken seventeen prisoners.

6:50—Machine-gun fire is temporarily delaying us from crossing Mad Brook. Some enemy machine guns have already been silenced by our artillery. Our patrols are in the marshes south of Mad Brook.

7:40—Our advanced elements have crossed Mad Brook, under enemy machine-gun fire, but without loss. Progress is slow through the marshy ground (I know from personal experience that one may sink knee-deep into the squashy mud in these swamps), but our main bodies are ready to cross.

7:50—The battalion is all across Mad Brook and is advancing up the hill toward Maizerais; we are meeting with shrapnel and machine-gun fire.

8:50—The 1st Battalion has entered Maizerais after attacking three machine-gun crews from the flanks, bayoneting the gunners and mopping up other squads.

9:20—There are no more Germans in Maizerais. We have taken twenty prisoners. The Germans are fleeing in droves across the fields northward toward Essey. Our artillery is shelling Essey heavily.

9:25—The enemy guns have been turned in force on Maizerais. Our tanks,

which assisted materially in the capture of the village, despite the difficulty of getting through the Mad Brook marshes, are moving toward Essey.

9:30—Battalion (name deleted) is advancing astride of Mad Brook east of Essey without encountering resistance.

10:30—Enemy machine guns are enfilading us from Essey; send word to our artillery.

11:40—The machine-gun fire which held us up east of Essey has ceased. The Germans have evacuated the village, according to reports from the (name deleted) infantry on our right. Our first battalion is advancing, in close liaison with (name deleted).

12:35—We are approaching Pannes, which is under heavy fire from our guns. Houses are burning in the village.

12:55—The enemy appears to be holding Pannes in considerable strength.

1:20—Battalions of scouts are advancing on Pannes, under the trees along the road from Essey; there is considerable machine-gun opposition.

1:26—Opposition from Pannes has broken down. Our scout patrols have captured two machine guns and some prisoners. Battalion is entering Pannes.

1:45—Our scouts are heading northward out of Pannes, over which German shells are bursting.

1:55—We have reached our second objective. The battalion is holding the line on the southern edge of Thiaucourt Wood.

5:40—Our battalion is consolidating its positions in Thiaucourt Wood, by order of the Brigadier-Commander. Our scouts are far ahead.

A rest of several hours was forced upon the men at this stage of the proceedings. Reports were resumed early Friday morning, and were as follows:

1:30—Orders have been received from brigade headquarters to continue the attack. The 3d Battalion (name deleted) will march toward the La Marche-Nonsard road (the 3d Battalion had been in support of the 2d in reserve, the regiment having been echeloned in depth).

2:10—The 1st Battalion of patrols has gone far into Thiaucourt Wood without finding enemy resistance.

3:50—The 3d Battalion holds the line of road from La Marche to Nonsard, facing westward, in liaison with the (name deleted) infantry on its left.

9:10—We have advanced through Thiaucourt Wood to Saint Benoît without encountering serious resistance. Enemy artillery-fire is not heavy. Saint Benoît Castle, which had been occupied by the German corps commander, is believed to be mined, as well as the roads leading to it.

9:30—A good regimental post for you is Sebastopol Farm; there is a cow there and something to eat.

9:35—(Name deleted) reports that the regiment has reached its final second-day objective and is consolidating its positions. Regimental patrols are operating in the wooded district north of Saint Benoît.

The cables have carried the story of a French girl who, in the course of that first night after the launching of the American attack, made her way through two barrages to bring news of German doings to the American deliverers. Another story, a bitter one, is that of a French mother who fell to her knees to pray for American victory as the olive-drab ranks advanced, and was killed by a German soldier who overheard her prayer.

Buy War Savings Stamps

The World's best-known Farm Tractor

THE "Caterpillar" Tractor was invented by Benjamin Holt for the American farmer. In the farmer's hands it made good. Then industrial users all over the world proved it the most economical solution of their difficult power problems—hauling ore over rocky mountain roads; bringing log trains through rough, winding forest trails; moving necessities across sandy deserts; building aqueduct or reservoir, highway or drainage canal; clearing land and making farms of it.

A decade of commercial success in conquering the "impossible" put such stamina into this Tractor as to make it the unanimous choice of Allied army engineers for military transportation. But the "Caterpillar" is still a farm tractor—extraordinary. As a farm investment it is like a concrete building, returning all it costs in added service and satisfaction.

The "CATERPILLAR" Tractor is built only by The Holt Manufacturing Company, Stockton, Calif., and Peoria, Ill.

The word "CATERPILLAR" is the exclusive Holt trade-mark, registered in the United States and nearly every other country. It can properly be applied only to products of Holt manufacture.

Write for detailed information.

"CATERPILLAR"
TRACTORS REG. U.S. PAT. OFF.

J. I. CASE PLOW

QUITE naturally the farmers who have ever looked to J. I. Case for the most advanced ideas in farm tools, now look to J. I. Case for tractor plows of superior excellence.

The faith of these farmers has been justified. The J. I. Case Tractor Plow combines scientific design with quality construction in a way that brings extreme light draft.

In this plow the "drag" of furrow bottom and land side pressure has been eliminated. Besides all the weight of the frame is carried on J. I. Case dust-proof, easy-lubricating, long-distance wheels.

J. I. Case Horse Drawn Plows

Sulley, Gang, Walker models. World's lightest draft. Flexible beam and "floating" bottom insure uniform penetration and prevent shares from breaking. Strong, dependable, convenient. See your J. I. Case dealer, or write us.

That's why this Tractor Plow "rides" like a wheeled vehicle instead of dragging like a stone boat. That's also why more acres per day and deeper plowing are possible—and *extreme fuel economy* is attained.

In addition, the J. I. Case Tractor Plow is easily handled from the seat of the tractor; has a simple, sturdy power lift; and enters and leaves the ground instantly, points first, like a walking plow. Thus less labor is required and a more uniform quality of work is done. The tractor is made a more profitable investment.

See your J. I. Case dealer today. He is a dealer who will justify *your* faith as well as *ours*. He will explain the foregoing features and many others which have resulted from nearly half a century of specialized plow building experience.

DEALERS EVERYWHERE

But in general German brutality in the region just delivered was confined to imposing financial burdens on the population. Deputy Mayor Malard, of St. Mihiel, acting Mayor during the captivity, is quoted to that effect in a dispatch to the *Philadelphia Evening Public Ledger*:

"On the whole, we were not so badly treated by the Germans. That is, compared to other places. At least my people have not suffered personal violence, and the enemy have not destroyed houses, as I hear they have done elsewhere. What damage you see was inflicted by shell-fire in 1914.

"But they exacted a heavy money toll. First there was 1,500,000 francs on their arrival—to ransom us from sack," said the German commander. We could never have paid even that much without the establishment of a syndicate bond system, guaranteed by forty communes in the Woëvre region. Those bonds formed our money (the unit value was 5 francs each), and small change was supplied by paper money from Lille, Roubaix, Douai, and other occupied towns. Then the *Boches* exacted an additional 500,000 in three instalments during the last two years, nominally for the maintenance of roads, water, conduits, and the like. We met that in the same way.

"They refused to accept French money at the canteens and the market gardens established after the first year, but willingly changed it for bonds and small bills. They tried especially to get gold. They even offered a premium of 45 per cent. at their own bank, set up in the square. But the *Boches* got precious little.

"It was in respect to 'requisitions' of furniture and mattresses that they treated us worst. All unoccupied houses were stripped first; then they took what they wanted from the rest of us."

The correspondent talked with a man of seventy-four whom the Germans robbed of a mattress on which he was lying sick, early this year. When he protested against the outrage, they said that the German soldiers' comfort was worth more than the lives of old Frenchmen.

"During the last two years," continued the Mayor, "they took away all metal utensils, and even bells, statues, and the water-pipes they could find.

"As regards food, we were kept alive by the American Committee. At first we got meat (horse-flesh) pretty regularly, but for the last year we have had nothing save vegetables and the daily allowance of three hundred grams of very bad bread, thirty grams of fat, and a little bacon. About once a month when a horse was killed or died it was distributed among us. But we were forced to slaughter all dogs."

The only dog the correspondent saw in St. Mihiel was a tiny Pekingese in the arms of a woman.

"I had as much trouble to save his life," she said, "as if it had been a French soldier's I was hiding. I was always in fear that he would bark and the *Boches* discover him, but the little creature seemed to realize the danger, and so I was able to keep him."

Altho the town was spared, probably in consequence of the hurried departure of the enemy, the neighboring villages have not been so fortunate. Many were burned to ashes, and in others the French and Americans found houses smeared with pitch which the enemy lacked time to set afire.

A correspondent of the New York

Evening Sun says that Mont See dominates the lower part of the St. Mihiel salient as the Woolworth tower dominates the lower part of Manhattan. A description of the dugouts in this vicinity furnishes a commentary on the domestic habits of the modern Teuton warrior—and on the fighting ability of the Yanks who captured them:

The shelters were made of steel, concrete, stone, mortar, brick, forty or fifty feet within the mountainside. Some built in 1915 are ornamented with the German coat of arms. They are littered with maps, papers, clothing, knickknacks, showing they were furnished in great comfort with beds, chairs, and pictures.

The Germans had four years to do it in. These dugouts facing north and so difficult of observation by the Allies had fine porches, pretty tables, with a splendid view across to the Meuse heights, and it was there the German officers used to drink their beer.

One of them had a hammock slung under the trees and another had an open-air bath-tub, but great gaps showed where our shells had crashed in upon them, and one big dugout, by name "Villa Minna," had completely caved in. The occupants lay on their faces on the floor. In another dugout lay a dead German officer, while beside him lay a dog silently watching his dead master. He wouldn't make a responsive sign to coaxing or whistling.

The whole top of the mountain is elaborately interlaced with paved paths railed with rustic woodwork, leading to all manner of observation-posts with outlooks at every possible angle. One big, pretentious villa had been occupied by a German brigadier.

The strange coincidence is that the Americans got at Château-Thierry complete information as to the exact whereabouts of everything atop Mont See. They captured maps showing the whole thing.

The Americans captured a whole German antitank school whose pupils do not seem to have learned their lessons well, besides a personage whose name is Otto Schmeerkase, a great gas expert, according to his voracious captors.

In Beney to-day I lunched on German potatoes, coffee, and meat. The coffee had to be mixed with the American brand to be made palatable. The Germans left there in such a hurry that an officer found an Iron Cross lying upon a table in a German colonel's office.

All manner of odd things were found in the old salient. American salvage men with red and yellow shoulder badges were busily collecting what they could save, but our boys are probably the world's greatest souvenir-hunters, and the salvage men will have to step lively. Of course, the St. Mihiel salient itself is the greatest souvenir of all.

This view of the battle-field after the victory is given in a dispatch from another correspondent of the New York *Evening Sun*:

Groups of our burial detachments with orange and red tags of cloth pinned upon their shoulders for identification were dragging forth the inanimate forms of Germans and sadly stowing them away for eternity, sowing the surface with mute memorials of another nation's misdeeds.

Other groups of Dixie negroes from the labor regiments and of white men from pioneer and engineer regiments were filling

High School Course in Two Years!

LACK of a high school education has kept thousands of men and women from attaining the **business and social position** to which their natural ability entitles them. That foundation schooling is necessary for success in any line. If **you** never went to high school, you'll welcome this opportunity to make up—in your spare time—the valuable training you missed.

Use Only Your Idle Hours

Every week of your life you idle away ten to twelve hours that, put into systematic study, would give you a good education in two years' time. Studying by correspondence with us does not interfere with your regular occupation and recreation, because you simply spend in study the hours that you would otherwise waste in idleness. Taking a course with us involves no risk on your part.

We guarantee to refund every dollar you've paid us, if, after completing ten examinations, you're not satisfied with your course.

Meets Every Requirement

Our complete, practical, simplified High School Course covers the same ground as the best high schools and preparatory schools. Our special instruction books are planned and written by leading professors and instructors, who have made a life work of correspondence instruction. The course meets all requirements for

General Education Teachers' Examinations
Business Career Civil Service Examinations
College Entrance Examinations

You take up your schooling just where you dropped it—grammar and common school branches included, if you need them—and get thorough high school training in your own home—at a small expense—in a short time.

Choice of 30 Courses

Our big Bulletin—free on request—describes thirty other courses preparing for desirable and well-paid positions in engineering, business, and law. Spare time study will fit you for any one of them. On the coupon below, mark an "X" against the position that most interests you, and mail it to us for full information. Do it today.

Moline-Universal Makes Wonderful Record at National Tractor Demonstration

Develops 20 H.P.
on the draw bar
and we rate it
at 9 H.P.
Think of it!

National Tractor Farming Demonstrations
A. S. Moline Company
July 23-24-25, 1918

Place, Name, Age of Tractor

Tractor, Make, Model, Year

Operator, Name, Address

Time, Fuel, Oil, Water, etc.

Work done, etc.

Remarks

Officially Accredited
with 26.48 H.P.
at the belt—
We rate it at
18 H.P.

JUST how conservatively the Moline-Universal Tractor is rated at 9-18 h.p. is shown by the astonishing official tests made at the National Tractor Demonstration which showed it to have an excess of over 11 h.p. on the draw bar and 8 h.p. at the belt.

These tests show beyond question of doubt the efficiency of the Moline-Universal. For each 169 lbs. of weight the Moline-Universal developed 1 h.p. on the draw bar. Compare this with the ordinary tractor which develops 1 h.p. for each 250 to 300 lbs. weight, and you will realize

the greater efficiency and greater economy of the Moline-Universal.

We shall continue to rate the Moline-Universal at 9-18 h.p. A tractor to give satisfactory service and stand up for years under the strain of tractor work must have reserve power, and the greater the reserve the better. Under normal conditions the Moline-Universal has from 50 to 100 per cent reserve power.

Ninety-eight per cent of its entire weight is on the two big drive wheels where every ounce is available for traction—no dead weight.

At 3.5 m.p.h. under aver-

age conditions the Moline-Universal will plow as much in a day as a 3-plow tractor traveling at 2.25 m.p.h.

The Moline-Universal has ample capacity for all ordinary plowing needs, and is equally suited for light operations, including cultivating, which require far more work hours than heavy work. One day your work may be heavy, the next day light—and light work is just as important as heavy. The Moline-Universal fully meets both these requirements.

Send for free tractor catalog. Address Dept. 63.

Moline Plow Company, Moline, Illinois

Woman Accountants WANTED!

Thousands of places, at big salaries, are waiting for women qualified as Accountants—Cost Estimators—Auditors—Credit Managers—Check Bookkeepers, etc. Our courses, now being started, prepare you quickly and thoroughly. Low tuition—paid monthly. Write for free book "Women Accountants Through Accounting Training." International Accountants Society, Dept. 100, 684 G. Michigan Avenue, Chicago.

STANDARD DICTIONARY. Inexpensively, quickly, because plain to the man or woman who investigates.

Short-Story Writing

A COURSE of forty lessons in the history, form, structure and writing of the Short Story, taught by Dr. F. Doug. Eschwege, for years Editor of *Lippincott's*.

Two important contributions to the *JUNE ATLANTIC MONTHLY* are H. C. S. folks. Our students are selling right along in leading magazines, from the *ATLANTIC* down. One busy wife and mother is averaging over \$75 a week from photoplay writing alone.

Also courses in Journalism, Verification, etc. No institution is better equipped to train for successful authorship. 154-PAGE Catalog Free. Please Address

The Home Correspondence School
Dept. 71, Springfield, Mass.

This Book Free to Ambitious Men

Meet a man who is wondering how he can make his job bigger and find the answer in this book.

Business is demanding the skilled letter writer. Not only subordinates but executives are expected to make their letters count for more. No matter what position a man may hold, he can get better results if he is a master of the business letter—and getting results means advancement and increased income.

A rich, new field is now opened to men and women of specialized training and skill in the writing of business letters. Large organizations now offer liberal salaries to Correspondence Writers and "Letter Executives." These positions not only pay well but are high in character and importance.

Learn by the "Case" Method

The experts of LaSalle Extension University will train you to write letters that bring sales at lowest cost—letters that collect money from customers—letters that open new accounts—letters that pave the way for salesmen—fitting you to hold a responsible, paying position. You will be trained by actual practice—the "Case Method"—being followed, similar to the system used for teaching law in leading universities.

Train By Mail

You receive all this instruction by mail—learn in your spare time at home without giving up your present position. All is explained in the book, which also tells about our easy payment plan by which you can pay a little each month for the course.

Simply ask for the book and it will be promptly sent. No obligation on your part. Just send a post card.

LASALLE EXTENSION UNIVERSITY
"The World's Greatest Extension University"
Dept. 1052-B1 W Chicago, Illinois

in with stone and earth huge shell-holes in the roadway and rapidly throwing bridges over the places where a series of trenches had stretched across the highways.

Two long lines of convoys choked the roads, ammunition and supplies were going forward, and empty trucks were returning, while along the green carpet of grass on either side trudged doughboys two abreast, some singing, others chatting, details going into the forward positions to relieve their tired comrades, altogether an unforgettable picture.

Near Essey-et-Maizerais I saw an altogether different picture of the war, the pathetic passage southward of about two hundred refugees.

"We came from the villages of Boulonville, Lemarche, and Nonsard," said a venerable priest who headed the column. "These poor people have been prisoners almost since the war began. They are hungry for a sight of the relatives from whom they have been cut off."

His black clerical coat was worn shiny and his wide-brimmed hat was battered, yet he carried himself with dignity. He was wearing a pair of German boots that he had picked from a pile of refuse behind the enemy barracks. An aged woman was driving a tiny donkey hauling a cart containing bed-clothes, alongside of which trotted a cute donkey colt, so small that the American soldiers crowded around to look at it.

"Can I get to Paris?" asked the old woman. "The Germans told me that the city had been destroyed. I have been living in a cave with this animal and my sixteen-year-old grandson, whom the beast oppressors have sent to Germany."

A French soldier was pushing a wheelbarrow in which were a large ormolu clock, two mirrors, and a bundle of clothing. An elderly woman followed leading his horse, for the soldier was a cavalryman. He had come upon the woman near headquarters, where as orderly he was attached to the French liaison officer. She was his aunt, whom he had not seen for six years. An American general who witnessed the reunion gave the soldier ten days' leave to enable him to take his relative to her sister.

A little boy was carrying a box containing two rabbits. He told us he had walked sixteen miles without breakfast, whereupon an American soldier near by produced a large cake of chocolate from his pocket.

I noticed but one baby in the entire line. All the children were four years old or more. One farmer said the Germans had told him the submarines had sunk all the ships that had started with American troops. A woman with tear-paths worn under her watery eyes said the Germans had said the French were doomed, the people were starved and diseased.

One actually wearied of saying so many times "Bonjour." I have never seen a people so happy as these were when they met our troops upon the roadside. Their actions made us feel what in a personal sense our entry into the war meant.

Tales of the American tanks, credited by many German prisoners with a large part in the proceedings, are told in this dispatch to the *New York Tribune*:

The advance of the tanks brought out many examples of daring on the part of their crews. One major whose machine was equipped with a thirty-seven-millimeter gun instead of a machine gun violated his orders and went far ahead until he was within range of Nonsard. With one well-

placed shot he knocked two Germans out of a church-steeple from which they were firing a machine gun.

A lieutenant, shot through the palm of the left hand by an explosive bullet, was sent to a hospital, but escaped and walked six miles back to the field. He appeared at his tank with the statement that he could "carry on" with his right hand.

Several others were wounded, but remained on duty. No one was killed, however, even tho a German six-inch shell plowed clear through a small tank, destroying it, but injuring only one of the crew. Another tank captured a battery of 77s, but was so far ahead of the infantry it could not turn over the guns to them.

The story is told of another tank which went into a town with a sergeant armed with a rifle perched on the turret. This machine captured two batteries of 77s, five machine guns, and many men.

Tanks were occasionally as much as two miles ahead of the infantry, throwing consternation into the Germans. Part of the success which attended their share in the battle was undoubtedly due to the intensive training given the drivers who had been taught to operate the machines blindfolded, guided only by signals from the gunners. This sometimes is necessary when the drivers are blinded temporarily by splashes of mud.

One of the latest, tho far from the least important, reports states that the hospitals near St. Mihiel, established and prepared with a view to handling thousands of American wounded, have found themselves with almost nothing to do.

A WAY TO HELP—DON'T NEGLECT IT

HERE is a request from Uncle Sam to our family of readers, from which it appears that in doing the large duties we have neglected the little, in giving the dollars we have forgotten the pennies. This request costs only a cent a week. Shall we surprize the boys in uniform with a deluge of DIGESTS? The Assistant Director of the Library War Service of the American Library Association writes to us this letter from Washington:

To the Editor,

THE LITERARY DIGEST,
354-360 Fourth Avenue,
New York City.

DEAR SIR:

Your magazine is one of eleven which the American Library Association has found in such demand in its Library War Service as to warrant a subscription for some 650 copies. These go to 650 service points, including the various Camp Libraries, Y. M. C. A., and K. of C. huts, other recreational centers, and small camps and posts where we supply books and other reading-matter.

The Library War Service now reaches 43 large United States camps, where there are central libraries, and more than 1,500 distributing branches and stations; 500 smaller army and navy camps, posts, and stations; 143 hospitals; 242 vessels; more than 350 distributing points in Europe.

Men in these camps want each current issue of THE LITERARY DIGEST, as camp librarians all assure us. In general, copies reaching them under the Burleson "one-cent" privilege have not been of sufficiently recent date, nor in sufficient quantities.

The pleasure a recent number of THE

To Manufacturers Engaged in Essential Industries or in War Work

THE United States Government has found it necessary, in order to effect a general saving of fuel, iron and steel, to considerably curtail the business of *all stove manufacturing concerns*.

This leaves us, or will very shortly, with a large excess capacity available for war work, or work classed as "Essential" on which U. S. priority orders are available. This concern, one of the largest and best known in our industry, in the country, was established in 1846. We now have a big up-to-date plant, equipped in the most modern manner and backed by a corps of experienced men, capable of handling any proposition in our line which you can put up to us.

We especially solicit work from other manufacturers, in the following lines:

1—Vitreous Porcelain Enameling on Steel or Cast Iron—all colors.

2—Sheet Metal Work—all kinds.

3—Nickel Plating and Polishing.

4—Japanning on Steel or Cast Iron and Electro Galvanizing.

5—Gray Iron Castings—all kinds.

For handling Vitreous Porcelain Enamel Work, we have a big capacity and one of the largest and best equipped enameling plants in the U. S.

For Sheet Metal Work, we have sheet steel and metal stamping machinery for employment of 100 men.

For Nickel Plating and Polishing, we have capacity for the employment of 100 men with all modern equipment.

For Japanning and Electro Galvanizing on steel or cast iron, our company is well equipped—has large capacity for both.

For handling Gray Iron Castings, we have 100 moulding machines with capacity for 250 moulders. Also cleaning mill capacity for foundry output including sand blast.

We are also in a position to make all types of stoves, ranges and furnaces, as well as cast iron garbage incinerators, cast iron latrine incinerators, (Conley Pat.), Army ranges, hotel ranges, etc. We have manufactured, at various times, a considerable line of Enameled Hospital Supplies and kindred lines and can handle any work of this nature required. The floor space available is about 360,000 sq. ft. We employ over 600 men and are in a position to serve you promptly and efficiently. We make a specialty of handling big jobs on short notice, and have a wide reputation for doing things *right and on time*.

Tell us about your needs and we will have our representative call—or will take the matter up with you by mail—and estimate on the cost, time of delivery, etc. WRITE, TELEPHONE or WIRE US AT OUR EXPENSE.

THE BUCK'S STOVE & RANGE COMPANY

Dept. M, St. Louis, Missouri

RUBBER

A world without rubber would be a most unpleasant place to live in. Imagine a motor truck pounding along on steel rims. Think of doing without rubber clothing and footwear, rubber belting, rubber hose, rubber packing, rubber water bottles and the hundreds of other necessities and comforts that rubber provides.

Zinc makes it possible to turn crude rubber to these many necessary uses. Zinc gives rubber its life, its wear resistance, its resiliency. No other material will supply these qualities.

Manufacturers of rubber products, as well as makers of paint, brass products, explosives, galvanized iron goods, and other lines, look to The New Jersey Zinc Company for the zinc products they need in order to get the quality and service that our long experience, extensive resources and modern processes assure.

THE NEW JERSEY ZINC COMPANY

The world's standard for Zinc products

LITERARY DIGEST will give to a man in camp or in France can best be understood by your readers. Therefore, we hope you will once more remind your readers to put a one-cent stamp on each number as soon as it has been read, and drop it into the mail-box, under the Burleson provision.

An army of millions of men will need hundreds of thousands of every issue of your magazine.

Very truly yours,

CARL H. MILAM,
Assistant to the Director.

DUTCH NEUTRALITY CONTINUES TO EKE OUT A BARE EXISTENCE

AN air of "intellectual detachment" characterizes the attitude of the average Dutchman toward the war, comments the English correspondent, Henry Suydam, writing in the London *Sunday Pictorial*—an air that has been much misunderstood abroad. Some English and American critics have gone so far as to accuse Holland of being pro-German largely on the basis of this attitude.

But Holland is not pro-German; Holland is merely preserving the "intellectual detachment" likely to be noticed in the air of a small man forced to stay in the immediate vicinity of several large men intent on eating each other up. By and large, the Dutch people are pro-Entente, says Mr. Suydam, and cites some of his own experiences to prove it:

When I left Holland a few days ago, just after the Dutch merchant fleet in American and English harbors had been commandeered, Dutch nationalism was in a state of tense coherence, but the Dutchman was not pro-German.

The Dutch people have never been able to see themselves in perspective. They are unreasonably intolerant toward even the mildest cross-currents that have intercepted the placid stream of their existence.

But there remains enough evidence that the Dutch, when once their sluggish emotions are aroused, are pro-Entente and not pro-German. The hospitality shown to several hundred thousand Belgian refugees, long after the first glamour of exile had worn off, must be remembered. Lately, hundreds of British prisoners of war, who had been in German prison-camps for three years and more, arrived in Holland for internment. Simultaneously, a similar group of Germans arrived from England. The official reception by the Dutch Government was equally cordial in each case, but there is a very evident preference for the British soldier.

The Dutch public do not like Germans, especially when in uniform. I have seen Germans walk into a restaurant, and the entire company of diners at once froze. Every one stopt talking and stared, and there was an indefinable bristling of backs.

There are, of course, large numbers of German spies and agents in Holland. The visible Germans—those we should call, in America, the "dress-suit men"—are part of a sinister cosmopolitan crowd that have trailed across Europe, during the last three years, as various small nations lost their neutrality. During my winter in Holland, I have recognized more than one German agent whom I have seen as a notorious figure in the international intrigues, carried

The Merchant Who Sells Murphy's

Go to him with your home-beautifying problems

The House of Murphy and the Merchant who sells Murphy's have gravitated together because of a common purpose to supply you with the best varnish and enamel that can be made. Probably the man who sells Murphy's is one of the "quality" Merchants in your neighborhood.

He may have built up his business through 50 years of experience—as the Murphy Varnish Company has—or he may be one of the younger men who have noted and met the tendency of the public to demand the best.

The fact that he sells Murphy's makes his judgment worth *your* while.

The Murphy Service to You

THE Merchant who sells Murphy's—because he believes in our materials and in this house and because we believe in him—is an important factor in the Murphy Service to you.

Consult with him!

He will be genuinely interested in having you select just the right kind of varnish or enamel for the particular finishing work you have in mind.

He will advise with you as to the best method of treatment for your floors.

He will tell you how to give your white woodwork that wonderful surface, like old ivory, which you have admired in other homes. He will supply you with the special Murphy booklet or booklets you need to help you make your decision.

He will tell you how to paint your car with Da-cote Motor Car Enamels.

If there is no Merchant who Sells Murphy's in your town, write us, and we will send you the name of our nearest merchant.

on just within the law, at Bucharest and Sofia, at San Sebastian and Lisbon, and even in the diminutive state of San Marino.

The German organization in Holland has, of course, no admitted existence. The Dutch Government is never able to detect a given breach of law or international etiquette that would justify drastic action. But the *Boche* leaves no stone unturned to win Dutch favor, or secure information of Allied military secrets. Prof. Hans Delbrück intones mild-phrased lectures at the University of Utrecht—that is one form of Germanism: the cafés of Holland are filled with beautiful blond *Boche* women—that is another!

One of the prettiest examples of German stage management I have ever experienced occurred in a fashionable hotel in The Hague one evening not long ago. Two young German officers in uniform, doubtless under instructions, walked into a room where two British officers in uniform were having coffee and cigars. The Germans strode up to them, clicked their spurred heels with a loud report, and bowed. The British officers were forced to return the salute, but the Dutch people present remained quite unimpressed by this blatant form of German politeness.

Meetings between interned Germans and interned Britishers, even tho the British are required to remain within bounds at The Hague while the Germans are confined to the environs of Rotterdam, occasionally take place. Then there is trouble in the air, even if the peace-loving Hollander usually manages to prevent actual outbursts.

The correspondent describes one such meeting:

I saw two British soldiers pass a Brandenburger on the street about a fortnight ago, just before the offensive started. There were glares; the German beat the pavement with his heavy boots; the British coughed rather in the manner of an angry lion; the Dutch policeman waved his white baton vaguely and drew near, and once again Dutch neutrality was saved.

I had an opportunity to inspect a camp of German deserters in Holland, but these men are so cowed in spirit that they hesitate to express their abhorrence of the system from which they have escaped. Even in Holland they rest under the German shadow.

Their view-point is almost impossible to obtain, but while a large proportion of them have a fairly definite antagonism to the German Government, there is nothing to show that a German deserter is a decent, reformed man, merely because he has run away.

I was amused to hear many of these ex-soldiers state that they intended to go to America as soon as the war ended. The American Government knows enough about Germanism to guard against something that is, after all, as much a strain of race as a perversion of human attitudes.

There was a young Bavarian in a forage-cap, pacing about in the rain, whom I stopt suddenly and asked: "Do you think the German Government will ever pardon deserters?" He regarded me in a determined way, as if he had been thinking about just that point. Then he bellowed, as one should shout an axiom: "If Germany wins, there will be no pardons!"

With regard to the general food-situ-

ation in Holland, I have found food more plentiful in The Hague, at any rate, than in London. There is no lack of sugar and sweets, a fair quantity of meat and bread, but a distinct shortage of tea and cereals.

Dutch business men have won much prosperity out of the war, perhaps more, in proportion, than the business men of any other country. But the wealth is concentrated in a very few hands, and while prices have increased, there has been no compensating rise in wages, as in the United Kingdom.

Moreover, unemployment in Holland is concentrated in peculiar economic areas, as, for example, in Rotterdam, where there is universal unemployment among the shipping workers, who form about nine-tenths of the working population. As these men have neither money, work, nor food, but must stand in long lines in order to procure the smallest quantity of tripe, the Dutch Government is faced with a distinctly dangerous prospect.

A Dutch mob has an angry temper, and there may yet come a time when Holland may experience something of the human antagonisms that have, in a larger sense and method, devastated the greater part of Europe since 1914.

LETTERS FROM THE FRONT TO THE FOLKS AT HOME

CORNER-GROCERY war-experts, parlor militarists, newspaper editors, and so many other critics who never saw a war have had their say as to just why the war in Europe must go on that there may be a certain freshness in the point of view of some Americans on the ground.

American soldiers got wind of the late "Peace Offensive" some time before it struck these shores. Sergeant Lawrence M. Michelson, of Cincinnati, Ohio, one of the most recent commentators, not only predicted the "feelers," but hinted at trouble in the Army if they gained any acceptance over here. His letter appears in the Cincinnati *Enquirer*:

Through reading the French and English papers, such as we receive here, I have come to the conclusion that since Germany has suffered two crushing defeats in the last thirty days she feels and knows that to obtain a victory on the Western Front is impossible, and as a result soon will start another one of her famous peace offensives to obtain a German "peace."

This alone, above most things, is to be most feared at the present time, and we boys over here would almost feel as if we had been betrayed were the folks at home even willing to listen to such a thing at the present time.

Just think what it would mean to the world now, peace with Germany after she had conquered almost half of Europe, laid waste most or all of it, ravished or murdered its helpless women and children, and, in short, broken every law of common decency of God and man to gain her selfish ends and criminal desires!

What of helpless Poland, ruined Belgium, and Serbia, and victimized Russia? Russia is the more to be pitied, since her downfall was caused by her own leaders, who were seduced by the cunning tongues of the lying malefactors.

Yet Germany is more cunning than cruel. I wonder what we could expect

Use Just the Steam You Need—

No More—
No Less—

Control each radiator individually and positively. If you want $\frac{1}{4}$ or $\frac{1}{2}$ radiation, turn the ADSCO Graduated Radiator Valve to $\frac{1}{4}$ or $\frac{1}{2}$ and use that amount of steam—not "All On" or "All Off."

ADSCO HEATING

Atmospheric System

Steam or Vapor with the ADSCO Graduated Radiator Valve and the ADSCO Regulator

Is the most economical, as well as the simplest system of steam heating for individual homes or industrial housing, for office or public buildings, either single or in groups.

With the ADSCO System there are no noises, no air-borne radiators, no "waterhammer," no leaky valves, no disagreeable odors.

SAVES FUEL

saves from 20 to 30%. Also big saving on pipes, fittings, and labor. Having an economical system saves coal.

Write for Bulletin 133-D

It explains the ADSCO System for every type of building. Bulletin 133-D tells how a hot water system can be changed over to a better controlled ADSCO system. If you are interested in heating a group of buildings, ask for our Bulletin on "Central Station Heating."

Approved by Big Business for New York Headquarters

If your New York sales office has not been meeting its quota, good business strategy will counsel its removal to the Fifth Avenue Building—right in the direct line of business. Here, more than half-a-thousand sales headquarters offer products nationally known for excellence. Among the list of tenants, eighty-five are "rated" \$500,000 or better.

THE FIFTH AVENUE BUILDING

Everyone knows the location. It is easily and quickly reached by eight transit systems, including the new Broadway Subway with entrance in front of the Building. The wide variety of the lines of business represented make an intensive appeal to buyers who can thus concentrate their purchases with marked economy.

Light, airy offices, under owner-management is another decided advantage.

Before you sign your next lease for New York Headquarters, write for details and Buyers Guide in your line of business

Hon. A. S. Hewitt: "The work, always indispensable to the scholar and the author, appears to me to be incapable of further improvement."

THE CYCLOPEDIA OF PRACTICAL QUOTATIONS

Thirty Thousand Choice Quotations with Eighty-six Thousand lines of Concordance. Proverbs from the French, German, etc., and other modern foreign languages, each followed by its English translation. Also a full list of Latin law terms and their translations. By J. K. Hoyt.

Cover Design by George Wharton Edwards. 8vo, 1205 pages. Prices: Buckram, \$6.00; Law Sheep, \$8.00; Half Morocco, \$10.00; Full Morocco, \$12.00.

FUNK & WAGNALLS COMPANY, Publishers, NEW YORK, N. Y.

her to do for these countries at the peace conference were we willing to listen to her terms. Perhaps, for the sake of argument, she might agree to give back to Belgium her rightful freedom, but just as surely as we do that another country will have to pay the penalty. And that other country would be—Russia, helpless and prostrate as she is.

Germany would demand great tracts of Russia as her "war-gains"—land as great as her own in square miles and as rich, if not richer, in natural resources. How long would it take, do you suppose, before again we would have to face Germany across No Man's Land—a Germany twice as strong and twice as well prepared, profiting by the enormous mistakes she has made in the present conflict.

Many other boys, I think, have written home letters of a similar kind, because we seek to have those at home feel that, no matter how much we may long for home and those near and dear to us, we will accept no half-way measures, but desire the job done, and done right.

This extract from a letter written by an American girl, a graduate nurse with the Red Cross at the front, may express another reason for the somewhat unpacific attitude of most Americans. The fact that the hospital mentioned was full of wounded soldiers suggested that it might be made the object of a German air-raid. Precautions were taken:

That night every *malade* who could possibly be moved went down to the cave for the night. At 9:30 the Huns arrived and never to my dying day shall I forget that night. They bombed until 3:45 a.m., around and around the hospital-wall, got the chapel and morgue, broke every pane of glass in the hospital, blew open every iron shutter on the windows, came within ten yards of the contagious building, so that all the contagious patients were forced to come over to our cave and halls; the concussion of one bomb was so terrific that it broke again the leg of Captain Mosley (one of our oldest patients), whose breaks (two) had nicely knitted. The terror of the patients was simply pitiful; those brave lads who had gone over the top so unthinkingly found it almost impossible to bear the racket when they were helplessly bound to a bed.

Corporal W. L. Whitcombe, formerly of Batavia, New York, is not inclined toward peace until there have been changes in Germany's ways. He writes from the fighting-lines:

You have, I have, and every one that reads has read of the German devastation. Dear folkses, reading makes little impression. You must see to realize, to even faintly comprehend the atrocities that the Hun has committed upon evacuated France. We have passed through villages where not a single house possesses a roof, where the legend *Gott strafe England* is on the buildings—mere shells of their former compactness—where the trees have been hacked to stop the flow of sap and deaden them, where churches have been dynamited viciously, where there are graves of women who have been ravaged so brutally that death must have been a blessing, where baby hands have been cut at the wrists, and old men have been the sport of these uncouth monsters, where wells have been poisoned

or filled in, and every conceivable deviltry of a mind given over to degeneration and savagery has been committed. It may be well. It may be that God has permitted these things so that we will be so incensed that we will never stop until every mother's son of a beast is dead in Germany, or has changed his mind. Its effect on me has been that I'm mighty glad I'm here and that I can take a man's part against such barbarians—which by the way is absolutely too polite a name for them.

During the past, the routine has blotted out the bigger aspects and even now it does at times, but that is only our human side. Deep down the larger things are constant with all of us. Every man in the company, I believe, feels much the same, and even the grumbling indicates the impatience of the men to take what they consider an active part.

Lieut. H. M. Ewing mentions peace prospects in a letter published by the Columbus (Ohio) Dispatch:

I heard a French captain say he would never again set a time for the war to be over as he had been fooled so often already. Others have it down to three and four and even one month! I think it will be some time next summer, if it is not over in three months. Nobody that I've talked with expects to reach Berlin. They seem to think the Boche will give in, and the Allies will dictate terms which will be accepted, before then. How true their judgment is I can not tell. For myself, if an extra six months or a year will take us to the lair of the beast, I am for going there and destroying his nest.

Dwight Humphrey Fee, of Canonsburg, Pa., now in Flanders, confesses that while he doesn't "yearn for blood," nevertheless he'll be glad when his section "moves up." His letter was written not long before American troops in Flanders took Voor-meeze and "moved up" in other localities.

To the British "Tommy" Private Fee pays a feeling and spontaneous tribute, the sort of tribute that he seems to feel may be needed in certain American quarters. He writes:

Resent any slurs on British troops just as quickly as you would resent an insult to ours. Tell their critics to go up the line and see for themselves. The spirit, the brotherliness, the unselfishness, the kindness, and the quiet courage of these British lads are things to be admired, no matter what some one "has heard." No matter what misguided British statesmen have done in the past, or may do in the future, T. Atkins, of whatever shire, of whatever station in life, is a gentleman up the line. And the Jocks—I doubt if the Jocks have superiors.

James Norman Hall—here's to him!—was right about the Tommies. "One wonders (not long, however) how he can ever live with them; and then he wonders how one can ever live without them." They're the greatest ever. Kindly, whole-hearted, and simple-hearted they are. No matter what is on, it's simply a case of "carry on" with them. Heroics are absolutely unknown. Before I knew the Tommies I thought their reputation for trench-humor had been overrated. Now I know it simply can not be overrated. Not that life in the line is one grand round of

"Down on the Mexican border the very winds breathed Alkali—and here in France the clouds pour torrents—but still the Packard does not rust."

Packard

This cross-sectional view of the Packard truck suggests the numerous exposed metal parts which are subject to the conditions of the atmosphere—and which are protected against rust by the Parker Process.

The Packard does not rust because every truck which leaves the great Packard factory is protected against the elements by the Parker Process.

Visit the war zone—and you will find metal equipment of almost every character resisting severe atmospheric conditions without a sign of rust.

Passed by rigid government tests the Parker Process is now being used on army rifles, bayonets, machine gun parts, hand grenades, bolo knives, trench knives, bicycles, motorcycles, mine cases, buoys, aeroplane parts, food containers, bridge bits, stirrups, truck parts and other apparatus of war.

Is Your Own Product Proof Against Rust?

Is your own product proof against rust—or do you have to sell it to your customer with the tacit admission that sooner or later it will corrode—and waste away in service?

Every manufacturer who uses steel or iron in any way will find much of interest in the new Parker Process book for industrial executives—a concise treatise on rustproofing which explains how the Parker Process is now used on metal articles from household ranges to fountain pens—from automobiles to building hardware—and how easily you can apply it to your own product without interfering in any way with your present manufacturing plans. Your copy will be sent immediately upon request.

TOLSTOY'S ESSAYS AND LETTERS. Containing new translations by AYLMER MAUDE. 12mo, cloth, 372 pages, \$1.00. Funk & Wagnalls Company, Pubs., New York.

Plant an English Walnut Tree

FROM FARTHEST NORTH WALNUT NURSERY

If you have room plant a grove of them, for the cultivation of the English Walnut in the north is not only one of the newest, but one of the most rapid growing industries in the United States. The early planter is bound to reap a golden harvest. Write us for details.

Look at this record of The Thompson Orchard, near Rochester, 228 trees, the largest commercial bearing orchard in the East, producing in one season, 260 Bushels Walnuts, 32 lbs. to the bushel, sold at 25c. per pound. This orchard has been in bearing many years, with occasional temperatures 20 degrees below zero.

"Northern Grower" means specially bred to severe changes of climate and low temperatures, strong, vigorous, husky young trees, able to offer unyielding resistance to severe weather.

Nut Culture, Fruit Trees, Berry Plants, Evergreens and Shrubs described in our 1918 Magazine, sent free on request.

Kwikelite

THE QUALITY FLASHLIGHT

Two popular styles—
2-cell with "Mince's"
head, and also
"Junior" model.

The Flashlight with the Seamless Battery

Kwikelite is the only flashlight with the seamless cell battery—guaranteed for 25 per cent longer service than any other flashlight battery.

The seamless construction practically prevents corrosion, the cause of most flashlight troubles.

Kwikelite is the Quality flashlight, inside and out.

The designs are distinctive, and many of the finishes, such as the "black metal," bronze and khaki, are absolutely unique.

Kwikelite costs no more than an ordinary flashlight. Keep one handy for use around the house. Have an extra one in the car.

The Child's BIBLE

Here is an edition of the "Book of Books" that will fascinate your growing boy or girl. It is a consecutive arrangement of much of the narrative portion of the Old and New Testament told in the words of the Authorized Version, printed in fine large type on wide pages, so that it can be easily read by a child. The collection includes—

The Story of the Flood
The Call of Abraham
The Brazen Serpent
David and Goliath
Daniel and the Lions
Christ in the Temple
The Good Shepherd

and many others of the more striking episodes of Biblical history conveniently divided into short chapters. The letterpress is accompanied by

100 Full-Page Plates

from Paintings by Famous Artists

twelve of which are in color. These beautiful illustrations will serve to fix the incidents recorded in the memory of the young in a way nothing else can do.

A large well-made book of over 800 pages, size 10 1/4 x 8 x 2 inches. Bound in Red Cloth, with gold lettering and gilt edges, \$1.75; by mail, \$3.00.

MAPLEINE
The Golden Flavor

repartee, but to my knowledge there has never arisen a situation, no matter how serious, that some Tommy didn't have something funny to say about it. And their songs—you shall certainly hear them when I get back.

But, altho I may be prejudiced because of my own ancestry, the prize crew is the Jocks. It was my good fortune to live for four days with a little detachment of kilties from Ian Hay's own regiment, the Argyll and Sutherland Highlanders. They weren't from his own battalion, tho. Harry Lauder's son was in the same regiment, too, you know. These lads were part of the first hundred thousand, so you can well imagine the pleasure I had.

They might well have stepped from out the pages of "The First Hundred Thousand." With their arguments, their songs, and their pride in "Auld Scotia," they simply took the cake. Here's the address of one of them; save it in case I should lose it: M. Quinn, 7, Park Lane, Stirling, Scotland.

And they sang that song Ian Hay speaks about, "Hold Yer Hand Oot, Ye Naughty Boy," altho it's about five years old. They hailed me as the "American Scotsman," and immediately christened me "Scotty," at the same time insisting that I was getting "Scotchier-looking" every day. Oh, it was a great week-end!

The war is no picnic, of course. Jerry's bombs are absolutely unpleasant, his shells are annoying, and his personal calls are unwelcome—not to mention his machine guns.

My new work is growing interesting and promises to be really important; that is, the section's work. We've moved again. This is the ninth place in France where I've spent at least one night. I don't know how long we'll be here. We are still away behind the front of one of the best-known sectors on the line. I'll be glad when we actually move up. I don't yearn for blood, but I do feel useless back here after nearly eleven months in the Army.

In our particular work there will be no actual combat-work, and no patrolling or scouting. I think I can get on a patrol now and then, tho. But you mustn't worry. I sha'n't run into danger needlessly, of course, but in a pinch I know what you want me to do and what, if all's well, I shall do.

Sometimes, when I see what some folks get away with—and not only on this side of the water, either—I am tempted to go after a "cushie" job myself. Then two things occur to me: One, that it isn't my idea of the right thing to do, because no matter what others do, that doesn't relieve one of doing what he himself—and he alone—believes to be right; the second is that you, living up to the creed yourself, wouldn't approve, and thus it would be unfair to you. So we'll both see the thing through to the finish; we'll keep the faith.

"If you keep your eye on the illustrated weeklies in the movies," writes Corporal A. R. Lowery to his "Dear Folks" in San Antonio, Texas, "you may see yours truly, as I've been doing the honors for our platoon." When Pershing gave the D. S. O. to Corporal Lowery's brigade, the writer admits that he faced the movie cameras. In addition to being photographed, the French treated them "like kings," and gave them a banquet, with "gorgeous eats"—and "nine girls and just one marine at each table."

Back of all that was tragedy enough to make the parades, and flowers, and

Need More Floor Space Quickly?

Then consider Austin No. 3 Standard, a type of Austin Standard Factory Building that has adapted itself to so many different manufacturing requirements—one of the Austin 30-working-day types.

With the data and illustrations shown on this page you can quickly lay out the size of building you require, locate partitions, machinery, equipment, etc., and decide upon a plan that will exactly meet with your individual requirements.

Dimensions will be found in the specifications below. Flooded with light and scientifically ventilated this building is an ideal type for manufacturing.

A monorail capacity up to 2,000 pounds can be carried at any panel point. Plumbing, heating, lighting, sprinkler, power and equipment layouts have been standardized for No. 3 Standard.

The Austin Book of Buildings—The ten Austin Standards are all illustrated and described in the book which will also give you an outline of the special service of The Austin Company.

Austin construction resources and facilities will be devoted entirely to essential war work until the end of the war.

In case your need is urgent use the wires

Brief Specifications Austin No. 3 Standard

Width—100 ft.

Length—Any multiple of 20 ft.

Clearance Under Trusses—13 ft.

Excavations and Grading—On normal site excavation for standard foundations, and outside grading within 3 ft. of outside of building.

Foundations—Concrete, 1 part cement—3 parts sand—5 parts stone or gravel.

Floor—5-inch concrete base with monolithic finish.

Side Walls—Common brick, selected for facing, laid in lime mortar gauged with cement.

Window Sills—Concrete.

Monitor Ends—Asphalt shingles on wood sheathing.

Columns—Structural steel.

Roof Structure—Structural steel trusses with level bottom chord, 6x12 yellow pine purlins carrying 2x6 dressed and matched yellow pine roof sheathing.

Waterproofing—4-ply built up felt, pitch and gravel roofing or equal.

Sash and Ventilation—Sidewall steel sash, continuous, with factory ribbed glass and ventilated sections in monitor operated with mechanical operator; all other sash hand operated.

Painting—Structural steel and steel sash, one shop coat and one field coat. Exterior wood work, 2 coats of lead and oil. Interior walls and ceiling, 2 coats of mill white paint.

Austin No. 3 Standard 100 ft. x 600 ft., built for the International Motor Car Co., Allentown, Pa., in 34 working-days

Cross Section No. 3 Standard Height may be increased to suit requirements

Austin No. 3 Standard, showing the Standard type widened many times in multiples of 50 ft. Length can be any multiple of 20 ft.

\$3.00
\$3.50

You'll never need to ask "What is the price?" when the shoe salesman is showing you W. L. Douglas shoes because the actual value is determined and the retail price fixed at the factory before W. L. Douglas name and the retail price is stamped on the bottom. The stamped price is W. L. Douglas personal guarantee that the shoes are always worth the price paid for them.

Stamping the price on every pair of shoes as a protection against high prices and unreasonable profits is only one example of the constant endeavor of W. L. Douglas to protect his customers. W. L. Douglas name on shoes is his pledge that they are the best in materials, workmanship and style possible to produce at the price. Into every pair go the results of sixty-six years experience in making shoes, dating back to the time when W. L. Douglas was a lad of seven, pegging shoes.

The quality of W. L. Douglas product is guaranteed by more than 40 years experience in making fine shoes. The smart styles are the leaders in the fashion centres of America. They are made in a well-equipped factory at Brockton, Mass., by the highest paid, skilled shoemakers, under the direction and supervision of experienced men, all working with an honest determination to make the best shoes for the price that money can buy. The retail prices are the same everywhere. They cost no more in San Francisco than they do in New York.

CAUTION—Before you buy be sure W. L. Douglas name and the retail price is stamped on the bottom and the inside top facing. If the stamped price has been mutilated, BEWARE OF FRAUD.

For sale by 100 W. L. Douglas stores and over 9000 W. L. Douglas dealers, or can be ordered direct from W. L. Douglas by mail. Send for booklet telling how to order shoes through the mail, postage free.

What 15¢ will bring You from the Nation's Capital

Washington, the home of the Pathfinder, is the nerve-center of civilization, history is being made of this world capital. The Pathfinder's illustrated weekly review gives you a clear, impartial and correct diagnosis of public affairs during these strenuous, epoch-making days.

Subscribe, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fully, briefly—before you. Send 15¢ for that you might like with a penny, and we will send the Pathfinder on credit for 13 weeks. The 15¢ does not repay us, but we are glad to loan it to our friends.

The 15¢ matter of 15¢ in stamps or cash will bring you the Pathfinder 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center for the Nation; a paper that gives you all the news of the world and tells you what it means to you. It is published every 26th year. The paper tells the truth about everything that is going on in the world. It is the best of its kind. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your paper. If you want a paper in your home which is comprehensive, authoritative, and interesting, the Pathfinder is yours. Send 15¢ for that you might like with a penny, and we will send the Pathfinder on credit for 13 weeks. The 15¢ does not repay us, but we are glad to loan it to our friends.

The Pathfinder, Box 56, Washington, D. C.

banquets doubly welcome. Honor is often coupled with tragedy by the fortunes of war, as in the bit of history that the Corporal tells:

It seems that every one of the pals I had got bumped off. Lindsey got it about the hottest part of the fighting. Our company, and especially our platoon, got into about the worst nest there was to clean out. They were on top of a steep hill and behind big rocks with machine guns and until we could get within hand-grenade distance of them we didn't have a chance. But of course we got there in the end after several attempts and the loss of half our men. Our platoon lost about as heavy as any in the Marine Corps and we had about as good men as there were in the outfit, too. That isn't hot air either, it's the truth.

Lindsey has been given a D. S. C. and if a man ever deserved one he does. If you see his folks you can tell them that he showed lots of the stuff that heroes are made of. The first day he fought hard all day and then helped carry wounded all night, and after just a very little rest he went into the second day's fighting with no rifle and only his gas-mask stuffed full of hand-bombs and two automatic pistols. He and I were together and we got close enough to hear the Boche officer give the command to fire before they opened up. We dropped behind a rock and he called me to where I could see better to snipe with my rifle. Then they started throwing bombs and we ran them away from three guns when we started up the hill to where there were more machine guns and a sniper that was up in a tree got him. We had just started when all of a sudden he crumpled up and went down. He just looked over at me and said, "Go get them, Lowery." It sure takes the heart out of a fellow to see his best friend go down like that. And then they wonder why we didn't want to take prisoners. I suppose he was awarded the Distinguished Service Cross for dragging our lieutenant from within a few feet of a machine gun after he was wounded the first day. The boys, every one, deserve lots of credit for the way they fought and skirmished in their first real battle. They obeyed commands as long as there were officers to give them, and after our officers were all killed or wounded they kept going until orders came from the major to stop.

There was a bunch of about eight of us that hung together and they seemed to get us first of all. There are only two of us left now. You don't want to worry over this letter too much, because it's over with now and it will probably be some time before we get any more of that, and if we ever do it won't be as bad this time because the Boche gives up now almost as soon as he finds out that it's the marines that are after him. You may know that when one marine can capture eighty-three prisoners in a bunch and bring them in alone that they must respect us. Now that isn't bull either, it really and truly happened. We had some funny things happen up there, too, and once in a while a fellow would have to laugh even when he didn't know whether he was going to get out or not.

I would have liked to have had time to see some of the fine works of art in Paris, but we only had one day and two nights there so I didn't have much time. Just saw Napoleon's Arch of Triumph and one or two of the most prominent things. It's sure some city.

THE SPICE OF LIFE

Don't.—Motto for the gasoline-savers, to be hung on the garage door that it may be seen Sunday mornings: "Don't keep the home tires turning."—*Chicago Evening Post.*

Real Progress.—HE—"And how are you getting on with your collecting for the soldiers?"

SHE—"Splendidly! I've had my name in the papers four times already."—*Sidney Bulletin.*

But a Worm Sometimes Turns.—A "conscientious objector" told the tribunal the other day that he wouldn't kill a worm. As the poet so touchingly puts it, "A fellow feeling makes us wondrous kind."—*Passing Show.*

Indicating Her Desires.—A man charged at Kingston last week stated that he left his wife because she had twice thrown him down three flights of stairs, struck him with a garden-rake, and looked him out at night. It is good to find, even in these brutalizing days, that there are still men who can take a delicate hint.—*Punch.*

This Happened Before America Got In.—A wife whose husband is on active service recently presented him with a bouncing baby boy. She wrote to ask him when he should get leave, and also when the war would be over. His reply was as follows: "DEAR LUCY.—I don't know when I shall get leave or when the war will be over, but if the baby should be called up before I get leave, give him a parcel to bring out to me." Your loving husband, BILL.—*Tit-Bits.*

Consistent Performance.—Shoeless, he climbed the stairs, opened the door of the room, entered, and closed it after him without being detected. Just as he was about to get into bed his wife, half-aroused from slumber, turned and sleepily said:

"Is that you, Fido?"

The husband, telling the rest of story, said:

"For once in my life I had real presence of mind. I licked her hand."—*Tit-Bits.*

Caught Off Guard.—"Did the postman leave any letters, Mary?"

"Nothing but a postcard, ma'am."

"Who is it from, Mary?"

"And do you think I'd read it, ma'am?" asked the girl with an injured air.

"Perhaps not. But any one who sends me a message on a postcard is either stupid or impertinent."

"You'll excuse me, ma'am," returned the girl loftily; "but that's a nice way to be talkin' about your own mother."—*Boston Transcript.*

Discrimination.—President Wilson is fond of telling a story about an old teamster. This old fellow said to the treasurer of the concern one day:

"Me and that off-horse has been workin' for the company seventeen years, sir."

"Just so, Winterbottom, just so," said the treasurer, and he cleared his throat and added: "Both treated well, I hope?"

The old teamster looked dubious.

"Well," he said, "we wus both taken down sick last month and they got a doctor for the hoss, while they docked my pay."—*Pittsburg Sun.*

WHITTALL RUGS

Buy Rugs as Does the Expert

He never buys on appearance—he "digs into" the value of the fabric. He looks beneath the surface for those hidden qualities which he knows insure long wear.

Although you may lack the technical knowledge and experience of the expert rug buyer, you do not have to take chances, for the name "Whittall" is your guarantee that any rug bearing this name has woven into it those very same qualities which the expert looks for as his guide to durability and service. The same reputation that has made Whittall carpets famous for many years also stands back of Whittall Rugs.

"Oriental Art in Whittall Rugs"

One illustrated book, describing the color, refinement and beauty of design of these substantial floor coverings, sent free on request.

Conditions of Labor in American Industries

By W. JETT LAUCK and
EDGAR SYDENSTRICKER

This book, by two statistical experts who have long and carefully studied official figures and facts, considers in a judicial spirit WAGES, and their adequacy or inadequacy; WORKING HOURS, and how these affect the work done; SANITARY APPOINTMENTS, and how the product of labor is affected thereby; EMPLOYMENT, irregularity thereof, and how the economic of business are affected thereby; UNEMPLOYMENT, and how this affects the rate of wages; THE WAGE-EARNER'S FAMILY, etc., etc.

IT HAS PARTICULAR INTEREST FOR THE REFLECTIVE BUSINESS MAN; THE THOUGHTFUL WORKINGMAN; THE SOCIAL WORKER, who would understand social conditions; THE TRADE UNIONIST, who would know all the facts; ALL STUDENTS OF INDUSTRIAL PROBLEMS.

Price, \$2.75 Net. By mail \$2.87.

How Tender, Bleeding Gums are Made Firm and Healthy

Pyorrhea is an unhealthy condition of the gums and not, as many people suppose, a disease of the teeth. It is a purely local condition.

Tartar deposit on the crowns of the teeth near the gum margin is the principal cause of pyorrhea. As the formation of tartar increases it extends to the roots of the teeth. It causes irritation, inflammation of the gum tissues follows; then the gums become sore and spongy; they bleed and begin to recede. The gums have become infected; pyorrhea pockets form and enlarge. Gums break down; the bony structure holding the teeth disintegrates. In time the teeth loosen, fall out or must be extracted.

Pyorrhea, while itself confined to the gums, menaces the general health. The pyorrhea pockets provide a most favorable breeding ground for all kinds of disease-producing germs. The system absorbs the pus and disease-producing bacteria exuded

from pyorrhea pockets. Constitutional health is undermined.

Pyorrhocide Powder is prescribed and employed by the dental profession as a most effective means for correcting sore, bleeding, spongy and receding gums and as an aid in the prevention and home treatment of pyorrhea. It is of the highest efficiency as a cleanser and polisher of the teeth.

Pyorrhea may be prevented by the daily use of Pyorrhocide Powder as it removes mucoid plaques or films and the daily accretions which form tartar.

Pyorrhocide Powder is invaluable where a pyorrhetic condition exists. Its use helps to make soft, spongy gums firm and hard and to heal bleeding gums. Pyorrhocide Powder assists in checking the receding action of the gums.

Pyorrhocide Powder is prepared solely for home treatment. It is used as a dentifrice. If pyorrhea symptoms exist in your mouth, get a box of Pyorrhocide Powder. Its healing effects on your tender, sore and bleeding gums will serve to show you why Pyorrhocide Powder won the confidence and approval of leading practicing dentists.

Pyorrhocide Powder is effective and helpful in its action. We would like to send you, without charge, a sample of Pyorrhocide Powder to try. Use it. Note how clean and soothed your gums feel—and how long that feeling lasts. This sample will give you an idea of what the regular use of Pyorrhocide Powder will accomplish.

Pyorrhocide Powder is economical because a dollar package contains six months' supply. For sale by all good drug stores and dental supply houses.

THE DENTINOL & PYORRHOCIDE COMPANY, Inc.
1470 BROADWAY, NEW YORK CITY

Sold for years exclusively upon the recommendation of the dental profession. Effective not only in the treatment of pyorrhea, but also aids in its prevention, when used regularly as a dentifrice.

Send for Free Sample and Booklet

Upon request we will send you a sample of Pyorrhocide Powder, together with our educational booklet on the causes, effects, prevention and treatment of pyorrhea. Write today.

War-Work, or Working the War?—Nodd—"Doing any war-work?"

Todd—"I should say so. I just persuaded my wife not to buy a new gown."—*Life*.

Wrong Number.—"Did you ever get a proposal, auntie?"

"Once, my dear. A gentleman proposed over the telephone, but he had the wrong number."—*Tid-Bits*.

Try This.—"So you sent five shillings for that advertised appliance to keep your gas-bills down. What did they send you?"

"A paper-weight."—*Tid-Bits*.

LIEUTENANT—"Don't worry, my boy. It's only Burleson."—*Life*.

Another Mysterious Disappearance.—"115 War-Stained Heroes of Foreign Legion Arrive Here."—*Tribune* headline. You will guess a half-dozen nationalities as their eighty-six bronzed faces come up the street.—*Tribune* Editorial.

Kidding Father.—With deep anguish he begged her to reconsider her answer.

"If you don't marry me, Millie, I'll blow my brains out."

"Oh, come now, don't do anything as rash as that. But—but," she reflected softly, "that would be a good joke on father, for he thinks you haven't any."—*Pittsburg Sun*.

Temporary

Miranda's dropt her fancy-work and sailed across the Straits

As a temporary "lady of the lamp"; And Jane's abandoned portraiture to wash the cups and plates

Of the Tommies in a temporary camp; And Ethel—nervy Ethel!—is a motor-driving Waac.

And fairly saved her special Brigadier The day that Fritz got busy and our line came surging back

In a temporary movement to the rear.

A temporary Major they've contrived to make of Bob

(He was always pretty hefty at his drill), While the rank of air-mechanic—and he hustles at his job—

Is the temporary perquisite of Bill; Old Joseph drives a tractor most surprising true and straight

(He's sixty, but a temporary sport), While Augustus sails the ocean as a temporary mate

When he isn't in a temporary port.

There's a temporary shortage of the things we eat and wear,

And the temporary pleadings of the Tank,

Plus the temporary taxes that we're called upon to bear,

Lead to temporary trouble at the bank; The only things that haven't changed since Wilhelm butted in

To show how Armageddon should be run

Are the views of Thomas Atkins as to who is going to win,

And his personal opinion of the Hun.

—*Punch*.

- as out-of-date as Sewing by Hand

THE old method of ironing—so wasteful of time and strength and so tiring, is no more in keeping with present standards than making the family's clothes by hand.

The many demands upon a woman's time today make it desirable—yes, imperative—that she do her ironing in the modern way with the **SIMPLEX**. Not only does it save your time, strength and health, but it saves fuel and money as well.

Irons everything except skirts and shirtwaists.

Completes an average ironing in a single hour at a total fuel cost of 3c. Saves on an average \$100 a year in fuel, help and laundry bills.

SIMPLEX IRONER

"THE BEST IRONER"

CURRENT EVENTS

THE WAR

THE WEST FRONT

September 18.—British and French troops advance from one to three miles in a coordinated operation on a twenty-two-mile front north and south of St. Quentin. British elements cross the Hindenburg line at Villoret and Gouzeaucourt. French troops reach the western outskirts of Francilly-Selency, three miles west of St. Quentin. Six thousand prisoners are captured by the British. The Paris bulletin announces the capture of a few hundred.

American Army Headquarters in France announces that the American First Army has completed a new line in the St. Mihiel sector running parallel with the Hindenburg line, at an average distance of one and a half miles.

Berlin reports British and French attacks on a wide front from Havrincourt Wood to the Somme. Counter-attacks are said to be progressing.

September 19.—London reports ten thousand prisoners and more than sixty guns as a result of the attack begun yesterday north of St. Quentin. The repulse of heavy German counter-attacks along the new line is noted.

Paris reports an extension of the French gains beyond Contecourt, and the capture of Castres.

The Berlin report claims recapture of a portion of the trenches northeast of Dixehoote which remained in the hands of the Belgians after the fighting of September 9. Australians who penetrated the German line between Hargicourt and Pontrouet are reported to have been halted by a counter-attack west of Bellicourt.

American artillery and airplanes are reported active on the St. Mihiel front.

September 20.—The village of Moeuvres, seven miles west of Cambrai, is recaptured by the British. In the Lempire-Epehy sector, northwest of St. Quentin, Haig's troops advance their line more than a mile. An advance on a front of two and a half miles northeast of La Bassée is also recorded.

French forces in the region of St. Quentin capture Essigny-le-Grand and make additional prisoners.

Berlin reports the repulse of British assaults, with the capture of prisoners, near Moeuvres, and the capture of 130 French prisoners in enterprises west of Jouy.

American Army Headquarters reports the deliberate bombardment of American hospitals, with the loss of eight American wounded. Metz forts and batteries are under fire from American guns. German artillery activities are increasing.

September 21.—British forces, fighting against strong opposition, advance slightly east of Epehy and near Hargicourt.

Paris reports the repulse of German counter-attacks.

Berlin reports the repulse, with very heavy losses, of British attacks near Hargicourt, and the capture of fifty prisoners north of La Bassée. A French advance on the high ridges west of Jouy is admitted.

American Army Headquarters notes great German activity on the Hindenburg line on the St. Mihiel front.

September 22.—British troops push their lines forward at four points on the front facing the northern part of the Hindenburg line. The most extensive gain is reported north of the Scarpe River, near Gavrelle, where they throw the Germans back on a two-mile front. Rain and mud are slowing the advance. American patrols raid the German lines east of St. Mihiel, taking twenty-

nine prisoners in the region of Haumont, and five southeast of Charey.

Heavy artillery activity is reported from the French front, near St. Quentin and north of the Aisne.

The German official report, dealing with the British attack of September 19-20, states that German defenses had been removed eastward in preparation for the attack, and that the British troops were defeated in front of these lines with "exceedingly heavy losses."

September 23.—French troops capture the wood north of Le Fontaine and penetrate through Vendeuil to the Oise. The French now hold the west bank of the Oise for more than half the distance from La Fère to Moy.

London reports hard fighting northwest of St. Quentin with slight advances by the British.

Berlin reports the capture of British prisoners in a raid near Neuve Chapelle, the repulse of infantry-attacks southeast of Epehy, and increased artillery activity near Ypres.

Heavy rains reduce activities on the American-Lorraine front to one American raid, producing but one German prisoner.

September 24.—British and French troops attacking on adjacent fronts, totaling about seven miles west of St. Quentin, capture 1,300 prisoners and four towns. The Allied lines are now less than three miles from St. Quentin.

Berlin reports the failure of Allied attacks northwest of St. Quentin.

American Headquarters in Lorraine reports an increase in the German artillery fire. Otherwise German activity has been confined to raids and patrolling. American raids net twenty-nine German prisoners.

THE BALKAN FRONT

September 18.—Servian, French, and Greek troops advance an average of ten miles on a front of twenty miles in Macedonia. Four thousand prisoners and fifty guns are reported among the booty. German troops, according to a Servian official statement, have been sent to this front to help the Bulgarian forces, and were put to flight along with the Bulgarians. Gradeshnitsa and Starovina are among the villages reported captured.

An official statement issued by the German War Office reads: "East of the Cerna the Bulgarians since September 15 have been engaged in fighting French, Servians, and Greeks. German battalions have also been employed in repulsing the enemy."

Vienna reports the repulse of Italian attacks in Albania, near the coast.

September 19.—British and Greek troops attacking in the region of Lake Doiran, to the east of the French and Servian offensive, gain a foothold in the Bulgarian first positions, notwithstanding stubborn resistance.

Bulgarian troops, driven back through the mountainous region of Rojden and the Balettes Massif, are reported in flight across the Cerna River. Forty-five villages have fallen to the Servian troops, operating with French and Greek detachments.

The Bulgarian War Office reports violent infantry fighting between the villages of Gradeshnitsa and the Jojorik heights, with the repulse of repeated attacks. Advancing British troops are said to have been repulsed near Lake Doiran.

September 20.—London reports the Servians operating on a front of twenty-five miles to a depth from fifteen to seventeen miles. Five thousand prisoners and eighty guns are among the booty. All the Bulgarian trench systems on this front have been penetrated and light cavalry has taken up the pursuit, one unit having crossed the Cerna

FINE FURNITURE NEED NOT NECESSARILY BE EXPENSIVE

IT is a mistake to assume that furniture, to be really artistic and beautiful, must of necessity be expensive.

You will be astonished at the low prices of many exquisitely fashioned pieces and suites made by Berkey & Gay. Each of them is an original creation by Berkey & Gay designers and each bears the famous inlaid Shop-Mark—your guarantee not only of artistic excellence but of the quality of material and workmanship.

You can see Berkey & Gay furniture at the leading furniture store in your city. If you have any difficulty finding it, write us and we will gladly tell you where you can see it. Berkey & Gay Furniture Company, 446 Monroe Ave., Grand Rapids, Michigan.

A new and comprehensive exhibit, comprising thousands of pieces of Berkey & Gay Furniture, may be seen at our New York Showroom, 115-117 West 40th St.—or at Grand Rapids. Visitors should be accompanied by, or have a letter of introduction from, a furniture dealer of their city.

twenty miles north of the Sokol positions.

British and Greek troops attacking on both sides of Lake Doiran carry the Bulgarian outpost lines. A gain of two thousand yards, more than seven hundred prisoners, and the repulse of heavy Bulgarian counter-attacks are reported.

September 21.—Servian troops east of Monastir advance more than nine miles and are reported less than eight miles from the main highway connecting Prilep with the Vardar River. Ten more villages, a great number of prisoners, and several guns are reported to have been captured.

Paris reports that the offensive of the Greeks and British in the Lake Doiran region, which has been marked by furious battles, continues to progress.

The Bulgarian War Office announces the repulse of Allied attacks north of Monastir and east of the Cerna.

September 22.—Rome reports that Italian troops, in conjunction with the Entente Allied offensive in Macedonia, have captured the front enemy positions in the bend of the Cerna River, to the east of Monastir.

Servian troops, pressing the Bulgarian and German troops in central Macedonia, are reported to be within four miles of the Uskup-Saloniki railroad, the main supply for the Austro-Bulgarian forces in this region. The Bulgarian retreat continues with increasing rear-guard resistance.

September 23.—Advancing on a front of more than ninety miles, the Allied armies in Macedonia, says a bulletin of the French War Office, have passed the mountain zone formerly held by the German-Bulgar Army and are moving swiftly forward on the plains. Prisoners, cannon, and enormous quantities of material are reported captured. Northeast of Monastir the line of Mogoliar, Kanatlarsy, and Kalyana has been reached. Further north Servian troops have reached the Vardar from Gradsko to Demirkapu.

Rome reports Italian troops in Macedonia have advanced more than seven miles and have taken sixteen villages.

The Bulgarian War Office report notes bitter fighting between the Cerna and the Vardar. Following the repulse of the Anglo-Greek attack near Doiran, says the report, the fighting activity on this front has diminished in intensity.

September 24.—French cavalry operating with the Servians capture Prilep, northeast of Monastir. British forces, following the capture of Doiran, are advancing to the north, passing Kara and Oghular, on the east side of the lake. Strong bodies of Servians are reported on the eastern bank of the Vardar between Demirkapu Pass and Krivolak, covering the passage of the main body of Servians.

Greek and French troops operating on the British left are reported at Gurinehet, a few miles west of the Vardar.

Thus far more than 11,000 prisoners and 140 guns have been counted, in addition to immense stores of material.

IN PALESTINE

September 19.—British and French forces in Palestine attack on a front of sixteen miles between Rafat and the sea and push forward twelve miles. One body of English cavalry is reported in the rear of the Turkish armies in the direction of Nablus, while another is advancing toward El Afule and Beisan to intercept the Turks to the north. More than three thousand prisoners, many guns, and large quantities of material are among the booty.

September 22.—London reports that the Turkish Army operating in Palestine between the Jordan and the Mediterra-

nean has been virtually wiped out by the British and Allied forces, following the overwhelming of the Turkish defense system north of Jerusalem. Eighteen thousand prisoners, 120 guns, four airplanes, and a large quantity of transport are in the hands of the pursuing forces. Cavalry units are reported, sixty miles from their original positions, in occupation of Nazareth, El Afule, and Beisan. Arab forces of the army of the King of Hejaz cooperated to the eastward by destroying bridges and tearing up railroad lines near Derat.

September 23.—London reports 25,000 Turkish prisoners and 200 guns counted in the advance of the British armies northward through Palestine. Having seized the passages of the Jordan at Jisred-Dameer, says the official statement, the last avenue of escape open to the enemy west of the river was closed by British troops. The Seventh and Eighth Turkish armies have virtually ceased to exist, their entire transport having been captured by the British.

September 24.—British cavalry capture the port of Haifa, together with the towns of Aere and Es-Salt. The number of prisoners is reported to greatly exceed 25,000, and more than 260 captured guns are reported inside the British lines.

EVENTS IN RUSSIA

September 19.—A Stockholm dispatch states that German defeats in the west have caused a panic among the Baltic nobility in Esthonia, who fear the withdrawal of the German garrisons.

London reports the Czechoslovak forces in European Russia badly pressed by the enemy. Within the last ten days Bolsheviks, assisted by a considerable number of Germans, have occupied Volsk, Simbirsk, and Kazan.

Moscow dispatches state that the Czechoslovaks still hold the city of Samara, which the Bolsheviks claimed to have taken.

London reports that Baku in Transcaucasia has been evacuated by British detachments.

September 21.—The American Government through Secretary Lansing appeals to neutral countries to join in a protest against the "openly avowed campaign of mass-terrorism" and "wholesale executions" now being conducted in Russia.

Baku, in Transcaucasia, recently evacuated by the British and occupied by the Turks, is reported to be on fire.

September 22.—The Petrograd correspondent of the Hamburg *Nachrichten* reports that the People's Commissary at Vologda has urged on the population of the entire province the most gruesome persecution of British subjects and French and American citizens. Rioting is taking place in various towns, the correspondent says, and some Frenchmen and Americans are being murdered. A dispatch from Kief by the correspondent of the *Leipziger Abendzeitung* states that recently at Kurst a soldier fired twice at Leon Trotzky, the Bolshevik Minister of War.

September 23.—Blagovieshtchensk, capital of the Siberian province of Amur, and Alexievsk have been occupied by Japanese cavalry according to information received by the Japanese Embassy. Two thousand Austro-Germans are reported to have been captured at Kokka.

Harbin reports that a proclamation has been issued by the Japanese saying that Japan wishes to restore order because of its friendly feeling for Russia and not for any selfish motive. The proclamation declares that any one causing disorders will be severely punished. It is believed, says the dispatch, that the proclamation was issued because the population declined to accept notes carried by Japanese troops, instead of Russian money.

Amsterdam forwards a Moscow dispatch to the effect that renewed attempts have been made to assassinate members of the Soviet Government in Russia. As a result there will be fresh measures in reprisal.

September 24.—A dispatch from Vladivostok reports that a conference is being held at Ufa, European Russia, attended by many members of the Pan-Russian Constituent Assembly. The object of the meeting is to form in Russia a single government with the controlling power vested in the Constituent Assembly. Bolsheviks and members of the Social Revolutionary Left party will not be represented.

A delayed dispatch from Archangel states that on September 18 Bolshevik forces attacked American outposts south of Archangel and were repelled with severe losses. Several Americans also were killed.

THE WAR IN THE AIR

September 18.—General Pershing reports five American planes missing as the result of an attack by superior German forces during a bombing expedition in Lorraine.

A new type of German bombing airplane is reported from the British front. It is said to seat eight men and carry bombs thirteen feet long, containing two thousand pounds of explosives.

Lieutenant Luke, of the American Air Forces on the Lorraine front, is reported to have brought down nine German balloons in three days.

British airmen destroy fourteen German planes and lose eleven machines in the day's fighting along the British front.

September 19.—Hetrock, of Amsterdam, reports that Allied airmen are bombing Cologne, Coblenz, and other German towns, daily, killing or injuring many persons. It adds that many residents of these towns are fleeing to Holland for safety.

Despite rain and clouds, American air-patrols are active on the St. Mihiel front.

First Lieut. David E. Putnam, of Newton, Mass., is reported to have been killed on September 12, while patrolling the American lines north of St. Mihiel.

September 20.—A Paris report notes an entirely new type of German airplane especially designed for ability in maneuvering. Germans are also reported to have adopted parachutes as means of escape from damaged planes.

London reports sixty tons of bombs dropt on German territory in five days by British machines. This exceeds the record of any previous fortnight.

September 21.—London reports nineteen German airplanes accounted for by British airmen yesterday, while eleven were lost by the British. Twenty-six and a half tons of bombs were dropt in twenty-four hours.

September 23.—A bulletin issued by the British Admiralty states that British and Greek airmen bombed Constantinople on September 20 and 21 and dropt thousands of leaflets into the city.

Eight German planes destroyed, four British planes missing, and eleven tons of bombs dropt is reported as the day's record for British aerial operations on the Western Front.

September 24.—The official report issued by the British Air Ministry states that eight hostile machines were destroyed, several tons of bombs dropt, and four British machines lost in the course of the day's fighting.

SUBMARINE CAMPAIGN

September 21.—Washington reports that the total destruction by German submarines from August, 1914, to September, 1918, was 7,157,088 dead-weight tons of shipping in excess of the tonnage turned out in that time by Allied and

FROM A LITHOGRAPH, DRAWN ON THE STONE BY GEORGE BELLOWE

This is Kultur

THERE is no sharper contrast between German Kultur and the civilization that our forefathers died for, than the difference in the attitude of the two civilizations towards women and children.

Kultur in Belgium, and other devastated countries, is a tale so terrible that never yet has one dared more than whisper fragments of it. Yet the wrongs of Belgium, as a State outraged, pale beside the wrongs inflicted in savage, bestial revenge upon its defenceless women and children.

Such a civilization is not fit to live. And God willing, it shall be mended or ended. To this task America summons every loyal heart and hand. It is a Crusade, not merely to re-win the tomb of Christ, but to bring back to earth the rule of right, the peace, good will to men and gentleness He taught.

To carry on this crusade of modern righteousness means not merely that our young men shall cross the seas to fight the Hun. It means that we at home shall uphold them. It means that we shall back them with all things spiritual and material. It means that we shall lend, not merely from our plenty, but that we shall save and serve. It means that we shall give up many things that are dear to us; sacrifice, that our Crusaders may save us and our children from the horrors that have come to the little ones of Belgium and of France.

neutral nations. In the meantime, 3,795,000 dead-weight tons of enemy ships were seized, leaving the actual loss to the Allied and neutral nations 3,362,088 dead-weight tons.

September 22.—Three officers and twenty-seven members of the crew of the American steamer *Buena Ventura* arrive at Corunna, Spain. Three boats with sixty-four of the crew are missing. The ship was returning light when torpedoed on September 16. She was of 4,881 gross tons and belonged to the United States Steel Products Company.

September 23.—A British freighter arriving in ballast at "an Atlantic port" reports an attack by torpedo and shell-fire while 800 miles from the United States coast Friday, September 13. The *U-boat* continued firing for one hour and twenty-four minutes. Another steamship, belonging to the United States Shipping Board, reports an encounter with a *U-boat* on September 19, 500 miles off the American coast.

THE CENTRAL POWERS

September 18.—The Hague reports that the German Government is resorting to posters calling on the Germans to hold out.

September 19.—A dispatch from Cologne to the Dutch newspapers states that peace demonstrations, organized by the Social Democrats, were held September 18 at Essen and Cologne and in a large number of towns in Saxony.

September 20.—An official communication issued in Berlin says that the German Ambassador in Vienna, presenting Germany's reply to the recent Austro-Hungarian peace note, announces the readiness of Germany to participate in the proposed "exchange of ideas." The Austro-Hungarian Government announces that its offer is still open.

September 22.—A dispatch from Amsterdam quotes Vienna newspapers to the effect that 382 persons have been killed and many others injured in an explosion in an ammunition factory near the Austrian capital.

September 24.—The German people are being prepared for a fresh retreat of the German armies, state advices from The Hague, and are told to expect renewed attacks on all sectors from French, English, and Americans. The *Volkzeitung*, says the same report, admits the recent defeat on the Turkish front and remarks that the British appear to have been well prepared to exploit their successes.

FOREIGN

September 18.—Premier Clemenceau declares in an address to the French Senate: "We will fight until the hour when the enemy comes to understand that bargaining between crime and right is no longer possible."

September 19.—A London dispatch states that the Belgian Foreign Minister, in discussing Germany's "peace approach" to Belgium, declared that the conditions can not be taken as a basis for any serious discussion.

September 20.—The Inter-Allied Labor Conference in London adopts the entire report of the Committee on War Aims. This result is regarded as a triumph for Samuel Gompers, president of the American Federation of Labor, who successfully opposed pacifistic elements of the conference.

September 22.—Zurich reports that many Swiss Socialist journals have received reports of serious differences between South German politicians and Prussian dictators. German deserters are quoted as saying that a Bavarian Prince tried to shoot Hindenburg but that the Field-Marshal was not wounded.

DOMESTIC

September 18.—General March, Chief of Staff, states that army plans call for American forces to the number of 4,800,000 by the middle of 1919.

A decision of the Federal War Labor Board upholds the eight-hour day except in emergency, and provides that the question of "emergency" must be determined by a committee representing the employer and employees of the particular plant in which the question arises.

September 20.—A. Mitchell Palmer, Enemy Property Custodian, makes public documents tending to show that Arthur Brisbane, for many years editor of William R. Hearst's *Evening Journal*, bought the *Washington Times* on June 26, 1917, with money supplied by a number of the leading brewers of the United States.

Secretary McAdoo announces that it is not the intention of the Treasury Department to ask for more than \$8,000,000,000 revenue taxation for the current fiscal year.

Warrants are issued for members of the firm of Rosenwasser Bros., Incorporated, Long Island City, N. Y., charging fraud in army shoe work.

Washington announces that those who have obtained employment in essential industries to escape the draft and others who, having obtained such employment, shirk their duty and impair the industry, will be inducted into military service.

September 21.—The number of American soldiers embarked for foreign shores, announces General March, Chief of Staff, is now 1,750,000.

September 22.—An analysis of the food-situation and the increase of living-costs, made by the Food Administration, shows that the average rise in food-prices has been only 3½ per cent. since last year.

September 23.—The House accepts the Senate prohibition amendment to the Food-Stimulation Bill by a vote of 171 to 34, and the nation will become dry on June 30 next, for the duration of the war, if the action of Congress is approved by the President.

The War Department at Washington announces that up to noon 2,225 new cases of influenza have been reported by telegraph by camp surgeons in the various army camps. This brings the total number of cases reported thus far to 20,211. The epidemic is most severe at Camp Devens, Mass., where the total number of cases reported to date is 10,700. Altho 65 deaths resulted from influenza and pneumonia at this camp during the last twenty-four hours, officials express confidence that the height of the epidemic has been passed here and elsewhere.

September 24.—One hundred and fourteen cases of Spanish influenza, according to a report by Health Commissioner Copeland, originated in New York City, in the past sixty hours. Thirty-six additional cases were reported from a British troop-ship. Only one death was reported for the sixty-hour period covered above.

September 25.—William G. McAdoo, Secretary of the Treasury, announces that the new Liberty Loan will be for \$6,000,000,000 of bonds at 4½ per cent., which will mature on October 15, 1938, unless the Government exercises its right to redeem the issue on October 15, 1931.

Washington announces that the Government is about to adopt measures to enforce stability of wages during the war.

One hundred and fifty new cases of Spanish influenza in New York City, breaking all records since the disease was reported, are announced by Health Commissioner Copeland.

\$95 an Hour!

"Every hour I spent on my I. C. S. Course has been worth \$95 to me! My position, my \$5,000 a year income, my home, my family's happiness—I owe it all to my spare time training with the International Correspondence Schools!"

Every mail brings letters from some of the two million I. C. S. students telling of promotions or increases in salary as the rewards of spare time study.

What are you doing with the hours after supper? Can you afford to let them slip by unimproved when you can easily make them mean so much? One hour a day spent with the I. C. S. will prepare you for the position you want in the work you like best. Yes, it will! Put it up to us to prove it. Mark and mail this coupon now!

**WORK FARMERETTES HAVE DONE
THIS YEAR AND THE GREATER
FIELD FOR THEM NEXT YEAR**

THAT the farmerettes "made good" thoroughly during the past season has been clearly demonstrated by the ten days' campaign which began late in September in New York State for raising a million supporting members of the State Woman's Land Army, that organization being the one under which the farmerettes have been engaged for work and sent out to farmers seeking to employ them. About one thousand, or perhaps more, appear to have been employed during the past summer in various parts of the State. No girl was accepted by the Land Army until she had a physician's certificate stating she could stand farmwork. Ineligibles were thus weeded out before they got to the farm. No other standard was set. The girls came from everywhere and had previously been engaged in various kinds of occupation. One camp boasted a concert-singer from South Dakota, a rich woman from Riverside Drive, college girls, teachers, stenographers, telephone operators, and an art student. Another enrolled a librarian from the children's department of the New York Public Library. At the Oceanside unit on Long Island half a dozen States were represented.

According to a writer in the *New York Sun* it has taken about 4 per cent. of those accepted an average of two weeks to get acclimated and to harden their muscles. Others have dropt quite easily into the work without much bodily inconvenience. Most of them lost weight in the first week or so and were "dog tired at night," their muscles aching. But the tonic of outdoor life, contact with nature, freedom from mental strain, long, dreamless nights of sound sleep soon have restored them to normal and something more.

In New York State these workers are credited with having saved thousands of dollars' worth of food and helped to increase food production. Partial credit for the increased acreage is given them, because the farmers would never have increased their food crops if they could not have depended on farmerettes to care for and harvest them. Westchester County had approximately two hundred girl farmworkers distributed among its six units.

The Land Army plans for next year call for establishing 280 camps in the State. To do that means to raise a fund of \$600,000 to cover the cost of securing and equipping camps, providing work-clothes for the girls and auto-trucks to carry workers to and from their work. Once established, a camp becomes self-supporting. Farmers pay the camps \$2 a day for eight hours' work by each girl. Only forty units were in the field in New York this year.

Official reports received from several counties have indicated that rural New York is supporting the movement for next year's supply with enthusiasm. Westchester County has had thirty women engaged in canvassing every town and village in their allotted districts. These personal canvasses disclosed great interest among farmers. Red Cross and Liberty Loan committees in the county cooperated with the Land Army canvassers. On Long Island leaders have been working hard to

complete quotas of memberships. Support has been given them by wealthy estate owners as well as truck-growers and farmers who employed farmereettes last summer.

Typical of farmerette work in the interior of the State was the work done in Unadilla, Otsego County, on a farm of several hundred acres, where the manager early in the year had reported to the owner, living in New York City, that he saw no way in which the summer work could be cared for, owing to scarcity of labor. On application to the Woman's Land Army eight young women, four of them college graduates, were secured by the owner and installed in a modernized farm-house near the larger family house. In the village newspaper, *The Times*, at the close of two months' work by the farmerettes, a writer described how they had done practically every kind of farm work:

"They have hoed corn, potatoes, and cabbages; done spraying and general weeding; driven mowing machines and horse rakes; spread hay, pitched hay and mowed hay away; done threshing with machine threshers; dug post-holes through shale; done painting and window-cleaning from ladders; cleaned out from barns rubbish on floors and eelworms on rafters until neighbor farmers said the barns were 'as clean as a house'; harnessed and driven two-horse teams; helped out farmers' wives with sewing, cooking, and serving meals; gathered stone for stone walls; cut corn both with scythe and reaper, and in pairs churned all summer. Nearly all learned to milk. One operated an electric milker having thirty-two mechanical parts. Another took care of the milk-house. Others cleaned stables, barns, and chicken-houses. In pitching hay two were needed to lift one haycock, but these two pitched as much hay as did two men working separately at one haycock each, and at the end of the day were less tired than the men were."

An official statement, prepared by the "supervisor" of the Unadilla unit, showed for the two months "an A1 condition for all the eight members," and that "practically none had been incapacitated, even temporarily." One did get her wrist sprained and therefore could not pitch hay, "but she kept at work weeding vegetable gardens." Their regular pay was \$2 a day. Of that sum, \$1.50 was set aside for the equipment and upkeep of the unit—the furnishings, food-supplies, etc.—the remaining 50 cents going to the worker, who thus received \$15 a month, free and clear of living expenses, a sum which, it was noted, "at least one of their number earns at home in one day." The farmerettes had their social pleasures, meanwhile, so much so that in the last week when they were in service the engagements and invitations which arose "began to interfere somewhat embarrassingly with their employment." They estimated, after careful discussion among themselves, that altho the farm was on a hilltop, five miles from the village, they had had in two months about one hundred visitors to their cottage—farmers and their families from neighboring hillsides, people from near-by villages, city boarders from summer hotels, and a lady library expert from the University of Wisconsin. These visitors were entertained with the piano and singing, "an attraction which drew to the cottage increasing numbers, especially of farmers, their wives and

Everlastin' Team Work

THAT fine spirit which the American people are showing in their determination to win the war opens the way for this pronouncement of policy covering the needs of the Government as against the needs of individuals.

As manufacturers of a product which alike meets the needs of a nation at war and the needs of individual Americans engaged in essential industry, the General Motors Truck Company owes this expression of appreciation to those whose orders have been delayed. And the spirit with which these prospective customers have bowed to the greater needs of the war is hereby gratefully acknowledged.

Either directly or through priority orders, those loyal Americans whose manufactured products may be utilized for war purposes are giving the Government first call, and we, being in that class from the standpoint of production, are, in turn, dependent on those who produce the raw materials that go into our own finished product.

So two conditions stand in the way of deliveries—factory production is curtailed by scarcity of material, and output for industrial needs is limited by Government demand.

Could we run the factory at capacity both demands might be filled with reasonable promptness.

Until this situation improves, however, we ask the indulgence of all GMC customers—those who already own GMC Trucks and those who seek to buy.

"The everlastin' team work of every bloomin' soul," as Kipling puts it, will solve the problem—will bring about the day when war will be no more; when peaceful industry may resume the development which war has so ruthlessly interrupted.

The Standard Spark Plug of America

After the successful termination of the war we will publish certain facts that will finally demonstrate AC superiority in terms so emphatic none can mistake them.

These facts, plus the testimony of the country's leading passenger car, truck and tractor manufacturers, who, as listed below, use AC Spark Plugs for standard factory equipment, will make more than ever significant our claim that AC is "the standard spark plug of America."

That AC superiority is already firmly established is made apparent by an ever-growing demand.

In these days of careful buying, car users see great importance in the truth that practically all makes of good cars come factory-equipped with AC Spark Plugs.

They realize that the chief engineer selects AC's only after harsh competitive tests in which every plug made has the opportunity to qualify.

While it is true that there are a few manufacturers who do not as yet equip their cars with AC Spark Plugs, time and again our dealers remark that owners of these cars are often the most enthusiastic AC users and endorsers.

Ask your dealer to show you the AC chart. There you will find the correct size and design of plug for the car you drive. There are various types of AC Spark Plugs specially designed for every make and style of motor.

Write for further information on AC Carbon Proof Plugs specially designed for Ford, Overland and Studebaker cars; also for booklet "The Unsuspected Source of Most Motor Ills." by Albert Champion.

Dealers: What does this mean to you in your endeavor to give your customers the best?

children." They were asked to dinner at summer hotels and went to village churches when one of them sang solos at the offertory, on succeeding Sundays.

It is predicted that next year the employment of farmerettes will become nation-wide, instead of being confined, as it was this year, to a few States. The Federal Government has been seriously considering taking over the service, as it has been taken over in England by the British Government. At Albany in August was held a conference at which Governor Whitman was present, having for its purpose the formulation of means by which the State could assist in promoting the work.

RAILROAD CONTROL BECOMES SELF-SUSTAINING

Statistics for July gave gratifying evidence that government control of the railroads had become self-sustaining. The net income of Class 1 roads more than covered that month's proportion of compensation to railroad-owners. The increases allowed in freight- and passenger-rates had restored the balance between income and outgo. Indeed, the figures promised well for a substantial reduction of the current year's deficit, and that it might be entirely wiped out by December 31. *The Wall Street Journal* sets forth the following facts in this agreeable turn in the railroad situation:

"Aggregate railroad earnings and expenses for July of all the important roads in the country are in line with the individual statements of the different roads already published in showing large increases in both gross and net revenues. They also indicate, so far as one month's operating results may be used to generalize from, that the railroads are now on a self-supporting basis, if they are not actually returning a profit to the Government on current operation.

"Net operating income of these roads for the month of July was \$137,845,425 as compared with \$92,599,620 in the same month of 1917. In a recent statement from the Director-General's office the compensation payable to the railroad companies for the use of their property by the Government was estimated at \$650,000,000 for the first eight months of the year, or at the rate of \$81,250,000 a month. The net operating income of the Class 1 roads as mentioned above exceeds this monthly rental figure by \$56,595,000.

"There are, of course, a considerable number of roads under Federal control not included in these figures, the operations of which are probably not resulting as favorably to the Government as those of the Class 1 roads. A further reduction of the Government's apparent profit is caused by the expense of maintaining the overhead organization in Washington and elsewhere, the cost of which is not included in the operating expenses in the report under consideration.

"In the Director-General's report to the President of September 3 he gave the number of officers in the regional and central administrations as 136 and the total of their salaries as \$1,642,300. The last-mentioned sum, however, by no means measures the cost of Federal administration, since it includes no salaries or wages under \$5,000 a year, nor the cost of supplies, office rent, etc.

"Nevertheless it is apparent that the increases in freight- and passenger-rates made by the Director-General near the end of June have, for the present at least, restored a balance between income and outgo. July results by themselves in fact, suggest that before the end of the year the existing debts on current operation will probably have been much reduced if not wiped out. For the seven months of Federal control ended with July net

operating income of the Class 1 railroads was only \$290,000,000, whereas the compensation due the companies for that period was \$568,750,000. Leaving out administrative expenses there is a deficit here of \$278,750,000. If this is to be wiped out by the end of the year the roads will have to earn an average of close to \$56,000,000 a month in excess of all payments for which the Government is responsible. Net earnings normally increase during the summer and fall months, reaching their peak in October."

WHERE THE COUNTRY IS PROSPEROUS

That the war has brought marked changes in business all know, but that conditions remain prosperous in general some have not known. A monthly circular from the First National Bank of Boston, however, declares that prosperity is attested "by the ease with which the enormous and unprecedented taxes are being paid; by the heavy subscriptions to the Liberty Loans, and by the fact that business failures are at a very low level." In August 720 failures, with total liabilities of \$7,981,760, were reported, which were the smallest total of liabilities for any month since September, 1906, and the smallest number of failures for any single month since July, 1901. Further information is contained in this bank circular, notably some interesting opinions as to reconstruction after the war and our ability to reconstruct without disaster.

"The steps that have been taken to curtail credits have resulted in greater conservatism, and have had a beneficial effect, which is likely to continue for some time after the present necessity disappears. The business foundation is extremely sound. Figures of resources of savings-banks show that the subscriptions to the Liberty Loans have brought only a trifling decrease in savings-deposits. Evidently subscribers are buying bonds with their current income rather than with their savings. In other words, the Liberty Loans represent additions to the savings of the country, and not merely transfers of investments.

"With the Allied armies pushing through the German lines and breaking down the German resistance in several sections, the end of the war becomes a matter for consideration, even tho it may be delayed longer than the general public now believes. New problems, and new aspects of old problems, will arise for solution with the close of the war, especially in the United States, which has become a greater factor in world trade than ever before. The cost of the war, even tho it should end comparatively soon, will be enormous. The United States will have issued some \$25,000,000,000 obligations on account of the war by the close of the current year, but a considerable percentage represents loans to our Allies, so that the net cost may be materially smaller than that figure. This appears to be a heavy burden.

"In the Franco-Prussian War an immense indemnity was placed upon France, yet that country, which had suffered severely, paid the debt long before it became due. The North recovered from the heavy cost of the Civil War in a very short time. History shows, in fact, that financial recovery from devastating wars has been prompt and complete. The United States at present is in a strong position, having lost nothing except the mere cost of the maintenance of the war, whereas France and Belgium have been devastated, and naturally will require a much longer time for rehabilitation. Even these countries are likely to recover much more quickly than now appears possible, especially if the burden of the war is placed upon Germany, where it rightly belongs, in so far as that is possible.

Beware of tender, inflamed gums

FOR THE GUMS

BRUSH YOUR TEETH WITH IT

FORMULA NO. 1
Forhan's
NEW YORK CITY
SPECIALIST IN
DISEASES OF THE MOUTH
PREPARED FOR THE
PRESCRIPTION OF THE
DENTAL PROFESSION

PYORRHEA, with a premature loss of teeth, is almost inevitable if you do not properly care for your gums. Here is the explanation:

As you age the body tissues naturally relax. You see this tissue-lose-movement in the fingers in your joints, too. As you grow older your gums shrink below the normal gum line. Through lack of care they become spongy and inflamed. Then you have Pyorrhea (Riggs' Disease). Four out of five people over forty have Pyorrhea. And many under forty, also.

Don't let a tender gum spot develop. These tender spots breed disease germs which enter the system through tiny openings—wounding the joints or tissues—or causing other ailments. Immediately use Forhan's, which positively prevents Pyorrhea if used in time and used consistently. Forhan's tones the gum and hardens them. They in turn keep the teeth healthy. Brush your teeth with Forhan's. It cleans them scientifically—keeps them white and free from tartar.

If gum-shrinkage has already set in, start using Forhan's and consult a dentist immediately for special treatment.

FUNK & WAGNALLS COMPANY, 354 Fourth Ave., New York

RECORD BUSINESS FOR THE CHAIN STORES

Four of the leading five- and ten-cent stores are expected to report about \$178,000,000 turn-over for the present year, according to *The Wall Street Journal*. In eight months the reports of two systems already show "larger gains than in the full year of 1917." Nation-wide thrift is named to account for this big business. About \$35,000,000 worth of domestic goods have replaced imports. The writer says in detail of these matters:

"If further proof be needed of the claim that thrift has accompanied the war, it is furnished by the sales reports of leading five- and ten-cent stores for the eight months to August 31. All of these companies reported substantial gains in business over the same months of 1917. In two instances the increase for the eight-month period was greater than the gain for the full year of 1917 over 1916. McCrory stores gained \$1,164,053 in the eight months and the Kresge chain \$3,950,937, compared with gains of \$1,044,391 and \$1,095,152, respectively, in 1917 over the previous year.

"Executives of the various companies state that the spirit of economy which is exercised throughout the country is immediately responsible for the heavy increase in business. This condition, they say, is not only true of the five- and ten-cent stores, but also of the entire retail trade specializing in low-priced merchandise. The gains are not occurring in any particular section of the country, but are nation-wide in scope. All of Woolworth's twelve districts, embracing every State in the Union, reported gains in August over August, 1917, the Atlanta district leading with a gain of 43 per cent.

"Few people realize the enormous amount of five- and ten-cent merchandise sold in a year. Recently, one of the big chains opened a store on Fifth Avenue, New York, and on the opening day 36,135 persons passed through the store and 41,000 individual purchases were registered. Based on the sales reports for the first eight months of 1918 it is estimated that the four chains will do a gross business of about \$178,000,000 this year. The following table shows the estimated gross of each company with a comparison of business in previous years:

	1918	1917	1916
Woolworth.....	\$116,292,263	\$98,102,458	\$97,089,271
Kresge.....	36,882,187	30,990,700	26,795,545
Kress.....	21,431,239	17,611,340	15,115,179
McCrory.....	9,526,389	7,831,508	6,787,117
Total.....	\$178,331,918	\$153,636,415	\$135,287,115

"It might be claimed that the increase in business is due to the opening of new stores but this is far from the case. Such expansion has now been practically eliminated, due to the Government's order restricting repairs on stores to \$2,500. In the first eight months the Woolworth chain was increased by only twenty-six stores, which is small in comparison with the 1917 record of seventy-eight, and the 1916 expansion of 115. Kress has opened about twelve new stores, while the Kresge and McCrory chains remain practically unchanged. The increase in business has been practically all handled by the old locations. This, of course, reduced the increased overhead expenses incurred by new stores. In the eight months to August 31 the old stores of the Woolworth chain, those operating a full year, accounted for 63 per cent. of the total increase for that period. Together the four companies are now operating 1,502 stores, Woolworth being in the lead with 1,026, Kresge next with 175, McCrory, 151, and Kress, 150.

"The companies have surmounted one of their highest obstacles this year by substituting American-made goods for merchandise formerly imported. In peace

times about 15 per cent. of the goods sold were brought across the water. Most of it, such as ornaments, hardware, and toys, came from the Central Powers, while France sent laces, china and pottery came from Japan, and sundry articles from England. Based on the estimated sales of the four companies for 1918, approximately \$35,000,000 worth of goods of American manufacture is needed to take the place of imports. According to officials of the various companies the American workman is making good. While these domestic products cost a little more, the quality is said to make up for the higher price.

"It is mainly for this reason that it is difficult to make an accurate estimate of net earnings, as was possible in former years. In 1917, the price of American-made goods, along with the increased cost of labor, reduced the profits of the Woolworth chain from 10 per cent. to 9½ per cent. The shortage of ocean tonnage has resulted in no shipments being received from England, France, and Japan this year, and this situation will undoubtedly have a deterrent effect on profits. However, sales are going ahead at such a rate that economies in operations will surely result and this should be favorably reflected in net earnings. The fact that the business is on a strictly cash basis has much to do with the success of the companies, along with the fact that capital is turned over from five to seven times a year. That the companies are in a good financial position is evidenced by the fact that in 1917, a period of borrowing by most industrial companies, none of the five- and ten-cent chains had to ask bank loans."

STATEMENT OF THE OWNERSHIP, MANAGEMENT, ETC.

Required by the Act of Congress of August 24, 1912, of
"THE LITERARY DIGEST"

Published weekly at New York, N. Y.

For October 1, 1918.

State of New York

County of New York

Before me, a Notary Public in and for the State and county aforesaid, personally appeared Wm. Neisel, who, having been duly sworn according to law, deposes and says that he is the Secretary of the Funk & Wagnalls Company, Publishers of THE LITERARY DIGEST, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the foregoing publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in Section 443, Postal Laws and Regulations, printed on the reverse of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor, and business managers are: Publisher, Funk & Wagnalls Co., 354 4th Av., N.Y. City. Editor, Wm. S. Woods, 354 4th Av., New York City. Managing Editor, Wm. S. Woods, 354 4th Av., New York City.

Business Managers, The Board of Directors of Funk & Wagnalls Co., 354 4th Av., New York City.

2. That the owners are: (Give names and addresses of individual owners, or, if a corporation, give its name and the names and addresses of stockholders owning or holding 1 per cent. or more of the total amount of stock.)

Funk & Wagnalls Co., 354 4th Av., New York City. Cuddihy, Robert J., 354 4th Av., New York City. Funk, Wilfred J. and Scott, Lida F., as Trustees for themselves and B.F. Funk, 354 4th Av., New York City. Neisel, William, 354 4th Av., New York City. Scott, Lida F., 354 4th Av., New York City.

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent. or more of total amount of bonds, mortgages, or other securities are: None.

4. That the two paragraphs next above, giving the names of the owners, stockholders, and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company, but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees hold stock and securities in a capacity other than that of a bona-fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by him.

WILLIAM NEISEL, Secretary of FUNK & WAGNALLS COMPANY, Publisher and Owner.

Sworn to and subscribed before me this 18th day of September, 1918.

(Seal)

Rollo Campbell, Notary Public.

President Wilson thrilled by "AMERICA'S ANSWER"

The U. S. Government's Own Second Official War Feature

THE audience at the first showing of "America's Answer" at the Belasco Theater in Washington included President and Mrs. Wilson, and the greater part of our "fighting Cabinet."

They saw a huge American transport with 17,000 troops aboard—convoyed by the U. S. Navy—American forces disembarking on newly completed American docks in France.

They saw row after row of American cannon—miles upon miles of American soldiers marching to the front—our boys hauling great guns into action, while fatherless French children waved them on to victory.

As one woman in the audience expressed it, "If they only would stop long enough for one to scan the faces, I feel sure that I would see my boy."

"America's Answer" will be shown in the following cities on the dates given:

CLEVELAND, *Gray's Armory*, Oct. 6-12
PORTLAND, Ore., *Auditorium*, Oct. 7-12
ST. PAUL, *Auditorium*, Oct. 7-13
MINNEAPOLIS, *Auditorium*, Oct. 14-19
TACOMA, *Tacoma Theatre*, Oct. 14-19
MILWAUKEE, *Auditorium*, Oct. 20-26

* * *

"PERSHING'S CRUSADERS," the First U. S. Official War Feature which shows America enthusiastically taking her place by the side of the Allies, is playing all over the country. Ask your local theater manager to get it.

* * *

SEE "OUR BRIDGE OF SHIPS," a graphic two-reel picture-story of the shipbuilding achievements of the U. S. Government. Also the Official War Review, a digest of current activities of the American, French, British and Italian troops on the Western Front—shown each week at your favorite theater.

What they say about "America's Answer"

NEW YORK TIMES

"The music, the tableau and almost every scene of the film brought forth cheers."

PHILADELPHIA LEDGER

"This is really a representative picture in which the fathers, mothers and friends of our soldiers may genuinely rejoice."

BOSTON TRANSCRIPT

"It gives the first pictures of the Rainbow Division in action at the Battle of Cantigny, when our men went over the top aided by French tanks."

WASHINGTON HERALD

"It is a proud record of accomplishment, and one that no American can possibly watch unmoved."

Presented by

COMMITTEE ON PUBLIC INFORMATION, George Creel, Chairman

Through the Division of Films, Charles S. Hari, Director, Washington, D. C.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the correct use of words, the Funk & Wagnall New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"G. A. M., Washington, D. C.—Please advise me of the origin of the word *personnel*."

Personnel is derived from the French *personne*, through the Latin *persona*, "mask for actors," through *per*, "through," plus *sonus*, "sound."

"A. M. L., Hartford, Conn.—Please tell me if it is correct to say: 'He lives on Sigourney Street,' or if it should be, 'He lives in Sigourney Street.'"

On is frequently used where in would be preferable, but usage has sanctioned the use of both in Sigourney Street and on Sigourney Street. On annoyed Fite-Greens Hallock, who once said to a friend, "Why do people persist in saying on Broadway? Might they not as well say, 'Our Father, Who art on Heaven?'"

"E. Z., Minneapolis, Minn.—Kindly inform me which is the more correct: 'He died off the boat,' or 'He done off the boat.'"

The first. *Done* is a colloquial use, and therefore *died* should be used—"He died off the boat."

"D. K., Los Angeles, Cal.—Please tell me whether *too*, *too*, or *to* should be used in place of the dash in the following sentence: 'There are three — in the English vocabulary.'"

The sentence should read: "There are three words in English pronounced like the preposition *to*, namely, the preposition *to*, the adverb *too*, and the numeral *two*," but there are not three *to's*, nor three *too's*, nor three *two's*.

"C. D., San Francisco, Cal.—Which is correct, *who* or *whom*, in the following: 'He pointed upon the stray man *who* he thought was a stranger.'"

If you will omit the parenthetical phrase "he thought," you will see at a glance that *who* is correct—"He pointed upon the stray man *who* (he thought) was a stranger."

The Best Feature about the Conklin—

-this "Crescent-Filler" makes it the Pen for the Soldier and Sailor

They prefer it because it's the pen for *hard service*, over here or "over there." The "Crescent-Filler" is strong and durable—and too simple to get out of order. All metal parts are non-rusting in the salt sea air, or any damp climate.

Sold by leading stationers, jewelers, druggists and department stores.

A FEW OF THE 250,000 PRISONERS TAKEN BY THE ALLIES IN JULY, AUGUST, AND SEPTEMBER.

"THE BEGINNING OF THE END"

THE MOST CHEERFUL WORD Wilhelm seems to have for his people just now is his "confident hope" that "in these most serious times" they will "resolutely gather around me and give their blood and wealth until the last breath"—much like the late Czar's defiant proclamation that he would "fight to his last muzhik"—and some think that when the German people "gather around," as requested, a fate such as befell the one ruler may await the other. Wilhelm's shattered mental state appears even more clearly when he announces he will fight this "defensive war" to a "victorious end." More sanity is evidenced in the German press, which admit in thinly veiled comment that the other allies will follow Bulgaria, leaving Germany alone to meet the "furious" foe, or they admit the existence of "an awful strain" on those "defenses" of the Fatherland in conquered France and Belgium, where "the whole German front is gradually crumbling away under the Allied attack." "Germans, be hard," adjures Hindenburg of the wooden effigies, while others hasten to throw out hints that Germany is now quite willing to make a "soft" peace.

For us, on the other hand, this is hailed as the dawn of victory, in one American correspondent's phrase, "only just beginning to glow after a very long night." These victories in France and Flanders and Macedonia and Syria, says the Premier of France, "are only the first sheaves of the fruitful harvest." "It is the beginning of the end," declares the Prime Minister of Great Britain, with whom the press in all Allied lands agree, the mindful that it is not the end—only the beginning thereof. We can all agree with the King of the Belgians, who told the troops

advancing to the reconquest of their polluted native land, that "This is the decisive hour"; we can likewise agree, say editors, with the Berlin writer who has noted the striking of the "fateful hour" for his Empire. At last, points out the *New York World*, "we can say confidently and certainly that the war is being won—not that it is going to be won, but that the actual, tangible victory progresses from day to day, and that the end is in sight, whatever the intervening difficulties may be." For, continues *The World*, "with Bulgaria out of the conflict, Turkey can not last long, for the physical link with Germany is definitely broken." Austria may or may not last through another winter, but this matters little, since her military power has "ceased to be formidable." The war then, as this editor and other observers see it, has now resolved itself into a question not of wearing Germany out, but of beating Germany in the field, on the front nearest Germany, in the strong positions of her own choosing, "and thus destroying the prestige of Prussian militarism at home." Here is the way that practical fighting man who commands the Allied armies described the situation a few days ago:

"The enemy is shaken up and shaken down, but is still holding out. You must not think that we shall get to the Rhine immediately. We have passed over the crest and are now going downhill. If we gather impetus as we go, like a rolling ball, so much the better."

Note that "you must not think we shall get to the Rhine immediately," say our editors to those Americans who are now talking of seeing "the boys back by Christmas," as they hear daily of the fall of German "key-positions" and "switch-lines"

and "massifs." All Pershing has promised, the *Atlanta Journal* points out, is: "Send us men, guns, and supplies quickly, and we'll win in 1919." The news of victory must make us "speed up," not slacken, continues *The Journal*, for "all hopes of crushing the enemy by the beginning of 1920 are based upon gigantic performances by the United States." Experienced and unemotional financiers in London believe, according to the *New York Evening Post* correspondence, "that the war will continue another year, the presumption being that only the actual

Luxemburg to the Rhine, "but Germany within her own borders will be defending a narrow front, and, pitiful as the spirit of her people seems in that adversity which only strengthened the French and British, it may well stimulate another and better patriotism." The Kaiser is on his way to defeat, but "he has still in his armies men who will not run," and "bravery is a quality confined to no nation."

Which is perhaps enough to keep us from undue exuberance as we consider what really has happened. It was less than three

months ago, we are reminded, that the tradition of German might was still casting a heavy blight upon the minds and souls of men. At the beginning of the Allied counter-offensive in July, the *Providence Journal* recalls, "Germany regarded herself as invincible. She had been checked in drive after drive, but she still held the bulk of the territory taken from the Entente in these savage advances." But now we see her driven back from all the area she overran, yielding up the supposedly impregnable Hindenburg line and preparing to retreat from Flanders.

For the first time in the history of the war Germany has no "margin of safety," writes Mr. H. Sidenbotham from London to the *New York Sun*. For the first time "the West and East fronts are crumbling simultaneously." Germany can draw no troops from one front to bolster up the other. Of late "she has been relying on the East to compensate her for prospective losses in the West; now the East is slipping rapidly away and failure looms in the West." Germany, says this British military critic, may be able to send ten or twelve divisions to punish Bulgaria or to

keep her hold on Austria; "the thing can be done, but at a price that will be the wholesale evacuation of France and Belgium west of the Meuse." To-day Germany finds herself, as the *New York Evening Post* graphically puts it, "a prisoner of the Pit and the Pendulum within a double set of contracting walls."

"One set of walls embraces Europe. The situation of the first years of the war is being reestablished. The Allied wall in the Balkans is to be shoved up to the Danube and the Save. What will happen in the far from impossible case of Turkey's defection can only be conjectured. But with an Allied fleet passing through the Dardanelles and into the Black Sea, the German treaties with Roumania and the Ukraine begin to totter. The Bolsheviks of Great Russia may stand aside, tho there is no assurance of what the Bolshevik *Realpolitiker* may do in the moment of Germany's decline. But among the border peoples handed over by the Bolsheviks to Germany—in the Ukraine, in Lithuania, in the Baltic lands where the population chafes under the reimposed rule of the German barons—a people's war in conjunction with the Allies may flare up. If the Bulgarian masses in their war-weariness have decided that the way out is by passing to the side of the Allies, all the more reason why the Russian nationalities now under the German yoke should rise.

"In the West is the second set of Allied walls closing in on the Germans. It is contracting at the rate of miles a day. Several miles a day on any one front would be menace enough, but the progress is from all directions. The Belgians push forward five miles to the east; the Americans push forward ten miles to the

THE CRUMBLING GERMAN LINE: TWO WEEKS' ADVANCE.

conquest of Germany can produce the results necessary to insure a democratic government in Germany and a lasting peace." Mr. Charles Edward Russell, who has been learning the thoughts rather of the toilers of England and France than of the money-changers, sees at least nine months more ahead of us. "Nine more months of vigorous and relentless warfare against Germany on the field will find her completely defeated, a suppliant for peace, and in a position where the Allies can fix such terms as will make a democratic and lasting peace possible." Thoughtful people in Paris, according to a cabled dispatch to the *New York Times*, admit the bare possibility of Germany collapsing suddenly through a wholesale mutiny or wide-spread revolt, but they argue that Prussian militarism will fight for its existence to the last gasp, even tho erecting in the meantime a camouflage of political democratization. In spite of the capitulation of Bulgaria and the possible defection of Turkey and Austria, say these Frenchmen, whose ancestors fought Germans before Columbus discovered America, "Germany herself is unfettered," and "a decisive, crushing defeat of Germany in the field and occupation of German territory on a large scale remain as ever the only possible means of ending the war." Germany, *The Wall Street Journal* reminds us, is still "fighting in conquered territory, with German soil inviolate." German armies may evacuate Belgium, may be forced to retreat through

northwest: the British thrust goes east and south; General Mangin pushes north and east. Along the entire front the German front is yielding in spite of furious resistance, and only in the region southwest of Douai does this morning's news bring the first report in days of a successful German counter-thrust. There can be no question now of Ludendorff's switching his reserves along the interior lines, or if such movements are under way they must be swift, desperate parries which may at any moment reveal the open guard through which Foch will thrust the fatal blow. Never on the Western Front has the enemy been so hard beset at so many vital points. Half a dozen centers of communication are being simultaneously threatened—Roulers, Cambrai, St. Quentin, La Fère, Laon, Grand Pré. The famous Hindenburg line has been filed thin in half a dozen places. A tragic repetition of the One-Hoss Shay threatens the Germans."

The Germans' one hope now, continues this writer, is in the very magnitude of the Allied effort; "what Ludendorff is playing for is a repetition of the Somme battle of 1916, with the Allies left spent for a half-year to come by their vast exertions." But we may trust in Foch, he continues, and "can take it for granted that the man who bided his time during the anxious days of last spring, who would not let the enemy force him into action where means were not perfectly adjusted to the end in view, is not the man to plunge forward for a decision recklessly." And the *New York Times* observes that "if Germany entertains the hope that Marshal Foch may overreach himself and expose one of his armies to a successful counter-attack, it is a forlorn hope, because it is evident that in the American troops behind his lines which have not yet been sent into action he has reserves ready to deal with any drive the enemy may attempt." The Foch strategy is the marvel and admiration of humble editors and self-confident war-experts alike. As it develops from day to day, says the *Columbia State*, it "unfolds as beautifully as the opening of the petals of a flower." The *New York World* calls it "a process of attrition on a grand scale." Foch's conception, writes William L. McPherson in the *New York Tribune*, "is pressure, pressure, pressure—on both flanks and on the center of the long German line from the North Sea to Switzerland." This strategy "shines by contrast with the lumbering German method of concentrated mass blows at long intervals on widely separated sectors." What the Marshal is delivering is not, says Mr. McPherson, "a series of isolated battles, but one great continuous battle into which all the various operations are perfectly dovetailed." In the same *New York* newspaper, Mr. Frank H. Simonds compares the military situation in France to the "break-up of the ice in a river when spring comes." Here are half a dozen coordinated offensives like the old battles of Ypres, Cambrai, the Aisne, and the Champagne being refought simultaneously. It seems certain to this careful watcher of military movements that

"one of the many blows will achieve the first objective, to compel a general German retreat out of France, away from the Hindenburg line. And the second objective is to crush the retiring armies, to turn the withdrawal into a rout, to break the military power of Germany, to do it this year, and in the present battle this is the single purpose."

The *Indianapolis News* recalls E. C. Stedman's line, "You'll find lovely fighting along the whole line." There, says the *New York Globe*, "the whole Western Front is aflame." Everywhere it sees the German line breaking, the capture of guns, supplies, and prisoners, terrific losses in futile counter-attacks. We are

witnessing "the last wriggings of the dying German snake just before the sun goes down." Not only does *The Globe* see German morale weakening and German man-power running low, but it expects soon to see "evidence of a lack of artillery, shells, and other indispensable supplies." For one thing—

"Germany did not build tanks in numbers because she could not. Similarly her weakness in the air is attributable to shortage of machines. She spent her surplus manufacturing power on the submarines, which failed her."

In the meantime, continues *The Globe*,

"This country, taking no chances, presses forward in the crea-

tion of a war-machine not yet one-quarter completed. Sixteen ordnance plants, each as large as Krupps, are but beginning to produce. The promise of 20,000 planes in Europe will be fulfilled. By June our effective Army will be 3,000,000 instead of 1,000,000. Germany has no chance, and she at last knows it."

Up to the 26th of September, Foch's marvelous victories, as the *Birmingham Age Herald* notes, had "in each case simply wiped out salients and annihilated offensive gains made by the Germans and straightened the battle-line in northern France." But on that date the Marshal made his first incursion into "what might be termed real enemy territory" by the Franco-American attack in the Champagne just west of the Meuse, apparently intended to outflank the Hindenburg line from the south. On the first day the American troops pushed ahead five miles, capturing twelve towns and 5,000 prisoners. On the 27th, while the Champagne offensive proceeded vigorously Haig crossed the Canal du Nord before Cambrai, piercing the Hindenburg line. On the 28th the Belgians began an attempt to repeat what the Servians had done, for, in the words of the *Buffalo Express*, they were "given the lead in a campaign for the recovery of Belgium as the Servians were given the lead in the campaign to recover their country." They drove forward on the Ypres-Dixmude line under personal command of their King, passing

the Passchendaele Ridge, and, with the help of British forces on their right, cutting the railroads around Roulers and imperiling the German hold on Lens, Armentières, and La Bassée. During these same final days of September, Haig was encircling

SPRING AND FALL

—Hartman in the St. Louis Times.

Cambrai and with the French driving the Germans from St. Quentin. Farther south the French under Mangin took Fort Malmaison and part of the Chemin des Dames position. To the right of Mangin other French forces pushed north from Reims, and on the second of October the Germans were apparently losing the entire Hindenburg line in the Cambrai-St. Quentin region and were about to evacuate most of their important positions in Artois and in Flanders.

During September alone the Allies took 123,036 German prisoners in France and Belgium, with 1,600 cannon and 10,000 machine guns. From July 15 to September 30 the total of prisoners was 248,404 men and 5,515 officers, with 3,669 cannon and 23,000 machine guns. Total German casualties have been estimated at upward of 600,000.

This new multiple offensive is looked upon by war-experts as a successful attempt to drive the Germans from the Hindenburg positions by combining an attack at the center—Cambrai and St. Quentin—with turning movements in Flanders and Champagne. They all expect to see a German retreat to a shorter line and an attempt at prolonged defensive effort. But, as one Washington correspondent points out, the actual penetrations of the German line have furnished Marshal Foch "with the means to embarrass a German retreat always with the possibility of precipitating a veritable rout." At worst, we are told, a German offensive is no longer possible and we are once and for all on the way to Berlin. A London correspondent of the New York World calls attention to the significant fact that "the farther back Germany goes in the West the more vulnerable her cities become to the operations of airplane-bombers, whose work has played such an immense part in producing the dejection and hopelessness now prevalent throughout the Empire."

While these events were developing in the West the Allies scored a complete success in the conclusion of the campaign in

Servia by the signing of the armistice by Bulgaria on September 30, which put that nation entirely out of the war and gave the Allies military control over her territory. Here, says the Newark News, "Germany has lost her one real victory of the war, which was the conquest of her allies." In Germany *Vorwärts* has called attention to the possibility of Austria and Turkey following Bulgaria. That, says the Socialist daily, "means that our arm to the southeast no longer stretches beyond Bodenbach (on the Elbe, just over the Bohemian frontier), and that we lose all influence over those parts of Poland and the Ukraine which Austria occupies." Germany, our Washington correspondents think, is likely to send troops from Roumania to defend the Danube, and Allied progress may be slow through northern Servia. But the use of Bulgarian railroads and ports ought to be able to carry the Allies very soon to Adrianople and the Tehataldja lines, and then to Constantinople itself. Besides the opening of the way to the elimination of Turkey and the construction of a new East Front threatening Austria from Bulgaria and Servia, the submission of Bulgaria may, according to Mr. Charles Michelson, of the New York World, result in—

"A renewed offensive by Italy when Austria is compelled to weaken her forces in the West by the Balkan advance.

"The opening of the Black Sea to the Allies and the release of the food-supply of that section.

"The return of the Ukraine to the fighting ranks, as it is demonstrated that Germany can not prevail, and through the Ukraine the influencing of Russia generally away from the Bolshevik-German alliance.

"The deliverance of Roumania and the nullification of the treaty of Bucharest."

Altho Bulgaria is now out of the war, a number of our editors feel with the *Syracuse Post-Standard* that she will not come back into good standing with the family of nations "until she has shown her repentance of an unholy alliance in a substantial way." These same editors, as they note rumors of peace offers

MITTELEUROPA.

—Fitzpatrick in the St. Louis Post-Dispatch.

from Turkey, declare that no peace should be made with the Sultan which does not take from him the rule over such non-Turkish peoples as have not already been liberated by the advancing Allied armies in Syria and Mesopotamia.

SHALL THE PEACE LEAGUE INCLUDE GERMANY?

NEARLY EVERYBODY in the Allied lands, and even a few in darkest Germany, have made their pet plans for a "league of nations" after the end of the present international *mêlée*, but that very fact has, some think, hindered rather than helped the idea. It has been "smothered with praise" by its advocates. It remained for President Wilson, in his speech opening the Liberty Loan campaign, to bring the dream of a league of nations into the realm of practical politics, as many of our editors now point out. And since that date the critics and upholders of his views have been led to add to his suggestions so that the phrase is at last capable of

more or less precise definition in the new lexicons of international politics. The service thus rendered by the President is acknowledged not only by our own press, but by the dailies in London, in Paris, Madrid, and the South-American capitals. Writing from Washington to the *New York Evening Post*, Mr. David Lawrence has called this speech by far the most important the President has made on the political and diplomatic side of the war. The *Raleigh News and Observer* has now not the slightest doubt that "the fundamental principles of the league of nations which is going to come out of the world-war will be pretty much as Mr. Wilson stated them in New York." President Wilson, as the *New York Times* notes, believes that the constitution of a league of nations must be a part of the peace settlement itself. And that, it declares, "would mark the beginning of a new era in the history of the world, a wonderful reversal of the intents and policies that led to the formation of the Holy Alliance." By this speech, declares the *Philadelphia Public Ledger*, President Wilson "has made permanent peace possible." He did not simply reassert the necessity for such a union of peoples, but proceeded to propose a practical plan for forming the union, or in the words of the *Philadelphia daily*:

"He took the league of nations out of the toy-shop of speculative statecraft and presented it to us as a workable tool and weapon with which the police power of organized civilization can be put squarely behind the informed, impartial, and just judgment of civilization. He sees that to make peace without making simultaneously a league of nations to protect it would be like driving a band of bandits out of a village they were looting, without providing any police law or armed force to keep them from coming back again. He is no impractical visionary fondly fancying that the world can be ruled as yet without force. His slogan is 'force, force to the utmost,' when force is needed. But he does believe—and this is where he leads the best thought of the world at this moment—that force can be recruited into the unselfish service of law, order, and justice, and employed to protect a peace based in every nation—even the weakest—on the content of the peaceful."

President Wilson pointed out how the war has brought into existence its own issues, which are now facts, not the mere statements of any group of men. These issues, he says, are:

"Shall the military power of any nation, or group of nations,

be suffered to determine the fortunes of peoples over whom they have no right to rule except the right of force?"

"Shall strong nations be free to wrong weak nations and make them subject to their purpose and interest?"

"Shall peoples be ruled and dominated, even in their own internal affairs, by arbitrary and irresponsible force or by their own will and choice?"

"Shall there be a common standard of right and privilege for all peoples and nations, or shall the strong do as they will and the weak suffer without redress?"

"Shall the assertion of right be haphazard and by casual alliance or shall there be a common concert to oblige the observance of common rights?"

Copyrighted by John T. McQuinn.

THE THREE "RS."

—McQuinn in the *Chicago Tribune*.

Since these are the issues of the conflict, no peace can be obtained by bargain or compromise, because the Governments opposed to us have shown at Brest-Litovsk and Bucharest that "they are without honor" and "do not intend justice." For the nations associated against Germany the price of a lasting peace is "impartial justice in every item of the settlement." This means the creation of the "indispensable instrumentality" assuring that the agreements of the peace will be honored and fulfilled, "a league of nations formed under covenants that will be efficacious." Therefore, as the President sees it,

"The constitution of that league of nations and the clear definition of its objects must be a part—is in a sense the most essential part—of the peace settlement itself. It can not be formed now. If formed now, it would be merely a new alliance confined to the nations associated against a common enemy. It is not likely that it could be formed after the settlement. It is necessary to guarantee the peace; and the peace can not be guaranteed as an afterthought."

The President then proceeds to give some details to make his terms "sound less like a thesis and more like a practical program":

"(1) The impartial justice meted out must involve no discrimination between those to whom we wish to be just and those to whom we do not wish to be just. It must be a justice that plays no favorites and knows no standard but the equal rights of the several peoples concerned.

"(2) No special or separate interest of any single nation or any group of nations can be made the basis of any part of the settlement which is not consistent with the common interest of all.

"(3) There can be no league or alliances or special covenants and understandings within the general and common family of the league of nations.

"(4) There can be no special selfish economic combinations within the league and no employment of any form of economic boycott or exclusion except as the power of economic penalty by exclusion from the markets of the world may be vested in the league of nations itself as a means of discipline and control.

"(5) All international agreements and treaties of every kind must be made known in their entirety to the rest of the world."

President Wilson did not make these suggestions, he explains, because of any doubt "whether the leaders of the great nations and peoples with whom we are associated were of the same mind and entertained like purpose, but because the air every now and

again gets darkened by mists and groundless doubtings and mischievous perversions of counsel." The President express his hope that the leaders of the Allied governments "will feel free to say whether they think that I am in any degree mistaken in my interpretation of the issues involved or in my purpose with regard to the means by which a satisfactory settlement of those issues may be obtained."

This speech finally "establishes the creation of a league of nations to enforce peace as the official program of the free Allied nations, a program, however, based upon the necessity of victory," says Mr. Herbert S. Houston, of the League to Enforce Peace. High praise comes from such important London papers as *The Morning Post*, *Times*, and *Daily News*, tho they naturally select different passages for a special consideration. *The Times* notes with approval the ruling out of "the economic boycott, or 'war after the war,' except for the purpose of punishment, awarded in common or of enforcing the will of the league." In our own country, the *San Francisco Chronicle* thinks that thoughtful people will enthusiastically indorse the paragraphs in the President's address declaring against economic boycotts.

While the President's declaration for "complete victory" was enthusiastically and unanimously hailed by our press, the details of his peace program "will not be accepted unanimously," the *Philadelphia Press* thinks. This paper reminds us that there are many among our allies who believe they are fighting to secure not only political but economic independence of Germany. *Le Temps*, of Paris, is not convinced that there will not be need for special alliances after the war. The *Boston Transcript*, the *Rochester Post-Express*, and *Lowell Courier-Citizen* are three American papers which, while they are thoroughly in sympathy with a league of nations, are not certain that it is entirely practicable. *The Transcript* thinks the very universality of it would split the league into hostile groups, and the other Massachusetts daily sees no guaranty that there might not be an alignment, in case of future difference, not of twenty members of the league against one, but of "ten against eleven, or some such fairly even division, insufficient in its disparities to prevent a resort to arms." Ex-President Roosevelt pointed out in his Lafayette day speech in New York that a league of nations would have to include Germany, Austria, Turkey, and Russia, and he asks: "What earthly use is it to pretend the safety of the world would be secured by a league in which these four nations under the Hohenzollerns or the Hapsburgs, under the Sultan and the Bolsheviks, would be among the nine leading partners." Continues the Colonel:

"Long years must pass before we can again trust any promises these four nations make. . . . Therefore, unless our folly is such that it will not depart from us until we are brayed in a mortar, let us remember that any such treaty will be worthless unless our own prepared strength renders it unsafe to break it. . . .

"Let us support any reasonable plan whether in the form of a league of nations or in any other shape which bids fair to lessen the probable number of future wars and to limit their scope. . . . Support any such plan which is honest and reasonable. But support it as an addition to, and never as a substitute for, the policy of preparing our own strength for our own defense?"

Here the Colonel is quite right, the *Minneapolis Tribune* thinks. The *Wichita Beacon* wonders whether any international court or police force would "be any more of a restraining influence upon international outlaws than were the combined armies and navies of England, France, and Russia in 1914." The trouble, as the *New York Tribune* sees it, is that "if you form a league of nations with the Teutonic and Allied Powers left out, you appear to have turned the earth into two great hostile camps, and if you admit them to the league of nations its security will rest upon the word of criminal members who have no faith to pledge." Since Germany can not be trusted, *The Tribune* continues, she must be "first defeated on her own soil and disarmed," made to surrender unconditionally. The Allies,

The Tribune suggests, might "guarantee her the status of a permanent neutral, unarmed, and therefore immune from attack." And as far as the economic boycott is concerned, this daily remarks that if we would resolve "to exclude Germany from all intercourse whatever—that is, to ostracize her utterly for a period of years—no economic boycott would be necessary." But, commenting on the Wilson speech, *The Tribune* makes a suggestion which implies that the price of peace demanded by the President from Germany might meet even the doubters of the practicability of a league of nations including Germany, for "the first indispensable instalment on it is the extinction of the Hohenzollerns and Hapsburgs, with all that other locust blood of kinglets and princelets which has fattened on German servility and has maintained itself in power by debauching German morals and conscience."

WOMAN'S CAUSE HALTED BY TWO MEN

A HEARTACHE IS FELT by one of the woman-suffrage leaders at the Senate's adverse vote on the woman-suffrage amendment, but the sorrow is not for herself or her sisters; it is for the Senate, which has "shamed our nation before the world." Mrs. Carrie Chapman Catt, the author of this remark, even express satisfaction that the vote was taken, since, as she is quoted in the *New York Tribune*, "we know now exactly how to place our work," and the same journal quotes Dr. Anna Howard Shaw as saying, "we are stronger to-day than we have ever been before, and we renew our struggle for the reign of law based on the consent of the governed and sustained by the organized opinion of mankind." Miss Paul, head of the National Woman's party, is quoted by the *New York World* as follows: "This defeat is a temporary defeat. The vote of the United States Senate, we are convinced, will be reversed before this Congress ends. Our efforts to secure that reversal will begin at once and will continue until our victory in the House is confirmed in the Senate." From Washington dispatches we learn that the total number of votes cast was only 84, owing to the absence of twelve Senators on the Liberty Loan campaign and other business. The absent Senators were all paired, and, counting the absentees, the vote stood at 62 to 34, lacking two votes necessary for passing under the two-thirds rule. Some observers consider as not the least surprising feature of the Senate's stand the fact that it was taken in despite of the President's personal appeal to support the amendment as a war-measure. Altho the *New York World* disagrees with the President's judgment on this point, it does confess that it "can find no evidence of either consistency or of principle in the action of the Senate," and, recalling the Senate's attitude toward the Prohibition Amendment, this daily remarks that it is evident that the adverse vote on suffrage represented "personal prejudice rather than adherence to any known theory of government." Reflection upon the status of suffrage in England, in Canada, in every English-speaking country save America, observes the *New York Tribune*, can not fail to turn the dwindling minority of opposition in the Senate from its error. The President's declaration that suffrage is a war-measure "in its nature can not have specific and material demonstration," *The Tribune* goes on to say, but "the larger truth lay unquestionably with Mr. Wilson's plea, and the coming weeks and months are certain to establish that truth." The voters of the nation, men and women alike, it adds, can be counted on to attend to these Senators in due course, for the United States of America "will not long support a Senate that insists upon being more reactionary and less progressive than the British House of Lords." The *Wheeling Intelligencer*, too, has not the least doubt that woman suffrage will finally prevail in this country, for "this great reform has progressed too far to be turned back now." A Washington correspondent of the *New York World* calls attention to the fact

that the chief hope of the suffrage advocates lies in the elections held November 5, and tells us further:

"Eight Senators voted who are serving by appointment. Their terms will expire immediately after successors appear. It is barely possible the additional two votes may be obtained through the election of Senators to succeed the present appointees.

"The eight appointive Senators were evenly divided. Guion, of Louisiana; Baird, of New Jersey; Drew, of New Hampshire, and Benet, of South Carolina, voted against the resolution. Willey, of Missouri; Martin, of Kentucky; Nugent, of Idaho, and Henderson, of Nevada, voted for the resolution. Politicians from the States indicated believe the alinement will remain unchanged, thus leaving the suffragists still two votes short after November 5.

"Some reliance is placed in the possible conversion of sufficient Senators to remedy the situation. It is believed by suffrage advocates that now the President will systematically take up the work of laboring with the obdurate ones."

In a Washington dispatch to the *New York Tribune* (Rep.) we read that the defeat of woman suffrage in the Senate is looked upon as somewhat of a disaster to the Democratic party and as a blow at President Wilson's power as a party leader, and we are told that—

"The fact that so many Senators from Southern States sacrificed their loyalty to the President to their Bourbonism will, it is believed, convince independent voters of progressive tendencies that there is no hope for their aspirations in the Democratic party, and that to-day's vote brands the party as too heavily loaded with reactionaries. Republican leaders count upon large gains from this element as well as from those who will determine their future political alinement solely upon the suffrage question. It is true that ten Republicans voted against suffrage, but, altho the minority party, it delivered more votes for suffrage than the Democrats. In the Western States the suffragists now purpose frankly to oppose Democratic nominees for the Senate, and it is considered possible that, as a direct consequence of their failure to-day to respond to their leader's call, the Democrats may lose control of the Senate and also of the House."

In the *New York Globe* Mr. Judson C. Welliver writes from Washington that the question has now been made something of a sectional issue:

"The suffragists fear that while the President has been able to make his own position perfectly plain as their supporter, he may have done it in a way that is calculated to solidify the only opposition that can possibly postpone for long the victory of the Federal amendment. There will be no serious Democratic split over suffrage, because, after all, the mainstay of Democracy is Southern, and the South has said No. But there is concern about the danger of making suffrage more distinctly a sectional question than it has ever been before."

By voting down their own party leader for the first time in his Presidential career, writes Mr. David Lawrence in a Washington dispatch to the *New York Evening Post*, the Southern faction in the Democratic party not only weakened his prestige, but tied the hands of the Democratic campaigners in the North, and we read:

"Republicans are chuckling over the situation produced by the coalition of their own opposition to suffrage and the much larger opposition inside the Democratic party. The Southern Democrats are undismayed. The Northern and Western Democrats are worried. It is truly an extraordinary situation, and woman is at the bottom of it all."

HOW TO FIGHT SPANISH INFLUENZA

AN OLD ENEMY is with us again, altho under a new name, say various editorial observers in noting the epidemic of Spanish influenza and recalling at the same time the "grippe" that was new a generation ago. Whether it was brought over in German submarines or not is lightly considered compared to the more practical interest of the press in spreading information from the State and city health departments throughout the country as to means of combating the disease. In

nearly all sections of the United States this so-called Spanish influenza is prevalent, we learn from Washington dispatches which relate that twenty-three States, from New England in the East to California in the West and from Florida in the Southeast to Washington in the Northwest, are experiencing the mysterious malady. It is especially severe along the Atlantic seaboard and in military and naval camps. More than fourteen thousand new cases in the camps were reported to the office of the Surgeon-General within one period of twenty-four hours, and deaths since the epidemic began have numbered thousands. Despite the alarming increase in influenza cases, we are told, the pneumonia rate continues low, and reports show that pneumonia has developed in only one of every

thirteen cases. The pneumonia is said to appear in a most treacherous way, when the patient is apparently recovering and ambitiously leaves his bed too early, thus giving the germ his deadly opportunity. The less ambition, therefore, the better the chances for longevity. Furthermore, the *Boston Globe* and other journals point out "fear is our first enemy," and "whether he fights a German or a germ, the man who worries is already half beaten." There is no excuse for panic about this epidemic if we all do our share to help stop it, and we are reminded that "from battle to disease the cool fighter wins." The way to handle this influenza situation, according to the *Hartford Courant*, is to "think of something else," and because you have a cold do not at once conclude that you are on the road to pneumonia, but "conclude the opposite and the chances are that you will win out." Similarly the *New York Morning Telegraph* warns us not to be excited because of the presence of Spanish influenza "in our midst or in our nostrils," and the *Cleveland News* reminds us that if we keep our system in good condition and avoid fear or apprehension of contagion, we shall be reasonably certain to escape it. Surgeon-General Gorgas, of the United States Army, has issued the following recommendations for the avoidance of contagion:

- "1. Avoid needless crowding; influenza is a crowd disease.
- "2. Smother your coughs and sneezes; others do not want the germs which you would throw away.
- "3. Your nose, not your mouth, was made to breathe through. Get the habit.
- "4. Remember the three C's — a clean mouth, a clean skin, and clean clothes.
- "5. Try to keep cool when you walk and warm when you ride and sleep.
- "6. Open the windows always at home at night; at the office when practicable.
- "7. Food will win the war if you give it a chance; help by choosing and chewing your food well.

THE MYSTERIOUS STRANGER.

—Knott in the *Dallas News*.

"8. Your fate may be in your own hands; wash your hands before eating."

Dr. Royal S. Copeland, Commissioner of Health of New York City, points out in a statement to the press that influenza and pneumonia are infectious diseases caused by germs carried in the matter spit, sneezed, or coughed by sick persons or sometimes by persons who, while carrying the disease germs in their mouth and throat, show no signs of illness. He advises avoidance of "contact with matter which is spit, sneezed, or coughed up," of dirt of every kind, of fatigue, and of overeating.

A writer in the *New York Times* recalls that the last pandemic of influenza occurred more than twenty-five years ago, and consequently physicians who began to practise medicine since 1892 have not had personal experience in handling such a disease. For their benefit, Surgeon-General Rupert Blue has issued a special bulletin setting forth the facts concerning influenza which physicians must keep in mind. It contains the following points:

"*Infectious Agent*—The bacillus influenza of Pfeiffer.

"*Sources of Infection*—The secretions from the nose, throat, and respiratory passages of cases or of carriers.

"*Incubation Period*—One to four days, generally two.

"*Mode of Transmission*—By direct contact or indirect contact through the use of handkerchiefs, common towels, cups, mess gear, or other objects contaminated with fresh secretions. Droplet infection plays an important part.

"*Period of Communicability*—As long as the person harbors the causative organism in the respiratory tract.

"*Methods of Control*—(a) The infected individual and the environment.

"*Recognition of the Disease*—By clinical manifestations and bacteriological findings.

"*Isolation*—Bed isolation of infected individuals during the course of the disease. Screens placed between beds are to be recommended.

"*Immunization*—Vaccines are used with only partial success.

"*Quarantine*—None; impracticable.

"*Concurrent Disinfection*—The discharges of the mouth, throat, nose, and other respiratory passages.

"*Terminal Disinfection*—Through cleanings, airing, and sunning. The causative is short-lived outside of the host.

"(b) *General Measures*—The attendant of the case should wear a gauze mask. During epidemics persons should avoid crowded assemblages, street-cars, and the like. Education as regards the danger of promiscuous coughing and spitting. Patients, because of the tendency to development of bronchopneumonia, should be treated in well-ventilated, warm rooms."

Of immediate remedial purpose is the suggestion of the *Rochester Post-Express* that physicians and nurses should be grouped into central units and that the public be educated to look to those units for medical care. This journal adds:

"A distrieting of the nation under medical supervision after the plan adopted in Great Britain and France three years ago must be had if we are not to run into danger. This danger is equal to our people and to the Government's ability to depend on them for war-work. All parties to the controversies now current over the best use to be made of doctors and nurses should immediately lay aside personal opinion in effort to devise a plan under which a working medical machine shall be set up throughout the country."

GERMAN Secretary of State for Colonies is hustling desperately to hold on to what's left of his job. If he fails, he's in danger of being appointed Chancellor.—*Anaconda Standard*.

GENERAL VON SANDERS's brilliant escape from Palestine reminds us of the time the combination auditorium and fire-house at Bryan, Texas, was burned down. The fire-engine was saved.—*New York Evening Sun*.

SECRETARY DANIELS doesn't want any conscientious objectors on his ships. Don't be stubborn, Mr. Secretary. Let the fellows take a ride on the boats until they reach the middle of the pond and then—you know.—*Knorrville Journal and Tribune*.

WHAT'S THE DIFFERENCE?

—Fitzpatrick in the *St. Louis Post-Dispatch*.

SAVE PAPER AND SAVE SOLDIERS' LIVES

IN THESE MOMENTOUS DAYS when every ounce of our energy, when every cent of our money, when every life if need be, is dedicated to the defeat of the Teutonic Powers, there is no single act of a private individual so unimportant as not to have a bearing on the outcome of the great enterprise that we have undertaken.

This is a war not merely of fighting men; it is a war of whole peoples. We are mobilizing not armies only, we are mobilizing our capital and our industries, our churches and our schools, our entire and intricate social system. The second line of defense enters our very homes: it extends to our pantries and to our coal-bins; it crosses every avenue of our domestic life.

Civilization demands the utter destruction of the German idea, and with this purpose in mind we cheerfully accept any new sacrifice asked by our Government, whether it be the saving of coal or gasoline, or doing without sugar or wheat or any other commodity needed by our nation or by our armies.

We make these sacrifices the more willingly because the requests are wisely made and because the departments making them are wisely administered. It must, indeed, have been an inspired moment in which our great leader, President Wilson, chose Herbert Hoover as Food Administrator. Mr. Hoover had already proved his great-heartedness and his executive genius by creating and administering that most merciful of organizations, the Belgian Relief Commission. He has carried this genius into his present high office and has made himself beloved by all peoples in all Allied lands. With the same sure wisdom the President chose Dr. Harry A. Garfield, that great son of a great father, for Fuel Administrator. The nation gladly follows such leadership as these men typify.

A NEW REQUEST TO SAVE—So closely are all peoples in all Allied lands bound together, so complete has the organization of our resources become, that we are scarcely surprised now to have our Government tell us that we must save paper, and that by saving paper we can help save the lives of our boys at the front.

The paper industry is enormous. This industry alone requires hundreds of millions in capital and needs the services of scores of thousands of laborers for its maintenance. There is a demand in this industry for nearly twenty-five million tons of freight, that must be moved annually in and out of the mills. Translated into other terms, this means a million car-loads yearly. Ten million tons of coal are used in the manufacture of this commodity. Again, the manufacture of paper means the use of chemicals precious in the making of munitions. Therefore by so much as we save paper, by just so much we release the chemicals, coal, capital, cars, and labor for more essential, more pressing war-necessities.

WHY YOU SHOULD SAVE PAPER—Let us get down to direct cases.

Do you know that every time you use a sheet of paper unnecessarily you are depriving the Government of caustic soda, sulfur, and potash—chemicals sorely needed in the manufacture of "T.N.T.," the most powerful explosive used in the war?

Do you know that every time you waste white paper you are wasting the chlorin needed for the poison-gas that protects our boys—the poison-gas that is beating Germany at her own fiendish game?

Do you know that when you destroy a pile of paper you are destroying the equivalent of several pounds of coal—for it takes from one to three pounds of coal to produce a pound of paper?

No, you probably do not know these things—none of us did until the Government told us. Now, however, the War Industries Board has placed the facts before the people and has requested the nation to save paper. It requests the people of America to save not merely in a casual and superficial way, but to save systematically, intensively, religiously, with the sure knowledge that every scrap of paper so saved is a direct act of service to our Army.

HOW TO SAVE PAPER IN THE HOME—Innumerable ways will suggest themselves to you. Of course the simplest rule is "use as little of it as you possibly can." Write on both sides

of a sheet instead of on only one. Save the blank sheets of letters and circulars and use them in place of pads. Instead of throwing away or burning up your empty oatmeal-box or your sugar-, coffee-, or cornstarch-boxes, save them together with your old newspapers and worn-out paper bags and dispose of them to the Salvation Army or to the junkman or to any one else who will send them back to the paper-mills to be remade into paper or paper products.

Above and beyond all, don't burn your waste paper. It is little less than treason to do this when paper is so scarce. And do not light a bonfire in which there are wood, old rags, or paper in any form. Waste paper and rags are two of the most important elements in the manufacture of new paper.

Housewives can further help by using baskets when marketing and not having their purchases wrapt except when necessary for the protecting of the goods. A paper bag saved is a paper bag made. Use your bags again and again. If every shopper saved a bag a day it would be equivalent to an output of twenty million bags a day. Twenty million bags produced and not a tree cut down, not a pound of coal mined or consumed, not an ounce of chemical used or a hand turned over to produce them.

The Government needs this cooperation on the part of the housewives. It needs all paper—every scrap—for remanufacture into shell wrappings, for packing for soldiers' food and clothing, for questionnaires, for correspondence, for soldiers' letters.

THE SCHOOLS CAN HELP—The Government has acknowledged in many ways the indebtedness it owes to the schools—teachers and pupils alike—for the aid and practical cooperation they have given to the Government in every war-enterprise.

Now again this vast school army can help the Government in its new and pressing problem. The children can assist in placing the facts concerning paper before their parents. They can organize "paper-saving squads," and they can carry out the saving in their own homes. They can watch the waste-baskets; they can save wrapping-paper and strings; they can see to it that both at home and at school the old scribbling habit is stopped and that the slate is substituted for the pad. Those who bring their lunches to school should be sure that they are never done up in paper.

We wish to make this appeal especially to the hundreds of thousands of boys and girls who will study *THE LITERARY DIGEST* this year and to the ten thousand high schools where this magazine is used as a text in the classroom.

HOW TO SAVE PAPER IN THE OFFICE—Placards urging economy on the part of employees can be prepared, or can be obtained on request from the War Industries Board, and then can be put in conspicuous places around the offices or the plant.

Blank sheets, and even envelopes, can be methodically saved from the daily mail. Yellow paper can be substituted for white paper for all ordinary uses. The War Industries Board is asking for more chlorin than can be manufactured. Chlorin is the "white" in white paper. As we have war-bread, so must we have war-paper. Use your paper in its natural state, unbleached by chlorin and untinted by coloring materials which are made from a basis of intermediates necessary in the manufacture of munitions and war-chemicals.

These are but a few random hints. The initiative of each employer will suggest scores of other ways in which saving can be accomplished.

THE NATION WILL RESPOND—When the Fuel Administration requested that automobiles should not be driven on Sunday the compliance of the entire nation was as complete as tho this single simple request had been backed by the armed force of a Prussian Military Autocracy. We can conceive of no greater tribute than this to the patriotism of the American people, no more convincing proof than this of the efficiency and the irresistible might of democracy. We know, we are confident, that this new request by the Administration will secure the same unanimous and instantaneous response.

FOREIGN - COMMENT

GERMANS SCENTING DEFEAT

WHEN THE RATS LEAVE, the ship is sinking, and nowhere is this realized more than in Germany.

Bulgaria's desertion to the Entente has been a hard blow, and the German papers see the handwriting on the wall. "Germany's most serious hour has struck," says the Berlin *Lokal Anzeiger*, and it warns the Government that there is great risk in hiding the gravity of the situation from the people. "On the contrary," it remarks, "we must confront the situation with a clear vision. Germans must accustom themselves to the greatness of the danger; with a consciousness of the great seriousness of these terrible times they must steel themselves for the task with which the Fatherland is confronted." So, too, the *Frankfurter Zeitung* recognizes that the Fatherland is in a position of no little peril, "more from within than from without." Writing before Bulgaria's armistice was granted, it said:

"It is useless to gloss over this news, and we are not quite sure whether it would not be useful to attach considerable importance to the semiofficial attempts to veil the threatening secession of Bulgaria or raise any hopes. . . .

"If Bulgaria deserts, then our position will become still more serious, but there is no more ground for anxiety than there has been for the last fourteen months. The seriousness of the situation, however, demands that our people unite more than ever for national defense, and to draw up their political demands. If this succeeds, and we do not doubt it, then we shall have mastered this danger, as we have mastered so many others."

There can be little doubt that the political situation in Germany is fraught with much anxiety to those in power, an anxiety that must be considerably increased by the news from Bulgaria.

Georg Bernhard, the editor of the staid and moderate Berlin *Vossische Zeitung*, warns the Government that political safety can only be attained by quick reform. He says:

"The point is that the necessities of the time force us without delay to undertake a change in our whole system of government, and this change must come quickly. Of course the German Empire could possibly endure six months of further struggling on in the old way, but what will happen after that no one can tell to-day."

While no one can tell what will happen, many signs show that the Junkers fear something in the nature of a revolution. The *Westminster Gazette* publishes this significant army order from General Ludendorff which was found upon a captured German officer. It runs:

"It has come to my knowledge, through a letter address to the Royal Prussian Ministry of War, that men on leave have spoken publicly of a revolution which is to break out after the

war. A soldier, said to come from the industrial region of Rhenish Westphalia, declared in the train that in his home district men going on leave were taking weapons with them for the aforesaid object, and that it was easy to take home German or captured revolvers, as well as stick and hand-grenades separated into two parts. I desire that arrangements be made for the kit and clothing of men going on leave to be searched as test cases, when occasion offers, before their departure. It will be possible to carry out this in baths and delousing stations. Offenses detected are to be severely punished. Above all, I wish to impress upon superior officers who happen to overhear such objectionable talk, or hear it through others, that they

must deal with it at once, without hesitation. The home authorities and Director of Military Railways have been requested to take corresponding measures."

Meanwhile the defection of Bulgaria shows the German people that their dreams of Empire are vanishing. As the *London Times* puts it, "the Berlin to Bagdad route is blocked." The *Paris Journal* sums up all that Germany loses thus:

"It will mean the reconstitution of Serbia, and therefore will compel the Central Powers to form another Danube front and return the territory taken from the Roumanians, which country is beginning to think of revenge on Germany. Turkey, cut off from the Central Powers, will be obliged to throw down her arms. The collapse of the whole brilliant but fragile structure raised by the German in the Orient is beginning. Twenty years of German effort there faces ruin."

It is the consideration of these facts that has made the Socialist Berlin *Vorwärts* come out with an urgent but despondent plea for peace, which incidentally reveals much of interest in the condition of the Fatherland to-day:

"We must to-day, with all necessary courage, consider the following situations as possible if Bulgaria deserts us. Austria and Turkey will associate themselves with that step. That will mean that in the southwest our aim will no longer reach past our own border, and that we will lose all influence over that part of Poland and the Ukraine now occupied by Austria."

"Then we German people will stand alone against the French, British, Italians, Americans, and their numerous allies. We are fighting with our backs to the wall and ruin before our eyes, but we must still further extend the picture of discouragement. If our soldiers on the West Front break, and the enemy streams across our borders, German towns will go up in flames. Our troops, fugitives, will roll eastward, and the penetrating armies will fill our towns and houses."

"Our authorities will then be confronted with an insurmountable task and everywhere the spirit of depression will spread. If our food-supply, now low, entirely fails, and there is no more coal, and in consequence no more light and no more trains, our industries will come to a standstill and hundreds of thousands of our people will die."

THE SLUMP IN MITTELKUROPA STOCKS

FERDY OF BULGARIA—"War is still business, but do let don't declare no dividend. I wonder if the Entente would like to buy a nice ally?"

—*Parving Show* (London).

"If madness breaks out and takes possession of the survivors, and if their attempts at revolt are resisted with bloody force, instead of war outside our borders, we will have war at home, with trenches in the streets, machine guns in the houses, corpses of men, women, and children on the pavements, and with death reigning everywhere. . . .

"The Government must do everything possible to come to the conference table, together with its allies, as speedily as possible.

"It must be a government of German democracy which goes to the conference. Guaranties are necessary that it not only be summoned in order to relieve those now in power, but that it be put there in accordance with the people's will, to watch over the permanent preservation of peace."

The news from Bulgaria seems to have stunned the German statesmen, and Chancellor von Hertling, Vice-Chancellor von Payer, together with Foreign Secretary von Hintze, have placed their resignations in the hands of the Emperor. The press seem as bewildered by the disaster as the politicians, and show a strongly hysterical note. The *Berliner Zeitung am Mittag*, for almost the first time in its history, entirely approves of the views of the Socialist *Vorwärts*, and remarks:

"Our Government throughout this terrible war has sedulously avoided hinting at this and the other possibility, namely, that the war may be lost if everybody and everything are not united in the utmost effort. The Government has thus itself contributed to veiling the real gravity of our position during these four years of war. It has preferred to lead the nation in blinkers past the abyss of danger to our national life."

The *Frankfurter Zeitung* begs the Government to do everything in its power "unequivocally and sincerely" to secure peace, while the *Düsseldorfer Nachrichten* bewails the fact that troops have been sent to Bulgaria from the West Front, "where they are so bitterly needed." Meanwhile, the Kaiser evidently is disturbed at the trend of events and hastens to make protests of democracy. According to the *Berliner Tageblatt*, in accepting von Hertling's resignation, he writes:

"I desire that the German people shall cooperate more effectively than hitherto in deciding the fate of the Fatherland. It is, therefore, my will that the men who have been upheld by the people's trust shall to a wide extent cooperate in the rights and duties of government."

GERMANY'S WAR-EFFORT—The Paris *Homme Libre*, the organ of Mr. Clemenceau, Premier of France, draws up a balance-sheet of the military efforts that the Kaiser has imposed on his people. The Paris organ writes:

"With the exception of 3,000,000 Germans, who are medically unfit for service, resident abroad, or exempted for work in factories, Germany has enrolled 10,900,000 men, which is fifteen per cent. of the total population and seventy per cent. of the male population between eighteen and fifty years of age.

"It may be estimated that her definite losses amount to 4,760,000; that there are 500,000 wounded undergoing medical treatment in hospitals, 200,000 of the 1920 Class in training, and about 100,000 composed of wounded who have recovered and soldiers in transit between the Eastern and Western fronts or belonging to units which have been disbanded and which are at present at various depots.

"Germany has therefore left at present 5,340,000 men in all."

GREECE'S FIRST YEAR OF WAR

JUSTIFIABLE PRIDE is taken by Allied observers in the record of Greece since her official entry into the war in June, 1917. Of particular note is her naval effort, into which she has put all the forces of her Navy and her mercantile marine. At the disposal of the Allied fleets she has placed her arsenal at Salamis, her docks, workshops, and harbors, and is thus effectively assisting all operations of the Allies in the East, in Asia Minor, in Palestine, and in Egypt. This information

from a "well-informed" Greek source is given in a Reuter dispatch of the *Belfast Northern Whig*, in which we read further that all important points of the Greek coast-line have been strongly armed and "a large number of skilled workmen, of shipwrights, and even seamen, are serving on board Allied ships." Also the light units of the Greek Fleet are guarding the whole Greek coast-line, thus relieving the Allied fleets in the eastern Mediterranean. The coal-problem, which concerns England as intimately as it does the United States, is eased to a degree by Greece, which formerly imported all her coal from England, but is now developing to the fullest her lignite mines. During May their production reached 18,000 tons, and the estimated production per month during the summer is 28,000 tons. As to the Greek Army, it appears that—

"On the Macedonian front the numbers of each division of the Army of National Defense were raised from 12,000 to 17,000 men by new formations and by strengthening the artillery and the auxiliary services. In spite of the good-will of the Allies, who were prepared to furnish Greece with all the war-material necessary to bring it up to the level of the other armies which had previously entered the war, the reorganization of the Greek Army was faced in the first instance with great obstacles arising from the reduction of tonnage, the general situation in Allied countries, and the difficulties of communication in Greece itself. For all these reasons Greek mobilization could proceed but slowly. Yet by June, 1918, altho only a third part of the classes subject to conscription has been called to the colors, 200,000 men were under arms. The Greek forces in Macedonia already occupied two large sectors, and their successes at Skra-di-Legan, for which they were highly commended by the Macedonian

Chief Command, proved their good organization, their progressive adaptation to the methods of modern warfare, and the effectiveness of their work."

All stocks of food in Greece were exhausted as the result of a long blockade, we are told, and in July, 1917, the country was in a state of famine. By constant representations to the Allies,

THE HEAD-BREAKERS.

NATIONALIST—"No conscription!"

ULSTERMAN—"No Home Rule!"

PRIME MINISTER—"Break my head by all means, gentlemen—if only you'll break the Kaiser's first!"

—Punch (London).

however, the Hellenic Government succeeded in increasing the tonnage allotted to secure the food-supply and by intelligent control of foodstuffs it succeeded in maintaining a supply sufficient for the needs of the population. All essential foodstuffs are under the control of the Government, maximum prices have been fixed, and a normal situation has been restored. A better harvest by 20 per cent. than last year is noted as an additional success of the Government's measures, which

"may be in part attributed not only to the civil population's deep sense of its responsibilities, but also to the effect of certain legislative measures. Production has been intensified by the use of agricultural machinery; artificial manures have been imported from America; a military control has been formed for the collection of produce; and, finally, agricultural cooperative societies have been largely extended.

"With reference to the economic and financial situation, which was very bad indeed, the Government has been energetic and successful. New resources were created by a rational system of taxation. The most important of the new taxes is that on war-profits, reckoned from 1915, which will not fail to yield a noticeable increase of revenue. The excise duties on tobacco and wines have been raised, and increases of 7,000,000 and 20,000,000 drachmae respectively are promised from them. The Allies have seconded the economic effort of the Hellenic Government by granting it a loan of 750 millions of francs, of which 50 were paid during 1917 and 180 up to the end of June, 1918. The tables of revenue as submitted to the International Financial Commission show that the acute crisis which the country has traversed has not affected its vital resources.

"The Government has given every attention to the normal working of communications and transport. A high control of transport has centralized everything connected with it, and in spite of the difficulties inherent in the work has obtained the most favorable results. The traffic on the railways is continually increasing. . . . The Government, further, will improve the railways by expending 36,000,000 francs."

ULSTER'S CASE AGAINST HOME RULE

THE STUBBORN DETERMINATION shown by Ulster to refuse any form of Home Rule is often somewhat of a puzzle to the American reader, whose views on Ireland are frequently derived from Nationalist sources. The American press, as a whole, has regarded Irish Home Rule very favorably, and our quotations of them in our pages have perhaps unconsciously emphasized the Nationalist side of the argument more than the other. The Ulsterman, however, is anxious that America shall understand his view-point, and the Lord Mayor of Belfast recently issued what the London *Spectator* describes as "one of the most important and significant state papers that have ever appeared in connection with the Irish problem." Some months ago, continues *The Spectator*, "the Lord Mayor of Dublin, Mr. Dillon, and his *ad hoc* coworkers, the leaders of Sinn Féin, the self-styled allies of Germany, drew up a communication to the President of the United States setting forth the Irish case against conscription and generally proclaiming the wrongs of Ireland and her right to self-determination. This Nationalist manifesto has been answered by a communication to the President by the other Irish Lord Mayor, the Lord Mayor of Belfast, Sir Edward Carson, and the representatives of commerce and labor in Northeast Ulster." This manifesto, *The Spectator*, itself a strong Unionist organ, regards as of great weight, for—

"If there had been no sound argument in the case set forth by Ulster, the mere existence of the protest would have been of great importance, for it shows America, and indeed the wide world, in the clearest and best possible way, the existence of the two Irelands, and so overthrows the monstrous fabric of falsehood and paradox reared by the Nationalists. America learns that if there is a Roman Catholic, anti-British, and largely pro-German organization headed by the Lord Mayor of Dublin for defeating conscription and breaking up the United Kingdom in one part of the island, there is another Lord Mayor in the other part of the island with an organization as determined to keep the Irish ship on the true course and to bear company with the good ships of Britain and America."

The Unionists of Ulster think they are as much entitled to the sympathy of America as are the Nationalists, who have so long enjoyed American support. In their manifesto they say:

"There is, however, one matter to which reference must be made, in order to make clear the position of the Irish minority, whom we represent. The Nationalist party have based their claim to American sympathy on the historic appeal addressed to Irishmen by the British colonists who fought for independence in America a hundred and fifty years ago. By no Irishmen was that appeal received with a more lively sympathy than by the Protestants of Ulster, the ancestors of those for whom we speak to-day—a fact that was not surprising in view of the circumstance that more than one-sixth part of the entire Colonial population in America at the time of the Declaration of Independence consisted of emigrants from Ulster.

"The Ulstermen of to-day, forming as they do the chief industrial community in Ireland, are as devoted adherents of the cause of democratic freedom as were their forefathers in the eighteenth century. But the experience of a century of social and economic progress under the legislative Union with Great Britain has convinced them that under no other system of government could more complete liberty be enjoyed by the Irish people. This, however, is not the occasion for a reasoned defense of 'Unionist' policy. Our sole purpose in referring to the matter is to show, whatever be the merits of the dispute, that a very substantial volume of Irish opinion is warmly attached to the existing Constitution of the United Kingdom, and regards as wholly unwarranted the theory that our political status affords any sort of parallel to that of the 'small nations' oppressed by alien rule, for whose emancipation the Allied democracies are fighting in this war."

Commenting on this paragraph, *The Spectator* asserts that *

"Instead of Ireland being politically or constitutionally neglected and oppressed, the value of a vote in Ireland is almost double that of a vote in England. Whereas there is only one

member for every 75,000 Englishmen, Ireland has a member for every 45,000 of her population. Ireland sends, in fact, to Westminster, and so to govern Britain, thirty-nine more members than she has any right to send on the only true and sound democratic system, that of equality of representation—a principle which is recognized as the ideal throughout the United States. In order to prove that the British connection has not, as is often alleged, left Ireland a ruined, famine-stricken, and desolate island, the Ulster manifesto calls only one witness. But he is one whose testimony can not be gainsaid by the Nationalists."

This witness is the late John Redmond, who, speaking of the present condition of Ireland in a speech made on July 1, 1915, said:

"To-day the people, broadly speaking, own the soil. To-day the laborers live in decent habitations. To-day there is absolute freedom in local government and local taxation of the country. To-day we have the widest parliamentary and municipal franchise. The congested districts, the scene of some of the most awful horrors of the old famine days, have been transformed. The farms have been enlarged, decent dwellings have been provided, and a new spirit of hope and independence is to-day among the people. In towns legislation has been passed facilitating the housing of the working classes—a piece of legislation far in advance of anything obtained for the town tenants of England. We have a system of old-age pensions in Ireland whereby every old man and woman over seventy is safe from the workhouse, and free to spend their last days in comparative comfort."

The Ulster Unionists in their manifesto dot the i's and cross the t's of this statement by commenting thus:

"Such are the conditions which in the eyes of Nationalist politicians constitute a tyranny so intolerable as to justify Ireland in repudiating her fair share in the burden of war against the enemies of civilization."

The Spectator has still a point to emphasize, and says:

"All these good conditions, we may add, were worked out in the Parliament at Westminster with the hearty good-will of the British people and paid for almost entirely by the British taxpayers."

The position that Ulster takes up with regard to Home Rule is thus defined by *The Spectator*:

"The people of Northeast Ulster believe as firmly as they have ever believed that the legislative Union with Great Britain gives Ireland her best chance for developing spiritually and materially, and for securing good government. But provided that the Imperial connection is maintained, they make no attempt to dictate to or interfere with the local majority in the South and West. Let those parts of Ireland which want Home Rule have it; but let those parts which do not want it be without it. In strong contrast to this point of view is the attitude of the Nationalists. The Sinn-Feiners and their feebler Nationalist allies not only demand absolute separation, but they demand it for the whole of Ireland. They will not for one moment listen to the principle just set forth. Their claim is for dominance, not for justice. What in the Southerner is but a rational word, that in the Ulsterman is flat mutiny."

The Ulster manifesto is somewhat emphatic on this point. It says:

"The appeal which the Nationalists make to the principle of 'self-determination' strikes Ulster Protestants as singularly inappropriate. Mr. Dillon and his cosignatories have been careful not to inform your Excellency that it was their own opposition that prevented the question of Irish government being settled in accordance with that principle in 1916. The British Government were prepared at that time to bring the Home-Rule Act of 1914 into immediate operation, if the Nationalists had consented to exclude from its scope the distinctively Protestant population of the North, who desired to adhere to the Union. This compromise was rejected by the Nationalist leaders, whose policy was thus shown to be one of 'self-determination' for themselves combined with coercive domination over us."

"It is because the British Government, while prepared to concede the principle of self-determination impartially to both divisions in Ireland, has declined to drive us forcibly into such subjection that the Nationalist party conceive themselves

entitled to resist the law of conscription. And the method by which this resistance has been made effective is, in our view, not less deplorable than the spirit that dictated it. The most active opponents of conscription in Ireland are men who have been twice detected during the war in treasonable traffic with the enemy, and their most powerful support has been that of

"IRELAND'S OPPORTUNITY"

IRISH-AMERICAN (from the fighting front)—"Say, you're missing the scrap of your life."

PAT—"An' how d'ye know I'll not be in it yet, now they're makin' conscription voluntary?" *Punch* (London).

ecclesiasties who have not scrupled to employ weapons of spiritual terrorism which have elsewhere in the civilized world fallen out of political use since the Middle Ages."

The Spectator claims to put the Irish question into a nutshell when it writes:

"If Roman Catholic Ireland would adopt the principle adopted by Protestant Ireland and allow the will of the local majority to prevail, those parts of Ireland which ask for Home Rule would have it at once. What has killed Home Rule is the refusal of the South and West to abandon their claim to dominance, and to live up to their principles—to be honest Home-Rulers. There is the Irish question in a single sentence."

HUNGARY WANTS NO "CENTRAL EUROPE"—No great love has ever been lost between Berlin and Budapest, and now it seems quite clear that the Magyars wish the aggressive Germans at the bottom of the sea. The Budapest *As Est*, one of the most important papers in Hungary, writes:

"Community of fronts for death and bread is no longer sufficient. The chains with which the Germans have bound our country are no longer strong enough. They now need a guaranty that the Central Europe alliance will last forever. Our armies must be made over in order to make one sole army for Central Europe. Customs frontiers must disappear, together with the state frontiers. Navigation, money, commerce, industry, and all our country's laws must be in common with those of Central Europe. Our streams, the air we breathe, our customs, perhaps even the language we speak, must be in common. We live in a world dominated by the statue of Hindenburg, so high that it seems to touch heaven. Oh, lords of Central Europe, eternal adorers of war! know that you have to do with the Hungarian nation, which wishes to act independently. We can not live without liberty, and we fight to free ourselves from Austria. Know, then, that we wish for a customs frontier, a national independent army, and the preservation of Hungarian civilization."

SCIENCE - AND - INVENTION

THE RECONSTRUCTION OF THE RACE

IT WILL BE NEWS to many to hear that the human race needs reconstruction. From the standpoint of the nerve-specialist, Dr. Frederick Peterson, of New York, an alienist of note, assures us that there is no doubt of such a necessity. Speaking before the National Education Association at its Pittsburg meeting, on the subject that we use as our title, Dr. Peterson bids us note that the selective draft has revealed defects in an average of nearly 30 per cent. of our young men—the school-children of yesterday. When we ask what was the matter with the schools of yesterday, we find the answer, he says, in the school-children of to-day. Through them and on them our plans for the reconstruction of the race must act, and he gives us a definite program for carrying it out. Says Dr. Peterson:

"Authorities show us that there are physical defects in 75 per cent. of the 20,000,000 school-children of to-day, most of them preventable and remediable, heart- and lung-diseases, disorders of hearing and vision, malnutrition, diseased adenoids and tonsils, flatfoot, weak spines, imperfect teeth—and among them 1 per cent. of mental defect. The children in country schools are worse off than in city schools. We are sending the best we have to foreign battle-fields. We are retaining the 30 per cent. of imperfect citizens to lighten the race of to-morrow. There is such a thing as prepotence of inferiority. It is often said that we get what we deserve in the way of government, laws, and institutions. Since it is possible in our democracy for a moron to be elected mayor of a city and an imbecile to be made governor of a vast State, it may be easily imagined how the smaller offices in our legislatures, county boards, and city councils overflow with the inferior and the unfit.

"We have spent millions of dollars on swine plague, foot-and-mouth disease of cattle, pine blister, chestnut blight, gipsy moth, chicken cholera, and we have that annual 'pork-barrel' of millions on millions of dollars devoted to all sorts of trivial and foolish exploitations of rural creeks and hamlets; but what have we spent on our greatest national asset—the health of body in our school-children? Body is the foundation on which mental structure must rise. It is of the first importance that the physical foundation be made and kept sound and strong. The mental structure is secondary to that. We are spending enormous sums on medical care of our insane and other defectives in institutions all over the country, and rightly so, to do what we can to repair our broken adults. This is relief work; but what we spend on preventive measures, on health education for our growing children, is, indeed, small by comparison. . . .

"Compulsory education we have—compulsory feeding and training of the mind. Compulsory health we must have—compulsory feeding and training of the body.

"In the war against ignorance we have conscripted the school-children. They are the vast draft army of our second line of defense. But in what sort of cantonments do we house them? What physical drill do we give them, what medical inspection, and care, what sanitation, what remedial steps do we take to restore them quickly to the ranks when they are ill?

"But enough of destructive criticism. Let us turn to the idea of reconstruction of the race. Let us read the old books with a new comprehension. It is almost a hundred generations ago that a teacher (Mencius) wrote: 'The root of the empire is

in the state. The root of the state is in the family. The root of the family is in the individual. So for the people—encourage them; lead them on; rectify them, straighten them; help them; give them wings!'

"We must set up a standard. It might be that of Dr. Oliver Wendell Holmes, 'to begin the education of the child a hundred years before it is born.' That can be attained in a few generations. To accomplish it, we must coordinate all the organizations now at work for the conservation of our citizenry—the maternity classes, the baby-saving societies, the mothers' committees, the kindergartens, the child welfare and physical training bodies, the seaside and countryside and sunshine associations, all that have to do with preschool welfare, the public and private schools, the Child Labor Committee, the Mental Hygiene Association, the boards of education, and the boards of health. The presidents of boards of education should be *ex-officio* members of these coordinated boards. This is a great undertaking, but we can begin by breaking into the curriculum of the public schools and establishing education in health, especially in food-knowledge and food-habits as a vital and essential part of the teaching. From the schools the health instruction will be carried home to the parents and younger children, and soon the whole movement of reconstruction will permeate the state."

Dr. Peterson next outlines his program for reconstruction, which is a large one, with several requirements as follows:

"1. The teachers themselves should be given better sanitary conditions for their own health and fuller instruction in all that has to do with the laws of health.

"2. Every city and country school should be made sanitary and kept so, and the school and its grounds should be as beautiful as

possible, not only for the benefit of the teachers and the pupils, but as an example to all other citizens who are beginning to use the school more and more as a community center.

"3. Every child should be regularly weighed, measured, and examined and a health record kept, which should accompany him throughout his school-life. It should be the duty of the authorities to see that the defects of our young citizens are corrected and disorders of growth and nutrition remedied. As malnutrition is one of the most serious conditions, a hot luncheon should be made available for every child and every teacher. The health examination should include dental inspection and treatment.

"4. Each school should have an adequate provision for physical training, gymnasiums, athletic-fields, playgrounds, gardens, and shops, together with specially qualified instructors in physical training and other vocational fields.

"5. Finally, with the foregoing foundations there should be a thorough system of instruction in all matters pertaining to health with special emphasis on health problems rather than on disease, in physical and mental habits, in personal hygiene, in public health and sanitation, in methods to avoid communicable diseases, in the responsibilities of parenthood, and in all that relates to nutrition and growth, including foods and food-values.

"This is a large program, too large for the inequalities of consciousness of our multitudinous States. It might be carried out in a few States soon and in others only after generations.

"This is a scheme for the reconstruction of the whole people. It is a Federal program. It is an emergency program. It should have the immediate attention of our foremost teacher in the Presidential chair. We need a Hoover for the children—a children's health administration.

"With all this in view and after months of careful planning,

HE FAVORS "COMPULSORY HEALTH."

Dr. Frederick Peterson thinks it just as important as compulsory education.

the National Child Health Organization has been formed, whose literature is being now distributed. Do the first practical thing for a beginning. The teachers can place scales and a measuring-rod at once in every school and with the height and weight and age charts that will be sent on request, the campaign can be immediately started against one of the chief evils, namely, malnutrition. The Child Health Organization has some of the best teachers and educators in the country as members and counts on its board the foremost medical specialists on children and public health. Its publications will be supplied on request to all who desire them."

GERMAN ARMY ENGINEERS INFERIOR

SO MANY PEOPLE seem to think the Germans excel in these features of modern warfare that depend on engineering skill that it is interesting to find that the Germans themselves regard the French as their superiors in this respect. The German officer, we are told, is a military leader, pure and simple; he leaves technical matters to civilians. Civilians build the big guns; civilians also, it is to be presumed, have developed the details of such weapons of offense as gas-generators and flame-throwers. Military men operate them, but they simply follow instructions. One can not help wondering whether this may not explain the fact that neither gas nor flame has yet won a battle for the Teutons. The point of view noted above is quoted by *The Electrical Review* (London), from a report in *Le Génie Civil* (Paris), of a speech delivered in Germany by Dr. von Rieppel, president of the German Society of Engineers. The editor of *The Review* believes that English army engineers are also suffering from some of the faults here set forth. Discussing Dr. von Rieppel's address, the writer says:

"The speaker said that Germany did not foresee that the war would become an economic and technical war; the military schools were designed solely to produce men fitted to command and familiar with the art of war, and economic and technical questions were practically ignored by them. He had been struck by the difference between their own ideas on this subject and those of the French when he visited the Universal Exposition of 1900; as a member of the jury on civil engineering works, he had several times had to judge splendid buildings of which the architect was a French officer, and he was surprised to learn that a large number of French officers received a very comprehensive training, and at the end of their studies had to pass examinations in engineering. These young officers often acted as engineers, especially in the colonies, where they were able to make use of their general knowledge and render valuable service in connection with economic and technical matters. There was nothing of this kind in Germany, and this deficiency had led to serious results. During recent years the technology of the arms of war had made unprecedented progress; industry had provided the officer with greatly improved, but complicated, weapons, the mechanism of which he did not clearly understand. The German officer was accustomed to receive with material instructions for its use, and did not seek to become better acquainted with it, looking upon industrial technology as a thing apart, with which he need not trouble himself, and this false idea led him to underestimate the value of industry with regard to the art of war. Modern weapons had to be served by specialists who must possess not only the usual qualities of the soldier, but, above all, technical experience and professional skill; the German officers were not fitted to control such men, for in their case the purely military point of view was a secondary consideration. In future the training of their officers must be regarded from a totally different aspect."

In suggesting that the British Royal Engineers may be suffering from this same malady, the editorial writer mentions particularly those branches of engineering which fall outside military operations, such as the use of electric light and power, water-supply, the industrial development of large areas of country, etc. He proceeds:

"It is quite a common thing to find behind our lines several little petrol-electric sets at work within a few yards of each other, each supplying a different department, and all, of course, devouring petrol, as well as capital outlay, and working under

uneconomical conditions of loading, where a single properly planned installation would have served the lot at less than half the cost and twice the efficiency. Even where a local supply of electric power has been available independent sets have been put down. Wholly unsuitable plant has been requisitioned from home owing to the lack of technical knowledge on the part of the local engineer officer in command. Petrol has been employed where coal would have been preferable, because the latter can be supplied by small vessels making short voyages, whereas petrol comes from far overseas in large and costly oil-ships, which are a special object of Hunnish hate.

"Such questions as these demand broad views and wide knowledge, which can only be gained in the school of experience. Their correct solution is of immense importance, not only to the efficient conduct of the war, but also to our finances and to the prosperity of the peoples concerned after the war. They may seem to be far-fetched; they are not. Narrow views on the scope of an engineer officer's duties and responsibilities are out of date, and must go. It may be thought that the problem can be solved by commissioning as officers men who in civil life are engaged in such work, and this is perfectly true, but only on one condition—that they are invested with full powers to carry out their plans without interference. This, we believe, has not been the case, and if such wide powers can not be entrusted to engineer officers who are not professional soldiers, then the latter must be provided with such an adequate and catholic training in the sciences of engineering economics and industry as will enable them to carry out the work themselves."

THE GOOD OLD TABLE D'HÔTE

ALTHO OUR ANCESTORS did not know the *table d'hôte* by name, they had it and enjoyed it. The cheap boarding-house and the lavish farm alike flourished upon it. And it would seem that Mr. Hoover, who erstwhile frowned upon it, has changed his mind. He apparently now believes that it will encourage saving instead of waste. This is also the opinion of Paul Pierce, who writes the department of "Comments" in *Table Talk* (Cooperstown, N. Y., September). Mr. Pierce counts it among the blessings of war, that, at least until peace and plenty descend again upon us, we shall be served in public restaurants with simple, home-cooked meals. He says:

"The Food Administration in its quest of finding the most economical way to dine seems to favor the *à la carte* method where a variety of dishes are listed and the diner makes his own selection as to soup, meat, vegetable, and dessert. This is the way we have always had it, except that the size of the menu-card has been gradually shrinking. Gone are the enormous sheets, as large as a newspaper, which restaurants, especially German ones, used to delight in laying before patrons, but the choice of foods is still amazingly large.

"But the hotel and restaurant men favor the good old-fashioned *table d'hôte*. Not the kind associated with small-town hotels and exploiting the three P's—pork, potatoes, and pie; but a carefully selected, well-balanced ration, chosen by *chefs* who know food-values and food-combinations and what's good for people.

"Hotel men claim it will save enormously, since left-overs can be utilized in planning other meals, just as the housewife makes last night's roast into this night's hash, and the odds and ends of vegetables into a tempting salad.

"Psychology enters largely into this suggestion. If food is put before people they'll eat it and like it. Men go to elaborate banquets which are nothing more or less than *table d'hôte* meals, and know nothing of what they are to eat—till they arrive. They accept each course as it comes, there is no waste nor any loss of food. Fancy a banquet of a thousand covers with each diner ordering what he wanted!

"So it will be with the *table d'hôte* plan of the large hotels and restaurants. So much food will be ordered and stocked and prepared, smaller portions served, thus eliminating waste of food left on plates; more courses will be served than are ordinarily ordered, so that the average diner gets greater variety than he would if he had chosen *à la carte*; and if a course is not wanted it needn't be served. Hotels and restaurants will run their tables just as the housewife does hers, and the result will be a reasonable and sane way of eating, just as in the 'old days' that patriarchs are so fond of holding up to our eyes."

CHEMICALS AFTER THE WAR

IF WE ARE GOING TO TABU GERMAN GOODS after the war, would it not be well to see that we have facilities for producing, in our own country, all the things that we formerly bought from Germany? Among these things were all sorts of higher synthetic chemical products used for research. German firms, we are told by Prof. Ross A. Gortner, of the division of agricultural biochemistry, University of Minnesota, used to make and sell these products at less than cost, charging up the loss to the advertising campaign for *Kultur*. The fact that such compounds were to be obtained only in Germany helped to create the impression that only Germans knew how to make them. We can make them perfectly well, but not as a commercial enterprise. As a matter of fact, we are not making them; and when the war is over we shall have to go back to Germany for them or stop our researches in the chemical industries. We quote parts of a letter from Professor Gortner, printed in *Science* (New York). He writes:

"It is well enough to say that we will not use German-made goods, but there would appear to be only one alternative, i.e., the cessation, or at least the slowing up, of research in organic chemistry if these essential starting materials are not available, or if they are available at relatively enormous prices.

"The question, therefore, arises in my mind: 'Why can not some man of wealth make his named blessed by endowing a laboratory which shall prepare these rarer organic chemicals against the needs of research work?' Undoubtedly the German supply-houses sold many of these products at a loss before the war, counting the loss as a necessary part of their advertising propaganda, which was meant to build up the idea that Germany was the great chemical center of the world. Our commercial firms, unfortunately, usually refuse to follow paths where a sure and handsome profit does not lead them.

"If some man of wealth can not be found to whom this suggestion would appeal, what is there to prevent one of our research foundations from supplying the need? How could research and discovery be better furthered in this particular field of science than by furnishing the essential basic materials to a host of research-workers in our colleges and universities? If such a plan as is herein proposed were adopted the United States would without doubt secure and retain first rank in the field of organic research. The initial cost would be comparatively small as measured by the scientific results, for the investigators' salaries would be borne by the colleges and universities, and where now a research foundation is giving to scientific investigation the services of one man, the same sum would assist a score or more of investigators.

"In my own laboratories approximately half of the time of the investigators' laboratory work must of necessity be devoted to the preparation of essential starting materials, pure amino acids, proteins, organic compounds, etc., in order later to use these for investigational purposes. These compounds are not available on the market except at exorbitant prices, tyrosin, for example, being quoted at \$5 a gram (when obtainable), a price utterly out of proportion with the cost of preparation."

Limited funds for research apparatus and chemicals in our colleges and the excessive cost of these materials are responsible for the small quantity of research work; the surprising thing, Professor Gortner says, is that so much is done. The chemistry budget for our smaller colleges is usually from \$350 to \$600 per year, and will probably not exceed \$1,000 in many of our larger institutions. This sum must first equip the student with his apparatus and chemicals, and if any funds remain research chemicals or apparatus are secured. Unfortunately in many instances no funds remain. The time of the instructor is taken up by teaching, and his aspirations toward real scientific investigation have no soil upon which to grow. The writer goes on:

"The question may arise: 'Why does not such a man prepare his basic materials even if his time is limited?' In the first place, there is no glamour in such work. In the second place, there are often eight or ten synthetic steps from raw products to finished material, and the necessary chemicals and apparatus for certain of these steps are not available.

"Such an endowed laboratory as I have in mind would be in

charge of an organic research chemist and would prepare and keep in stock all sorts of organic compounds for research-workers. If an investigator desired a certain compound he could obtain this without cost or for a nominal cost, providing that he first convinced the director of the laboratory that there was an actual need for the compound and that it would be used in *bona-fide* research work, acknowledgment of such a grant to be appropriately made in the published results. If, on the other hand, an industrial demand for the chemical should arise (such as that which did arise due to the depleted supplies of dimethylglyoxim after the war began), the laboratory should charge a fee at least large enough to cover the cost of preparation. This would prevent the possibility of exploitation, and in any event it should be definitely specified that there should be no resale of the article in question, and any supply remaining after the completion of the approved research should revert to the endowed laboratory.

"The above plan is probably not perfect, but I feel that there is in it at least a suggestion worthy of the serious thought of our scientific men or scientific societies, and I only hope that in some manner it may bear fruit. We must not again be dependent upon Germany for our research needs, and unless some such endowed laboratory is brought into existence I can see no other alternative."

ARE THE GERMAN GUNS WEARING OUT?

GERMAN PRISONERS have complained lately that their front line was being exposed to their own gun-fire.

This leads *The Scientific American* (New York, September 14) to the conclusion that German fire is deteriorating, particularly in accuracy. Loss of accuracy is proportional to the wear of the rifling, or erosion—probably the most serious of all the causes of diminished effectiveness. According to a General recently from the Western Front, wastage due to wear completely overshadows that caused by accident and by the enemy's fire. Says the journal named above:

"We have always known about erosion, which ever since the introduction of nitroglycerin powder has been the *bête noire* of the artilleryman. It has taken the present war, with its enormous increase of the use of artillery, to prove how serious may become the wear of guns. Under modern conditions their life is very limited. In fact, experience on the Western Front has shown that, at the end of a single battle, some of the guns may be so worn as to have entirely lost their accuracy. Erosion, which has been serious even under normal conditions where the firing was more or less intermittent, has become extremely serious under present conditions, where field-guns, such as the French 75, can fire as many as fifteen to twenty shots a minute, and in cases of emergency may be called on to keep up that rate of fire for long stretches of time. Sustained rapid fire with full charges results in the guns becoming excessively heated. This is being met by the use of reduced charges and the enforcement of strict rules calling for pauses, after a certain number of rounds, of sufficient duration to give the guns a chance to cool. Another palliative has been found in the greasing of the bore with specially prepared substances.

"Now, for the Germans the peril of this wearing out of the bore lies in the fact that they are extremely short of the raw materials for gun-manufacture and particularly for the manufacture of liners or inner tubes. The supply of manganese is becoming a serious problem for the German gun manufacturers, and it is at least reasonable to suppose that the notable decrease in the volume and accuracy of German gun-fire is due to the fact that their guns are wearing out faster than they can replace them. If this be so, the German High Command stands face to face with a stupendous problem: for the long-range shelling of back areas, particularly of shell-dumps, cross-roads, and concentration points; the silencing of batteries; and, above all, the exact placing and controlling of a creeping barrage, or, for that matter, of any kind of barrage, all demand that the sights of the guns shall correspond with mathematical accuracy to the ranges actually covered by the shells. This loss of accuracy keeps pace with the wear of the rifling of the gun and with the enlargement of the bore. Loss of accuracy is due both to the escape of gases past the base of the shell and to the failure of the worn rifling to impart the necessary speed of rotation to the projectile. The rapid wearing out of German guns is one among many contributory causes, which are slowly but very surely bringing the once seemingly omnipotent German Army to its knees."

FORCING COAL-ECONOMY

BY AN ORDER of the United States Fuel Administration, the "skip-stop" plan is to be adopted shortly by all the street-railways in the United States, thus saving, it is estimated, 10 per cent. of all the coal used by these roads, or 1,600,000 tons a year. A writer in *Engineering and Contracting* (Chicago, September 4) suggests that it might be a good thing if the Federal Government, in peace as well as war, might eventually assume the function of forcing individuals and corporations to use economic methods and machines. The adoption of undoubted economies like the skip-stop is usually blocked by petty local opposition. The Federal Administration, having a broader outlook, cares naught for these. It is working now, of course, to win the war, but the writer is of the opinion that peace-time, as well as war-time, would benefit by these persuasive governmental influences. He says:

"Conceive, if you can, what could be accomplished in America in the way of increased productivity and economy if our Federal Government had the authority to make every individual and every company adopt any method or device that had been proved to be economic. No engineer acquainted with the application of the principles of the science of management can doubt that if the universal adoption of those principles could be forced upon producers in general, this nation could increase its productivity fully 25 per cent. That would alone add more than twelve billion dollars annually to the national income. But that is not all. The application of the principles of the science of management is only a fraction of the total engineering at our disposal. We have literally countless labor- and material-saving machines and appliances that are scarcely used, altho many of them are generations old. Does this sound incredible? Certainly not to any engineer who has a wide acquaintance with the literature of engineering.

"Take so simple a thing as the heat-insulator for steam-pipes and boilers. It has been known to engineers for nearly a century that by encasing boilers and pipes with magnesia or other suitable insulators, practically all heat radiation and conduction losses could be stopt. Furthermore, it has been known to engineers that the saving in fuel thus effected would pay an annual interest of 20 per cent. on the cost of the heat-insulator. But go into the basements of steam-heated residences if you want to get a conception of how rarely this knowledge is applied. The landlord may know that heat-insulators

15 per cent. of the fuel required to heat the average house. On these matters the Fuel Administration has power to act, and it should act.

"In our issue of March 27 we published directions for house-heating prepared by the Engineering Group of the Denver Civic and Commercial Association. The engineers estimated that by following those directions fully 20 per cent. of the fuel commonly used in heating buildings can be saved. Of the

Illustration of housing of "The Railway Review," Chicago.

"SIDE-DOOR PULLMANS" MADE INTO A HOME: BOX CARS AS A RESIDENCE.

600,000,000 tons of coal annually produced, about one-sixth is used in households and other buildings. Hence if one-fifth of this 100,000,000 tons can be saved, it would amount to 20,000,000 tons annually. Experienced mechanical engineers estimate that of the 500,000,000 tons used for steam-power purposes fully 10 per cent. can be readily saved by utilizing methods that have been well known to engineers for twenty years. In short, by the universal application of long-known methods of fuel-saving it would be possible to save fully 70,000,000 tons of coal every year, and this with a comparatively slight outlay of capital for new apparatus, etc."

THE BOX CAR AS A RESIDENCE—Altho the utilization of old box-car bodies for the housing of railroad employees has been under criticism during recent years, the objections found usually arise, we are told by *The Railway Review* (Chicago), from the use of equipment in such dilapidated shape that it is not practicable to keep it in sanitary condition. Says this paper:

"With proper attention to this matter, however, it is possible to put old car bodies in such repair as to make them neat and comfortable. One railroad has adopted the plan of placing two of the old bodies side by side, building a roof over the two in common and siding up the gables, so that the real character of the premises is somewhat disguised. At a number of its division points in the West the Chicago, Burlington & Quincy Railroad

has found it necessary to furnish living quarters for shop and roundhouse employees and trainmen, owing to lack of residences available for renting in these localities. Rather extensive use has been made of old box cars, grouped together and fitted over inside and provided with screened porches. The old bodies are floored, sided inside and ceiled with one-by-six-inch flooring, and eased windows are placed in the sides and ends. The ordinary car-door is reduced in size to two feet eight inches, the remaining open space being neatly sided and eased. At Greybull, Wyo., there is a 'village' of such residences, and all of the rooms are lighted by electricity.

As a usual thing two or three of the bodies are joined together, to afford four or more rooms. In some instances two of the bodies are placed 'T' shape, in others 'L' shape, and in still other cases a lean-to is built on in the rear. Prepared roofing is generally placed over all the bodies in each group to make the covering unbroken. There is no trouble in keeping the rooms clean and sanitary, and the screening in front of the porches is particularly appreciated by the occupants."

NO FRILLS, BUT HAPPIER THAN THE KAISER'S PALACE.

would earn a big return on their cost, but since they would earn it for the tenant and not for himself, he does not cover the boiler and pipes adequately, if at all. The tenant, even if he knows the economics of heat insulating, will not spend the money for insulators whose use he may not enjoy for more than a year or two before he moves out. For similar reasons very few houses have double windows, altho double windows will save fully

LETTERS - AND - ART

FRENCH GIRLS HERE FOR EDUCATION

THE GERMAN SCHEME of educational exchange which failed so utterly to make the world love the Kaiser will be imitated for a better purpose and on a large scale by ourselves and our allies, and as an earnest of the scheme sixty-six French girls lately landed on our shores to take up their studies in American colleges. The emphasis is

With a high sense of local disloyalty the New York *Tribune* felicitates the young ladies on the fact that they are "not going to any alien spots like Radcliffe or Barnard or Vassar or Bryn Mawr," but "straight to headquarters, to the University of Iowa, the University of Wisconsin, and so on, where education is corn-fed and Americanism is not diluted by any imported, transatlantic accent." It turns the matter this way and that:

"This is quite as it should be. We like our East and are proud of it. But it is only a small part of America and not representative at all of much that is most American. If visitors from Europe could skip hurriedly over Beacon Street and Fifth Avenue and spend most of their time west of Pittsburg and much of it west of the Mississippi, they would not misunderstand us as much as they do. They might even then comprehend New York, which, despite surface appearances, is much nearer to Kansas City than it is to Paris—or even Kiev.

"It is genuine understanding between nations that should be gained from such transfusions as this very interesting educational venture. And understanding can come only from gripping essentials. Henry James is an American essential, yes. But there ought surely to be Spoon River to supplement him, and it is just this intimate touch with an American West that these French girls can gain from life in our Western colleges.

"A young Roumanian once did just this and wrote of it with rare frankness. His name is M. E. Ravage and his book bears the title, 'An American in the Making.' You can be irritated at his point of view or not, depending upon the stiffness of your American collar. But there is no questioning the clear look at America which life in a Western college, the University of Missouri, gave him. East, or rather the Old West, met the New West there with a will. Democracy, coeducation, our whole social system, were flashed on the screen with a vividness impossible to parallel in any other American community. Mr. Ravage was fairly scornful of our culture by comparison with East Side standards. He was warmly appreciative of much else.

"So will our visitors from France be impressed, we suspect. It is a long jump from a French village, with its deliciously worn and mellowed beauty, to a raw Kansas town. Yet the war has made the Kansas soldier utterly welcome and thoroughly at home in any French village. We have surely not less faith in a *poilu's* sister equipped with the rarest of tact and the clearest of eyes."

The Baltimore *Sun* does not take the flippant view implied in the New York *Sun's* characterization of "half a hundred packages of international cement":

"After the war is over there will be millions of Americans coming home from France. What they will have learned of that land will be disseminated through their family circles, and perhaps beyond that; but it will be, to all but those who have been in France themselves, second-hand information. Likewise, it will consist of observations made through masculine

FRENCH GIRLS TO LEARN YANKEE WAYS.

This group of French college students are distributed through Western institutions to complete their education as guests of American colleges. They were received on arrival by Mrs. Stocks Miller and Mrs. Nicholas Murray Butler. These two ladies occupy chairs in the center of the group.

put upon "American" by one New York paper, which feels that the real American qualities will be assured our visitors by their going to inland or Western colleges. They come on scholarships founded through the efforts of Dr. Robert P. Kelly, of Chicago, executive secretary of the American Association of Colleges, working in cooperation with the American Council of Education and French institutions. The purpose of bringing these French students to America was explained by Dr. Kelly at a meeting in the assembly-room of the National Training School of the Y. M. C. A., where they were gathered to receive their first words of public welcome. The New York *Evening Sun* thus reports the address:

"It is the first chapter of a large program of educational reciprocity between the United States and the Allies and involves the exchange of students, both men and women, and also of faculty members, with the view of a close spiritual alinement of the various peoples of the Allied nations.

"The two hundred and thirty scholarships which have been awarded will cover the tuition, living-expenses, and fees of the students during their courses. One hundred and twenty-eight girls of the two hundred and fifty who applied for scholarships have been chosen by Dean Mary Benton, of Carlton College, Northfield, Minn., and Mrs. Stocks Miller, of Denver, who were appointed to go to France and visit towns and villages, choosing from among the applicants with the aid of the Department of Education of the French Government and various professors who are or have been teaching in universities in this country. The French Government appropriated 75,000 francs for the traveling expenses in this country and for personal expenses of the girls who could not afford them."

eyes; and while the American woman will not distrust, perhaps, the opinions of the other sex concerning the women of France, she would undoubtedly prefer to form her own conclusions from personal observation. . . .

"These young Frenchwomen are coming to live here; they will see many phases of American life which are not apparent to the casual visitor; and those who go back to France will take with them a knowledge of America which no millions of Americans in France could convey. The experiment is an admirable one; it savors distinctly of a broader internationalism to come."

The Evening Sun was successful in gathering some personal facts about our new visitors:

"Madelene Letessier expresses great interest in the submarine question on this side of the Atlantic and inquired anxiously whether the American coast had been gassed. All of the girls spoke excellent English, and many expect to teach English in French colleges after their graduation, others to teach French in English colleges.

"Mlle. Edmée Hitzel, of Paris, had studied English for some years with a view to teaching it when this scholarship offer came. Now she is to attend the University of Colorado. She says: 'France is quite animated now that the American soldiers are there. . . .

"Mme. Marcelle Blouche, of Paris, a slight, dark-haired girl who is the widow of a French soldier who was gassed two years ago, will go to the State College for Women, Denton, Texas.

"Four students have scholarships to the Carnegie Foundation. They are Mlle. Fernande Helie, of Paris, who attended the University of Rennes for two years and also a school for girls in Sheffield, England, for one year; and Mlle. Paule Bureau, who studied in the University of Bordeaux for three years and has been in England the last year. Both will go to the University of Wisconsin.

"Mlle. Mouly and Mlle. Preivet will study at the University of California. Mlle. Helie told of the French universities. 'Our universities have few men in them. At Rennes we had but two rooms for the lectures. Now the wounded men discharged as unfit for further service are coming back to study. There were men of the Foreign Legion on our boat coming over for the Liberty Loan drive. We heard, too, of your war-work drive. It is splendid, so many organizations representing such different interests and religions going together in one big drive. It helps us French so!'

"The drive referred to was the United War Work Campaign set for the week of November 11, when the seven organizations—the Y. M. C. A., the Y. W. C. A., War Camp Community Service, American Library Association, National Catholic War Council (K. of C.), Jewish Welfare Board, and Salvation Army—will combine to raise \$170,500,000 for war-work."

WAR'S SHOT AT "LA GUERRE"—The mystic may find comfort in the symbolic accident of battle about Amiens and see the shot that tore a fresco by Puvis de Chavannes as war's detestation of war. The added fact that the shot may have been guided in vengeance for the wide-spread ruin suffered by art itself may give the mystic a firmer basis for his faith in the future peace of the world. The *London Evening Standard* prints from a correspondent the following account of a rather remarkable coincidence:

"Such descriptions of the havoc wrought by the German bombardment of Amiens as I have read from the pens of the special correspondents who attended the impressive thanksgiving service in the cathedral make no mention of one of the most remarkable feats of salvage accomplished during the war. I refer to the rescue from the partly demolished Picardy Museum of the world-famous mural paintings by Puvis de Chavannes.

"The work was accomplished in May, under an intense bombardment, by Mr. Felix Boutreux, a leading art-expert, assisted by four sappers of the 'camouflage section,' under the supervision of the Military Governor, Colonel du Teil de Havelt.

"Altogether well over 200 square yards of canvas had to be detached, inch by inch, from its foundation, and rolled on cylinders for removal to a place of safety. Despite the continuous and deadly peril of the working party, every one of the masterpieces, including the great panels, 'Pro Patria Ludus' and 'Ave Picardia Nutrix,' was got away undamaged, with the exception of the panel, 'La Guerre,' the canvas of which was slightly torn by a shell-splinter."

P. T. BARNUM DRAMATIZED

BARNUM'S CIRCUS keeps alive the name of the great American showman; but Mr. Tom Wise, the actor, has off and on been devoting himself to the task of revivifying his personality to a generation that knows him only by tradition. "The rich humanity of the showman has gripped Wise's imagina-

JENNY LIND

Her appearance under P. T. Barnum's management on September 11, 1850, at Castle Garden, thrilled our forefathers as never before. It is shown on a following page as the play represents the event.

tion," says Rebecca Drucker, in the *New York Tribune*, who represents the actor as convinced that Barnum's "irresistible humanity is a part of the permanent American spirit." From Mr. Wise's presentment of the character, *The Tribune's* critic thinks that if theater audiences never know anything else about "P. T." they will "always believe his country did well to have loved him." The play built around the actor, tho it presents Jenny Lind, Lavinia Warren, and Gen. Tom Thumb, does not fare so well at the New York critics' hands. Their complaint is that the real aroma of the circus is not given. Upon this point Mr. Wise wonders what New York knows about a circus anyway? When asked by Miss Drucker if he was disappointed at New York's greeting, he replies: "No. I have the fun of doing it. Besides, New York isn't a circus town. It doesn't know what it is to get up at five o'clock in the morning to see the circus come into town—and to have every one knock off work on circus day—or the feel of being under circus canvas. It only knows the Garden. New York doesn't get much thrill out of a circus." The play, which was concocted by Mr. Wise himself, assisted by Harrison Rhodes, has an interesting history:

"The idea first came to him almost ten years ago, while he was playing 'The Gentleman from Mississippi.' For years people

had been casually remarking 'How much you look like Barnum!' Then one day he chanced upon the 'Recollections,' and the naive self-revelment of the Connecticut Yankee fascinated Wise. He began to dig—into the newspapers and periodicals of the time, in the anecdotes extant of him and in the biographies of him—and found a mine of character. A thousand stories of him

music, but he undertook the tour of Jenny Lind at what was then considered a fabulous risk. She accepted his management because on the letterhead on which he proposed negotiations there was printed an ornate picture of his house. She was sure that a man who had such a fine house must be a very substantial person. Not many people now recall how he enriched his native city of Bridgeport, Conn."

The critic of the New York *Sun* shows that he himself could respond to the allure, perhaps because he is less of a New-Yorker than the others who refuse to be pleased. He writes:

"If Phineas T. Barnum had returned to the flesh last night on the stage of the Criterion Theater he could scarcely have filled his skin better than it was done by Thomas A. Wise. There was not a wrinkle to deplore. He might have been somewhat surprized at the aptness of circumstance and the immediateness of cause and effect, but doubtless he would have raised no great ructions at any slight improvement contrived by the dramatic biographer.

"Numerous attempts have been made to shadow forth the glamour of circus life on the stage, but it remained for Harrison Rhodes and Thomas A. Wise to conceive the bright idea of making it but the nimbus of glory surrounding America's greatest showman. When to these factors are added the appeal of such illustrious characters as *Jenny Lind* and *Gen. Tom Thumb*, it would seem strange that it took five years to get a production after the play was written, but the death of Charles Frohman put the plans out of joint until Charles Dillingham became interested.

"Nothing short of four acts would have been adequate to the essential phases of the subject. Besides the personality of the Yankee showman, his geniality and shrewdness, there was a whole gallery of portraits to introduce, from that of the Swedish nightingale down to the living skeleton, the prize fat woman, the snake-charmer, and the woman midget. The complete cast numbers twenty-five. The dramatic turn of the plot grows out of *Barnum's* land speculation in Bridgeport, which came

Mr. Wise, in an off-stage moment, shows his conception of Barnum as a man of "rich humanity."

illustrate the man's audacity, and yet his essential simplicity; his highly personal code of honesty, coupled with a fundamental morality; his love for bigness and his small-town kindness—the contradictions that make a personality. But the task of digging a play out of all this material was too much for Wise. He called in Harrison Rhodes, and together they began the laborious work of elimination. When all had been eliminated that they thought they could spare they found they had material for four plays. They wrote them all. For years, in off seasons and in obscure places, Thomas Wise has been producing one or another of these versions—testing, cutting, combining, discarding—until he thought the present play worthy to bring to New York. In the discarded versions was one that showed Barnum at the zenith of his career, when as proprietor of the 'greatest show on earth' he was astonishing the world with his three-ring circus, his menageries, and the splendor of his shows. But this Barnum was an institution that it was difficult to galvanize to life—so they went back to the time when as proprietor of the All-American Show of Freaks he floated up and down the Mississippi.

"Wise mourns the stories of him they could not put in—one can see that. There was an advertising exploit in which Barnum promised to show a horse with a head where his tail should be, and when the reporters came they found a horse turned about wrong side before in the stall. He did not know or care about

THE GREAT AND ONLY BARNUM.

Whom an actor of our day, Mr. Tom Wise, so strongly resembles as to make his appearance as the great showman a foregone conclusion.

near breaking him and smashing the tour of *Jenny Lind* under his management.

"The first act was in the office tent of the circus at Eutawville, Tenn., where all the characters were introduced with considerable comedy, and *Barnum* adopted a French girl who had run away from a drunken father. How she was transformed from the hoodoo of the company into its idol, how *Tom Thumb* wooed

Lavinia Warren, and how Barnum rose superior to bankruptcy and launched *Jenny Lind* on her successful career at Castle Garden in New York, were the principal elements of the play. The costumes of 1850 helped to create an interesting atmosphere."

MORE CONDEMNED BOOKS

THE ARMY "INDEX" has had some notable names added to its list. To swell the number of books which we gave in our issue of September 16, more have been indicated by the Department of Military Censorship as undesirable for our soldiers to read while training for war. So the camp librarians must comb them out. On the new list may be seen the name of an ex-Mayor of New York, one who was outspoken in his defense of Germany in the early days of the European conflict, but who now holds a commission in the American Army. Then we find a college president, a late college professor, and an editor under indictment for violation of the Espionage Act. That a man may repent and abjure his shortcomings is proved by the fact that the list also includes the book whose introduction was written by the head of the Committee on Public Information, and published at the instance of a notable review. The New York *Tribune's* dispatch from Washington goes over the list in fuller detail:

"In the new list, which makes a total of seventy-two books placed under the ban, is 'Two Thousand Questions and Answers About the War,' edited by J. W. Mueller, American representative of *The Stars and Stripes*, and containing a foreword written by George Creel, chairman of the Committee on Public Information.

"Other books barred because of containing pro-German utterances, or found to be salacious or morbid and thus 'unfit for American soldiers,' were written by Bernhard Dernburg, chief propagandist of the Hun in America; Edward Lyell Fox, writer of laudatory articles of the Central Empire; David Starr Jordan, pacifist and antiwar spokesman, and George B. McClellan.

"The books were barred from every army camp and from every post where American soldiers are located because their influence tended to make the soldier who read them a less effective fighter against the Hun," it was explained when publication of the complete list was authorized. . . .

"The inclusion of the Mueller-Creel book in the list of volumes blacklisted was due to the many passages in the publication that military censors declared were Simon-pure German propaganda, ranking alongside the Dernburg volume carrying the telltale title, 'Germany and the War,' and Edward Lyell Fox's boastful work with the apparently undisguised title, 'Behind the Scenes in Warring Germany.'

"'War and Waste,' written by David Starr Jordan, was characterized as another one of those 'vicious pacifist books intended to emphasize the wastefulness of war and subordinate the real purposes of the United States in the war.'

"In the list also are numerous religious publications opposing war and emphasizing the views of pacifists. Other publications were barred because they were unfit from a moral standpoint."

The sixteen new undesirables are:

- "Behind the Scenes in Warring Germany," Edward Lyell Fox.
- "Book of Truth and Facts," Fritz von Frantz.
- "Disgrace of Democracy," Kelly Miller.
- "German Empire's Hour of Destiny," Col. H. Frobenius.
- "German World Politics," Paul Rohrbach.
- "Germany and the War," Bernhard Dernburg.
- "Germany's Just Cause," J. O'D. Bennett and others.
- "Heel of War," George B. McClellan.
- "Jesus is Coming," Anonymous.
- "Outlook for Religion," W. E. Orchard.
- "Short Rations," Madeline Z. Doty.
- "The Searchlight," Lawrence Mott.

"The War and America," Hugo Münsterberg.

"Two Thousand Questions and Answers About the War," Anonymous.

"Understanding Germany," Max Eastman.

"War and Waste," David Starr Jordan.

The special objections urged against the "Two Thousand Questions and Answers About the War" were made by Dr. Claude H. Van Tyne, of the University of Michigan, editorial director of the bureau of education of the National Security League. The New York *Evening Sun* quotes him as saying:

"It is a masterpiece of German propaganda. The German Government could not have devised anything more insidious.

W. L. B. Photo. N. Y. C.

more calculated to destroy our faith in our allies and to insinuate into the American mind excuses for Germany."

Some "strikingly propagandist paragraphs" quoted from the work in the League's report are these:

"Q. How did Prussia become militaristic? A. As a result of being licked too often. . . . Whenever France wanted to fight Russia or Austria the road led through Württemberg, Bavaria, or Prussia. . . . At last the Prussians determined grimly to fight for themselves, and it was under the inspiration of a burning zeal and love for home and country that the seeds of militarism were sown.

"Q. Has war ever produced so much hatred as this one? A. Always much the same kind of attacks as now on the Germans.

"Q. Were German soldiers worse than others in the march on Peking? A. According to revelations made by correspondents who managed to get through to Peking, and by officers after the trouble was over, there seems to have been very little to choose between the troops. . . . Of all, the Japanese emerged with the cleanest record and the Tonkinese troops of the French with the worst.

"Q. What is the German people's attitude toward the Kaiser? A. With the exception of the Radical Socialists, the German people hold the Kaiser in the highest esteem."

RELIGION-AND-SOCIAL-SERVICE

THE ARMY TO REDEEM THE CONVICT

OBJECTIONS made by officers of the National Army to the utilization of convicts in the Army furnish a "good example," says Lieutenant-Commander Thomas Mott Osborne, "of the way the average mind ceases to function when it meets the word 'criminal.'" The officers in question had stated that "the National Army is composed of the best

or boys are here, and, like myself, as no questions were asked of our past, we got through; and some day the people outside will know how we did our bit when we could very easily manage to be rejected. . . . It is great to be in a uniform, and altho I am just a private I know I will always do my bit and carry out any orders cheerfully that are given me, as I realize only too well that I must walk the chalk-line more than any one who has not been in stir."

"Another writes: 'We expect to go over in October. Well, as for me we can not go across too soon. I have a rap to square in X—, so I am going to try and make a record in case I do come back. But I don't think I will come back alive. If I get killed it will be the best thing I ever did in my life, and it will go to square some of the bad things I did.'"

The friend of the prisoner asks if this is not the stuff out of which good soldiers can be made? On the other hand:

"Our present policy lets some of the crooks get into the Army, but they can only do so by deceit and concealment of the truth; we encourage hypocrisy and falsehood. How much better to have an ex-convict contingent where these men could look after and help each other. By putting them in a separate division there would be given them the highest stimulus to 'make good,' for each man would be working not only for his own rehabilitation but also for a great cause—the cause of the prisoner the world over. Thus both sides would gain. The country would gain a large number of soldiers who would prove themselves among the best fighters in the war, and the prisoners would gain the opportunity to prove that the problems of crime can be solved—if they are approached in the right spirit."

"May I call attention in passing to the fact that this prison has contributed to the Navy within the last year over a thousand men now doing useful duty, who except for Secretary Daniels's enlightened policy would have been thrown out from the service with dishonorable discharge? The same policy should open up the ranks of the National Army and make it not 'a refuge for criminals' but a service where even the criminal may have a chance to do his duty to his country in its hour of need."

A move in the direction of Lieutenant-Commander Osborne's recommendations is being made in New Jersey, where a plan for the military training of the prisoners confined in the jails of this country to prepare them to do work essential in the conduct of the war is now in its experimental stage. The purpose is to enable prisoners to earn the privilege of fighting for their country. Mr. Burdette G. Lewis, Commissioner of Charities and Corrections of the State of New Jersey, gives to the *New York Evening Post* a statement of what is undertaken:

"I am gratified to say that New Jersey has again taken the lead as the first State in the Union in beginning to-day to utilize the man-power of its correctional institutions in work essential to the conduct of the war, and has arranged, after conferring with the War Department, to assign prisoners to do essential war-work in the State of New Jersey. This work will consist of building roads, railroads, digging canals, ditching, drainage, and agricultural labor. They will be trained by institutional officers under the supervision of United States Army officers. The prisoner should be given a chance to do his bit in that class of service for which the army and State authorities decide that he is best fitted."

"The plan will at once eliminate the objections of certain army officers to the placement of felons or misdemeanants together with the other United States troops, inasmuch as it provides for the segregation of such prisoners in separate army divisions under regular army officers. Further, it will eliminate the obvious injustice of the situation, which calls for the entire effort and sacrifice of our best and noblest men, and carefully shields and protects our offending classes."

"I have received the approval of the War Department in Washington to make a test of my plan in the State of New Jersey, which eventually will provide, if it is extended to the

THE PRISONER WILL LEND A HAND.

—Mandy in the Sing Sing Prison Star-Bulletin.

of the nation and is not a refuge for criminals." Apply common sense to the issue, says Mr. Osborne, in a letter to various leading newspapers of the country, and "we should see at once the absurdity of taking our best out of their honest employments and sending them across the seas to danger and death, while we carefully keep at home the burglar and the pickpocket." Mr. Osborne, whose reputation was made in the humane reform of prison methods, exclaims in amazement at the relegation of these men to Class 5 as "morally unfit":

"Consider for one moment. Morally unfit to fight the Huns! 'The National Army is composed of the best of the nation.' That is obviously not true. The National Army is composed of all men fit to bear arms and fight—good, bad, and indifferent. Our National Army is now the nation itself engaged in the serious task of saving the basic principles upon which our nation exists; it is not a gentleman's club composed of the socially select, excluding such persons as are not agreeable to its members."

"By keeping out of the Army men who have served time in prison we shut out many who would make the very best soldiers—bold, active, and accustomed to discipline. As for patriotism, you will find no more loyal Americans than the crooks. Why not? One man can love the country in which he burgles as much as another who banks. There is no reason why the pickpocket should not feel as keenly the blessings of a free country as the plumber or the lawyer. 'Rich man, poor man, beggar-man, thief'—we are all in the same boat, and it is our common country that is concerned."

"As a matter of fact, there have always been thousands of ex-prisoners in our Army; and there are now more than ever. I get letters almost daily from one or another. The latest one says: 'I have passed all examinations here and am now a full-fledged soldier. You can't imagine how many of your friends

other States, for the utilization of the man-power of more than 400,000 prisoners in the United States. To this end I have called a meeting to-day of the wardens and superintendents of the correctional institutions in this State, and of my medical advisory board on classification, and have directed that the plan be put into immediate operation, thus placing the man-power in the prisons and reformatories of New Jersey at the disposal of the United States Army."

If these plans are found feasible they may be adopted throughout the nation.

HOW GERMANY GETS CHURCH BELLS

GERMANY'S APPETITE FOR CHURCH BELLS only seems to grow by what it feeds on. Where copper and tin can be extracted the sacred association of their booty affects them no whit.

We recall the outcry of Cardinal Mercier over the looting of the *carillons* of Belgium; we hear daily of the stripping of the churches of eastern France, particularly of their bells; we know now that Russia has given her tribute even to the great bell of the Kremlin in Moscow. "The mad Reds of Russia have outlawed religious faith and for months have been carrying on a general religious persecution which centers on the Orthodox Russian Church, but embraces all religious bodies." This statement is given by the New York *Tribune* on the authority of the clerics of the Russian Cathedral of St. Nicholas in New York. Their chief informant is the Rev. Alex-

ander Philoposky, pastor of a church in Sitka, Alaska, who recently returned from Russia. Items of news brought by him show how the Germans profit by the disorder created by the Bolsheviks, if indeed the Bolsheviks do not create this disorder especially for the profit of the German:

"Churches have been plundered and their congregations shelled by artillery and shot down with rifle-fire. Church treasures, such as are to be found only in Holy Russia, have been carried away into Germany and German motor-trucks are rapidly stripping the land of its myriad bells. Even 'Czar Kolokol,' 'king of the bells,' the greatest bell in the world, which long had been used as a chapel in the Kremlin, Moscow, has been taken by the Germans, according to Mr. Philoposky, for the sake of its nearly two hundred tons of copper and tin.

"While the Bolsheviks, obsessed with the notion that the one indelible characteristic of the *bourgeoisie* was their faith in God, proceeded to the wholesale slaughter and pillage of those professing such faith, the Germans, the Russian priest said, were taking advantage of the panic conditions to seize upon the business and resources of the country.

"A decree had been passed by the Bolshevik Government, he said, asserting that the churches were 'the inheritance of the people,' and the Reds lost no time in asserting their claims. Some of the most famous and sumptuous churches in the land, he declared, now mere shells, were used as communal homes by followers of the Bolsheviks. Smoke from their cooking-fires trickled through the shattered windows, the air that had been heavy with incense reeked of boiling cabbage, altars became lavatories, and wings were used as stables.

"While priests were carrying icons through the Chudow Monastery in the Kremlin, Moscow, the singing of the choir penetrated to the Bolshevik mob, who realized at the sound that

a part of their 'inheritance' was still uncollected. Surrounding the building with armed guards, the Reds demanded of the hundreds worshipping in the church if they believed in the Czar, in God, or in whom they did believe.

"The response was instant and came from scores of exalted worshipers. They believed in God, they cried. Others, whom even the atmosphere of the sacred building could not blind to the significance of the rifles with which the intruders were armed, added vociferously that they did not believe in the Czar. The congregation, said to number nearly one thousand, was massacred on the spot.

"Religious teaching of any kind was banned. A priest who ventured to teach the Ten Commandments to a pupil was liable to corporal punishment."

CRACKBRAIN RELIGIOUS OUTBREAKS IN GERMANY

FRENCH CHURCH BELLS AT WOLFENBÜTTEL

This photograph, taken from a German prisoner, confirms the story of the Kaiser's wholesale loot of church bells, and tells the tale of underfeeding in the weedy group of young boys who are onlookers here.

the German Empire, and to an Amsterdam correspondent of the New York *World* they appear very "weird." Pan-Germans are said to have "given way to a kind of heathenish mysticism," and "openly propagate a revival of the pagan worship of the ancient Teutons, including offerings to Wotan." Other forms are even stranger:

"The commander of the 19th Army Corps at Leipzig has found it necessary to prohibit meetings of a sect known as the 'Little Flock,' which originated at Meerane.

"Its head is a weaver named Hain, whom his adherents address as 'Holy Father.' He poses as the Messiah and pronounces 'sentences' from his 'judgment-seat,' from which he 'separates the sheep from the goats.'

"The new 'Messiah' has achieved some measure of popularity by his attacks on the established clergy on the ground that they draw stipends which, he says, the Apostle Paul never did; neither does he himself. The 'Little Flock' craze, it seems, has spread to such an extent in Saxony, especially among impressionable young people, that the authorities have had to interfere.

"A more modern offshoot of this queer movement is headed by one Ludwig Neuner, who definitely renounces Christianity on the superfluous plea that it is 'foreign to the German ideal.' Family life is out of date, says Neuner, and all children should be charges of the state. For prayer, Neuner proposes the following substitute, which the Roman Catholic *Germania* appropriately calls a 'prayer *ersatz*,' or substitute:

"Bodily and mental 'uplift' movements every morning, baths, deep breathing, song and dance, reading of valuable poetry, contemplation of truly artistic objects of art, training of will power by autosuggestion, etc. The Roman Catholic Bavarian *Courier* suggests an additional movement—tapping of the forehead morning, noon, and night."

THE NEW KIND OF CONSCIENCE

"FOUR YEARS AGO one would have considered it a compliment to be called a pacifist. To-day he would resort to violent means to resent the charge." If this statement of *The Northwestern Christian Advocate* (Chicago) is not one of universal application, at least the exceptions are so non-spoken as to make the writer here unaware of their existence. In marveling at the change of feeling which induces this condition, *The Northwestern* is equally impressed by the absence of "conscientious objectors." No one to-day at least, it is averred, "can apply that term to himself with honor." Instead, "the popular term is conscientious fighter." These facts, says this journal, emphasize "how completely revolutionized is the thought of us all as it relates to the application of the principles of Jesus Christ to the present world-emergency." *The Northwestern*, in its amazement, confesses it "had no idea such unanimity of sentiment could have been secured favoring a full surrender of our nation to a state of war." Whatever opposition there is is surely non-vocal. England, however, is not so fortunate. Recent correspondence on the subject in the columns of *The Westminster Gazette* (London) shows that at the end of August "over five hundred conscientious objectors . . . had suffered two years' imprisonment with hard labor as the result of successive sentences imposed upon them by courts martial." To one of these writers, Margaret Morgan Jones, "their continued imprisonment is a proof to the world of the failure of England to appreciate the fact that conscription can not operate in the realm of reason and conscience." The writer in *The Northwestern* is moved to his reflections by a book recently published called "The Record of a Quaker Conscience." We read:

"It consists of a running diary of Private Cyrus Pringle, a young Quaker who was drafted into the Federal Army at the outset of the Civil War, but whose conscience was so sensitive on the matter of taking up arms against his fellow men that he refused to serve. In company with a companion of like scruples, he endured all manner of trials. He was even threatened with death if he did not comply with the regulations of the Army and carry arms. He was at last placed in hospital service with the hope on the part of his nonplused officers that he might be induced to serve in that humanitarian fashion. But his conscience still balked, and nothing could bend him. All the while he referred his attitude to a Christian virtue. He felt that he was being persecuted in a measure commensurate with that of the martyrs of old.

"The most interesting feature of the story was the fact that he at last won out. For some time he had attempted to get his case before President Lincoln, and at last succeeded, with the result given in the following excerpt in the closing chapter of the book. It is pertinent to remark that his sickness mentioned in the last paragraph was induced by his persistent refusal to drill, march, or work:

"6th.—Last evening E. W. H. saw I. N. particularly on my behalf, I suppose. He left at once for the President. This morning he called to inform us of his interview at the White House. The President was moved to sympathy in my behalf, when I. N. gave him a letter from one of our Friends in New York. After its perusal he exclaimed to our friend: 'I want you to go and tell Stanton that it is my wish all those young men be sent home at once.' He was on his way to the Secretary this morning as he called.

"Later, I. N. has just called again, informing us in joy that we are free. At the War Office he was urging the Secretary to consent to our paroles, when the President entered. 'It is my urgent wish,' he said. The Secretary yielded; the order was given, and we were released. What we had waited for so many weeks was accomplished in a few moments by a providential ordering of circumstances.

"7th.—I. N. came again last evening bringing our paroles. The preliminary arrangements are being made, and we are to start this afternoon for New York.

"NOTE.—Rising from my sick bed to undertake this journey, which lasted through the night, its fatigues overcame me, and upon my arrival in New York I was seized with delirium, from which I only recovered after many weeks, through the mercy and favor of him who in all this trial had been our guide and strength and comfort."

The conscientious objector is more conspicuous to-day than

in the time of the Civil War; and *The Northwestern* is moved to question whether the brand is quite so "conscientious" as in former times:

"The Quaker Church has itself had some slight additional revelation on the subject and is throwing itself into auxiliary service with earnestness; and few, if any, of its members absolutely refuse to submit to the draft in the performance of some constructive work.

"A modern army campaign is so complicated an affair, with scores of directions into which endeavor can be cast, that all can be suited. Not only has there been a change in the attitude of the Quaker Church in the matter of war, but our own Government considers the subject from a changed standpoint. Pressure of strong character has been brought time and time again to relieve conscientious objectors from any part in the conduct of the present war, but without avail. This is due doubtless to the issues at stake. Never in the history of America has she gone to the front with so clear a conscience. Never were the issues in hand so defined. To turn practically the entire nation into a solid phalanx against the Central Powers, and that without any uprising or exhibition of rebellious spirit, is one of the most remarkable accomplishments of modern times, particularly in view of our great distance from the scene of conflict and the fact that we had been living for generations under the spell of the Monroe Doctrine. But when Europe called, America responded, and to-day she is fast becoming the decisive factor to humble the brutal enemy and bring to pass the supremacy of justice. It is this clear-cut issue that has given the Government persistence in dealing with conscientious objectors, and has forced them to do their part toward the accomplishment of the desired end."

RIGHTEOUSNESS OF THE PEACE LEAGUE—Speaking for the Christian folk of England, the Archbishop of Canterbury in a letter to the *London Times* hails the address of President Wilson in New York at the opening of the Loan Drive as a document in righteousness. He is confident that the President's words will be approved by tens of thousands of Christian men and women. From such a source these assurances carry weight to the conviction that the President has issued a new "Magna Carta," as a recent writer to the daily press has put it, but one whose purview is beyond the limits of the mere rule of states. The Archbishop's words are printed in a cable dispatch to the *New York Times*:

"With the straightness and force which we have learned to expect from him, President Wilson in his speech of yesterday describes the character and vastness of the issues which are at stake. He appeals to the Governments of the Allied nations to say plainly whether or no, in the plan now being shaped for the league of nations, their vision and their purpose correspond with his. I can speak for no government, but I am convinced that the mass of thoughtful Christian folk in England feel with an earnestness beyond words, the force of his contention that for reasons not of policy, but of principle, not of national interest, but of righteousness and justice and enduring peace, we want a league of nations on the very lines he has drawn.

"Details there may be in his description which need elucidation or development, but his outline has our unhesitating support. We are not afraid of such items of self-surrender as may here and there be involved for this nation or that. The issues are world-wide. Our vision and our purpose must be world-wide, too.

"Let Mr. Wilson rest assured of the vivid and eager response which his appeal awakens in the minds of tens of thousands of Christian men and women, upon whose will, in the long run, the effective decision must turn. The churches in our land have spoken with no uncertain voice. The responsible vote of our Bishops, given eight months ago, was deliberate and unanimous. We not merely welcomed, in the name of the Prince of Peace, the idea of such a league; but we desired that provision for it should be included in the conditions of settlement when it comes. Other churches agreed or followed suit. We have not spoken lightly or without assurance of the width and warmth of support on which we count. We give no mere lip adherence to a great ideal. We mean that the thing shall come to pass."

By an error the article on "Impulse for Daily Work" in our issue for August 31 was credited to the Missouri Council of Defense instead of to the Conference Committee on National Preparedness, Inc.

"For work or in training or play,
This soup makes me clever and gay—
A feast so beguiling I have to keep smiling,
And trouble just bubbles away."

**Good health, good work,
good courage—**

They are linked together

You cannot succeed at your daily task—no matter what it is—if you are handicapped by a weak frame and undernourished nerves. You cannot bear your share of the Nation's burden unless you are well fed and well nourished. You cannot be courageous and cheerful without a good appetite and good digestion. This is right where you feel the benefit of

Campbell's Tomato Soup

It is an appetizing nourisher in itself and it so strengthens and regulates digestion that all your food gives you more nourishment—and more enjoyment, too.

We make it from choice fresh-picked tomatoes prepared and blended with other wholesome materials by the improved Campbell method. This gives you all the delightful flavor and valuable tonic qualities of the perfect ripe tomato—and even more tempting than nature made them.

The contents of each can gives you two cans of pure rich nourishing soup. And it is more economical for you than would be possible if made in any home kitchen.

Served as a Cream of Tomato, it is doubly nourishing and delicious. The whole family will be healthier and happier for its regular use.

Order a dozen at a time. Enjoy it often and keep in good condition.

COLUMBUS DAY

IT IS A GOOD THING to keep holidays and anniversaries, because they make us remember. And memory is in a sense the greatest and most necessary of all the powers of man because it is the root of all the rest. Civilization is memory—the memory of what men have learned before us, that we may learn more. Honor is memory—the memory of a pledge. Religion is memory. All the beauty and profit of our future grow out of the past as flowers and fruit grow out of the ground. And we go forward only by looking back. When a man is suddenly struck with loss of memory, he becomes helpless, like a child. And when a nation loses its memory, we know what becomes of it. We are fighting against such a nation.

WHAT COLUMBUS SOUGHT AND FOUND—Every school-child remembers that Columbus discovered America. Columbus was an Italian. And Columbus day, which is the anniversary of his landing, has become especially the festival of the many Americans who are of Italian origin. But in order to find the full meaning of the day, it is interesting to remember more. Columbus did not come here from Italy, but from Spain. He came seeking, not a new continent where a new nation might make its home, but a short way to India. To the end of his life, he never doubted that this was what he had done. That his discoveries would result in the growth of a great free republic, the hope and the home of millions from all the corners of the earth, he never imagined for a moment. And yet that was what came of his work.

WE ARE ALL IMMIGRANTS—Every American who is foreign-born has passed through the adventure of Columbus in his own life. They have all discovered America. They came here not for the sake of that new country which they had never known, but very naturally and properly for their own sake, for opportunity or advantage. But they have discovered more than they knew, and more than they came to find. For they came seeking a strange land, and they have found a flag and a nation of their own; they came as travelers and they have become citizens. And that is all part of a greater thing which goes on always and in many ways. For men are forever seeking their own gain, and when it is won, learning that they have something to value and care for and defend. A man buys or builds a house, and finds that he has a home. A man marries a woman and finds that he has a wife and children. A man prays for what he wants, and finds that he has a God and a religion. And it is that experience which has been the making of America, because we are a nation of immigrants. Other nationalities are born, but Americans are made. We all came here, ourselves or our fathers or our forefathers; and the difference of a few years or a few generations in the time of our coming does not matter much. What does matter is that we remember why we came and what we have found, and care for it properly. And caring for it means two things: it means realizing its worth; and it means guarding it from harm.

AMERICA A TREASURY OF TRADITIONS—We talk of America as a country of the future, a land without tradition.

But, in a truer sense, America is the new home of many a great past, and a preserver of traditions from the four corners of the world. The immigrants who made this country, from the first Spanish and French and English colonists to the last newcomer from Russia or the Mediterranean, did not come here to find something new. They came to preserve something old and dear to them. The Puritans came to preserve their religion. The Revolutionary War was fought by Englishmen—under the leadership of George Washington—to preserve those English foundations of liberty which were assailed by the German king, George III; and it is upon those foundations—made secure by Washington forever—that the American Republic stands to-day. So did the Huguenots and the Christian Armenians and the persecuted Jews. Others came to preserve their personal and political freedom, which is the oldest of the possessions of man. Others again came for the opportunity to do their own work and exert their own talents freely. And all of them, in one way or another, came here for the chance to keep what they valued

and to do well what they had it in them to do. America is the place to which for four hundred years people have brought those traditions of theirs which were threatened or assailed in their old homes, and in which they have been able freely to preserve them. We are a new nation; but the blood of the older races runs mingled in our veins. We are a treasury of traditions; and it is fitting that we defend that treasure against the new enemy of all good old things.

ITALY AND THE ITALIANS—No American needs to be reminded now of the part Italy and the Italians are playing in preserving the traditions of world-civilization and world-freedom. The armies of Italy have arisen from the depths of the disaster of 1917 to the triumphs of the Piave.

The Italians in the United States are serving no less the cause of America and the world. Second in numbers only to Americans of German birth and parentage, the Italians in the United States have more than borne their share of the burdens of the war, and the casualty lists from Pershing's Army in France bear eloquent testimony to the fact that the American soldier of Italian birth is making the supreme sacrifice for the traditions of his people and of the new people of which he is a part in America.

QUESTIONS

1. In what States is Columbus day a holiday?
2. What special significance do you see in the celebration of Columbus day this year, by proclamation of the President, as Liberty day?
3. Name any other famous Italians you have heard of besides Columbus.
4. What prominent figures in affairs of the present day are of Italian birth?
5. How many residents of your immediate town or neighborhood are of Italian birth or parentage?
6. What proportion of the Italians in your vicinity are American citizens? Compare with the figures for the entire United States as given above.
7. How do you account for the large numbers of Italians returning to Europe in recent years?

ITALIANS IN THE UNITED STATES

There were 2,151,422 Italians in the United States in 1910. Of these 1,365,110 were born in Italy.

Three States—New York, Pennsylvania, and New Jersey—have altogether over a million Italian residents.

New York City alone had 549,444 Italian residents in 1910—7,000 more than Rome, Italy.

Italian-born males of voting age in the United States numbered 712,812 in 1910. Of these 126,523, or 17.7 per cent., were naturalized, and 55,522, or 7.8 per cent., had filed their declaration of intention.

Between 1910 and 1917 the United States received 1,281,218 immigrants from Italy, while 600,793 returned to Italy in the same period.

STYLE HEADQUARTERS
Where Society Brand Clothes are sold

THIS sign tells
about the "Style
Headquarters" in
your town. It's the
place to go to for
the smartest looking
men's wear.

Society Brand Clothes

THE commanding place in the clothing trade of nearly every city is held by one store by virtue of the class of goods in which it deals. This store is rated by the best dressed men as "Style Headquarters." It is the first place they think of going to.

"Style Headquarters" sells Society Brand Clothes because the management knows that Society Brand attracts the most desirable trade. That these clothes are bought by men who want hand tailored clothes and want them without the fuss and uncertainty of the custom tailor's way. By men who want the premier styles and want them first. By men who count it wasteful to pay less than Society Brand prices for clothing that can never fit so well nor wear so long.

For your guide and safe-guard look for the label SOCIETY BRAND on the inside pocket. It's the maker's pledge of unqualified satisfaction. Write us for the Fall and Winter Style Book. It's ready.

CURRENT POETRY

THE soldier-poet in his songs from the trenches usually avoids any theme that savors of "shop." One reason for this, we are told, is because the soldier seeks relief in verse from the wearing monotony of war, a monotony broken only by the brief burst of battle. Here, however, are a sheaf of poems direct from the trenches which deal with war, and war as the soldier sees it. We quote a reflection of war's monotony as it appears to a British private, from *The Westminster Gazette*.

HOMESICK

BY S. J. SCHOFIELD

You sit and twiddle bits of straw
To ease your heart from hating things;
And all behind you, all before,
Is clouded with the vulture's wings.

So homesick that you strive to frown
On thoughts of lovely things remote,
And yet you can not fight them down
Before they're rising in your throat.

Friend, 'tis a sickness in our bones,
And how it comes we can not say.
But talking here with Private Jones
I felt the evil ebb away.

From the *New York Sun* we take this vivid picture by an Irish, but not a Neo-Celtic, poet:

A SOLDIER'S PRAYER

BY RIFLEMAN PATRICK MACGILL

Givenchy Village is now in ruins. The village church has been repeatedly shelled and is practically leveled to the ground. One portion of a wall remains standing, however, and on this is a figure of Christ, which, in some miraculous manner, has escaped the fury of the German shell-fire.

Givenchy Village lies a wreck, Givenchy church is bare;

No more the peasant maidens come to say their
vespers there.

The altar-rails are wrenched apart, with rubble
littered o'er.

The sacred sanctuary lamp lies smashed upon the
floor.

And mute upon the crucifix He looks upon it all
The great White Christ, the shrapnel-seared
upon the eastern wall.

He sees the churchyard delved by shells, the tomb-
stones flung about.

And dead men's skulls and white, white bones
the shells have shovelled out.

The trenches running line by line through meadow
fields of green,

The bayonets on the parapets, the wasting flesh
between—

Around Givenchy's ruined church, the level
poppy red

Are set apart for silent hosts, the legions of the
dead.

And when at night on sentry-go, with danger
keeping tryst,

I see upon the crucifix the blood-stained form of
Christ,

Defiled and maimed, the Merciful, on vigil all
the time,

Pitying His children's wrath, their passion and
their crime,

Mute, mute, He hangs upon His Cross, the symbol
of His pain.

And as men scourged Him long ago, they scourge
Him once again—

There in the lonely war-lit night to Christ the
Lord I call:

"Forgive the ones who work Thee harm. O Lord!
forgive us all."

Here is a poem, written in Flanders, by an officer as he watched some of "Kitcheners Mob" marching into battle for the

first time. It appeared in the New York Times.

THE NEW ARMY

BY LIEUT.-COL. J. C. FAUNTROPE

A bleak northeaster chilled the blood.
The driven rain was cold as steel,
Over the cobblestones the mud
Lay thick along the sordid street;
Under a lowering leaden sky,
Singing a music-hall refrain,
A Kitchener brigade went by
Marching through Merville in the rain.

Young men and strong, and some will die
By bullet, shrapnel, bomb, and mine,
Torn by the shreds of steel that fly
From four-point-two and five-point-nine;
The poison-gases' choking breath
Others will feel, and it may be
That some will suffer, worse than death,
Starvation in captivity.

I could not hear the words they sang,
I did not recognize the song,
But clear to any listener rang
The meaning—"Now we sha'n't be long!"
At last they heard the sounds of war,
Parades and field-days now were done,
To eager ears the blizzard bore
The grumble of the German gun.

Under a brighter, warmer sky
I fancied I could hear and see
The Roman gladiators cry,
"Salvati morituri te!"
The new battalions marched away—
Somehow I'd like to hear again
The simple song they sang that day
Marching through Merville in the rain.

The Harpers have published a collection of poems by American soldiers in France called "Songs from the Trenches." From it comes this song of the airman:

AVIATION

BY PRIVATE RALPH LINTON

Battery D, 140th Field-Artillery

We are youth's heart made visible, who rise—
On gleaming wings to greet the splendid sun,
Weary of earth's show certainties, and run
Joists with the elements to show our pride.

Last and most chosen élite, we meet
In single fight to win a single fame;
Sweep on victorious, or, defeated, pass
Like the archangels, trailing robes of flame.

From the same collection we take this touching tribute to the comrade who has passed on:

THERE IS A CLOSE

BY MAURICE BOURGEOIS DE MARAIS

Base Hospital No. 10

There is a close that overlooks the sea,
Wide to the vaulting blue, and very still
Save for the rooks' sad cawing. Here at will
Wanton the errant winds of Normandy.
Within are crosses, rear'd in ebony,
Crying to all who pass that here fulfil
Their destiny those souls time can not kill,
"Contemptibles" who died so willingly
And here the other day we laid him down,
Sadly, yet proudly, in his verdant youth,
The first of us, the sealing of the bond,
Sweet be his rest, tho' fleeting his renown
Among his kinsfolk, warriors all for truth,
Together now through battle and beyond.

This is a very different treatment of a similar theme, but it rings true, the authentic touch of the "rookie" lamenting his pal. It comes from a trade paper, the New York Tobacco.

NEAR NO MAN'S LAND

BY PRIVATE B. A. SCHAK

16th U. S. Infantry

"There wa'n't no bugler there a-blowin' taps,
The regimental chaplain, tho', was 'round;
No! I'm a tellin' you as how I'm feelin' blue,
Cause they put my rookie Buddy in the
ground."

SHOE POLISHES

FACTORS of SAFETY

*The Factor of Safety in Shipbuilding is 5-7
The Factor of Safety in Pneumatic Tires is 10-14*

For everything that carries loads, that bears stress and strain, there must exist factors of safety.

To send our great ships across the ocean with their burden of supplies, human lives, food, the munitions of war—the very hope of our country—and to unload them “over there” is, to a large extent, dependent upon the pneumatic tire.

Because haulage, transportation, the business of war, is hastened, conserved, accomplished by motor-driven vehicles.

Does not the “extra ply” of fabric carcass in the Hood Tire make it possess the greatest factor of safety you can buy in a tire?

The Hood Tire is therefore the tire you should be sure to use upon your car to carry you with greatest immunity from tire mishap and to give you greater mileage in your service behind the front.

←Look for this sign of the Hood Dealer

in your town or city. You will do well to call and see him—he is a good man to know.

THE HOOD TIRE COMPANY, Inc.
WATERTOWN, MASS.

I showed 'im how to do "right shoulder arms"
An' told him all a doughboy oughta know;
We slept together, but to-day he sleeps
Near "No Man's Land," beneath the mud
an' snow.

He said 'is ma an' sister back at home
Kissed 'im a dozen times in fond good-bys.
An' when 'e talked about 'em I could see
That look o' longin' shinin' in his eyes.

I hate to think o' how 'is mother feels—
A mother's loneliness is worse 'n mine.
I'd write 'is folks a letter, only that
This writin' business ain't much in my line.

I don't know what to do when I'm off post.
My Buddy's gone; an' seems like all I know
I'd like to put a flower on 'is grave
Near "No Man's Land," beneath the mud and
snow.

This from *The Westminster Gazette* is by
an unknown author.

SUDDENLY ONE DAY

(Found in the pocket of Capt. T. P. C. Wilson,
killed in action)

Suddenly one day
The last ill shall fall away.
The last little beastliness that is in our blood
Shall drop from us as the sheath drops from the
burl.

And the great spirit of man shall struggle through
And spread huge branches underneath the blue.
In any mirror, be it bright or dim,
Man will see God, staring back at him.

The *London Graphic* gives us these
noble lines.

COMMUNION

By GEOFFREY F. FYSON

You ghosts of those who fell
With hearts still flush'd with the first ecstasies,
Why do you leave your lofty citadel?
Ever your wistful, unapparent eyes
Peer thro' each darken'd doorway, and your hands,
Vibrant, intangible,
Hover, and strive to touch us in the street.
Ever the soundless feet
Follow, and leave no trace upon the sands.

The no dim voices speak.
Foll'd by your blood and ours, Death can not seal
The spirit's ears; we know you vainly seek
The faith unfaltering and the primal zeal.
Breathe from your burnished lips upon our clay;
Again that dawn shall break
When Honor handed us her flame-white sword.
And we, with one accord,
Sped to the hills to greet the refulgent day.

In his "Glory of the Trenches" (John
Lane Company, New York), Coningsby
Dawson gives us this poem, with its sud-
den, unexpected climax:

IN HOSPITAL

By LIEUT. CONINGSBY DAWSON

Hushed and happy whiteness,
Miles on miles of cots,
The glad, contented brightness
Where sunlight falls in spots.

Sisters swift and saintly
Seem to tread on grass;
Like flowers stirring faintly,
Heads turn to watch them pass.

Beauty, blood, and sorrow,
Blending in a trance—
Eternity's to-morrow
In this half-way house of France.

Sounds of whispered talking,
Labored, indrawn breath;
Then, like a young girl walking,
The dear familiar Death.

PERSONAL GLIMPSES

"CAMPING OUT" UNDER FIRE WITH AMERICAN BOYS IN FRANCE

FROM one point of view, this war
resembles a stupendous camping-out
party, the most stupendous camping-expe-
dition in history. Of course, there are
differences, as the correspondent who makes
the comparison hastens to point out. He
writes in the *Newark Evening News*:

You know how it is when you go camp-
ing. You look about for a place by a lake,
a river, or a spring, if possible, where you
can get your own water, and then you ar-
range so that some cozy little village is
near, or at least a good farm, where you can
get a chicken or a potato or an apple now
and then. The idea is to locate in a coun-
try where nice open fields, woods, hills, a
stream or two will offer you pleasure
through the summer day, bird-song, play,
and repose.

Here you find your best luck in avoiding
anything in the nature of water. You get
as far away from its awful taint as you can.
You don't wash. You drink not.

The cozy village you steer shy of for
beaucoup reasons, as our French-speaking
American soldiers say. One reason is that
it isn't cozy. What is cozy about little
homes that have been struck amidships by
the sudden shell and have spilled out into
the road their beds and linen-closets and
all their treasured attic junk? whose kitch-
ens lie beneath a ton of stones and plaster
and broken things? whose cellared stores
of food have now become the half-eaten
banquets of rats? Another reason is that
the village is haunted—not by dead folks,
but by the living—by two or three old
women and an old man, perhaps a child,
too, come back on foot, following here the
ebbing tide of battle. It brings on an
acute attack of blues to hear their faint
scratching among the ruins, to smell their
camp-fire, to see them silently camping,
lonely and desolate, without food or
water, or clothing or homes, on the site of
where they used to live.

But the correspondent's lugubrious pic-
ture is rebuked by the retort of a Yankee
private whom the writer met on the battle-
field, and to whom he evidently made
remarks much like those above.

"Don't you complain about my war,"
said the doughboy. "It's the only war
I've got."

The correspondent resumes, in a some-
what chastened mood:

No, we'll take it as it is. How is it?
Two or three others and myself were fol-
lowing the trail up from Meaux, the general
trail taken by American soldiers in their
first great offensive battle in Europe be-
ginning July 18, the battle in which they
registered the quality of the American
Army.

Where would we rather have had them
go into the fire than along the shores of the
Marne? This is the little stream that has
marked the stopping-place of Hun ambi-
tions for 1,500 years, ever since 421 A.D.,
when Attila came to grief at the hands of
the Gauls, lost 165,000 men killed in one
day and retired into Germany. Some day
that! With all our engines of destruction
we do not kill like that now. Still that is
good ground for Americans to be fight-
ing on to-day and significant ground for

STEELE
-Designed
-Built
-Equipped

A STEELE structure is *complete*. It is not just a factory of four walls and a roof fabricated to meet a present emergency, but a comprehensive industrial plant in which every detail of *design, construction and mechanical equipment* is worked out along the individual lines which the particular business in question requires—built *right* for all time.

STEELE'S IDEA

is to centralize control in one organization—to take from the busy executive all the care and worryment attendant upon that method of construction which divides responsibility between the architect and the various contractors.

Such service is possible only because of the size, completeness and 64 years' experience of the STEELE organization.

Wm. Steele & Sons Company

Engineers and Constructors

PHILADELPHIA

TORONTO

Established 64 Years

American boys to lie in by the Marne, the old barrier between hordes and individuals.

This camping- and scouting-party of mine had its lunch on the high ramparts of the château at Château-Thierry. Our soldier-chauffeur called it "Chatto Tear-y," and that is the favorite way to say it in our Army. But don't you laugh at our boy. He speaks French with a khaki accent, but it was he who told me the history of this eleventh century château and how it was ruined in a war many decades before this one. I don't know where he browsed for his history, but he was not camping in a ruin he knew nothing about, as the rest of us were. The more hurrish for him.

The mossy, tree-grown ruins are on a height, and as we ate the only food we had been able to buy in Meaux—that is, tinned meat, a loaf of straw bread, and a bottle of aristocratic wine (an unkindly mess)—we looked down on the town and across the Marne to the south bank. It was only three and a half weeks since the *Berke* had left. So we had already gained half a week on him since Belleau.

The town below was much shelled, but still it remains a recognizable place. Dust rises out of it as we look down, and a roar of traffic. Its streets are pasted up with board signs, newly written in American. You can tell whose signs they are by the stark brevity of the directions. No word-wasted. Old curbstones are down and war-wagons almost bunk against the little flowery statue of the harvest girl. She still stands there timidly in the midst of all the wreckage and dust.

The château ruins are in a depressing mess with dirty German leavings. The ancient dungeons beneath the walls made good shelters and these are full of signs of recent occupation. We struck a match in one of them and it was so damp that the poor flame swallowed hard and expired. But not before we had seen a few things. A very old and very huge stone cross loomed out of the blackness. Nothing on it but scribbled German script. There was a magnificent red-plush chair at its feet, evidently brought from some luxurious home in the town, and there was the broken neck of a violin, and some straw beds and eans and mud and junk. Oh, but this is a dirty war!

Above, among the ruins, were graves, German, and some nice furniture for sitting outdoors and enjoying the view of the town. One fine, hand-made carved chair had been ruined on and the mud splashed up the legs. What does anything matter?

As the party, after gathering up their own unopened tins and bottles, "hit the trail" again, they heard an unfamiliar sound in the air. From other sources we have learned that the roar of the Liberty motor is easily distinguishable from the sound of any other aero engine at the front.

But we anticipate the joyous revelation that came to that party of correspondents and soldiers there beside the Marne:

What was it, where was it? It was a general roar, vague, frightening. You couldn't locate it and couldn't recognize it. It was in the air. It must be up in the air. It was getting suddenly much louder.

"I say, can it be a plane?"

The roar filled the whole heavens. Far up between the leaves of the trees we strained our eyes and there! there were two specks. We turned and looked at each other, a dawning question in our eyes. Could it be possible? A low voice at our elbow said:

"They're Liberty planes."
 "Isaiah! Our planes! They've come!"
 The strange new sound grew to a climax, passed, faded, died away. It was over in three minutes, and the tender sky up toward the front had swallowed them.

Like people who had seen a vision and heard the words of the prophet on the mount, we turned and went down the path without a word. We faced the same direction and followed in the imagined shadow of our planes.

Now we were on the broad highway to the front. This is the famous route from Château-Thierry to Fère-en-Tardenois. Along this road the German masses were struggling only three weeks ago to get out of the Marne pocket. French and Americans at the left, and French, Italians, and British to the right were squeezing in ahead to cut them off. French and Americans behind were chasing after them. French and American planes were hovering overhead and bombs were splashing down from them. Every little while several of our fliers swooped down and reeled off a belt of machine-gun bullets into them. No wonder the road is still bordered with broken stuff and dotted with German crosses stuck in the ground haphazard, turned over, and tossed about at fantastic angles as the halted in a marionette dance.

A little farther back, neglected and half-trodden harvests were being hastily gathered in by French soldiers. Up here, and from here on, nothing in the fields but shell-holes, big and little.

A few refugees mingled on the roads with troops this day, sturdy pioneers coming back to their homes. Some very few had a horse and wagon to bring them home, but that is heaped-up luxury. Most of them were walking, staggering along under a big bundle. That bundle in most cases represented all they had now to start life with again. The villages on the high-road to Fère are all badly damaged and empty except for soldiers bivouacking in the ruins. Little Vaux is a complete chaos, and the only living people in it are three old women, one old man, a cat, and a very portly kitten who was cold-bloodedly playing with a piece of debris as I passed.

We hear so much of ruined villages that it seems as tho we get to feel that the French people must be used by now to living in them. However, it is the first experience for all of these people, and there are few harder experiences for any one to have to face. It is not as bad now, either, as it will be in a couple of months, when it turns cold and begins to rain.

Now we ran into Fère-en-Tardenois, and I, for one, shall always think of that place as the Inferno. To some people it was once home, and to the Germans only a week before it was a big base for their Paris armies. They had miles of ammunition, and stores there and thereabout, and some say they had 600 cannon in active batteries in the vicinity.

We shelled them out of it, and we bombed them with terrible tornadoes of air-bombs ropt by great squadrons of planes roaring down out of the clouds. The little town, an awful jumble. The houses look as tho they had not only been hit by shells but wrecked them through to the bottom, as tho their debris had been hit again and tossed far away, so that perhaps the sink of one house now lies in the cellar of a neighboring one.

In all the woods about the town the Germans had well-built sheds and vast stores of boxes, grenades, and shells. Our bombs stormed down among this sinister pile and up they went, and the woods with

Dream on— the table is Valsparred!

Valspar is a remarkable varnish. *It is water-proof, spot-proof, and durable.*

Neither boiling water nor spilled liquids can turn Valspar white, or mar its beautiful surface.

It protects and preserves woodwork and furniture.

You should use it everywhere in the home, indoors and out, to get the very best results.

In the bathroom, kitchen, pantry, laundry, splashes won't hurt Valspar.

In the sick-room or the nursery, you can sterilize the Valsparred woodwork with hot water and soap.

On the front door and porch Valspar laughs at rain or snow.

In the front hall, wet feet and dripping umbrellas won't harm Valsparred floors.

Beyond all question, Valspar is the most efficient household varnish in the world.

Special Offer—If you wish to test Valspar send 25c. in stamps and we will send enough Valspar to finish a small table or chair.

them. Some charred pines and the black ground mark the site of this great tree-hidden store that no doubt was destined in one way or another for Paris. What our bombs did not explode, the Germans in retreating pell-mell tried to finish. But there was too much of it even for lightning destruction to engulf.

A famous American division, already celebrated in spite of its few months of action, passed along the road. The faces, seen in glimpses through the dust, were red and streaming with sweat, but they were a "contented-looking lot," notes the correspondent, and many of them were "jolly." He writes of them:

These were the boys who had led the American vanguard to the Vesle. We tossed remarks to them and they roared back good cheer.

The little streets were encumbered with fallen ruins, and hundreds of French and Americans were salving, clearing, pulling down, and piling back the rubbish. Plaster powder was flying.

Signal-corps men on ladders were leading telephone-wires through the town high along the ruined walls and across the chaotic square. Others were hammering up new signs marking directions and telling where certain quarters were. Often the American signs were beside the recent German ones, which were still there in fresh paint. And those German sign-boards were nailed over or beside the original French ones. Kaleidoscopic! We shot past the dread word "*Kommandantur*" stretching across a wreck of a building on which the faint word "*Mairie*" (town hall) was just visible.

All of this was only the furious background. The thing that riveted attention was in the foreground. It was a *camion* train that had started through the town on its way forward. It was carrying a whole division of husky young Americans up into the battle just ahead. We were going in the same direction and we tried to pass, but it was a "two-direction street," and cars and trucks were coming steadily down from the front, too. We worried our way along, shooting ahead, now darting in behind a big lorry, then on again.

The train came thundering on, and the road-bed shook with the weight of it. The *camions* were big French ones, blue, with prairie-wagon tops, each one packed with about twenty-five American boys standing or sitting, and driven by—whom do you think?—Chinese drivers. It's a strange war!

I think I spent four hours on the road with that forward-urging stream. I have but little idea what the countryside was like beyond Fère toward Fismes, because I could see nothing. It would be hard for the imagination to picture the dust that surrounds a train of two or three thousand *camions* bowling along a dry road. The first one kicks up an ordinary cloud. The following ones make that fly and add theirs to it. The next group whirls this wide of the road and thickens the air with its contribution. Soon the road is lost. You can no longer see it or anything on it. If you are on it yourself you make out nearby outlines uncertainly. The rest of the world has disappeared. You are crawling along the bottom of a dry sea which floats and swims about you. Your eyes look like burned holes, and the dust hangs like hoarfrost to skin, hair, clothing.

I shall never forget the roar of the oncoming thousands of lorries, nor the glimpses I got of those Chinese faces at the wheel, their blue helmets pushed back,

their mouths and eyes twisted into uncanny grimaces as they strained forward peering into the dust. Some of them looked horrified like Peking demons, but they passed with relentless certainty of grip and with unchanging expression. They gave one an impression of sureness, faithfulness.

Our own boys, seen vaguely in this huge blur, look oddly familiar, yet strangely grotesque. In the blazing heat their faces were streaming, and on their damp cheeks and noses the yellow dust was caked like a mask.

The lowering sun was getting red and turning the whole dust sea coppery. I watched our lads' faces in that light as they glided by. They looked serious, firm. I remembered something a Frenchman had said to me a few days before: "Your boys more than any others of us keep thinking that they are fighting for an ideal." It seemed true of those grave young faces that I saw fitfully through the dust, thousands of them passing on to go into the battle.

Then later, right up near the field of action, I saw them dismount from the lorries. It was dusk. The road wound away back over the hills, and faintly in the gathering darkness you could see the train winding out like a serpent. The men formed beside the road, silently, without lights. The Red Cross companies marched away first to get their equipment set up in some concealed place. After that, the others. A curt word of command and they fell into companies; another, and they strode off, over the crest of the hill and toward the line.

There was just light enough left for us to prowl up a bare hillside to a clump of trees at the top. Up in these regions no faintest glimmer of light can be used at night. We crossed an open field cautiously, plunged into an unseen shell-hole, and finally gained the crest. We groped our way through the wood to the front facing the east, and there we commanded a wide view of the Vesle Valley about Fismes.

When we spoke to our soldier about Fismes, he looked puzzled.

"Fism?" he asked.

We spelled it.

"Oh, Fizzums," he said. Our men entered that this morning.

That is where we are fighting now, and that was whither our new division was hiking.

The night's gun-fire was already rumbling as we sat down in the dark around what felt like a log and had our evening feast—a feast that was entirely unseen, maneuvered only by the twin senses of feeling and taste.

What was around us? We did not know. It was only a few days since the Germans had held this ground we were on now.

All through the night we watched the barrage and followed the battle as it illumined the sky. Overhead we heard German airplanes buzzing. Down the hill in some hidden bivouac that must have been of large proportions we heard the gas-alarm and the raid-alarm given at intervals.

Like fool Americans, true to type, we listened to the gas-alarm without taking it personally. Our masks we had left in the car on the edge of the wood. Luckily for us no gas came our way, and the raiders wasted no bombs on us. We were absorbed watching the east. It flared with lights. Strings of star-shells and flash of guns between them made the night gorgeous, if hideous. We had heard of some wondrous new red light that was being used to illuminate the battle-field, and at about

Lifting the Railroad's Load

Night and day—on long haul and short haul—thousands of cars and trucks are lifting the over-load from the railroads.

To help relieve the overburdened railroad facilities, the Council of National Defense urges use of motor transportation.

Every motor vehicle in America has a vitally important work to do.

Prepare your car—passenger or commercial—to give the limit of service.

Equip it with good tires—tires that will enable it to go farthest at least cost and with least trouble.

United States Tires are good tires.

For passenger cars: 'Royal Cord', 'Nobby', 'Chain', 'Usco' and 'Plain'. Also Tires for Motorcycles, Bicycles, Airplanes and Solid tires for trucks.

Whitman's candy in war time

It is possible to eat candy and satisfy your sweet tooth and still be patriotic if you use care in selecting the kinds of candy that contain a minimum rather than a maximum amount of sugar.

Candy not alone has food value but a reasonable amount of it is desirable in the diet. Eat the kinds of candy that contain the least amount of sugar but which also contain other pure and wholesome ingredients, which are plentiful.

We are offering a limited amount of our standard packages for public consumption and recommending those kinds that the Food Administration suggests for conserving sugar.

VEST-POCKET STANDARD DICTIONARY

The latest addition to the Funk & Wagnall's Standard Dictionary Series. "A marvel of condensed information."—20,000 Vocabulary terms; 12 pages; colored maps; many valuable supplementary features. Cloth, 30 cents; blue maroon cover, 35 cents; leather, 75 cents; each volume has thumb-notch index. Postage 2 cents extra.

FUNK & WAGNALLS COMPANY, - New York and London

Saving Money for Authors

is the purpose of a handbook prepared by Frank H. Vizetelly, LIT. D., LL. D., Manager, Editor of the 129,000 word Dictionary. It is a most valuable reference work for authors. Explains every right, how to market manuscripts, etc. "Preparation of Manuscripts for the Printer." Fully revised edition, most judicious. Cloth, \$1.00; postpaid, \$1.10.

FUNK & WAGNALLS COMPANY, New York.

Ready for the Huns— and for His French Comrades, Too!

The United States Marine carries his bayonet for the Boches. He also carries a short-cut to conversational French so that he will be able to talk to his French comrades. He wants to have a speaking knowledge of French so that he can chat with the Fusils, converse with the Paravues, understand French army orders, read French newspapers, and do all the other things that the American in France is called upon to do. And he has found the quickest and easiest short-cut to conversational French.

The Soldier's Service Dictionary

By FRANK H. VIZETELLY, Lit.D., LL.D.

A pocket-manual of War-French designed for those who want to acquire this knowledge in a hurry. By studying it in odd moments, any one can gain a mastery of conversational French sufficient for every-day needs. Or, in an emergency, he can instantly find out how to express in French anything he needs to say.

Ten thousand military and conversational words and phrases are contained in alphabetical order, and under each word are given the correct forms in many different phrases. The exact pronunciation of each word is given by a simple and accurate system. The commands, technical terms, popular phrases, etc., of every branch of the service are explained and pronounced, as are also thousands of conversational terms needed in everyday life.

This should be part of the equipment of every American fighter, for it will save him endless inconvenience and embarrassment. Many Commanding Officers in the United States Army have endorsed this manual, including:

Major-General J. T. Dickman

"I take pleasure in recommending this book for official use with the troops."

Colonel J. A. Ryan

"You have compiled a most excellent work and placed it in a form that will be most convenient for our men in France."

Get a copy for YOUR Soldier or Soldier friend—he needs it.

Pocket-sized, cloth-bound, \$1.00 net; \$1.05 by mail. Thank-note index, 25 cents extra.

FUNK & WAGNALLS COMPANY, 354-360 Fourth Ave., New York

two o'clock we thought we saw it low in the eastern sky. But this marvel turned out to be Mars, burning victoriously before he set.

Before day appeared we gave over the watch, and as the dawn wind came up we dropt in huddled heaps, wrapt in the folds of army blankets.

As seen by the next morning's light, the battle-ground, or camping-ground, showed evidence of having been put to the same use by the recently departed Germans. Gray overcoats, letters, postcards—one of the latter beginning "*Lieber Heinrich*"—were scattered around.

The "camping out" side of their experiences were enriched when they went exploring for coffee; or at least for water to make some.

We coasted along a wild road through the strange and desolate country of that front, and we saw enough things to ruin our appetite for the coffee, for which we were scouting. The fields and roads were all freshly shell-pitted, full of overturned wagon-junk of the retreating Germans, scattered live ammunition, fresh graves, unburied forms. There were burying-parties crossing the fields with trudging step, salvage-parties clearing away the battle-wreckage, mending and clearing roads, gathering grenades. There were signal-corps groups laying wires.

Here at a turn in the open countryside we came suddenly on a little pine wood, and in the pine wood a most attractive little bivouac of about 100 men.

We stooped our ear and called out, "Any coffee in there?"

"Hot your life! Come in," came the cheery welcome.

They sat us under a tree at a wooden table, and they dished up some clean tin cups of good hot coffee, and more than that, flapjacks, and still more, good old maple-sirup, the like of which I hadn't seen, as one doughboy put it, "since the tiger was a pup."

Then they gave us hot water and soap and a clean towel, and told us to go to it.

This was an advancing signal-corps company that was chasing up after the retreating *Boches*. How they managed their luxury I don't know, for they brought up all their goods on their backs. We looked at their little brown tents and their towels and basins and soap, and at their table and bench and stove and tin dishes, and at their coffee and flapjacks—and we couldn't make it out. They are pretty good campaigners, these lads, and they know how to camp out to the queen's taste, even on a gory battle-field like this.

This camp was pitched at the end of eleven days' fighting and chasing after the Hun.

"Good runner, the Hun," one of them said. "We haven't caught him this time."

You will never read to the end of this if I don't stop soon, and yet I could keep going for hours. On a battle-field like this the things are endless. I could tell you about Quentin Roosevelt's lone grave on the bare hill-slope near Champéry and the little wreath of pink paper-roses laid on it by Commandant Evangeline Booth of the much-cheered Salvation Army. And I could tell you how the plane he fell in has been carried off already, bit by bit, in souvenirs, so that only a few sticks of it still lie by the grave.

I could tell of Ludendorff's headquarters in the eighteen-foot thick tower of the château at Nesles. I could tell you of a

field right near the front where we watched our anti-aircraft gunners in their pits take part in a great air-battle between eight planes, and how the swaying line of observation-balloons came floating hurriedly down to avoid the attack of swooping German hawks. And how a plane came down, and how every spare man raced across the fields to it, tho none knew what moment shells would drop about. And I could tell of batteries of our big and little guns, manned by American gunners, while German shrapnel burst in angry green and yellow splashes overhead. And of how from a high and "shell-swept," as the word goes, observation-post—where somehow no shell arrived during the few moments I was there—I took a long view of the Vesle Valley and of the active doings going on in it now.

But you know about all these things—that are now happening in the daily *communiqués*.

What I can tell you, among all the cross-tales and contradictory stories and as yet untold history, is that our boys are there, solid and strong, for I have seen them going in, and have seen them in, and have seen them coming out, and it is true what the French soldiers say, "They are real *pauvres*."

"HURRY-UP" HURLEY. THE MAN BEHIND THE SHIPS

THE man who drove the first rivet that was put into a steel ship in any other way than by hand has a life-story that explains why he is where he is now. To-day the cry is for ships, ships, and more ships; and we all know the splendid success that America is making of her end of the job. We are told that three brand-new ships a day are sliding down the ways into the water to the dismay of the *U-boats* of Berlin. Well, the man back of that is directing the largest and fastest ship-building job in the world; he's known as "Hurry-up" Hurley, and this is the tale *The American Boy* tells about him:

Born in Galesburg, Ill., he found family finances in such a state when he was fifteen that he decided to leave the public schools and go to work to help out.

"I've got to hurry up and get a job," he said, and he landed a job in a machine-shop before eight o'clock that morning. In a few years he got an opportunity to work for the railroad as a fireman on a freight-locomotive. After a while he sought a job on a passenger-train.

"They go faster," he said. He was fond of hurrying up. He got the job. Before he was twenty there came an opportunity. The engineer did not show up.

"Put Hurley at the throttle," said the boss.

"But he's only a youngster," some of the older men objected.

"He's made good so far," was the only argument, and so he was given the right-hand side of a passenger-locomotive, which means that he was to be, for that trip at least, engineer of a passenger-express.

He merely shifted over from the fireman's seat at the left to the engineer's seat at the right of the cab, another fireman was brought on, and Hurley said, "Hurry up."

Just as the fireman was stoking up and young Hurley was oiling up, an old-timer

The World's Great Pictures

HERE is a splendid volume for Art Lovers, that throws open the doors of the world's famous art galleries and places on view their greatest masterpieces. It describes the development of art from the 13th to the 19th century, covering all periods and all schools—the Dutch, Italian, French, Spanish, British, etc. It presents in delightful narrative form a history of the world's artists and their works. Biographies of the Painters are given which explain their characteristics, interesting features of their private lives, the influences which affected their work, etc. This book offers a thorough education in art, something that is needed and desired by every man or woman of culture.

250 ARTISTS—OVER 400 REPRODUCTIONS

The lives and works of about 250 Artists are described fully and fascinatingly by a high authority. Over 400 handsome reproductions of famous paintings are included. Many of them are in the original colors and all represent the finest work of photographer and engraver. Gems from the most important public and private collections of Europe compose this work. They are printed on fine art paper which sets them off to the greatest advantage. This is a large volume, bound in handsome maroon cloth with blue and gold decorations.

It is sent under an unconditional guarantee of satisfaction. If it is not in every way satisfactory, you may return it and your money will be refunded in full. This is an imported book of which we have only a limited supply. While the present stock lasts, you may secure a copy for \$4.00. When this stock is exhausted, the price will have to go up. So order NOW.

which employs Diamond Construction. The battery plates—always subject to the most severe racking strain on rapid discharge—are supported each by a Diamond Grid or framework. The diagonal members of these grids, crossing each other at angles, form Diamonds which brace and support the plates to withstand this strain. That is why the Philadelphia Diamond Grid Battery plates do not buckle, short circuit, nor shed their active material. They are built in accordance with the fundamental engineering principle—Diamond Construction for Strength.

Philadelphia Diamond Grid Battery is at Work

have been lost but for its annihilation of time and space. The automobile is relieving the railroads. It is saving the time of officer and civilian in necessary war work. The Philadelphia Diamond Grid Battery for automobile starting, lighting and ignition, is **Guaranteed for 18 months**. There is a special size and shape to fit every car. A thousand dealers and service stations can replace the battery in your car with a Philadelphia Diamond Grid Battery.

Commercial Trucks—Trucks also relieve the railroads. They are the necessary transportation medium between the producer and the user. Electric trucks, equipped with the Philadelphia Diamond Grid Battery, save gasoline. Furthermore, electric trucks and also gasoline trucks equipped with an electric starter and a Philadelphia Diamond Grid Battery can be driven by women and thereby release men for other war work or for the front.

Industrial Haulage—Industrial trucks and tractors equipped with the Philadelphia Diamond Grid Battery are speeding production everywhere. In the mills and factories, in the shipyards, loading transports and supply ships, at the railroad terminals, they are doing the work of thousands of men. In powder mills, where a spark from a horse's hoof, a back-fire from a gasoline motor, or

an electric arc from a trolley would mean irrevocable disaster, these enclosed storage battery industrial trucks and tractors are the only safe means of haulage.

The dominance of the Philadelphia Diamond Grid Battery in essential war fields is due primarily to its Diamond Construction and its consequent strength.

mentioned to him that it was a shame to give him that run.

"This train has never been on time. The schedule is all wrong. It is impossible to make the trip on time."

"We'll try. Hey, Bill?" he shouted to his fireman, and for the first time in the history of the road that express went through on schedule. Young Hurley never went back to the fireman's side of a locomotive after that.

Then came a railroad strike. They sent for Hurley on another road. He was about to take the job when he was told that he couldn't, it was against the Union rules.

"That settles it. I'm no quitter. I'll play fair," he told them, "but I won't sit around waiting for this strike to be settled."

The fellow who couldn't wait for the strike to be settled got a job that very day; he became secretary to the man who is known as the "Gladstone of the Labor Movement," P. M. Arthur. This shows the man; he had left school at fifteen and then turned to and worked as machinist, fireman, and engineer, and yet, meanwhile, he had studied hard and so was fit to step upward when the chance came. He didn't care for the work, so he became a traveling salesman for a Pennsylvania steel-plate firm at which he "hurried up" for years. Just then opportunity called and he was shrewd enough to see it. The writer continues:

A machinist of his acquaintance was trying to perfect a pneumatic riveter. Every one who has lived where steel construction is going on has heard the "rat-tat-tat-tat" of the pneumatic or compressed-air riveter. Hurley had very little money, but he hired five workmen and started, with his partner, perfecting the riveter. Into overalls and jumper once more, in a tiny, dirty shop, he worked with the men. Then he tried to introduce the riveter here. It was slow work. He decided to go to England with it.

To the great ship-building plants on the Clyde he went. His claims did not seem possible, but they allowed him to try it out. Before a big assembly Mr. Hurley drove the first rivet that was ever put into a steel ship in any other way than by hand. He had no difficulty in getting English rights and with this money he went back to America and started up a big business. Sometimes he went to a company and presented his card as president of his own company. At other times he presented a card which represented him to be only an agent. He carried his outfit, showed what his riveter would do, and thus built up his business here.

Without this pneumatic riveter the big ships of to-day could not be built, as it is necessary to use rivets far too large for man-power to drive.

No one knows how many years he might have been struggling to get his company started here if he had waited. But he knew that his riveter was as important for ship-building as for sky-scraper and bridge-building, so he went where the biggest ships were built.

Finally he sold out his interests for a million dollars, holding some other interests that did not require his presence, and retired to his stock farm at Wheaton, Ill.

But so clever a man was needed. President Wilson had him go to South America

to study trade conditions and got from him the first report that really improved our trade relations. Then he asked to help in Red-Cross work, being a master-hand at organization. Then there came trouble in our ship-building, a row between Goethals and Denman over wooden ships. President Wilson asked Hurley to take over the whole job.

They know now in Washington who "Hurry-up" Hurley is. Within six days after he took charge he took over all of the ships and shipyards for Government service. He began building yards until now we have nearly 150 shipyards. He standardized the ships so that 82 per cent. of the ships are built in factories all over the country, hundreds, and some of them thousands, of miles from the ocean. Only 18 per cent. of the ships are actually created at the yards. The standard parts are shipped on and the ships assembled. We must build 5,500,000 tons of ships this year, or 1,200 ships, which is ten times as many ships as were ever before built in this country in a single year. Hurley will do it.

WHAT FRENCH CHILDREN THINK OF AMERICAN SOLDIERS

PROVERBS, the world over, bear witness to the folk-belief that children are keen observers of character, that they have an uncanny way of seeing what's behind the camouflage. Evidently with this in mind a soldier while in southwestern France requested a village schoolmaster with whom he was acquainted to ask his pupils to write, without preparation, compositions upon American soldiers as they knew them. It will be noted that the politeness, the cleanliness, the cheerfulness, and the "sweet tooth" of our boys are among the chief things that struck the kiddies, a quaint touch of the coming woman appearing in Mathilde's epistle.

The authenticity of the following extracts is vouched for by *The Independent*, in whose pages they appear.

They are all fine men, tall, large shoulders. I know one, a big fellow. He has a scar on his right cheek, which was made by a horsekick. He has a rosy face, long hair, carefully arranged. His feet are small for his size. He has a sweet tooth. He is gay. He is good. He eats chocolate and sweets. There are some who, going on an errand near their camp I met him sharing his chocolate with his comrades. Next Sunday I was playing at spinning-top with my comrades. He was looking at us. My small brother had no spinning-top. He gave him two cents to buy one.

The Americans are polite. When they shake hands, they bow down their head a little. Before entering a house they take off their hats, and wait till they are told "sit down."

They have good discipline; no fault is left unpunished. They are more daring than we are; they do not fear expense.

JEAN LABEROTTE.

I know one more particularly. He is of ordinary size. He has a fine face, round cheeks, blue eyes. He likes to laugh at others. He is intelligent. He has got the bad habit of smoking and chewing tobacco. He is fond of sweets. He bathes very often.

The Americans have been very good

PAIGE

The Most Beautiful Car in America

Both here and behind the battle lines in Europe the Motor Car has demonstrated that it is the most efficient form of transportation that has ever been evolved. The one-time luxury has become the present-day necessity. The Motor Car is, indeed, universally recognized as Standard Field Equipment of every business executive who appreciates the value of time and the conservation of energy.

The Paige Company is proud of the part that it has played in the development of so important an industry. Its products have been manufactured with a sincere and honest purpose. It has adhered strictly to quality standards and, today, the Paige name plate is a symbol of the confidence and respect which is reposed in this car by more than 50,000 owners.

What the Users Say

The most dependable index to the quality and serviceability of a product is the experience of those who have already put it to use.

It should be interesting, then, to truck makers and operators, to hear what a few representative users have to say of Goodyear Pneumatic Cord Truck Tires:

"OUR two-ton truck, which makes the run daily to and from our logging camps, is equipped with your cord casings," writes H. P. Brown, President of the Humptulips Logging Company, of Tacoma, Wash. "Sixty miles of the run is over good gravel roads, but thirty miles of the trip is over roads so rough that the truck was constantly in the repair shop during the period it was equipped with solid tires. We have gotten as high as 14,000 miles on front casings and 10,000 miles on rear casings, which, considering road conditions and the heavy loads carried, is very satisfactory, but we are particularly pleased with the reduction in repair bills the change from solid tires to pneumatic casings has brought about."

A LETTER from B. J. Henner, of the B. J. Henner Carting Company, of Rochester, N. Y., which operates two trucks on these pneumatics, reads: "The tires on both trucks are still in good condition, and those which have gone 15,000 miles we are figuring on having retreaded in the fall. Besides giving such excellent service, these tires reduce to a minimum our repair bills and make it possible for us to cover considerably more territory. In fact, our experience with these tires is so satisfactory that we cannot recommend them too highly."

IN reporting a mileage of 14,400 miles from tires then still in service, W. G. Klett, President of Klett Brothers Company, Inc., of Detroit, says: "We would recommend these tires to anyone handling fragile materials, as we have had practically no broken or marred furniture since using them, furthermore, we are getting a lower cost per tire-mile, use less gasoline, and make more trips per day."

"I HAVE been using your pneumatic tires on my one and a half ton truck, and can say that they have given me complete satisfaction both in mileage and saving of wear and tear on truck," reports Edwin W. Ward, of Troy, N. Y. "Candy and syrup are easily broken in trucking, especially when your truck can travel 45 miles an hour. This is also a great strain on a tire. These tires have been put to a severe test in plowing through long, heavy drifts, and at times with one wheel down in a ditch. My truck is equipped with a 45 horsepower motor, so you see there isn't much let-up on this as far as power is concerned. I cannot speak too highly of your tires. As for service, it has always been satisfactory to me."

IN similar vein is a letter from A. H. Heil, of the Lubric Oil Company, of Cleveland: "We are certainly satisfied with the excellent results secured as against solid equipment, which we were recently compelled to take off, due to the enormous expense caused from the vibration of the solid tires. The pneumatic truck tires have given us a mileage to date of 7,000 miles, in addition to a saving of about 25% in gasoline, and the appearance at present indicates at least 3,000 miles more. We are very enthusiastic over this equipment, and will cheerfully recommend it to owners of trucks who wish to increase speed and eliminate vibration."

AFTER using our pneumatics for ten months, Mr. P. Harney, President of the Joplin Hardware Company, of Joplin, Mo., writes: "In the first place you will be interested to know that we have not been troubled with the tires during all that time—not having had even a puncture. This to us seems pretty remarkable. In the second place they have traveled at least 5,000 miles over all sorts of roads, and we fail to see that the casings are worn very much. We have no speedometer, but our truck travels as much as sixty miles a day. In the third place we are glad to say that the upkeep of our truck has been reduced 75%, which makes the proposition of the change-over from the original solid tires all the more satisfactory. We are frank to admit that we had no idea of securing such satisfaction when we purchased a set of your big pneumatics, but we like them fine and firmly believe they ought to be used on all trucks except possibly the large, slow-moving kind, because they save the mechanism of the truck."

WE hear from Smith's Dairy Farm, of Aberdeen, Wash., as follows: "Since being equipped with your pneumatic truck tires, our truck has been in service 560 days, making a total of 48,603 miles. In that time our only lay-up was due to an accident to the car. Our repairs on the car consist of two wrist pins, one universal joint, two new brake drums and valves ground three times. We ordinarily had this amount of repairs to make every month when our car was equipped with solids. Our mileage on these tires has been very satisfactory, averaging from 10,000 to 17,775 miles. You certainly have a wonderful tire, and we owe to this tire the solution of our hauling problem, for to date nothing we know of in tires compares in economy, low upkeep and certainty of delivery with the Goodyear Pneumatic Cord Truck Tires."

CORD TIRES

BRIGHTON-CARLSBAD SLEEPINGWEAR

You'll Appreciate Its Warmth and Comfort

THIS winter you can do your part in saving coal by sleeping as you should always have slept—the healthful, invigorating way—in a heatless bedroom. Wear Brighton-Carlsbad sleeping garments for warmth.

See the new Brighton-Carlsbad fall and winter designs at your dealer's. There is smart, comfortable nightwear in all weights and sizes and all scientifically sealed to keep you warm. Our 517 styles include Pajamas for men, women and children; one-piece union sleepers; night-gowns; out-door sleeping robes; two-piece pajamas; infants' and children's sleepers, in flannel and other fabrics.

The Pajunion (pictured at right), is made union suit style. Coat can't creep and bunch up, nor trousers slip down. No binding draw strings. Popular for women and misses as well as for men and boys.

WOMEN'S FULL LENGTH NIGHTGOWN. Made of soft, warm flannel. Sealed to keep you warm. No binding draw strings. Popular for women and misses as well as for men and boys.

CHILDREN'S FULL LENGTH NIGHTGOWN. Made of soft, warm flannel. Sealed to keep you warm. No binding draw strings. Popular for women and misses as well as for men and boys.

MEN'S FULL LENGTH NIGHTGOWN. Made of soft, warm flannel. Sealed to keep you warm. No binding draw strings. Popular for women and misses as well as for men and boys.

Have the clerk *unpin* the garments. See the value hidden in the folds. Look for the Brighton-Carlsbad blue label—a guide you can today depend upon when poor night garments cost almost as much as this quality brand.

Send for FREE "Nightie Book" If your dealer hasn't what you want, send for "Nightie Book," showing styles, so he can order what you require.

H. B. GLOVER COMPANY, Dept. 6 DUBUQUE, IOWA

to France, to come to help her to fight the Germans.

JEAN GAITS.

The Americans are generally very clean and very polite. They also like sweets. They are always eating chocolate and sweets. There are some who like raw eggs mixed with chocolate and milk, or with beer. They do not cut their bread as we do. They put it on the table and cut it as with a saw. Every morning they wash thoroughly. They wash their teeth after all meals. They have leather gloves to work. They smoke and like alcohol.

The Americans came to France not for their own interest, but in order to help us. And so we have affection for them. They have at the front one million men who will inflict great casualties on the Boches; meanwhile more yet come to join them by the sides of the English and French.

FRANCIS LOUPIEN.

The one that I know is tall, well built. He is very amiable and kind to children. Whenever he meets one on the road, he will stop his horses and take him along. He is a horse-driver. When it is raining he does not care, he will then whistle with all his might.

ERNESTINE CARANNES.

The Americans are very courteous. They came to save France, to save right and liberty. America rose against the despotism of Germany.

FERNAND LACOSTE.

The American soldiers are always laughing. They are playful and funny. They remember Lafayette and Rochambeau. They shed their blood for France.

GABRIEL NINOSQUE.

They are clean and polite. They often give us good examples and good lessons. They have everything necessary, horse-wagons, automobiles, trucks, bicycles, motor-cycles, and some kind of motor with a sort of "bath-tub."

ANDRÉ PEDEMONOU.

They like sweets very much. They are clean; they wash all their body with cold water. They are very polite. They do not have the same religion as we have, but it does not matter, they are free to practise the one they choose, or none. I saw them put up their camp when they first came here; some were pitching the tents, some cutting the fern and others leveling the ground. They had soon put up a kitchen. Their tents have floors. They were quick to place a shop and a forge for their 300 horses.

CAMILLE DUBOS.

It is magnificent to see this country place herself by our side to help us to fight for liberty.

ROGER BES.

I have observed them well. Most of them are close-shaved. They are almost all tall and large fellows. They have quick eyes. They are polite, but some of them are great drinkers. The Americans are very smart. They do almost everything with machines and horses. They are up to date in everything.

ANDRÉ PROUSTEY.

Their tents are water-proof, and well closed. They must be quite at home there inside, it must not be cold for them. They made barracks of boards. Over one of them waves the "Star-Spangled Banner." They are polite, pleasant, desirous to serve. But some of them have the bad habit of blowing their noses with their fingers and of drinking too much. It seems to me that they were courageous to cross the sea.

CHILD TRAINING

A new book by George W. Jacoby, M.D., Fellow New York Academy of Medicine, Member American Neurological Association, New York Neurological Society, etc. He tells things that thousands of people never stop to consider, and shows why parents, physicians and teachers should make it their purpose to thoroughly understand the important relation of the treatment of the body to mental functions. "A splendid work that cannot fail to be of great assistance in training children."—Medical Record, Philadelphia, Pa.

running the risk of being sent to the bottom by the submarines, to come to help us. They want to make safe our endangered freedom, and the liberty of the world.

BERTHE SUBERVILE.

I have noticed one more particularly. He is lodged in the house of the school with some others. He is small, blond, has a mustache. His face is often cheerful, and has a broad smile frequently. He called my comrade Gaits, "Square-headed Boche," because my comrade, he says, has blond hair and wears spectacles like the Boches. He told us his father was a Spaniard and his mother French. Having no liking for the Spaniards, he became an American citizen. I saw the American soldiers at their meals. It is very funny. They stand in a long line and laugh aloud. When their meal is over they start singing. Some of them are very fond of Cognac and Champagne, of which they very likely have a great deal in their country.

PIERRE LOUPIEN.

The one I have noticed is close-shaved and beardless. He has a fine body. He is tall and slender. He wears nice spectacles. He seems to be energetic. On his coat, very well made, he has a yellow belt which passes around his waist, and another over his shoulder with a case for the automatic pistol. He is an officer. He is called Captain —, THERESA LABATUT.

They all work. Some place the decauville (railway) rails; others drive the horses which haul the big trees to the station; others drive the trucks which bring the supplies. There are some who bring the mail to the post-office, and fetch it on motor-eyes; and still others transmit the orders given by the officers. Some do the cooking and others wash the clothes.

They are fighting at the front by the sides of our dear soldiers. They help to support the hardships of this war and take their share of them. Let us be very grateful to them. ALICE DUBIL.

The American soldier has a great love for his family. He always speaks of his mother, of his father, brothers and sisters. There is one who comes to my house often. They are jealous among themselves. When one of them goes in a house to learn French, if one day he finds another fellow in that house, an American soldier, he will not come back any more.

MATHILDE LECOMMERES.

The work of the Americans is certainly a curious one. I saw them raise huge logs with large pliers, as easily as they would have moved a straw. Their furnaces for their kitchens are half in the ground, in order not to waste any heat. What struck me especially about the American soldiers is their cleanliness. All of them are tall, healthy, and strong, owing to their hygiene. Their teeth are very white; and not to soil their hands, they put on gloves, even at work.

Another thing I admired also is their politeness. France had the fame of being the most polite nation in the world. We have often heard and read about the French courtesy. Is France going to lose her rank among the well-bred nations?

I like the American soldiers who came to help France. I like the Americans who came here to defend justice and right. I admire the Americans who remembered France, and who came to her in spite of the many dangers.

Long live the United States of America!
RENÉE BOUTTE.

Salt Mackerel

Direct from the Fishing Boats to You

Old Gloucester

Your pail is ready—fat, meaty, juicy mackerel—send no money—try the fish first.

Frank E. Davis, PRESIDENT

Fall Mackerel, Fat and Tender

Most of the fish your dealer can buy are Spring fish, thin, dry, and tasteless. What I've selected for you are Fall fish, juicy and fat with the true salty-sea mackerel flavor. We clean and wash them before weighing. You pay only for net weight. No heads and no tails. Just the white, thick, meaty portions—the parts that make the most delicious meal imaginable. You probably have never tasted salt mackerel as good as mine.

Send No Cash—
Try the Mackerel First

I want you to know before you pay that my fish will please you. If there is any possibility of a risk, I want it to be at my expense. Just mail the coupon today, and I'll ship at once a pail of my mackerel containing 10 fish, each fish sufficient for 3 or 4 people, all charges prepaid, so that your family can have a real Gloucester treat Sunday morning.

Then—if my mackerel are not better than any you have ever tasted, send back the rest at my expense.

If you are pleased with them—and I'm sure you will be—send me \$4.90, and at the same time ask for "Descriptive List of Davis' Fish," sold only direct, never to dealers. Remember: Meat, flour, potatoes, everything has gone 'way up in price. In comparison, Davis' mackerel is low. An economical food—so good to eat, so nutritious! The "Sea Food Cook Book" that goes with the fish will tell you just how to prepare them.

Mail the coupon now with your business card, letterhead or reference.

Frank E. Davis Co.,
76 Central Wharf
Gloucester, Mass.

The Frank E. Davis Company is prepared to supply, at wholesale and retail prices, all kinds of fresh and frozen fish, including mackerel, haddock, salmon, and many other varieties. Write for special list.

Fishmen for Generations

You see, I know fish. My folks, 'way back, have always been fishermen. They helped found Gloucester in 1623. My boyhood days were spent aboard fishing boats. Catching fish, knowing the choicest and picking 'em out, cleaning and curing them the right way, has been my life's job.

!Thirty Years' Development

Today our business is housed in a modern, four-story, concrete building, with 20,000 square feet of floor space; fitted with the most improved and sanitary equipment for cleaning and packing fish. Standing at the water's edge, the fishermen's catches are brought right into the building. They go to your table with the "tang of the sea" in them.

Such a Good Breakfast!

Hot, tender, juicy Davis Mackerel broiled in a melting butter, some butter, a sprinkling of pepper, a touch of lemon, if you wish—how good it smells, how tempting it looks, how it tickles the palate, and, oh, how it satisfies!—the favorite breakfast dish of thousands.

Frank E. Davis Co.,
76 Central Wharf
Gloucester, Mass.

Without obligation please send me, all charges prepaid, a pail of Davis' Mackerel—10 fish, each fish sufficient for 3 or 4 people. I agree to remit \$4.90 in ten days or return the fish.

LETTERS FROM THE FRONT TO THE FOLKS AT HOME

OUR soldiers on the Western Front are strongly opposed to all suggestions of "peace without victory." Many of them write home to warn their friends against German peace propaganda, which they expect to increase in power when Germany realizes that utter defeat is inevitable. One of the ablest letters on the topic comes from Louis Molnar, former mayor of Redondo Beach, Cal., who is now with the Expeditionary Forces in France. Nothing could be more immoral than to propose a peace by negotiation, declares Mr. Molnar, because such a peace "would condone all the crimes of Germany and leave outraged humanity open to the next cold-blooded attack. Physical and crushing defeat for the whole German combination is the only hope for the world."

Newspaper clippings from this country have informed him of the great efforts of the people to "aid every war-agency in the interest of our Uncle Sam," and he advises every American citizen to make himself a center of resistance against German propaganda. Every Red-Cross center, every Y. M. C. A., every home, he says, should "fortify itself against this psychological offensive, which will be the last one to be made by Germany before the day of reckoning." Ex-Mayor Molnar then warms up in his argument:

I do not believe that there is the slightest desire on the part of the German nation for freedom. I do not think that nation is able to understand the meaning of the word. The Germans support their blood-thirsty rulers and rejoice in the loot of nations. When they are utterly destroyed on the field of battle the world will have a just, honorable, and moral peace. It is the relentless war between truth and falsehood that is now being fought out in France. To parley with Germany is to parley with the devil. No man can see what I have seen in France and not realize that this war must be won in the field. America in her wonderful youth and power knows that she can win, that she can win alone if necessary, but are all Americans conscious of the fact that it is America's duty to make the victory complete and beyond all question?

The very honor and life of our beloved country depend on the absolute death of autoocracy. Never before in all our history has America fought under circumstances where the goal stood forever outside the realms of diplomacy. We stand there now. Every man and woman at home as well as in the Army should take that obvious situation to heart. President Wilson stated it in his last reply to Germany's hypocrisy.

During four years Germany has made the cities and farms of other nations the scene of battle. All destruction caused by the fire of both sides fell on the property of innocent people. Now when America has come, let the German rulers stick to their gospel that might alone is right. Let them behold the working of might. It is the only thing they can understand. Allied troops must go to Berlin, and the treaty need not be signed at all. Let us remember

that Germany has no honor, no chivalry, and no mercy.

Germany is a bad sportsman and a poor loser. The Germans fight like wolves in a pack, and without initiative or resource if compelled to fight singly. Before defeat has quite reached the nation of Germany it will do what its individuals do, cry "Kamerad" and plead for the kind of mercy they refuse to give. Every American should know these facts, and guard himself and his country accordingly. Such action is in every way as vital as the many other essential war-activities at home. The consciousness of this deadly struggle with wrong and deceit should be present at every knitting circle and in every war-material factory.

Now that I am so near the actual point of contact where two opposing forces struggle for mastery, I realize that America must not be easy, good-natured, or compromising in any phase of this war whatsoever. To slip in that manner means disaster and disgrace.

Spiritual lessons of the great conflict are elucidated in a letter from Sergeant Hatton D. Towson, formerly a theological student, to his father, Rev. W. E. Towson, of Camilla, Ga. Sergeant Towson, who waived exemption and submitted to the draft, looks at the war from a new angle. He says:

The essence of Christianity is vicarious love, and surely the men and the women of this generation are in their Gethsemane and Golgotha, sacrificing themselves that the world may see a new birth and resurrection. If I did not have a conception of this war as a struggle between the Kingdom of God and the Kingdom of Satan, I could not feel as I do. It is only the inspiration of a high conception of the war that makes me resigned and peaceful in facing it. I would not feel that way if I were in some other wars where the issues were not so clear cut. I pity the thoughtless, who have not thought the matter through and do not have the sustaining strength of a high conception of the war.

Jesus said, "If any man will come after me, let him deny himself, and take up his cross and follow me. For whosoever will save his life shall lose it, and whosoever shall lose his life for my sake shall find it."

My one desire is that all of you at home do your "bit" by not worrying. A person is no real Christian who consciously indulges in the sin of worrying. Let me quote, with adaptation, something I was reading to-day:

"My father, my mother, my sister, and brother, are the father, mother, sister, and brother of a soldier now, and soldiers' fathers, mothers, sisters, and brothers don't lie awake at night imagining, they just say a prayer for their loved ones and leave everything in God's hands." I am sure you would far rather I had died than not to have played the man to the fullest of my strength. It isn't when you die that matters, it's how.

But all of this is very serious and solemn and doleful-sounding. The most of us are going to come back home, happy in having done our duty, and in returning once more to peace and love. How superactive memory is at a time like this. All the happy years of blessing and peace we have had together, and how joyous the reunions were! I look forward to the joyous meeting, after the war is won and settled. Then, I believe, after we have been tried in the fire, we can appreciate why God gave

Applying Win-the-War Policy To the Automobile

A Letter to Overland Dealers:

OUR first consideration, as it is yours—and that of every right thinking citizen—is “win-the-war.”

Immediately following the American Declaration of War, we offered our production capacity, and the Government is using a very large part of it.

We are ready if need be to devote it entirely to war work.

The Automobile Industry as a whole is on a similar win-the-war basis.

We are building only a limited quantity of automobiles.

How many cars conditions will permit us to build for any future period is problematical—dependent wholly upon the urgency of war needs.

Any existing transportation must be used to its fullest capacity in order to increase the diminishing manpower of our home forces.

The total output of automobiles is fast becoming insufficient to replace cars wearing out in service.

And fewer cars rather than more, is the production outlook.

With “win-the-war” our first consideration—and yours—this condition places a responsibility upon us which we are bound to fulfill.

★ ★ ★ ★

Because it has assumed its transportation burdens so gradually few realize the extent to which the automobile is performing essential service.

—so essential that the rest of the system, railroads, trolleys and every other means of transportation that could be pressed into service, would be wholly inadequate quickly to assume the load were automobiles suddenly not available for the performance of their usual service.

In even so essential a matter as our food supply the automobile is a most important factor.

MY war-time conception of the automobile is that it is simply a given number of miles of rapid transportation.

It goes into service as a unit of our national transportation system.

In placing our restricted output of these units of our national transportation system in the hands of individuals, I want our distributors and dealers to discern the uses to which they will be put and to place each unit where it will best serve in the winning of the war.

J. M. Willys
President

Few realize that over half the automobiles now in use are owned by and serve the people of the farms upon whom we and our Allies are dependent for food.

Farm labor is already scarce.

Lack of automobiles to serve the farmers would mean a loss of untold hours of productive farm labor.

Lack of automobiles to serve our loyal industrial workers would seriously hamper our industrial efficiency.

Lack of automobiles for those who direct and serve our essential workers would hamper our national efficiency as a people.

★ ★ ★ ★

It is time for public appreciation of the fact that every mile that

an automobile is driven needlessly is a mile of wasted transportation that ultimately may be needed for essential service.

It is time for public understanding that these smaller units of our transportation system should be used and maintained with the same thought for national needs as we demand in the use and maintenance of our larger units of transportation.

Failure on our part to take every means available for us to inform the public concerning the importance of this matter would be neglecting an opportunity to perform a valuable public service and a failure to live up to our win-the-war policy in a vital respect.

Let us, as automobile manufacturers, and you, as automobile dealers, put ourselves on a one-hundred-percent win-the-war basis.

Let us, to the full extent of our influence, put the war-importance of the automobile fully before the public—you in your contact with the public—we in the public print.

Let us to the fullest extent realize that when we sell an automobile we are in reality selling miles of transportation—placing a unit of our national transportation system in the service of an individual.

Let us intelligently discern the uses to which it will be put and place each unit where it will best serve in the winning of the war.

In this spirit of full co-operation we can bring about a fuller understanding and appreciation of the situation and its trend, and perform a service of value to the whole people.

Willys-Overland
Incorporated
Toledo Ohio

to be satisfied. It is wonderful to note what good home-loving boys they are all going to be when they get back. Oh, you couldn't drive them away from home. I tell you it takes a game of this kind to domesticate our young manhood. We are certainly going to have a better nation. The education is marvelous. You find out things that you could never get out of books.

I think always of home and I keep hoping against hope that it will not be very much longer before I can plant my toes under the table at 436 and partake of one of those good old-time family feeds. I feel confident the war will end overnight (the way it started), soon enough, and then you will not be able to hold these fellows in.

A violinist of reputation in his "hometown" of Peoria, Ill., where his music was heard weekly in the Universalist Church, Sol Cohen volunteered, went to France, fought—and thought. He writes about his fighting and thinking in the *Peoria Star*, beginning with his discovery that "the Yanks have saved the war":

The tiredness has gone out of the struggle, the world on our side has awakened, the new spirit of our own freedom and democracy has literally thrilled the Allied forces, and we—yes, we of the farms and banks and groceries and bars and street-cars and theaters and—ragtime—we are they who have won. That is what causes me to greet each day with a prayer of thanks that I was born in that country which has chosen to end it and to begin it—to begin the real war that the universe was waiting for. Because after this war is over, we have still to fight that war that still exists in the human mind—we have still to fight the war against war. And the wheels of war are to be the wheels of peace, even as the old prophets told us. And the machine that has won the war will win us peace, and not until that peace is won is our real victory established.

I have watched the gigantic, clumsy wheels of war turn round; and I have wondered what would happen were those wheels suddenly to turn in the direction of peace! What if the same machinery were employed for the exploitation of good news and good will? You have no idea of the intricacies of that machinery! How in Heaven's name do they feed these soldiers? How do they clothe them? How do they house them? I'll tell you how they house them! We march with our heavy packs for hours of a night—march while the mysterious signals of night play on the firmament, and while the dread hum of the German airplane terrorizes us down below—and we enter a deep forest and seek a dugout. No dugouts? All taken? Then let us lie on the ground, comfortably at rest on the good bosom of the nature-mother. No blankets? Well, our overcoats are here! What matter if they do not quite reach our feet? A soldier is never sick, he is never unhappy, he is never uncomfortable. He may be all of these, but he can not be. The war must be won, it must be won by us; and the feeble civilian of a few months ago is a robust worker for a principle, who recognizes no material hindrances.

A lieutenant said to me some days ago that if we did this sort of thing in civil life we should all be sick. I doubt that, but many of us might be. We know when we awake in the morning that a day full of needful activity is before us—we simply

PROTOD Forgery-Proof Checks and Drafts are printed or lithographed to order only for owners of Todd machines only.

PROTOD defeats the "professional" forger. Chemicals in the fibre of the paper prevent changing the name of payee to some other name or to "cash" or "bearer," etc.

Every sheet of **PROTOD** is checked and safeguarded like U.S. bank-note paper, so there is no way for a crook to duplicate a genuine **PROTOD** Check.

TODD PROTECTOGRAPH CO.

(Established 1899)

1143 University Avenue Rochester, N. Y.

World's largest makers of checks and check-producing devices

Who Stands Back of Your Check?

The banks now "clear" some 300 or 400 Billion Dollars yearly, constituting the bulk of the business of the U.S.—nearly all of it in checks, just "scraps of paper." (The total stock of U.S. money in existence is barely 5 Billion Dollars.)

Uncle Sam stands back of his tiny 5 Billions to the limit—counterfeiters are afraid to tamper with it.

But nobody stands back of your checks except yourself. They go everywhere. They take chances with all kinds of people. (Look at the endorsements on the next bundle of your old checks returned by the bank.) Any check you write with pen or typewriter can easily be "raised" to a larger amount by the first "professional" or amateur crook who handles it.

Doing business as we do today, mostly with checks instead of "money," there is no excuse for failure to use

TODD SYSTEM of Check Protection

PROTECTOGRAPH CHECK WRITER in combination with **PROTOD** is proof against all common check frauds and backed by an iron-clad Indemnity Bond to each user—the first legal system of complete check insurance ever offered.

If you want "inside information" how check raisers and forgers work; if you care to be shown why your chance of having your check "doctored" is increasing every day—pin your business letterhead to this coupon and send to us.

The ABC

ADDING BOOKKEEPING CALCULATING

ADDING figures to get totals is the all-day, everyday occupation of thousands of people, and an incidental daily occupation of practically everybody in any business.

The world's adding has long been done on Burroughs Machines—which print *and add* figures faster than the writing alone can be done with pen or pencil, and which never make a mistake in addition.

So great an aid to business is this machine-work that it can truthfully be said that many forms of business as we know them today could not exist without it.

BOOKKEEPING with Burroughs machines is displacing bookkeeping with pen and brain in all kinds of business, everywhere.

A Burroughs makes 95% of the work automatic. It enters the items, classifies them, totals debits, totals credits, subtracts, and prints the balance—all with unfailing accuracy and great rapidity.

With a Burroughs Machine an inexperienced boy or girl can quickly learn to keep the books, prepare the trial balance and perform all the operations of the trained bookkeeper—but at much less cost, and with mistakes in figuring and their consequences eliminated.

CALCULATING, though, is the big, universal figure-job that underlies all business.

There must be calculating before figures are ready for the bookkeeper to enter—the sum of two or more numbers must be found; discounts must be figured and deducted; the result of one or several multiplications and subtractions must be worked out. If percentages enter there is division also—all these figure-processes being gone through merely *to get an answer*, a result, which is the only thing to be written down on the ledger page or invoice or report or cost-sheet or estimate.

That is the work of the Burroughs Calculator. It multiplies, adds, divides and subtracts, without writing down a single figure, giving the correct result in practically the time it takes the operator to read the items to be figured. No mental calculation, no figuring on a scratch-pad; just

pressure of the keys, and a notation of *the wanted result only*. It multiplies the amount of work that can be done, and cuts the cost of doing it.

That's why scores of big concerns have, each, more than a hundred Burroughs Calculators—and why thousands of small business houses have from one to five.

The Burroughs Calculator is a typical Burroughs product—in speed, durability and economy, in convenience, appearance and every satisfaction-giving quality. The 10-column model (capacity up to 99,999,999.99) is \$175—\$220 in Canada.

Burroughs Machines have proved their value to you in adding and bookkeeping. Here's one for the calculating—a bigger job than either of the other two.

The Burroughs

of Business

×
÷
—
+

The work of the Calculator is as universal as figuring. Here are a few of its most-used applications:

Extending and checking invoices—multiplying the items, adding totals, deducting single or chain discounts.

Figuring payrolls—multiplying and adding to get totals of items or days, subtracting for deductions, calculating net totals, etc.

Preparing cost figures—multiplication and addition and subtraction, with equally rapid division for percentages.

Miscellaneous figuring—proving freight bills and allowances; preparing estimates and statistics; extending inventories; converting foreign currency; figuring selling prices, profits, etc.; totaling sales by classes; checking deposit slips and any figure-compilations; making engineering calculations; calculating interest, etc., etc., etc.

Calculator \$175

LONG BEFORE BREAK-FAST YOUNG DOUGLAS COULD BE SEEN TRUDDING ALONG THE DUSTY ROAD, DRIVING THE COWS TO PASTURE.

have no weaknesses of that workaday life back in America.

I have talked much with the marvelous men who have held their ground for four years. I mean especially the French and Australians. They never appear to be sentimental or sad or very homesick; and they never admit defeat. They bore you at times with their stories of triumphs, because they are similar to all others you hear. And deeds of the most splendid heroism are recounted with a vulgarity that would be offensive if it were not refreshing. These men talk very little of religion. It is, I regret to say, a topic which seldom enters into their conversation.

But they know God, for they have seen him face to face. The religion which was platitudinous to them in their youth they have practised in these past terrible years without knowing it. No soldier is consciously religious; he is involuntarily so.

God's handwriting is large in the trenches; it is there for every soldier to read, and we do see it as we pass in long lines down the crooked roads to certain victory.

And that is what I find in every inch of the forward area—every weary "Tommy" knows it, every war-tired Frenchman sees it, every mourning civilian in the shelled villages dreams of it at night—for the principle for which we are all fighting is the universal brotherhood of man and the universal Fatherhood of God. No longer will the world cry because it is ruled by night—no longer will men crouch in a trench because their fellow man is pointing a gun at them, and they fear death; no longer will a boy leave his home to learn how to destroy his cousin across the sea—but the love of God will be showered on earth, as it even now is when we look up and see.

Soon will we throw aside these old clothes, soon will we take up the old, familiar duties; but not again will we speak in low tones that our words may not be heard—not again will we fear to shout the truth that Love rules the world! For the spirit that is ours is winning and will continue to win; it is founded on the highest ideals and the most beautiful conceptions of living that the world has ever known. It is the spirit that has altered the whole trend of the most terrible war in history.

Mechanic Ed. J. Lacey, of the old "Fighting Sixty-ninth" New York regiment, has had some troubles, but is not downhearted. He writes to a friend:

I have been pretty lucky at this game so far. Just now I am in a base-hospital a little gassed, slight wounds, and nerves upset a bit. But, thank the Lord, I will be well soon and back with my own regiment. Have met Fritz bayonet to bayonet and believe me he sure is a cur, "Kamerad" when you get him, but kill him, for if you don't he will do it to you, no matter how kind you are to him. Have seen women chained to the machine guns and they fight like mad. Fritz will sit at his gun until it is so hot that he can't hold it any more, and when we get on top of him he then cries for help, "don't kill me Kamerad." Sometimes I think I am wild, for I can hardly sit still here, thinking of the things I have seen at the different fronts I've been fighting on. We have lost some good fellows, but they died game and that is some honor. Can you imagine one of these Hun beasts walloping an Irishman from the old Sixty-ninth and just trying to get away with it? I for one would die before letting Fritz give it to me and

What Shall We Believe—and Why?

WITH such historic times as these, all thoughtful men are asking the question: What shall we believe—and why? This book gives the answers in a clear, concise, and convincing manner. It is the result of a study of the Bible and the history of the Church, and it is the only book of its kind that has been published in this country.

The Church, The People, and The Age
Edited by Henry Moore and Thomas William Moore, 104 of the world's leading theologians and religious leaders. Their views on the Church, the People, and the Age are presented in a clear, concise, and convincing manner. This book is the only one of its kind that has been published in this country.

FUNK & WAGNALLS COMPANY, 354 Fourth Avenue, New York

TURNING THE SEARCHLIGHT ON CHRISTIAN SCIENCE

MUCH has been written, both in praise and attack, regarding the great movement inaugurated by Mrs. Eddy, which has made great strides in the past century of its history. Nowhere have the facts been more clearly and dispassionately told than in

A New Appraisal of Christian Science
by Josephine Louise Bennett.
which gives in a clear and interesting form the history of the only true religious movement with a careful review of the progress of the movement and the progress of the religion. This book is the only one of its kind that has been published in this country.

FUNK & WAGNALLS COMPANY, 354 Fourth Avenue, New York

Discoveries That Vindicate The Bible

Amazing archeological discoveries have been made during the past few years which are of the most vital importance to every Bible student. Original manuscripts dug up in Egypt are found to answer conclusively many of the criticisms that have been leveled at the Bible and defend many of the Scriptural passages which have been constantly attacked. Writings centuries older than any previously discovered have been unearthed and their priceless contents translated. Some of these give striking proof of the accurate political and geographical knowledge possessed by New Testament writers, and—batter many of the claims of destructive criticism. The whole fascinating story of these discoveries is told simply and clearly in this important new book.

The New Archeological Discoveries

and Their Bearing upon the New Testament. By Camden M. Colson, D.D., Litt. D. In a vivid and fascinating way, the Author presents the wonderful manuscripts and their story in the life and customs of the earliest Christians, drawing the most remarkable parallels between the modes of living of that period and of our own. The book contains many striking illustrations of the sculpture, architecture, etc., which have been brought to light. This remarkable volume will provide Pastors, Teachers, Lecturers, and other Bible students with a rich store of valuable and necessary material and will give to the general reader much worthwhile entertainment and information.

A large book handsomely bound in cloth; price 5. net; by mail, \$5.50.

FUNK & WAGNALLS COMPANY, 354-60 FOURTH AVENUE, NEW YORK CITY, N. Y.

Fritz will have to fight to get away with it, before the last drop of blood leaves my body. When we are in action and Boche in sight I am crazy; all I want to do is kill. Have seen dead Germans piled five and six high. But the United States boys still go on, and Fritzes going on the double, it is a running fight. I wonder what they think of the United States Army now in Berlin. We don't retreat until the last man is gone. George, help the Red Cross—as I know you do. They are the greatest people on the face of this earth for wounded soldiers. I'll never forget their kindness or any other soldier here, especially when I was so slightly hurt they were so kind to me, every branch of them. There are not words big enough for me to express my kindness, for what they are doing here in France. Nine months on the go and roughing it in all kinds of weather and barns and up in the trenches, and then to be treated with such kindness! I can't get over it, a nice bed to lie in. The last time I lay in a bed was home over a year ago. Corporal Leo is going to write, and Patsy Shea I did not get time to look up. George, I'll be back in the game soon and going to make up for lost time on some of these Wienerwursts and going to fight like h—. If God is good and spares me I'll see you all some day, and if not it is just the same to me, for I am always ready to meet my Maker. The old regiment, Sixty-ninth, never faltered and we are here to the finish.

A great outpouring of French sentiment for Americans is described by Lieut. Frank O. Brigham, of the Air Service, whose home is in Oakland, Cal. He writes to his mother, F. E. Brigham:

I was in Paris on the 14th of July. It was a wonderful day in every way. The morning was very dull and gray, but by the time the parade was started there was not a cloud in the sky. I never expect to see another spectacle like it unless I am fortunate enough to see an Allied entry into Berlin. Half the world—yes, more than that—was represented in line and presented by the best that each nation could bring forward. As the colors of each nation went by, Paris seemed to get more and more excited until I believed that I had reached the absolute heights of enthusiasm. English, Belgian, Italian, all of them took the city by storm, but away off down the line I heard a hum that steadily grew louder and sounded above all the rest of the noise, a hum that somehow or rather inside of me and made me stand a little straighter, and then about a block away I saw a flash of color, and oh! how wonderful it looked to me for the color resolved itself into the "Colors"; and then, my dear people I thought the heavens had broken loose. I have never in my life heard such an outburst of noise. It was not the high shouting that one usually hears, but a roar that started away down and gradually increased until when it broke the very windows rattled. It sounded like the organized yell of a million rooters, and then just as quickly as it had started it died down, and amid an absolute silence and with every civilian hat off, every man in uniform, at a stiff salute, the colors of the United States of America went by.

It was awe-inspiring. It seemed to me in every heart there was a blessing for that bit of hunting, and on every lip a prayer for its safety. I can not describe my own

You will be **COMFORTABLE** indoors and **WARM** outdoors — and lessen the risk of catching colds — in

Duofold Health Underwear

A thin layer of fine Wool is interknit over a thin layer of soft Cotton. The wool keeps cold out and warmth in—but it doesn't touch the skin.

The outer Wool absorbs perspiration from the inner layer of Cotton and quickly evaporates it, keeping the garment soft, fresh and dry and the body dry. This greatly reduces the danger of catching cold caused by stepping from heated rooms into the cold outdoors.

An Air Space between the layers of wool and cotton ventilates body and garment.

feelings. I am not ashamed to admit that my eyes were far from dry, and many others were in the same condition. I wonder if that welcome was heard in Berlin, and, if so, whether some of the more prophetic did not understand it for what it was to them—the first mutterings of a storm that will break and destroy them.

It was difficult that day to realize that it was a French fête and not American. Everywhere the American uniform was a signal for a demonstration. I was fortunate to be at the Place de l'Opéra about five that evening when a *camion* train of Americans left for their camps. As you know, the Place is always crowded at that hour, and I believe that every man in that outfit left Paris a great deal richer than when he came in. The crowd was throwing everything to them, money, jewels, cigarets, etc. There is no question in my mind but what France is Americanized; anything American is now decidedly *au fait*.

Lieut. H. M. Ewing, son of George Ewing, chairman of the Ohio Civil Service Commission, shares the general opinion of our boys that the *Boche* is "a detestable creature." "A *Boche* is a *Boche*," he writes, "and the deceitful, treacherous tricks of some of them have deprived them of the privileges and quarter decreed some classes by the rules of warfare." The *Lancaster Daily Eagle* quotes from a recent batch of letters from "Somewhere in France":

Lieutenant Ewing tells of his own experience in finding Germans chained to their guns. He says on this subject that "we have come on *Boches* chained to their guns which are too heavy for one man to carry, a chain fastened by a padlock, passing around their waists. The French say these chained men are men convicted by court martial, thus sentenced for trivial offenses. They are not taken prisoners, for they usually fire until the last. We have found dead *Boches* lying beside their guns with Red-Cross brassards on and have found others, when all hope of stopping us is up and our men coming upon them, run a few paces from their guns and put the Red-Cross armband on. But our men are wise now, and such tactics receive little consideration and meet with no success."

That the Germans have no idea of the number of Americans in France is indicated by the following incident related by Lieutenant Ewing:

"I was present here at headquarters when some of the *Boche* prisoners, sacrifice troops, were questioned. They all give willing answers, tho most of them know very little of the Germans' intentions and plans. Some are mere boys, others are old men, while some are fine specimens. We are fighting the flower—the crack divisions—of Germany, yet they say that if a stand is to be made against us, new divisions will have to be thrown in, as the morale of those now facing us is very bad. We took prisoner a boy of fifteen years of age, who had been drafted four days before we captured him. Intelligent, weak, and acquainted with the recent internal conditions of Germany, and willing to tell all he knew, intelligence officers said he was the best they ever got."

"The French inhabitants around here say that during this drive a steady, continuous line of ambulances filled with wounded passed to the German rear. I

heard a French officer to-day estimate the Boche killed and wounded and prisoners at 200,000. They are not all buried around here yet. In the first line, prisoners say, they get one meal of soup, coffee, and black bread a day. Behind the line, they get coffee morning and night, in addition to their noonday 'meal'—and they do things on such rations, too!

"The Allies own the air here—no Boche planes attempt the sky like they did where we were, and only French 'sausages' are up. Every day the Boche gets an extra kick. Pretty soon he'll get tired of facing it, for as a nation they can't stand continuous setbacks and defeats. They are fine while their machine works, but let some one throw a hammer into the cogs and the whole works 'go up,' as the British say. As we came along on the way here, people at times shouted '*Finis la guerre!*' One house our train passed had a big banner nailed up, upon which in English were the words: 'We thank you for your aid.'"

A stirring account of a battle in which he was wounded is given in a letter from Base Hospital No. 34 in France, written by Howard Huston, of Sweet Springs, Mo. In "a sort of wild, enchanted forest, like one of the spots in Grimm's Fairy-Tales," the foe was first encountered. Germans at machine guns tried to stop their advance, but "it couldn't be done; you can't stop Americans." The story continues in the Sweet Springs Herald:

A few men dropt; some dead, some wounded. We kept up a heavy fire as we advanced on the wood. Suddenly the firing ceased, and lo and behold, in single file, one behind the other, they filed out—about five hundred Germans in all and taken in the first twenty minutes!

A moment later and I heard the Colonel's voice behind us, "Is this Company M? Good work, great work. Keep it up."

We charged the woods. A few Germans were found in the trees, dugouts, etc. Then I forgot everything for a few minutes. When I came to I felt something warm on my stomach. I reached up my hand and saw it was blood. My runner was kneeling by me. I saw at once that it was not serious. A first-aid packet strapped tightly around me, a drink of water, and then through the woods after the platoon. We found three Germans in it as we went through. It was either they or ourselves who were to stop, and they will bother no more. When I came up to the company they were in a wheat-field under heavy machine-gun fire. Pop Crane went forward to put them out of business. He did it, but he didn't come back. I sent a runner to the captain; he, too, was wounded. I was in command of the company.

Forward again we went and I came on to Pop Crane. He was hopelessly wounded. He took his revolver from his holster, smiled, handed it to me and said, "Do your best with it, boy. I can not use it any more." I left him there with a man to care for him. Inside of ten minutes the man was back. Pop had smiled to the last and I had to stop and wipe my eyes. There's a wife and three little children back in Summertown, Tenn., who are going to be mighty lonesome. If I wanted to define the word gentleman, I'd say, "Pop Crane."

On we went, ten kilometers I think they say we advanced. We took many prisoners, had some men killed, some wounded.

Now Uncle Sam begins arming the country's factories to conquer the Hun!

THE minute the United States declared war, the factories of the country became an important element in the struggle. On their output of munitions, food, clothing, airplanes, ships, etc., depended in a great measure victory or defeat.

For a time every effort was centered on production, on speeding up, on increasing output. But to this one year Uncle Sam saw tens of millions of dollars melted from his war-machine by fire. In one year he saw thousands of irreplaceable fabricating-machines and tools wiped out by fire. In one year he saw fire take from his fighting-men shiploads after shiploads of vitally needed finished products.

One year was enough!

Uncle Sam learned in a twelvemonth what many business men have not learned in a lifetime. He learned that insurance money could never regenerate the victory-winning, Hun-crushing supplies that have gone up in smoke.

He learned more. He learned that such destruction was as foolish as it was dangerous because there is an infallible answer to this challenge of fire. His War Industries Board found out that, more than 33 years ago, Frederick Grinnell had invented a weapon—the automatic sprinkler—by which fire would annihilate itself.

At the beginning of the second year, Uncle Sam acted. To-day uses the entire resources of his industry devoted solely to the work of rushing sprinkler equipments into factories, warehouses, grain-elevators, etc., specified by the Government. This requires the total output of our factories.

The General Fire Extinguisher Company
274 W. Exchange St., Providence, R. I.

"We are as proud of the 1500 men putting in these systems throughout the country and of the 1500 employees in our seven great plants fabricating these systems as we are of the 500 men we have with the colors in France."

proper order and not a man was put in jeopardy of life or limb by being compelled to jump from the deck or bulwarks after the order was given to abandon ship, except two or three of the frightened mess-attendants, and they, for the most part, were not Americans.

The men and the officers, of course, were as cool as they would be on parade. When the order to abandon ship was given the men at the boats and rafts began to sing the usual "chanteys" sung by sailormen the world over when doing that kind of work, and which are sung not so much for the purpose of cheering the men as to cause them to move in unison and thus facilitate their work.

When we pulled the boats and rafts from the side of the rapidly settling ship, not only the men at the oars and sweeps sang, but the men in the bodies of the various craft sang with the oarsmen in time to the sweep of the oars.

If there was an excited man in the lot, except the two or three mess-attendants I have already mentioned, I didn't see him. I have begun to think that what we call fear is merely a matter of anticipation and that when we get face to face with the real thing fear rushes to the tall timber. I certainly hope I will never have any more fear than I had while the old *Schurz* was slipping from under me. It may be that the absence of panic in me was due to the fact that there was no panic anywhere. Panic, you know, is catching and in that case there was no panic to catch.

TO WORK IS TO PRAY

THE old Latin saw, "*Laborare est orare*," for many centuries has been a kind of dignified motto, more decorative than practical. A kind of pretty legend to put on carved scrolls over buildings sleeping in monastic calm, or in later days to decorate letter-heads used by semi-religious sociological experimenters. Its unfathomed depths and glorious inner meaning, as expressed by the workingman of Nazareth, seem to have been smothered in the clamor of conflicting sects, or swaddled out of sight in the grave-clothes of exotic liturgies.

In these days of strenuous struggle, when men, that we knew in the days of peace spoke but little, if at all, of God and the soul, now are sending from the trenches, where they daily look into the eyes of Death, strange letters of an altogether different tone, it would seem that the very fountains of the soul's depths were being broken up.

Labor is no longer undignified; it has come into its own. Imagine a scant few years ago a scholarly preacher doing laboring work, and proud of it! Yet so it is. The New York *Evening Mail* makes a feature of such a case, saying:

Earning three dollars a day as a common laborer in the shipyard of the Luders Marine Construction Company, Rabbi Wise, of New York, preacher, author, and scholar, is spending his vacation in the service of the Government. Rabbi Wise works ten hours a day at strenuous labor. With the ardor of a schoolboy, his enthusiasm undampened because of his lack of technical training, he is employed in a yard

"Tank & pipe that last"

California Redwood has remarkable air resistance, when in contact with the ground or exposed to the elements—every fibre permeated with a natural preservative.

Resists the action of acids and alkalis—widely used for cylinders, dyer, tanning and similar uses.

Permanent to shape—seasoned Redwood makes and holds a tight joint under most trying conditions.

These are a few of the qualities that make Redwood the premier for tank and pipe uses.

A single Redwood tank and pipe company has installed at various States, with a capacity of over 1,000,000 gal., and that of Redwood pipe and accessories gives a capacity of Redwood tanks.

The unusual properties of Redwood, including the long, straight, smooth, and uniform, make it of greatest importance in every branch of industrial construction. We have your building problem, with the best information as to Redwood's availability.

Ask for free booklets, "Redwood for the Engineer" and "Especially Useful Redwood."

WOMAN: MARRIAGE AND MOTHERHOOD

A big new book by Elizabeth Sloan Chesler, M.B. With Introduction by Mrs. Frederic Schöff, President of National Congress of Mothers and Parent-Teachers Associations, S. A. Every thinking woman and every man of public it should read and heed this most comprehensive volume deals with the woman's sphere—the evolution of motherhood—marriage and customs—the legal position of the wife and the unmarried mother—woman and divorce—infancy and maternity—the awestruck mother in the home—the busy mother—the world's crop of human babies—the use of mother energy—the world's work for mother position—women prisoners—motherhood and eugenics—motherhood and the social vile—training for motherhood—motherhood and the woman movement—the mothers of the future. "A sane, practical and scientific presentation of the woman movement," says the *SURVEY*, N. Y. 12mo, cloth, 287 pp., \$1.50 net. By mail, \$1.62. Funk & Wagnall Company, 354-60 Fourth Ave., N.Y. City.

Happiness Here Below depends so largely on one's point of view that it pays to cultivate optimism. Read Walter DeVoe's "LITTLE STUDIES IN SELF-HEALING." \$1.00 postpaid from FUNK & WAGNALLS COMPANY, New York.

Cut Food Bills in Two

With a National Steam Pressure Cooker you can serve better meals for less money. Cheap cuts of meat, hard-to-cook cereals and vegetables make delicious, savory dishes when cooked by steam under pressure in a

Cooking by steam pressure saves time, work and fuel, preserves natural flavors and makes all food more digestible and nutritious. Cooks thoroughly in less than half the usual time; cooks chicken, mutton and veal in 15 minutes. The cooker also adapted to steam pressure cooking for the hotel, pack and tourist.

NORTHWESTERN STEEL & IRON WORKS
ED. CLAIR
WISCONSIN

for only the least skilled labor. He is as brown as a berry and expects to be in tip-top condition for his work in the winter. His foreman says he is one of the most popular "boys."

The New York Evening *Sun* chimes in with a story of Father Duffy, chaplain of the "Fighting Sixty-ninth," who has so won the hearts of the men as to be called a "real guy!"—

When the history of New York's own "Sixty-ninth" in the war has been written, the world will know the full story of the bravery under fire of the regiment's chaplain, Father Francis P. Duffy. Meanwhile it must content itself with the meager details of his wonderful work that come over the cables.

"He's a real guy," was the way Private Rooney, who lived at 557 West 149th Street when he enlisted, summed up the chaplain of the famous Irish regiment.

All through the charge across the Oureq and the advance of the old Sixty-ninth, the chaplain, Father Duffy, with his coat off, the perspiration streaming down his begrimed face, worked tirelessly, administering the last sacraments and taking last messages for mothers and wives "back home."

Times there were when a stretcher-bearer was shot down in the furious fighting. Then the chaplain halted his work as a priest to take up the fallen and help bear the wounded behind the lines.

"When you are writing about it," said Private Rooney to a correspondent with whom he was discussing the famous dash across the Oureq, "don't forget to say a good word for the chaplain. He's a real guy."

Heedless of snipers' bullets Father Duffy "carries on." He is in the fiercest fighting, bearing comfort and cheer. And stories of his bravery, to be told some day, multiply.

When a priestly professor of philosophy attains to the dignity of such a name among the doughboys he has indeed got "under their skin."

Could anything tell more vividly of the breaking down of man-manufactured barriers than their beautiful story told in the New York *Sun*:

The Rev. Sheridan Zelic, of Plainfield, N. J., is a Red-Cross Chaplain and of the Presbyterian faith. A few days ago, when he was near Château-Thierry, he wanted to hold religious services, and as the Catholic chapel near there was unoccupied, with nobody with authority around, he decided to hold services there. Several Red-Cross nurses and some soldiers and orderlies took seats, and as the services proceeded some French soldiers entered. After the service, as he was going around to put out the candles, one of these approached and, smiling, said he was a priest and told him he had been preaching in his chapel. "This instance shows how war breaks down all barriers between religious denominations," the pastor said, relating the incident.

Contrast that with the fiendish work of the disciples of *Kultur*, which follows:

Private Harry Meeks, of Washington, Pa., and J. C. Titterington, of Ligonier, Pa., told me that when they entered the town of Poncheres and were fighting

through the streets, much mysterious sniping was going on. Finally, they said, they located three German sharpshooters in the belfry of a church, directly under the shadow of the cross, shooting down on our soldiers. It took only a few shots to bring these defilers of the sanctuary to cries for mercy, and their surrender was accepted.

Private Robert Tibbert of Seranton, Pa., told of sniping from the second floor of houses in Seringes, necessitating fierce combats up narrow stairs. With his corporal he took seven German prisoners, all wearing Red-Cross brassards on their arms.

Private Norman Dicks, of Washington, Wis., says that in the same town the Germans had placed a machine gun in the belfry of a church, and that the crew were dislodged only after a hard fight.

In the same area were found men chained to machine guns in trees, they having been told by their officers that the Americans took no prisoners. Several who had been killed were hanging dead from their chains, forming the most gruesome sight imaginable.

The New York World sings the praises of the Salvation lassies who have thrown their tambourines aside and busied themselves with rolling-pins and pie-manufacture as more fitting to the occasion:

They bake real home-made pies and feather-weight crullers that take the edge off a man's homesickness.

Every girl who wears the Salvation Army khaki in France must be a good cook. At one of their huts you bring about six cents and your plate for the evening's "special." These dishes are cakes and puddings, which aren't included in army rations.

One of the kitchens began with a tiny stove which would bake only one pie at a time. Soon a kindly quartermaster supplied the girls with an old field stove that cooked four at once; it looked big to those girls. But now they have a huge one and turn out hundreds of pies a day. At the canteen they sell them to soldiers who wait their turn in long lines. But some of the pies find their way into the trenches.

At night men set out with packs of provisions and crawl up to the boys with them. The enemy sends up star-shells—like arc-lights hung in mid-air—and the bearer ducks, crouching as still as the sand-bags on either side of him. Then he reaches the outposts, where soldiers have lived on "iron rations" for two or three days. As yet, the Army has published no casualty list of pies at the front, but according to unofficial report, they don't last long.

At first there was a hard time finding tins for their pies. France does not appreciate American pastry, and had no dishes suitable for cooking it. A few weeks ago a French ship brought over 1,000 tins for use in the Salvation Army huts.

Pies won the Salvation Army its welcome at headquarters, according to a popular legend in France. They say that General Pershing asked only one question of the officer who arranged for the work there. "Can your girls bake good pies?" According to our soldiers, they can.

The day of a Salvation Army lass is long over there. She bakes and stews, she mends clothes for soldiers, and answers a thousand questions. When she gets up in the cold winter mornings she builds the wood-fire in her room. Once a vigorous captain arranged a schedule by which each of her three workers should build the fire for a month. Her turn would have come

The PROBLEM of the NATION'S MILK—A VITAL FOOD

MILK is vitally necessary to the human race—yet the most perishable of foods. Conserving the milk supply presents a two-fold problem, as Gail Borden realized sixty years ago.

Summer's surplus must be conserved for winter's wants—and dairy districts must share their supply with regions far removed. For to all alike milk represents genuine food-economy—body-building elements and energy-producing elements combined.

From Gail Borden's solution of this problem arose the Borden Institution of today—protecting milk purity—maintaining the quality—establishing uniformity. Milkless regions and milkless seasons are abolished. A perishable food is made non-perishable. And Nature's food is conserved for all in these pure, safe, convenient forms—the milk supply of the Nation for the whole Nation's use.

Borden's

The Nation's Milk

EAGLE BRAND

The standard infant food when Nature's nourishment fails. Pure, uniform, easily digested. Also delicious in coffee.

Evaporated

Economical for cooking. In compact form—always ready. Just pure, rich, milk—some moisture removed—nothing added.

MALTED

Pure milk and nutritious grains, partially predigested. A delicious drink, nourishing lunch—the ideal food-drink for invalids.

INSYDE TYRES Inner Armour

For Auto Tyres. Double strength, prevents punctures and road shocks. Easily replaced by air gun. Used over and over on several tires. Thousands sold. Available from Agents everywhere. American Accessories Co., Dept. 316 Cincinnati, O.

FORGETFULNESS

Has caused the loss of millions of dollars, jobs and ambitions to go up in smoke more often than almost any other human failing. If you would succeed, if you would build a career of importance and distinction, you must first forgetfulness. The only remedy of a permanent memory for facts, names, figures, and the like can be accomplished with ease, on master what most handbooks may be, by the study of *Forgetting*. A Memory System—practical, scientific, mental training that produces results. Write today for free booklet "How to Remember" and protect yourself against disaster.

Funk & Wagnalls Company, Dept. 211, New York

The Home Life of the Ancient GREEKS

Translated from the German of Prof. H. BLUMNER
By ALICE ZIMMERN (Girton College, Cambridge)

With Over Two Hundred Illustrations

The purpose of this volume is to present, in a clearly written and attractive style, a description of all sides of life in ancient Greece. While to the student, by illuminating the many allusions to customs and manners, it will make clear the preparation for, and study of, the Greek texts, its interest will be equally felt by the general reader. *The Nation*, New York, says: "It is a book which may be used either for consecutive reading, or, owing to its full index, for reference."

Large 12mo, cloth. Profusely illustrated and thoroughly indexed.
Price \$2.00 Net; average carriage charges, 10c.

FUNK & WAGNALLS COMPANY, Publishers, 354 Fourth Avenue, New York City

around in April, but the others protested, so she continued to rise early during February. She discovered that the only water without a coating of ice was that in their hot-water bottles. So every morning she would unscrew the cap of the bottle and pour its contents into her wash-bowl.

During the day the phonograph spins steadily. Every record sent across from the New York headquarters is played until the tune is shaved off. Then there are the reading and writing corners of the huts, where men can be quiet for a time, unless a bombardment interferes.

In the evening there is a religious service in the hut. Every night it is crowded by soldiers who enjoy singing the familiar hymns. The same girls lead these meetings who have worked since dawn. Men preach and pray after driving a heavy motor-truck, or hammering all day at the walls of some new shack. Later, some of them will run a moving-picture machine, or make their night deliveries of food to the trenches. Sometimes the working-day is eighteen hours. One Englishwoman has served four years, without a day of rest, in the British huts.

Pies, doughnuts, hot coffee, and phonographs, are all part and parcel of a great, virile faith, found vigorous and watchful on every battle-front. In bomb raids, where panic-stricken refugees flee in terror, the Salvation Army, the Red Cross, the Y. M. C. A., the Knights of Columbus proclaim by deeds the faith that is in them. *The World* continues:

American soldiers in France will always think of the Salvation Army as a dispenser of pies and doughnuts, a store for the sale of everything from chocolate to shoe-strings. But they will also remember the religious work of the Salvation Army, its meetings and songs. Some of these meetings have even been held in the Catholic churches of France, which shows the good feeling between the leaders. Then there are the quiet talks with the men or girls of the units, girls who can cook fudge—just a tiny piece for each—and talk like the girls at home.

So welcome have they made themselves at the front that Army officers are asking for huts at special places. Once, when a Salvation Army lass was ill, a gruff colonel insisted on turning over his comfortable billet to her, while he went into a tent. Often army officers address meetings at the huts.

These men and women are not only soldiers of the faith, but, when need be, stand side by side with the boys before the Hun guns and gases. Such a man the *New York Evening Telegram* tells of:

John T. Atkins, who was a Salvation Army major in Chicago, but now is serving with a famous battalion of the United States Army as a Salvation Army worker, has been mentioned in battalion and regimental orders and has been several times "over the top" with the battalion. He has been acclaimed the most popular man in the battalion and recommended for a commission as chaplain by the regimental commander.

"Major" Atkins, who is known to the officers and men of the battalion as the "little major" to distinguish him from the real majors of the organization, is said to carry the good luck of the unit with him. The boys believe that when he is with them

in an engagement their casualties are light. On one occasion, when a raid was to be undertaken, the little major's unit suffered only four casualties, while the organization which followed them into action suffered severely.

When pay-day was a long time coming recently the "little major" gave each man in the battalion an order for seven francs on the canteen. Each took advantage of the "jawbone," as the Army boys call a loan, and when pay-day came not one failed to show up to the "little major" with the return payment.

Creed makes no difference when men want "to do their bit."

Anxious to be of service to his country, and believing his vacation-period this year was no time to loaf, says *The World*:

The Rev. Chester J. Hoyt of the Vincent Methodist Episcopal Church, Nutley, N. J., is working in the plant of the International Arms and Fuse Company, Bloomfield. He gets 28¼ cents an hour, the same as his seventeen-year-old son Robert. They are inspectors.

IN THE BRITISH TRENCHES BEFORE THE GERMAN STORM BROKE

SOMEWHAT akin to the weather sense of a wise old farmer, it seems, is the fighting sense of a well-seasoned British Tommy in the present stage of the war. As the farmer foretells changes in the weather by signs that would escape the city-dweller completely, so the battle-wise Tommy, by a bit of unusual shelling, or some sign of camouflaging activity, predicts the storms of flying steel and tornadoes of poison-gas that are forever breaking over the fighting-lines.

Whatever was the information of the British higher command about the time set for the beginning of the last great Teutonic storm on the British front, the veteran British soldier had a good deal of definite information on the subject, says Newman Flower, writing in *Cassell's Magazine*.

Mr. Flower met a war-weather-wise Tommy just outside Ypres a few hours before the storm broke. The Tommy ate an orange, and cheerfully mentioned that there was fresh war in the air. The writer comments:

He was one of a type. He knew the Boche was coming, and he knew it would be red murder when he came. The men I met between Ypres and Bapaume were like that. They waited for the Boche, they realized and openly said that they might be forced back somewhat by sheer weight of numbers, but they figured out what the Boche would pay per inch for the ground he took.

And they knew, what thousands in Britain did not know during the next few days, that battles are not decided with the yard measure.

Ypres was a queer place that day. It was very peaceful and restful in spots and noisy and unhealthy in others. We walked up through what may have been a city till the war made it an abortion, over the canal with the big shell-holes plugged in its banks, through the Menin Gate and

If your hair is beginning to thin out—What are you going to do about it?

ONE of the most beneficial aids is sometimes overlooked because it is so simple. It is this:—

Keep your scalp pliable and free from dirt and dandruff by regular and systematic shampooing with Packer's Tar Soap. Rub its rich lather in thoroughly. Get *all* the good from "Packer's."

You will find this simple method will prove of great service in restoring and maintaining the health, beauty and luster of your hair. "Packer's" is made from pure pine tar and other healing and cleansing ingredients. Try it. Sample half-cake sent on receipt of 10c.

You will find it helpful, too, to read our manual, "The Hair and Scalp—Modern Care and Treatment," 36 pages of practical information, which we will send free on request.

PACKER'S TAR SOAP

"Pure as the Pines"

Packer's Liquid Tar Soap, delicately perfumed, cleanses delightfully and refreshes the scalp—keeping the hair soft and attractive. Liberal sample bottle 10c.

Abstract

FOR MEN OF BRAINS
Cortez CIGARS
—MADE AT KEY WEST—

The name is
always in
the glove.

Fownes quality is always *Fownes quality*—in war times as in any other times. Since 1777 that name has been an international guide-mark to good gloves.

Leather, fur, silk, fabric.
At the Principal Shops.

American art and skill have produced **FILOSETTE** surpassing any fabric glove imported before the war.

before the war.

FOWNES

down the road. Shells were dropping into the cemetery on the right of the street and flung gravestones and the remnants of stones high in the air like white feathers in the sunlight, disturbing nothing save the sanctity of the dead. Some freshly mangled horses were lying here and there. And there were ugly pools of blood that explained a lot.

An officer went up to the sentry.

"Lively here this morning," he said calmly, as if he were a doctor inquiring after the health of his patient.

The sentry smiled.

"The way 'e's bin pasting that cemetery, sir—weeding it, that's wot 'e's doing," he replied.

The nonchalance of the sentry was very typical of the men who waited for the *Boche*. His job was about the unhealthiest in the place just then, but it amused him to see Jerry wasting his powder and shot. He really did not think very far beyond Jerry's silliness in so doing.

Another little picture typical of these men.

It was out toward Zonnebeke. The soft ground was pecked with shell-craters half full and more with water. Stooping down at one was a soldier shaving with a safety razor. He paid not the slightest attention to the aerial disturbance above as German "heavies" swung over. And in the middle of the water which served for his toilet a dead German floated, with the wavelets, made by the dabbling of the Tommy, breaking against the gray ugliness that had been a human face.

One of the greatest mysteries of the holocaust has been the accommodation of the gentler side of the human temperament to the extreme sordidness of war. But for it thousands—it may even have been millions—would have gone down through the sheer uprooting of that mental refinement and comfortable orderliness of life to which they had always been accustomed. No one has yet written an epic about the sufferings of some of these during the readjustment of outlook. It has been a hidden miracle of endurance.

Shortly afterward the writer, after passing a bunch of men who were singing in the midst of the desolation all around them, came upon an American doctor; and the doctor, also, had news of the coming offensive. Much of the doctor's news, as is a very common way in this war, was too horrible to be put into words. Mr. Flower writes:

"I've been here three years," said the doctor, after the exchange of names. "Seen something? Guess so. Come and have a look round. Forty-two casualties in my station already this morning."

I looked at my watch; it was a quarter to eleven.

We followed him to a dark hole in a broken-down wall. We bent our heads and crept through, feeling for steps with our feet. We went on down somewhere into the dark; we crawled along a narrow passage and then into somewhere else. And as we crept cautiously forward the atmosphere grew warmer and came in little gusts at one with a mixture of odors which at first I could not sort out.

We reached the main chamber. Probably before the hell came to Flanders it had been a rat-infested cellar. The air was heavy; one breathed in the smell of anesthetics and blood and sweat. The wounded were being brought in, and they lay around on stretchers. Men shell-torn.

The worst season of the year for automobile accidents

SEPTEMBER and October are the worst months of the year for automobile accidents. Here is the reason:

All summer long you have been running your car. Naturally the brakes are worn. Then there comes an emergency when you must stop quickly—but you find you can't!

That is what is happening to so many motorists this month. That is what may happen to you. There are more accidents in the fall than at any other time of the year simply because brake's have been made dangerous by a season's wear.

Make certain today that your brakes are safe

You will be running your car for two or three months longer; perhaps all winter. You can't afford to

let your safety, and the safety of your car, depend on brakes that are worn. Have your dealer inspect your brakes today. If they need relining have him put on Thermoid Hydraulic Compressed Brake Lining.

Gives greatest security for three reasons

1st—Contains over 40% more material and 60% more labor than ordinary woven brake lining. This gives long wear.

2nd—It is Grapnalized, a special exclusive process which enables Thermoid to resist moisture, oil and gasoline.

3rd—Thermoid is Hydraulic Compressed. It wears down slowly and can be used until cardboard thin.

Support the Brake Inspection Movement and have your brakes inspected today.

OUR GUARANTEE:
Thermoid will make good—or WE WILL.

men hit in all sorts of places that did not show, and in places that did horribly, men who came in with blood dripping from them in little quick puddles as they lay there. As I moved I felt my boots treading in something wet. Just by me a man, as conscious as I—I will not describe his wound, for it was the most awful thing I ever looked upon—was just slipping over the edge to the Great Discovery. . . . A little way on another twitched his lips slightly, and by the time the doctor had reached him and moved his head he had gone.

These men an hour before had waited for the offensive and chuckled at its prospect, like the man with the orange. I felt the sudden catch of a nausea, and remembered with one of those strange flashes of memory that I had only felt like that once before, and that was when as a boy I had watched with some evil fascination some men killing a pig in a Dorset village. Why, I thought now, should they kill these fine specimens of humanity in the same brute and pitiless fashion as those men had killed that pig?

We went out into a farther corridor. There was a string of pigmy lights on the wall, like the Embankment in the old days, seen from afar. In another chamber were more men on stretchers, the less serious cases. You saw their faces before anything else, red with little rivulets of sweat crawling over. And then on into another chamber where there were men who had been gassed, sitting in rows in the half light with dead-white faces, and red half-closed eyes that cried. . . .

In one corner was the dim outline of a big oxygen instrument. Beside it a bed-like contrivance that bore a resemblance to an operating-table, and over all a quaint unnatural smell, foreign to anything one has ever met before in a world supposed to be civilized.

We climbed up to the street in time to see a horse's head propel itself like a monstrous football down the street following a close shell-burst.

The Hun was trying to put a warning—to camouflage his movements—into a place he was not going to attack within the next few hours. Looked back upon now, the hideousness of war stands apparent when one remembers those torn men who had been destroyed for a German fake, and dragged in there to be made as comfortable as possible till they panted their lives out.

Later, while walking from Neuve Eglise to Messines, and from there to Wytschaete, the writer saw increasing evidences of the storm whose full fury struck and overwhelmed the British a few miles to southward. Fritz, or Jerry—as the German is variously called on the British front—was trying endless experiments that morning:

He was tilting his guns on to places he seldom if ever fired into, he was forcing his airmen out on all sorts of impossible "stunts," he was pushing gas-shells into villages where there were no troops but only harmless peasants tilling fields, he was groping with his "heavies" for railways a mile or more from where those railways existed, he exploded shrapnel in inconsequent places where only children played at soldiers with salvaged army badges and wooden swords. I saw him sweep a couple of these tiny warriors into his hideous net. He was very eager and searching. . . .

When later that day I walked out

Neuve Eglise and Messines and from thence to Wytschaete, the big game was still going on overhead. A few stray bullets sprayed up spots of dirt on the road, a couple of guns suddenly emerged with a blast following a blast from a spot almost under one's feet which one thought was an empty pool of water, so cleverly camouflaged were they.

In the advanced dressing-station a major in reply to my question, "Where is the Boche?" said, "Come out and look at him. Be careful to follow me exactly."

We wandered over ground cloven with shell-holes, beside which an ancient turnip or two still showed in the broken soil. I pointed to them. "Yes," he said. "Somebody's garden—once." And yet there was no sign of a house ever having been built within miles, so complete was the destruction.

Somewhere at the back of us over the battle-field of Messines some light locomotives rattled along and tootled playfully as if it had been Clapham Junction. When a shell just missed them they tootled louder than ever.

The Major stooped at last and pointed to a thin line of dirty clay and sandbags.

"Plenty of Boche field-glasses watching us now," he said cheerfully.

"And what on earth do they make of us?" I asked.

"Working party. If they continue to think so they won't waste a shell on us. If they discover their mistake they may let us know. We won't loiter. Funny beast, the Boche. Pounded our stables last night and thought it war. The horse gets a rotten time out here, shell-shock and that. Two bolted this morning, sheer, absolute shell-shock. I'm a horse-lover, and I hate that sort of thing."

"It's beastly," I said, and remembered some mangled things in Ypres.

Just then Jerry pushed up two or three sausages from behind a distant ridge, the first he had shown hereabouts that day. Spots of white fluff arrived as suddenly and hung lovingly around them. They crept up, these sausages, a few hundred feet, dubiously. Very dubiously. They would halt as if to look about them, as a burglar might when he is climbing the drain-pipe, rise a few hundred yards and pause to look again. In these hesitations and halts was all the demonstration of nerves that had crept into the Boche system. He may have known that he was going to attack in a few hours, but he was very uncertain about his enemy, and about his own skin.

Journeying on down to Arras, where British officers were willing to give betting odds that the first great attack would come, the writer records a small but significant bit of French romance:

I chanced to see amid a string of broken houses some curtains in the lower window of a building which had been crumpled like a silk hat that has been sat upon.

"Surely," I remarked to the officer, "no one lives there!"

"Come and see," he said, and led the way across the street.

He knocked at the door.

A Frenchwoman of about fifty years of age, obviously of gentle birth and breeding, came to the door. At the sight of our visitors she smiled and insisted on our going in.

"He wouldn't believe," the officer told her, pointing to me, "that any one lived here, so I wanted to prove it to him!"

She took us into a small room on the

Remember Last January

The ability to heat your home, office or factory comfortably and with economy is entirely within your own hands—for there IS a way to get more heat out of less coal.

Steam heat is always economical. It can be generated quickly; heats rooms quickly; and can be turned off positively without loss of heat units when you have no need for it. It is at its best when radiators are fitted with the Dunham Radiator Trap—a simple device that supplants the ordinary hissing, unsatisfactory air valve. The air and water waste coal—and it is this waste that is stopped by the Dunham Radiator Trap—one of the elements of

The DUNHAM
HEATING SERVICE

Leading architects recommend Dunham Radiator Traps for homes, apartments, office buildings and industrial plants. Good heating contractors everywhere install them.

The expense of fitting the coal-saving Dunham Radiator Traps to your present system is small compared with the increased comfort and economy.

Find out all the details NOW by writing to our nearest branch office.

The Dunham Radiator Trap

Automatically removes the coal-wasting air and water from radiators; stops the pounding and hissing; quickly saves enough coal to pay for itself.

Branch Offices in Principal Cities

This is Mrs. Cynips Tinctoria

To this lady from far off Arabia, you owe the fact that Carter's Writing Fluid turns black and will never fade.

To safeguard her eggs, she bores holes in the tender twigs of the oak trees. This results in a swelling or gall about the size of an acorn.

From these gall nuts, Carter chemists extract the tannin, add a salt of iron and by an exact chemical combination secure a colorless liquid that is the basis of Carter's Writing Fluid. Because you want to see plainly as you write, Carter chemists add that unusually beautiful blue color that has made Carter's Writing Fluid so desirable.

This pleasing blue, after the writing has been exposed to the light, turns to an intense permanent black, and continued exposure to light, which fades writing made with other types of inks, only intensifies writing made with Carter's Writing Fluid.

Particularly now you should be sure to ask for Carter's Writing Fluid because it writes the same snappy, rich blue today that distinguished it before the war made good ink colors scarce.

For pen and fountain pen use there are, in all, some thirty kinds of

Carter Ink

Besides these there are nearly three hundred separate formulas for special Carter Ink, adhesives—including CICO, Carter typewriter ribbons and carbons.

Anything in the Carter Ink family can be had at your stationer's.

Boston Chicago New York Montreal

EXPECTANT MOTHERHOOD

By Dr. J. W. BALLANTYNE, of the Royal Maternity Hospital, Edinburgh

In the rare sympathy with which the author approaches the subject of motherhood, in the delightful literary style which characterizes every page, and in the intimate and frank nature of the advice that is given, we have here one of the best books ever written on this subject. Every young woman approaching matrimony as well as every "expectant" mother should solve for herself the mysteries of physiology through a careful reading of this work.

100 Years of Vital History

The World's Greatest Story of the World's Most Critical Period

Nearly a century of vital history fills the interval between Napoleon's fall and the maturing of the Franco-Russo-English understanding. It was a century of national upheavals and international readjustments which had so important a bearing upon the alliance of the powers for the present war. A knowledge of the events of this period and the men who controlled them is indispensable to the man or woman, boy or girl, who would understand the attitudes and motives of the nations to-day. This great story of the world's evolution is completely, fascinatingly, authoritatively told in one, big, fine, inexpensive volume.

A HISTORY of the MODERN WORLD

By Oscar Browning, M.A.

One of the world's greatest historical authorities

It describes the world's dominant figures of the last hundred years and what they accomplished—Lincoln, Bismarck, Edward VII, scores of others. It tells of our Civil War; the evolution of the German Empire; the birth of the French Republic; the beginning of the Triple Alliance which Italy repudiated in 1914; the Boer War; the Russo-Japanese War; and all the other significant political and military events of this period. It is a gripping story of a new world in the making. Get it and read it. History and Biography give the greatest education.

New, inexpensive, one-volume edition. 1000 pages, cloth bound, \$3.00; by mail, \$3.20.

FUNK & WAGNALLS COMPANY 354-360 Fourth Avenue, New York City

ground floor facing the main street. It had been turned into a bed-sitting-room. It was the only room in that house, or probably in the street, that had not been smashed to fragments by insistent shell-fire. And in it this woman who had been rich before the war lived alone. All her relatives and the owner of the place had been killed in the house and buried in the garden.

But she was not entirely alone. She had with her a woolly dog of uncertain breed, a green-and-red parrot in a cage on the only unbroken chair, and upon the sill of the window sat a ginger cat looking out at the destruction across the street with that mysterious brooding peculiar to its tribe. Stuffed into this room was the salvage of the furniture of the house. In the ceiling was a shell-hole big enough for a man to let himself down through. And on the mantelpiece, shelves, and cabinet were lumps of shell that Madame had picked up at odd times as they had come into the house, including a splinter which was cut out of her own forehead and is her most cherished possession.

"Madame," the officer explained to me, "has refused to go out of her house all through the war. She has stood the German occupation and the continual bombardment, and she won't budge."

At this Madame shook her head and laughed.

"When I go out they will have to carry me," she answered.

She lives there and spends her whole time writing poetry. She has written reams about the valor of her own soldiers, and now, she explained, she had begun to write about the British and Americans.

"And what do you do when the Germans bombard Arras?" I asked her.

"Come and see, m'sieu'." She took me into the hall and opened a door through which I peered down into darkness. "I go in there—the cellar. And I pull this table against the door—so. And these chairs—so. And I am barricaded in. And if the Germans ever return, I go down with my cat and my parrot and my dog. So we shall live till the English push them out again."

"And how long will you have to endure all this?" I said. A foolish question enough, but one does not speak of their heroism to women like that.

"Oh, m'sieu'," she said, "it will all end some day!"

And that is how "My Lady of Arras" waited for the great offensive.

She was so like France. So sure.

A few hours later the storm began. All night it raged. Of the next morning, the morning of the fateful 21st of March, 1918, Mr. Flower writes:

The pandemonium was unlike any other pandemonium I have ever heard. The ground moved beneath one's feet—veritably moved. The sun came up in a wide, splendid sky. It seemed the only placid thing above a world that had suddenly gone mad.

The noise—it was not so much a noise as a blast that never stopt—appeared to have a well-defined horizon. Nearer sounds, the rumbling of hurrying lorries, the tread of men's feet were inconsequent—they passed almost unnoticed.

The hour had struck. Germany had come over the top to buy certain stretches of soil for a price that has never been paid for ground in the whole history of the human race.

THE SPICE OF LIFE

It All Depends.—"How late shall you remain at your summer cottage this year?"
"Ask the cook."—*Boston Transcript.*

Mannerly Conservation.—MAMA—"Willie, you have no manners."
WILLIE—"Well, if I waste them now I won't have any when company comes."—*Judge.*

Advice to a Soldier.—"Remember, my son," said his mother as she bade him good-by, "when you get to camp try to be punctual in the mornings, so as not to keep breakfast waiting."—*Life.*

Fashion Notes from the Front.—"Where are you going?" asked one rookie of another.

"Going to the blacksmith shop to get my tin hat reblocked."—*Pittsburg Sun.*

Word from Br'er Williams.—"When you think you is at de end o' de road, don't fling up bekaze you find dar's one mo' river ter cross. Dat's a big compliment from Providence ter de grit an' git dar what's in you."—*Atlanta Constitution.*

Commercially Speaking.—"I understand you have several speeches ready for delivery."
"Yes," answered Senator Sorghum. "They are ready for delivery; but they remain uncalled for."—*Washington Star.*

Showing Them What Was What.—NEW CURATE—"What did you think of the sermon on Sunday, Mrs. Jones?"
PARISHIONER—"Very good indeed, sir. So instructive. We really didn't know what sin was till you came here."—*Tit-Bits.*

Might Be Too Much for Him.—SOUTHERN PARSON (to convert)—"Does yo' think yo' kin keep in de straight an' narrer path now, Sam?"
SAM—"I reckon I kin, pahson, ef dey ain't no watahmillion patches erlong de road."—*Boston Transcript.*

Fixing Up the House.—"Have you no potted geraniums?"
"No. We have some very nice chrysanthemums."
"I must have geraniums. They are for my wife."
"I'm sure she'd like these chrysanthemums."
"You don't understand. The geraniums are to replace some I promised to care for while she was away."—*Pittsburg Sun.*

What Saved the Baby.—The family were entertaining callers one afternoon, and while the grown-ups were talking, the baby crept on the floor. Suddenly there was a loud bump and wild wail. It came from the direction of the piano.
"Oh, the baby has hurt himself!" cried the mother. "Run quick, dear!"
The young father had already dashed toward the piano. He dropt on his knees and groped under the piano for his injured offspring. Presently he returned.
"He fell down and bumped his head on one of the pedals," he reported.
"Oh, the poor darling! Is it a bad bump?" asked one of the guests.
"No," he answered. "Fortunately, his head hit the soft pedal!"—*Tit-Bits.*

Why Alvin defies the years

A test was made by H. G. Torrey, for 37 years Chief Assayer of the United States Government Assay Office, of *fourteen leading makes* of silver plated teaspoons. This test showed that Alvin Long-Life Plate averages a heavier amount of pure silver than *any other make of plate.*

It is an INVESTMENT to get Alvin. And in beauty, it is unsurpassed even by sterling!

AMERICAN SHEET AND TIN PLATE COMPANY, Frick Bldg., Pittsburgh, Pa.

Explosives and Chemicals

It requires fourteen great plants—

working to capacity to enable us to keep pace with the ever-growing demand for ATLAS Explosives and Chemicals.

Located in those parts of the country where the use of explosives and chemicals is most general, these fourteen factories make it easy for the users of our products to secure shipments under present traffic conditions.

The ATLAS line of explosives, embracing all kinds of high and permissible explosives, dynamites, blasting powders, sporting powders and farm powders, makes it possible for users of ATLAS Explosives to get just the right powder for every particular purpose.

We also manufacture a full line of blasting supplies.

The ATLAS Chemicals include nitric and sulphuric acids, mixed acids, sodium nitrite, ammonium nitrate, nitre-cake and lacquers. Also producers of leather cloth.

General users of explosives should write for further information. Farmers, owners of estates, lumbermen, should get our book "Better Farming." Mailed free.

Little Weakness of Chris.—SAM—"Ah done heerd dat dey fin' Columbus's bones."

EZRA—"Lawd! Ah never knew dat he wuz a gamblin' man."—Panther.

Well Seasoned.—"Are they seasoned troops?"

"They ought to be. They were first mustered in by their officers and then peppered by the enemy."—Baltimore American.

Thoughts Encouraged by Nation-wide Prohibition.—The modern germ-crank can not understand how the boy who drank out of the old oaken bucket ever lived to write the verses. And there have been times when the verses struck others as having been written during a long illness.—Kansas City Star.

Easy Money for Maggie.—"My sister Maggie is a very fortunate girl."

"Yes? Why?"

"Dunno. But she went to a party last night, and played blind man's buff all the evening. The gentlemen hunt around and find a girl, and then they must either kiss her or give her a shilling."

"Yes?"

"Maggie came home with thirty shillings and a war-bond."—Tut-Bits.

Cheerful News from "Over There."

It's a shame to do it, but public safety impels us to expose the sergeant who is palming off his Mexican border service-ribbon as an American *croix de guerre*, thereby raising his own holdings of "amou-rique Amerique" stock in the eyes of *petite Madelon*.

Even so, sleeping on the rocks has its advantages, for in the rosy days of the future when friend wife turns the lock on our late nocturnal home-coming, we can curl up on the front porch with sleepful abandon.

And when we are in the parlor with our best girl telling her of the great rôle we played in the world-safe-for-democracy drama, we'll not mind it a bit if the passing guard orders, "Camouflage those lights!"

So many Yanks are over here now that there is scarcely room to house them, thereby creating the necessity of extending the eastern frontier of this domain of Foch, Pershing, *et al.*

To our exchange-desk has recently come a copy of the *Kriegszeitung*, the official organ of the Seventh German Army. The most we can say for the sheet is that it is Boche and bosh.

What gets us guessing is how this daylight-savings plan works out in the land of Eskimos, but we suppose all they have to do is to get up six months earlier each morning.

Elsie Janis danced so gracefully that, after she had alighted from a perfectly stunning flip-flop, a doughboy in the third row was heard to remark: "Just like a wheelbarrow I saw in the air after a high explosive hit near it."

Our staff correspondent who made the trip to Paris is recovering from a rather severe headache.

Cursed be the mule whose braying is like unto the whistling of a shell.—The Ohio Rainbow Reveille, Official Organ, 166th Infantry, Somewhere in France.

Inspiration and Ideals

Grenville Kleiser

They are brimful of homely wisdom, packed with the logic of experience, and rich in stimulating suggestion. To read them will make you better and more human, more worth-while in yourself and to the world.

A delightful gift-book or keepsake. Net price bound in purple cloth with gold lettering, \$1.45; by mail \$1.57.

Funk & Wagnall Company, 354-360 Fourth Ave., New York.

HERE is a new book with a mission by GRENVILLE KLEISER, famous author and teacher, who has helped thousands of people to success. It cannot fail to help you.

Your ability to accomplish things, your power to make good on any given day of your life, depends upon the way you start that day. This sturdy little volume will show you how to start every day right. It contains three hundred and sixty-five brief and pithy essays, one for every morning of the year.

They are brimful of homely wisdom, packed with the logic of experience, and rich in stimulating suggestion. To read them will make you better and more human, more worth-while in yourself and to the world.

A delightful gift-book or keepsake. Net price bound in purple cloth with gold lettering, \$1.45; by mail \$1.57.

CURRENT EVENTS

THE WAR

THE WEST FRONT

September 25.—British forces capture Selency, two miles west of St. Quentin, taking 1,000 prisoners and many machine guns.

Owing to the American long-range bombardment of Metz, states a dispatch from Berlin, preparations are afoot for the expeditious removal of civilians and property from the city.

September 26.—General Pershing cables that the First American Army has delivered an attack between the Meuse and Aisne rivers on a front of twenty miles, smashing through the Hindenburg line for an average gain of seven miles and capturing 5,000 prisoners.

The British War Office announces that two divisions have taken the German trenches and strong points northwest of St. Quentin and 1,500 prisoners.

September 27.—French troops in the battle-line east of Reims gain five miles and take over 10,000 prisoners.

The British advance on a fourteen-mile front across the Canal du Nord and pierce the Hindenburg line at several points.

General Haig carries Cambrai defenses, Americans aiding, and takes 6,000 prisoners. Operating on the extreme right, American troops capture a series of trenches and fortified farms forming the outer defenses of the Hindenburg system southwest of Le Catelet.

September 28.—A dispatch from the front states that the Americans have reached the Kreimhilde line at Brioulles and advanced to Exermount, making three miles in one day. More prisoners were taken.

The French and Americans push onward in Champagne and take the German railway base. Americans north of Verdun are bringing up artillery for another big offensive.

Belgian and British troops attack on a front running from Dixmude to a point ten miles north of Ypres, capturing Poelcappelle and 4,000 prisoners.

Allied war-ships bombard Zeebrugge and Ostend, the German batteries replying with vigor.

The French War Office announces the capture of Fort Malmaison, one of the strongholds southeast of Laon.

British forces continue sweeping forward toward Cambrai. General Haig reports the capture of more than 10,000 prisoners, 200 guns, and ten villages.

September 29.—Newspaper correspondents report that General Pershing's Army is sweeping all barriers aside. In three days our men cut through defenses that had stood four years.

London reports the capture of Dixmude by the Belgians, who have also advanced to within less than two miles of Roulers. Over 5,500 prisoners and 100 guns were captured.

The forces under General Haig, including Americans, make a notable advance and are now at the edge of Cambrai. American troops capture Bellicourt and Nauvay.

A dispatch from Paris notes that the Americans on the Champagne front have captured Brioulles-sur-Meuse and Romagne on the Kreimhilde line.

September 30.—London reports the outskirts of Cambrai and two villages near St. Quentin won by the British. A considerable number of prisoners were taken.

Another dispatch states that the Belgians

Miss

Says:—

Finck's "Detroit-Special" Women's Overalls

Necessary because women workers must adopt an efficient work-garment to produce effective results.

Modest because they are made along lines that are essentially feminine, having been designed by women who know how to put style even into a work-garment.

Comfortable because they are cut full and permit the free use of the body.

Safe because there are no loose ends or cumbersome skirts to become danger-points.

Efficient because the wearer can do better work with clothing suited to the purpose.

Quality and Workmanship maintain the same high standard that has made

Pencils and eye glasses

You wouldn't want to read all day through another person's glasses. Of course not! And neither should you work all day with a pencil never intended for your kind of work.

DIXON'S ELDORADO

The master drawing pencil

has, among its graduating degrees, a pencil of the precise hardness or softness to suit each kind of work—each individual taste. The strong, smooth, responsive leads are making work easier, quicker, more economical in every industry and profession. Made in 17 degrees—9H (hardest) to 6B (softest); HB (medium) is most popular for general work.

Write us the nature of your pencil work and name of dealer, enclosing 15c in stamps, and we will send you full-length samples of the right degrees for you, worth double the money—also our chart showing the uses of the 17 degrees.

have entered Roulers, and that the British to the south are close to Menin. The whole of the enemy's communications in Belgium and Flanders are threatened.

General Pershing notifies the War Department that American troops had held their own in the face of heavy attacks from the Aisne to the Meuse.

Paris reports French troops making important progress between the Aisne and the Vesle rivers on a front of about seven and a half miles. Sixteen hundred prisoners were taken in an advance which won three villages.

October 1.—The British are in possession of the northern and western suburbs of Cambrai. The Germans set the town on fire.

During August and September the British captured 123,618 Germans and 1,400 guns.

THE BALKAN SITUATION

September 25.—London reports the Bulgarians retreating on a total front of 130 miles and that a British invasion of Bulgaria seems likely.

September 26.—Capture of Veles (Köprülü) by the Servians is announced. British and Greek troops invade Bulgaria from the Doiran region and are forcing their way over the Belashitza mountain range.

Cables from Paris state that martial law has been proclaimed in Sofia and that a complete change in Bulgaria's foreign policy is impending. It is believed that Crown Prince Boris will be made regent and a separate peace negotiated.

September 27.—Paris and London receive a proposal from the Bulgarian Government for an armistice of forty-eight hours with a view to making peace. The offer causes intense excitement in Germany.

British forces on the Macedonian front capture Strumnitza.

September 28.—Worried by the armistice proposal, state dispatches from London, Vienna and Berlin are rushing troops to their ally.

Replying to the Bulgarian request for an armistice, Great Britain insists upon unequivocal submission, and adds that if the terms laid down are not acceptable to the Malinoff Government, the Allied Powers have no further conditions to propose.

September 29.—According to information received in Swiss political circles, the German forces of occupation are retiring from Roumania, where, it is rumored, the population has revolted.

Rome reports that Italian troops are vigorously pushing their way over the mountains northwest of Monastir, and that the Bulgarians are retiring rapidly in the direction of Kiehevo.

September 30.—Paris and London report that Bulgaria has surrendered unconditionally to the Allies, hostilities ceasing officially at noon. It is said the armistice was signed with the full consent of King Ferdinand.

The defection of Bulgaria causes a panic in Germany, and Vienna is reported to be dismayed by the new situation.

October 1.—A dispatch from Paris states that the French look for the deliverance of Roumania as one result of Bulgaria's collapse.

THE WAR IN THE AIR

September 25.—British airplanes dropt bombs on Frankfurt and shot down five enemy machines. Airdromes at Bühl and Kaiserslautern, between Metz and Mannheim, were also bombed and

If People Only Knew

"If everyone realized, as we doctors and nurses do, what a menace to health ordinary, poison-filled, germ-harboring wall coverings are, homes would have as sanitary walls as our hospitals now have."

What wall finish do hospitals use? Almost invariably a flat wall paint such as

Lucas Lu-Co-Flat

The Beautiful, Sanitary, Washable Wall Finish

It is clean, wholesome, health-protecting. Free from poisonous ingredients and lodging places for germs. Can be kept clean with soap and water.

Send for Interior Decoration Book

Lucas Lu-Co-Flat is as beautiful as it is sanitary. Its unusual decorative possibilities are illustrated in our book of complete decorative schemes. Contains suggestions for walls, woodwork, floors, curtains, rugs and furniture. A valuable help in planning artistic rooms. Send for this book.

Our decorative department will be glad to advise you without charge on any problems of home decoration.

John Lucas & Co., Inc.
Office 214, Philadelphia, Pa.

Used in over 4,000 plants

Use the OIL paint with a glossy, tile-like, white finish. Made by a special process over which we have exclusive control. Contains no varnish. Its firm, yet elastic surface will not crack or scale, for it expands and contracts with temperature changes, and withstands vibrations.

RICE'S MILL WHITE (Barreled Sunlight)

The original "Mill White." It increases your daylight 19% to 36% by actual tests. Reflects every ray of natural and artificial light. Reduces your lighting bills. Resists dirt. Is sanitary and can be washed clean when other paints need re-coating. Remains white long after other paints have turned yellow under the same conditions. This we guarantee.

For all interior use in shops, factories, stores, restaurants, etc.

Sold in barrels, also in cans. Made in Gloss, Egg Shell and Flat.

Write for free booklet, "More Light."

U. S. GUTTA PERCHA PAINT CO.
29 Dudley Street, Providence, R. I.

two enemy machines destroyed. Eight British machines are missing.

Paris reports that copies of orders found on prisoners show that the Austrians have given instructions for the hanging of captive aviators known to have distributed proclamations within their lines.

September 27.—Geneva reports that the Kaiser and his staff took refuge in a cellar when British airmen raided Mannheim. Several bombs fell in the vicinity of their hiding-place.

September 28.—Reports received by the War Department at Washington show that fifty enemy airplanes and seven balloons were brought down by American aviators with the British forces in the period from July 1 to August 25.

Low-flying airplanes have been used by the Americans northwest of Verdun to cover the forward movement of the infantry by laying down what amounted to a barrage. Often the aviators flew as low as 150 feet.

September 29.—General Haig reports that the air force cooperated in every phase of the operations on Saturday. Enemy troops were bombed and machine-gunned from extremely low heights and heavy casualties were inflicted. Twenty-two hostile machines were destroyed and three were driven out of control. Twenty-four British machines are missing.

It is reported that General Pershing's airmen are now all American. In three days, despite the prevailing bad weather, they downed sixty German airplanes and twelve observation-balloons.

September 30.—General Haig reports that fifteen hostile balloons were destroyed, twenty-six planes brought down, and nine others driven out of control. Co-operating with the Navy, the air force bombed enemy destroyers and raided Zeebrugge, Ostend, and Bruges. Twelve hostile machines were destroyed and fifteen driven out of control. Ten British machines are missing.

IN PALESTINE

September 25.—London announces that more than 45,000 prisoners and 265 guns have been taken by the British in Palestine. The British are in a favorable position for cutting off the retreating Turks.

A dispatch from Constantinople states that the retreat of the Turks is being successfully carried out in conformity with War Office plans.

September 26.—London reports that the British are extending their occupation about the Sea of Galilee and that the Fourth Turkish Army is virtually surrounded.

September 28.—In the region between Jerusalem and the Sea of Galilee, General Allenby has taken 5,000 more Turkish prisoners and captured 350 guns. Up to date 50,000 prisoners have been taken by the British.

September 29.—A Turkish official communication admits that the British are continuing to advance on the Palestine front, and that the other fronts are quiet.

September 30.—London reports that a Turkish force of 10,000 men has surrendered to the British in Palestine.

October 1.—British forces have surrounded the City of Damascus and French mounted troops are speeding to capture Beirut.

THE CENTRAL POWERS

September 25.—Admiral von Hintze assures the Main Committee of the Reichstag that, despite repeated re-

"Wooli-Kid"
All American Pure Wool, Warmest Dress Glove

Just Arrived! Stylish! Novel! Warm! Patriotic!

"Wooli-Kid"

THIS introduces the Grinnell "WOOLI-KID" Glove, the new All-American glove for dress and street wear. The "WOOLI-KID" comes in response to the need for conservation of leather, as a serious shortage exists.

It is a dressy, classy, all-wool glove, combining warmth, comfort, economy and quality.

The "WOOLI-KID" fits to perfection and looks as fine as it feels.

Full outside seams, one-button tops, embroidered backs—in Gray, Khaki or Winterfield shades.

The "WOOLI-KID" saves leather. Wear a pair and do your share.

"Glove Styles" Free Write for a complimentary copy of our book—"Glove Styles"—showing all styles of Grinnell Gloves—for army, navy, aviation and civilians. If your dealer cannot supply you with the "WOOLI-KID," send us his name, and size of glove you wear, and we will send a pair for your inspection.

MENTHOL COUGH DROPS

"X" Liquid will repair over 24,000 Radiator Leaks in 10 minutes

CAN you imagine 24,000 leaks in one radiator? It is entirely possible. The average radiator has more than 24,000 corners—each one liable to leak.

Suppose all the corners *did* leak at once—would you throw the radiator away and buy a new one? Or would you use "X" Liquid to repair every single leak and make the radiator as good as new—without taking it down?

What would a *thrifty* car owner do?

MOTORISTS often ask, "How can I repair my leaky radiator better and cheaper than by soldering it—and without choking the cooling system with cements, flax-seed meals or other 'dopes'?"

Investigation proves that "X" Liquid is the *only scientific way* to repair leaks without solder or welding—and without injury to the cooling system.

"X" is simply poured into the radiator. It mixes with the water—circulates freely throughout the cooling system—and finds every leak or crack. Then it flows through and turns to a solid *right in the hole*.

Whether you have one leak or a hundred—whether these leaks are in the radiator, the pump, around the motor head gaskets, the connections or elsewhere—"X" Liquid makes a *permanent repair*.

The surest way to *prevent future leaks* from bothering you is to keep "X" Liquid constantly in the water.

"X" Prevents Rust and Scale

The easiest and most scientific method of keeping the cooling system free from Rust and Scale is to use "X" Liquid. The same "X" that repairs and prevents leaks also *loosens Rust and Scale*. And with "X" in the water no new Rust or Scale can form.

The result is a **RUSTPROOF, SCALE-PROOF** cooling system—a cooler, better-working engine—a saving of oil and gasoline—plus a reduction in upkeep costs.

"X" Liquid is guaranteed to make good—or your money back.

Large Size, \$1.50

does \$25 in repair work

Ford Size, 75c

jection of peace offers from the Central Powers, Germany maintains her readiness for peace.

News gathered on the German frontiers, cables an American correspondent, shows increasing restlessness, discontent, and rebelliousness, not only among the civil population, but also among the troops. General Ludendorff admits the impaired morale of the fighting men.

September 27.—Captain von Mantey, of the German Admiralty, tells the German Navy League at Dortmund that "we are losing about five submarines and 125 officers and men monthly."

September 28.—Rumors persist in Vienna political circles, states a dispatch from Paris, that Foreign Minister Burian will soon send a second peace note to the belligerents.

The Berlin *Vorwärts* declares that the hour has arrived to speak plainly, and that the question is no longer one of conquest, but of attaining peace in an orderly way and without unbearable burdens.

Amsterdam reports that the Bulgarian crisis produced a panic on the Berlin Stock Exchange, several stocks dropping 30 points and over. Roumania oil stocks dropt over 60 points.

A Berlin dispatch claims that west of Cambrai, in Champagne, and west of the Meuse heavy Allied attacks failed.

September 29.—Berlin admits retirement on a seventeen-mile front before Cambrai and the loss of some positions, including artillery lines, between Dixmude and Wulverghem. The dispatch adds that American attacks gained local successes.

The *Lokal Anzeiger*, of Berlin, in discussing the Bulgarian situation, declares that "Germany's most serious hour seems to have struck."

September 30.—Amsterdam reports that Chancellor von Hertling, Foreign Secretary von Hintze, and Dr. von Payer, Imperial Vice-Chancellor, have tendered their resignations to the Kaiser, who has accepted them.

Amsterdam reports that a proposal that the presidents and vice-presidents of the parliaments of belligerent and neutral states be invited to meet for an unbinding discussion of the basis of peace has been introduced in the Lower House of the Austrian Parliament.

According to advices received at Basel, Switzerland, cholera has broken out in Berlin.

October 1.—A dispatch from Amsterdam quotes the German Governor of Belgium as stating that plans are ready for the early evacuation of Belgium, should it become necessary.

Berlin reports that enemy attacks in Flanders, Champagne, and on both sides of Cambrai have been repulsed.

AFFAIRS IN RUSSIA

September 24.—Archangel reports that American troops have captured several villages in a combined advance up the Dvina River.

September 26.—Amsterdam circulates a newspaper report that the Bolshevik Government has issued a decree rescinding its reign of terror.

On arriving at Stockholm from Moscow, United States Consul Poole stated that the British Acting Consul General and other Entente officials and civilians are imprisoned in the Krendin.

September 27.—Martial law has been declared at Vladivostok. The measure is directed against enemy agents, traffickers in arms, and any one attempting interference with the military operations, and is expected to keep the Bolsheviks in check.

This Rim-Klinch Patch Beats Blowout Troubles

There are times when a man would gladly give \$50 to get a Miller Rim-Klinch Patch—that is when he's miles from nowhere, or when service stations are closed as they are so much of the time nowadays. Anyone can insert this patch easily and quickly between the tube and casing when a blowout occurs. It enables a car to continue its trip without further injury to casing, tube or rim.

So take precaution today against being stranded by blowouts by putting the Miller Rim-Klinch Patch in your tool kit.

The wide fabric wings on the sides of Miller Rim-Klinch are firmly held between the rim and tire. The head holds the patch securely. And will answer in almost any emergency.

It is also a good idea to carry the Miller Hook-Held Tire Boot to use with the Rim-Klinch Patch in case of large blowouts or cuts in your tire casings.

Repair Guide Free

"Guide to More Tire Mileage" is the name of a brand new home repair guide that we have just issued, containing many illustrations that show you the cause of all tire and tube troubles and what to do. Send your address for one of these free books while the edition lasts.

And don't forget to ask your dealer for Miller Tire Accessories before trouble comes.

The Miller Rubber Company
Dept. A-59 Akron, Ohio

When having Tires or Tubes repaired by others request the use of Miller Repair Materials and you are sure of a longer lasting job.

Earn \$100.00 Weekly

High class educated men and women wanted to sell the famous New Standard Dictionary, the latest and most complete dictionary published. Now being advertised everywhere. Liberal commissions. Energetic representatives can earn \$100 weekly and upward. Address, with references, Mr. Hadley, PUSK & WAGNALLS COMPANY, 354 Fourth Ave., New York City.

IT delights me to get together a "Jury" of wiping waste "fans"—the man who pays for it and the purchasing expert and the mechanic. I ask them to judge a waste by the work it does to the dollar's worth, the bale, the handful.

To all of them I say that soft, absorbent, refined Royal is guaranteed for uniform quality, even weight, 6% "tare" (wrappings); that the largest and most progressive waste producers in the country stand solid behind the guarantee.

"Producing the Fittest in Waste" tells entertainingly how Royal brought standardization out of mystery. Get it—also ask your jobber or us for the Royal Sampling Catalogue of the 12 standardized Royal grades.

LOOK FOR THE BRAND ON EACH STEEL BAND

September 28.—A London dispatch states that Japanese troops have effected a junction at Rufulov, 306 miles northwest of Blagovyeshensk.

September 29.—A writer in the Berlin *Tageblatt* says he learns from authentic sources that if the Bolsheviks are compelled to leave Moscow they will attempt to destroy the city and slaughter the bourgeoisie.

FOREIGN

September 25.—Ottawa announces that the net losses in the Overseas Military Forces of Canada up to August 1 were 115,000.

The engine-drivers' strike in south Wales collapses when troops arrive to maintain essential war-service.

The monthly statement of the British Admiralty shows total sinkings by submarines during August were 327,676 gross tonnage, of which 176,401 was British and 151,275 Allied and neutral.

September 26.—The Finance Minister of France states that of the \$23,200,000,000 raised by the French Government since the beginning of 1915, \$3,600,000,000 came from normal sources and \$19,600,000,000 from loans. Of the total amount of loans \$14,600,000,000 was raised by the French people themselves.

The American-German war-prisoner's conference begins at Bern under the presidency of Paul Dimechert, Swiss minister plenipotentiary.

Washington is informed that the Brazilian minister at Vienna has closed his legation and departed for Berlin and that the Austrian minister at Rio de Janeiro will return to his country soon.

Amsterdam reports that meatless weeks are to continue in Germany through November, December, and January.

September 30.—London reports that 30,000 Czechs, Poles, and Silesians gathered near Troppau, Austria, and declared in favor of the foundation of a Czecho-Slovak state and Czecho-Polish solidarity.

DOMESTIC

September 25.—Federal officials report that Spanish influenza has appeared on the Pacific coast and that it continues to spread in army-camps.

The New York Department of Health announces that the disease is really an epidemic of pneumonia.

Citizens of Magyar origin in New York organize the Committee for Magyar democracy. They charge that the Hungarian-American Loyalty League was working against the Czecho-Slovak movement.

At the National Exposition of Chemical Industries in New York the establishment of a national research laboratory for chemists is urged.

September 27.—The War Department Committee on Education urges colleges under contract with the Government to conduct military-training courses to refuse young men who enter those courses permission to join secret fraternities because they should have no time for activities outside their regular college work.

President Wilson opens the Fourth Liberty Loan campaign with a speech in the Metropolitan Opera-house in New York in which he outlines a plan for a league of nations to be formed at the peace conference.

September 28.—Pittsburg decides upon an eight-hour day for all steel-mills in the district.

Washington reports Fourth Liberty Bond sales large all over the country.

cities and towns giving their quotas before noon of the first day.

Congress passes a resolution appropriating \$1,000,000 to fight influenza.

September 29.—Eighty-five thousand cases of influenza are reported in Massachusetts. Health Commissioner Copeland thinks the epidemic is under control in New York.

A dispatch from Washington states that the Administration does not favor the proposition exempting army, navy, and marine officers serving abroad from the payment of income tax.

September 30.—Fuel Administrator Garfield launches a drive for coal-production to continue until April 1. He wants 12,234,000 tons of bituminous and 2,030,000 of anthracite a week.

President Wilson delivers an address to the Senate urging the passage of the Woman Suffrage Amendment.

Replying to the German threat of reprisal against American soldiers found using sawed-off repeating shotguns, Secretary Lansing notifies Germany that the United States will retaliate to protect our men. He denies that the weapon violates the Hague Convention and says its use will not be abandoned by the American Army.

October 1.—The United States Senate fails to ratify the Susan B. Anthony Woman Suffrage Amendment to the Constitution. The vote is 53 for to 31 against, a two-thirds vote being required.

During the month of August, 35,447 machine guns, 263,989 rifles, and 337,732,000 cartridges were made for the United States Army.

TWO TERRIBLE JOKES OF THE FROLIC SOME "DUD"

A "DUD," if you don't know it, is an enemy shell that, through some defect in the fuse or the bursting-charge, fails to explode. Instead of scattering death and destruction, it harms only the object with which it comes in contact.

A captain of artillery tells, in a recent *Y. M. C. A. Bulletin*, of two experiences that his men have had with the frolicsome "dud."

"Not long ago," said the captain, inhaling a puff from his first cigar in several days, "one of my men heard a 'whiz-bang' coming. He darted head first into a dugout like a jack-rabbit. At the same moment, the shell entered and lodged right alongside him in the soft earth. For a fraction of a second the soldier thought that he was going to be an unusually complete casualty, but the shell just stayed there, rested quietly and didn't explode. That soldier is now firmly convinced that he was born to be hanged.

"Another time, one of the men in the battery was in a deep dugout when one of the big German shells came through the roof and lodged right at his feet. It was a huge shell and it looked as big around as a washtub to him. He fainted dead away when he saw it, for in a flash he figured that it had one of those delayed action-fuses and was all ready to blow up. When he came to, and they told him that he had been scared into insensibility by a 'dud,' he was the maddest man you ever saw. He seemed to take it as a personal insult that the shell hadn't exploded and scattered him

THE OLDEST OF ALL LIBERTY BONDS

ALTHO called by other names, we have had issues of Liberty bonds in this country on several occasions for 129 years—notably in the first years of the Republic and in the Civil War. The first was floated in 1789, the year when the Government was established with Washington's inauguration. During the first six years after the Revolution ended, the American States were in a condition bordering on anarchy, with no national Government and feeble State governments. It was what John Fiske in one of the best of

promptly and unanimously granted, the money to be advanced in five instalments of \$20,000 each and ten of \$10,000 each, at 6%. On the following day Hamilton sent to the bank the first bond ever issued by the United States Treasury—a bond of \$20,000—on receipt of which the money was paid over, so that the United States Treasury could show \$20,000 cash on hand. In *The Investors' Magazine*, where these facts were recently brought to light, we are further told that the bond then issued is still carefully preserved by the bank which bought it. Quite unlike the now familiar Liberty Bonds of 1917 and 1918, it was executed with an ordinary quill

his books called "The Critical Period of American History." When the Constitution was finally ratified and Washington elected the first President, the Government as we know it was formed. That was in the spring of 1789. Alexander Hamilton was Secretary of the Treasury, and on him devolved the duty of raising funds for the infant Government. One of the fundamentals in his operations was the great task of funding the war-debts of all the States and inducing the National Government to assume them. Conditions being pressing, Hamilton, in raising the necessary money, at first did not wait even for the approval of Congress, but went to the Bank of New York, which he had helped to found in 1784—the second bank in the United States and the first in New York City—to raise the first necessary money. At a meeting of the Board of Directors the new Secretary of the Treasury asked for a loan of \$200,000. It was

pen, such as was in use in those times, and signed in ink by the Secretary. With its seal somewhat yellow with age, the bond is still in an excellent state of preservation. Above is a reproduction of it.

THE THRIFT THAT SAVINGS-BANK DEPOSITS SHOW

While the deposits in New York savings-banks do not corroborate, as they have been wont to do, the substantial evidences that abound in regard to wide-spread employment and record wages, "war-times," says a writer in *Bradstreet's*, "have divested many statistical barometers of their value," and too much stress, he says, should not be put upon this fact now. Altho for the first time in history the resources of these savings-banks failed to reflect an increase over the preceding year, this probably was "ascribable to charging off for depreciation in securities held." Their resources on July 1, 1918, amounted \$2,180,977,964.

P. A. puts such smiles in smokes!

Night-and-day *happygoods*, you'll call Prince Albert! For, it rips down the barrier between you and a jimmy pipe and shoots in a wireless to your smokeapparatus that the coast's clear to bang away like a regular!

You get what you're keen for—*make-good-on-the-spot-quality*—when you tuck the tidy red tin in your jeans for active service! For, Prince Albert's old family name is Quality—and that's what P. A. slips you every time you've a hankering like you must have some of that little old smoking, *for yours!*

Your anticipation of a pipe jammed joy'usly brimful of Prince Albert will speed such pep into your smoke-

spot you'll have some time getting the business end of a match fussed quick enough to meet demands!

And, to get-set with such smoke yearnings, *and to know* that Prince Albert is as free from bite as a kid kitten is about enough to make a man yearn for a month's vacation every third week! For, P. A. is made by a patented process that cuts out bite and parch. It won't ruffle the touchiest tongue you ever heard tell of!

You buy Prince Albert in tappy red bags, tidy red tins, handsome pound and half pound tin humidors—and in that clever, practical pound crystal-glass humider that keeps the tobacco in such perfect condition.

PRINCE ALBERT

the national joy smoke

is *your* smoke at both ends and the middle. It's so enticing in flavor and fragrance and such a pal every hour of the twenty-four that it'll win your favor quicker than you can bat an eye! For, P. A.'s made to do a big joyjob for every man! And, you can bet-a-house *on that!*

Are You Prolonging or Shortening Your Life?

THIS is a supremely important question for every one of us, but how many can answer it intelligently? You, for instance, may be unconsciously shortening your days at this moment. There is a new knowledge, the product of modern scientific research, by following which you can prolong your life. It is clearly and practically set forth in "How to Live," by Professor Irving Fisher and Eugene Lyman Fisk, M.D., of the Life Extension Institute, with a Foreword by William Howard Taft. It is the best and cheapest life insurance policy ever issued. Invest in it to-day. It will cost you \$1.00; by mail, \$1.12.

Do You Know the Effect of Alcohol and Tobacco on Your System?

Do you realize what effective measures the excessive smoker or drinker is taking to cut down his period of usefulness, how he lowers his vitality and undermines his powers of resisting disease? Have you read the life insurance statistics on the subject? They are illuminating. This book gives you the cold facts, makes clear the probable physical cost of indulgence, and leaves you to decide for yourself.

Are You Aware What In- telligent Eating and Drink- ing Can Do to Prolong Life?

Have you ever studied the nutrition problem from this point of view? Do you know which foods are wholesome and which harmful? Are you informed as to the quantity and the variety your system needs? This book will show you how to get real vital value out of every dollar you spend on food and how to avoid poisoning your system by improper feeding.

Do You Understand the Re- lation of Right Breathing and Right Exercise to Health?

Have you ever learned to breathe properly, so as to energize and refresh your whole body? Do you take sufficient exercise of the sort that meets your particular requirements? Are you helping your body to eliminate waste products? In this book you will find recommendations that will make you over physically, if properly followed. It will go far towards making and keeping you young.

FUNK & WAGNALLS COMPANY, 354-360 Fourth Avenue, New York

decrease of \$3,039,050 from the corresponding date in 1917, but the volume of deposits, "wholly as a result of crediting dividends," expanded to \$1,991,720,349, thus indicating a slight increase, only \$251,203, over July 1, 1917. The most noteworthy feature of the statistics was the remarkably heavy withdrawals, \$521,298,363 having been taken out of the savings-banks in the year ending on June 30, 1918. This sum was an advance of \$55,448,000, or 11 per cent., over 1917, in which year withdrawals also were of large proportions. Withdrawals last year, in fact, exceeded those of any previous fiscal year. At the same time, the sum deposited, viz., \$448,768,201, fell just about as much as withdrawals increased, deposits in 1918 having decreased approximately \$55,000,000, or 10.9 per cent., from 1917. Barring the record year 1917, deposits, however, exceeded those of any other twelve months. "As we have been accustomed to associate savings-bank deposits with prosperity," the first impressions created by these figures seem to indicate that they suggest other impressions than those of prosperity. The writer observes that in seeking explanations for the heavy withdrawals "one does not have to go far afield," adding:

"First of all, subscriptions to the Liberty Loans concededly caused depositors to withdraw large sums from the banks, and, moreover, the draft took off many thrifty young men who undoubtedly withdrew some, if not all, of their savings. While the sum deposited last year fell below that for 1917, the showing is not altogether unfavorable, for here again subscriptions to Liberty Loans played an important rôle in keeping down deposits, and, in addition, the sales of war-savings stamps exerted a similar influence. Incidentally, the Postal Savings Department of the Government directly competes for deposits with the savings-banks, probably attracting foreigners in larger numbers, and, needless to say, the restricted movement of immigration has cut off many potential savers."

"In short, while the war continues it is quite futile to expect savings-bank deposits to exhibit any noteworthy increment. But the volume of deposits, especially if viewed in the light of Liberty Loan and thrift-stamp campaigns and pledged subscriptions to the various war-working societies, can not be deemed otherwise than favorable. Indeed, the data do not show that the high cost of living has insured to the disadvantage of the provident, high wages, no doubt, having provided nest eggs in the form of money savings. As a matter of fact, heavy subscriptions to the Liberty Loans, sales of thrift stamps, building and loan savings, and the deposits made in the banks, all stamp the American people as pretty thrifty. No longer can Americans be charged with being improvident and extravagant. In truth, as a class we can adapt ourselves to the most exacting conditions."

Family Troubles.—The tramp came to the back door and unfolded a long tale of woe. His wife and six little children had, it appeared, fallen victims to a *Gotha* bomb, and the shock had so unnerved him, etc.

The woman of the house heard him patiently, but she fixt him all the time with a cold, searching eye.

"My man," she said, when at last she could get an innings, "are you telling me the truth? I have a very good memory for faces, and if I am not mistaken you called here some years ago and told me you had lost your wife and six children in the sinking of the *Titanic*."

"Yes, marm, that was me," agreed the tramp unblushingly. "I'm the ~~most~~ unfortunate man ever born. Never could keep a family anyhow."—*Tit-Bits*.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current use of words, the Funk & Wagnall New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"F. W. St., Pawtucket, R. I.—Kindly give me the ages of the longest-lived people of (1) Bible times, (2) of our times, and (3) of people of the earliest times?"

(1) According to Genesis v, 21, Methuselah lived 969 years. Many theories have been advanced as regards the exact meaning of the word *year* in such cases, the general opinion being that a much shorter period than our year is denoted, but we have no proof of this. (2) In modern times, Thomas Parr, of England, lived from 1483-1635 A.D., or 152 years, and there are other instances, more or less authenticated, of similar ages. Recently attention has been called to the number of centenarians in Bulgaria and neighboring territories (which Metchnikoff suggested was due to their use of sour milk), but it is difficult to prove the ages, tho about 140 has been given as one. (3) The length of human life in the earliest times is also a matter of controversy, but most authorities agree that at least the average age is increasing with civilization.

"B. M. V., New York, N. Y.—What do the words *oppidan* and *tug* mean in English public-school life?"

An *oppidan* at Eton College, England, is a student not on the foundation who boards in town. He is distinguished from a *tug* (see below). The word came into English through the old French *oppidain*, from the Latin *oppidanus*, from *oppidum*, a walled town. A *tug* is a scholar on the King's Foundation; he is a collegier. The *tuggery* is the examination that a student must pass to become a King's scholar. It also designates the King's scholars as a group. The word is said to be derived from a corruption of the Latin *toga*, the gown worn by King's scholars who were sometimes referred to as the *togati*.

"UNKNOWN CORRESPONDENT.—The maxim 'Tace is Latin for candle' is an old phrase used humorously in requesting or promising silence. It is equivalent of 'Mum's the word,' *tace* being Latin for 'Be silent.'

"A. P. C., New York, N. Y.—(1) What is the meaning and history of the word *dictionary*? (2) Could you tell me the definition of *acromegaly*?"

(1) The word *dictionary* is defined as "A book containing the words of any language, sometimes together with their equivalents in another language, or the words employed in any science or art, or special branch of knowledge, arranged alphabetically, and usually also with the spelling, pronunciation, etymology, and definitions of the words, together with other explanatory or illustrative features." The word is derived from the late Latin *dictionarium*, which is itself derived from the Latin *dictio*, word, from *dicere*, to say. The word *dictionarius* was used about 1225 A. D. as the title of a book arranged somewhat like a dictionary. The first English dictionary was issued in 1552. (2) Perhaps the term *acromegaly* is meant. This is defined as "A disorder characterized by an enlargement of the extremities, thorax, and face." The term is used in pathology.

"E. S., New Rochelle, N. Y.—Please give me the meaning of the word *syndicalism*."

Syndicalism is defined as: "(1) An economic movement originating in France, but now widespread, which aims at the federation of workers in all trades into an effective unity for the purpose of enforcing the demands of labor by means of sympathetic strikes. (2) The principle underlying this movement."

"T. L., Chicago, Ill.—Which is the correct preposition to use following the word *gratified* in 'We were highly gratified by, with, or for your action.'"

At is correct—"We were highly gratified at your action."

"O. J. A., Camp Fort Bliss, Tex.—'From what poem is the following taken—'Had we never met, then we'd have never parted'?"

The line you give is from Robert Burns's "A well to Nancy."

Six of Many Office Uses

- 1 3-in-One cleans and polishes desks, filing cabinets, all office furniture.
- 2 3-in-One lubricates typewriters just right. Saves repair-bills. Makes old machines run like new. Never gums or collects dirt.
- 3 3-in-One removes worn typewriter ribbons. Better than re-inking. Apply with toothbrush. Allow oil to permeate ribbon.
- 4 3-in-One cleans the keys. Prevents rust or tarnish on the metal surfaces.
- 5 3-in-One stops squeaking of revolving chairs and stools.
- 6 3-in-One is the correct lubricant for adding machines and all calculating machines. Also polishes the case and prevents tarnish.

3-in-One The High Quality Oil for Offices and Banks

costs little—saves its price many times over. Keeps all delicate office mechanisms in smooth working order. Try it on typewriters, adding, calculating and billing machines, numbering and dating stamps, check-protecting devices. Best for time locks of vaults. Penetrates instantly to the bottom of the deepest bearing, lubricates perfectly, wears long.

3-in-One transforms old office furniture. Works out the grime of time—causes superficial scratches to disappear. No oily residue remains to show fingermarks and catch dust. 3-in-One polishes and prevents tarnish on the bright nickel and other metal parts of bank safes and vaults.

3-in-One Oil is sold at all good stores in 50c, 25c and 15c bottles; also in 25c Handy Oil Cans.

FREE The 3-in-One Dictionary of Uses describes an infinite variety of needs for this pure, high-grade oil. On request we will gladly send you a copy—and a liberal sample of 3-in-One Oil—both free.

Three-in-One Oil Co., 165 KAM. Broadway, New York

Saved \$9,480

J. R. Blanchard & Son, Grand Meadow, Minnesota, saved last year, and are saving this year, \$9,480.00 by operating Acme Trucks.

Acme Truck cost is 4½¢ a mile for Mr. Blanchard—horses cost 18¢ per mile. The length of haul is five miles and Acme makes ten trips a day—teams make two trips a day each. Acme replaced nine men and twenty-four horses and saved 75% of the cost of his hauling.

This, too, is man-power conservation—which justifies the Acme truck as a vital national essential.

There is a significant reason for this wonderful saving

of 75%, and the reason is that the Acme is the truck of Proved Units.

You can know, *in advance*, that the powerful Acme truck will yield service far beyond the accepted standard. Acme service is in no way uncertain—in no way doubt-clouded. It is *certified* to you by the Proved Units of Acme-construction.

The Acme truck is built in four models—one ton; two ton; three and one-half ton, and four ton. Each model oversized in capacity and dimensions. Study the list of Acme Proved Units, to know why Acme service is *certified*.

Write for the Acme truck book "Pointers to Profits."

TOPICS - OF - THE - DAY

THE PRESIDENT'S REPLY AND THE PEOPLE'S REPLY

SINCE WE ARE FIGHTING FOR DEMOCRACY and to end secret diplomacy, it was perhaps fitting that the German peace bid address to the head of the American Government had such a clear, direct, and categorical answer from the American people themselves, for while President Wilson was carefully preparing a counter-offensive to meet the Prussian peace offensive, the spokesmen for the American people in Congress, on the street, and in the newspapers, were telling what they thought of Prince Maximilian's request for an armistice. They were telling it, various editors remark, with a unanimity which has never been equaled in this or in any other warring country, and the answer of the American people came in phrases like the *New York Tribune's*: "We demand the unconditional surrender of Germany, and we prefer to receive it on German soil."

Our people were clearly ready for a curt rejection of the German overtures such as the earlier Austrian note met with at the White House. They were naturally surprised when, expecting to be thrilled by a battle-cry, they found themselves called upon calmly to appraise a cautious and clever diplomatic maneuver. In Washington, according to one correspondent, twenty-four hours' study of President Wilson's note pretty well did away with the original disappointment of those who had looked for a flat refusal to entertain any proposition emanating from Germany. Everybody, says another writer, expressed disappointment on first reading; then, after hours of thought, two camps formed: those who considered it a splendid piece of strategy and the equivalent of a demand for surrender, and those who held it "a weak invitation to a lot of peace talk" which might even impair the morale of the Allied armies. Editorial comment naturally split along similar lines. Germany's first announcement of her willingness to meet the President's conditions found opinion here likewise divided. Those who dreaded any "conversation with the Hun" agreed with the *Memphis Commercial-Appeal* that "a most dangerous situation for the Allies" had been brought about, and shared its fear that "the arch-criminal among nations may escape with its hide." Strong supporters of the President's diplomatic move, on the other hand, remained confident that if the German answer were not the "unconditional surrender" Secretary McAdoo and others understood it to be, Mr. Wilson could be depended upon to use it so as to bring about either such a surrender or a complete exposure of German double-dealing.

Since further discussion of the President's note would not be intelligible without reference to the actual words of the communications with Berlin, it may be well to quote the documents at this point. On October 6 the German Chancellor dispatched this note through the Swiss Government to President Wilson:

"The German Government requests the President of the United States to take in hand the restoration of peace, acquaint all the belligerent states of this request, and invite them to send plenipotentiaries for the purpose of opening negotiations.

"It accepts the program set forth by the President of the United States in his message to Congress on January 8, and in his later pronouncements, especially his speech of September 27, as a basis for peace negotiations.

"With a view to avoiding further bloodshed, the German Government requests the immediate conclusion of an armistice on land and water and in the air."

On the 8th, Secretary of State Lansing sent this note to Germany through the Swiss legation at Washington:

"Before making reply to the request of the Imperial German Government, and in order that that reply shall be as candid and straightforward as the momentous interests involved require, the President of the United States deems it necessary to assure himself of the exact meaning of the note of the Imperial Chancellor. Does the Imperial Chancellor mean that the Imperial German Government accepts the terms laid down by the President in his address to the Congress of the United States on the 8th of January last and in subsequent addresses, and that its object in entering into discussions would be only to agree upon the practical details of their application?

"The President feels bound to say with regard to the suggestion of an armistice that he would not feel at liberty to propose a cessation of arms to the governments with which the Government of the United States is associated against the Central Powers so long as the armies of those Powers are upon their soil. The good faith of any discussion would manifestly depend upon the consent of the Central Powers immediately to withdraw their forces everywhere from invaded territory. The President also feels that he is justified in asking whether the Imperial Chancellor is speaking merely for the constituted authorities of the Empire who have so far conducted the war. He deems the answer to these questions vital from every point of view."

On October 12, Foreign Secretary Solf sent out from Berlin a note accepting the peace "terms" laid down by President Wilson on January 8 and subsequently, and declaring the German Government's readiness to agree upon the practical details of their application and its belief that the Allies also take the position taken by President Wilson in his addresses. The German Government in this note declared itself ready "for the purpose of bringing about an armistice" to "comply with the propositions of the President in regard to evacuation," and suggested "a mixed Commission" to make the necessary arrangements. Finally, it was asserted that the Chancellor, supported by "the great majority of the Reichstag," spoke "in the name of the German Government and of the German people."

On the publication of the President's note of inquiry, Senator Lodge, Republican leader in the Upper House, declared himself "keenly disappointed," as he had felt very strongly "that there should be no discussion with the German Government until they are ready and compelled to accept the terms we think it right to impose." Colonel Roosevelt believes that any "effort to fight and to negotiate at the same time is apt to damage the fighting end of the combination." Ex-President Taft asks in the *Philadelphia Public Ledger*:

"Is it not dangerous to invite acceptance of the points made in the address of January 8 in the changes which have taken

SQUEALING.

—Ireland in the *Columbus Dispatch*.

THE KAISER WOULD LIKE TO FIRE THE COOK.

"You fired and you want to fire me, hey? Nothin' doin'."

—Morris for the George Matthew Adams Service.

A ROYAL MIXTURE OF YELL AND YELLOW.

place in the situation since that address? Would some of the fourteen points not need amendment? Moreover, are not many of them so phrased that a formal acceptance of them would leave many issues open for dispute and easily lead to a renewal of hostilities?

"If the achievements of the world's proper purpose in this war demands, as it does, an unconditional surrender of a tricky, cruel, and untrustworthy foe, why not say so now and be as frank in our language as we ask him to be in his?"

Mr. Gifford Pinchot points out that "discussion of peace weakens the attack far more than the defense—weakens us far more than our enemies." The *Chicago Evening Post* considers the note "certainly a source of danger for the future." Now, it thinks, if the rulers of Germany "can talk and send notes, they will have a chance to string their people along till winter comes and compels the dying away of Foch's merciless offensive." This note, the *Boston Transcript* thinks, "falls painfully short" of popular expectation, and its "tone and terms revive the ugly memories of the sterile *Lusitania* series." Nor are the critics all to be numbered among the President's political opponents. The Democratic *New Orleans Times-Picayune* fears "that the note as it stands will impress millions on both sides of the ocean as a modification, even in some sense a retreat, from the fine and straightforward position which he took in his address of September 28." The *Memphis Commercial Appeal* (Dem.) in Tennessee also condemns the idea of "negotiations with an outlaw and a murderer except on an 'unconditional-surrender' basis." In the Far West we find the *Salt Lake City Herald* (Ind.) regretting "that the President's note to Germany was not more decisive," and the *Denver Rocky Mountain News* (Rep.) is very much afraid that President Wilson's answer is but the beginning "of diplomatic correspondence between Washington and Berlin regarding construction of phrases that may give the enemy time to mend the break along the fronts."

President Wilson's diplomacy seems to the *New York Globe* "nimble and adroit, worthy of Talleyrand in his best days," because his note "succinctly puts queries whose answer will either compel a statement of German terms or force an abandonment of the assertion that Germany is threatened with extinc-

tion." But *The Globe* is nevertheless convinced that great danger lurks in playing the game this way. It says:

"We are on the eve of complete victory. If the President's note is interpreted by our allies as meaning that the President, having said no negotiation with the present Government of Germany is possible, is now negotiating with it, there will be great dissatisfaction among those whose help is necessary to us if Germany is no longer to be a menace to us and to the world. Our own efforts will inevitably relax if the idea gets headway that a settlement is in an advanced stage. So far as Germany is concerned it will seem to many that she will be stimulated to say to herself: 'Behold, we need but to hold out a little longer to escape humiliation.'

"If Prince Maximilian says 'Yes' to the President's queries, and there is some sort of rift between this country and our allies, it is possible Germany, and cracking Turkey and Austria-Hungary, with new hope in their hearts, will be stimulated to new efforts, thus leading to a prolongation of the war. The proviso that evacuation must precede an armistice is valueless. Germany and Austria-Hungary are already evacuating. To allow them to withdraw their armies and stores from danger and to establish a new line of defense would, in the opinion of most experts, be a military gift to Germany."

While many would have preferred a message like the answer to the Austrian peace note, the *San Francisco Chronicle* (Rep.) holds that the note of the 8th was "even more crushing in its rebuke, for under cover of diplomatic language it contains a rapier thrust at the insolence of German Imperialism." Never before, it adds, was the word "merely" intended to mean so much—"merely the German Government, merely the Kaiser, merely those things for which no honest, sensible people have a moment's respect or trust." Another Western daily, the *Portland Oregonian* (Rep.), calls the note an "adroit" counter-offensive:

"Germany seeks to set the Allied peoples talking and to develop differences among them which will strengthen the pacifists. The President seeks to set the German people talking with the same result."

The President's note seems to the *Los Angeles Times* (Rep.) to be an admirable strategic move. The *Pittsburg Dispatch* (Ind. Rep.) believes that the German leaders are now not "in a position where they must choose between virtue" and

ON THE WAY TO BERLIN.

The line of arrows above the solid line shows the advance made by French and American troops between Reims and Verdun.

or self-exposure as arch hypocrites." The *Detroit Free Press* (Ind.) praises the President's reply as "brief, clear, pungent, and comprehensive." The *Chicago Tribune* (Rep.), frequently a critic of the President, is now enthusiastic over the "masterly skill with which he parried the German thrust," or, as the *Nashville Tennessean* (Dem.) more picturesquely puts it, "with a keen, glittering sword of justice and right the President has foiled the would-be cunning maneuver of the Hun and has shivered the latter's blade to the very hilt." The *St. Paul Pioneer Press* (Rep.) agrees that "the Hun Government has been outmaneuvered," and the *Minneapolis Tribune* (Ind.) is quite certain that the German Chancellor will not be able to answer the President's questions "without loss no matter which horn of the dilemma he elects to seize." The same point is made by *The Globe* (Dem.) and *The Post* (Dem.), of Boston, while the *Springfield Republican* (Ind.) points out what a searching test the President's questions are of the good faith of the German Government. The *Boston Record* and the *St. Louis Republic* (Dem.) both consider the President's peace note a subtly worded demand for surrender. The *New York Evening Post* (Ind.) says the President "is simply serving notice on the adversary that he will not strike if an honest surrender is intended, but otherwise —"

In the Senate Mr. Borah, of Idaho, a Republican, finds the President's note "well designed to clarify a very involved situation." While such prominent Senators as Messrs. Reed (Dem., Mo.), Hitchcock (Dem., Neb.), Overman (Dem., N. C.), and Thomas (Dem., Col.) applaud the

President's statesmanship none of them are quite so enthusiastic as the editor of the *Louisville Courier-Journal* (Dem.), who writes:

"In a few words the hypocrisy of the Central Powers is exposed and left to the scorn of humanity, and the whole field of attempted negotiation is so cleared of ambush and pitfall and stealthy shelter that it becomes a vast sunny plain where the nations must stand with their pretensions and aims naked utterly."

Critics of the Wilson reply are carefully answered by the Democratic *New York World* and independent *Newark News*. *The World* points out that, owing to differences of wording and

circumstances, the Austrian and German proposals called for wholly different answers. The German note contained a trap in which *The World* sees the German rather than the United States Government now caught. Berlin, we are told, knows full well that radical opinion in France, Italy, and Great Britain would never be satisfied with an abrupt and curt dismissal of the Chancellor's proposition. A refusal by the President to consider any communication from Germany would have "meant playing into the hands of the Junker and Pan-German elements, which are trying to hold the German people together for another winter of war by solemn warnings that the Allies are determined to dismember and destroy the German nation." It would further have meant "creating a new opportunity for the German propaganda to work upon the credulity of British, French, and Italian labor, which has been held in line largely by the President's

THE GAIN BETWEEN CAMBRAI AND ST. QUENTIN.

After having been in sight of Cambrai for nearly four years, British and French troops captured the city, as shown in the shaded section of the map, which records the direction of their continuing drive toward the Belgian border.

influence, and to renew the old argument that the war goes on only because of the inexorable greed of capitalism and commercialism." But now the burden of proof is upon Prussian autoeracy "both at home and abroad; unless it is prepared to surrender on President Wilson's terms, its peace offensive has failed as signally as its military offensive."

The Newark *News* after due reflection is convinced that most Americans realize that the President's note is "stronger and more confounding than a brusque dismissal of the Chancellor's proposal would have been; they understand that it has cheek-mated the Kaiser's plan of appealing to the German people with a claim that he has honestly tried to make peace and that responsibility for the prolongation of the war rests upon the wicked enemy." The very frequency of the criticism that the note should have been more peremptory shows, however, what the sentiment of this country is. The President's demands "are a minimum; if Germany wants to know what the American attitude is she is answered by the people directly." The *News* would quiet the fears of those who think that compliance with the President's suggestions would enable Germany to withdraw to safety great masses of troops and large stores of munitions. It believes that his plan is not to let Germany retire unmolested from invaded territory, but to refrain from suggesting an armistice until Germany has actually evacuated it, and—

"How she is going to evacuate that territory is Germany's problem, for the Entente armies will not let up harassing and hammering her while she is going out, or abate their efforts to destroy the German armies and capture their munitions and supplies in the process. Let her get out if she can; but not until she has got out will we take an armistice under consideration."

In both Paris and London, according to correspondents for New York dailies and the Associated Press, the President's note was considered clever, logical, and effective. The London *Westminster Gazette* says "it fulfils the hopes and expectations of the Allies in Europe." An official statement has announced the British Foreign Office's approval. The popular verdict in Paris, according to one dispatch, is "that the note could not be improved upon," and the *Journal des Débats* says:

"The Vienna and Berlin Cabinets sought to place the United States before a dilemma—either to accept the armistice, which would give Germany time to reconstitute her harassed troops, or to evoke in Germany, by a refusal of the offer of peace, a patriotic movement which would rally round the new Government the whole nation, including the Socialists. President Wilson has not allowed himself to be caught in this dilemma. He demanded enlightenment, and lays down a preliminary condition. President Wilson's last question strikes at the very heart of the German Government. It is a blow in the Kaiser's face."

The only suggestion of dissent from any representative of the Allies is found by a Washington correspondent of the New York *World* in a statement given to the press in Washington by Sir Eric Geddes, First Lord of the British Admiralty, who said:

"We can not win by talking of peace. To get us all talking of peace is just what Germany wants. . . ."

"The Allied armies and Allied navies will bring peace. Let the Kaiser talk while Foch shoots."

That Foch has been shooting to more advantage than the Kaiser has been talking is shown by the smashing of the Germans' great defense-line in the Cambrai region and the relentless pressure in the Champagne sector, both indicated on the maps on the preceding page.

The program of world peace which the German Chancellor must now unequivocally accept or reject was thus stated by President Wilson in his address to Congress on January 8 last:

1. Open covenants of peace, openly arrived at, after which there shall be no private international undertakings of any kind, but diplomacy shall proceed always frankly and in the public view.

2. Absolute freedom of navigation upon the seas outside territorial waters, alike in peace and in war, except as the seas may be closed in whole or in part by international action for the enforcement of international covenants.

3. The removal, so far as possible, of all economic barriers and the

establishment of an equality of trade conditions among all the nations consenting to the peace and associating themselves for its maintenance.

4. Adequate guarantees given and taken that national armaments will be reduced to the lowest point consistent with domestic safety.

5. Free, open-minded, and absolutely impartial adjustment of all colonial claims, based upon a strict observance of the principle that in determining such questions of sovereignty the interests of the population concerned must have equal weight with the equitable claims of the Government whose title is to be determined.

6. The evacuation of all Russian territory, and such settlement of all questions affecting Russia as will secure the best and freest cooperation of the other nations of the world in obtaining for her an unhampered and unembarrassed opportunity for the independent determination of her own political development and national policy, and assure her of a sincere welcome into the society of free nations under institutions of her own choosing; and more than a welcome assistance also of every kind that she may need and may herself desire. The treatment accorded Russia by her sister nations will be the acid test of their good-will, of their comprehension of her needs as distinguished from their own interests, and of their intelligent and unselfish sympathy.

7. Belgium, the whole world will agree, must be evacuated and restored without any attempt to limit the sovereignty which she enjoys in common with all other free nations. No other single act will serve as this will serve to restore confidence among the nations in the laws which they themselves set and determined for the government of their relations with one another. Without this healing act the whole structure and validity of international law is forever impaired.

8. All French territory should be freed and the invaded portions restored, and the wrong done to France by Prussia in 1871 in the matter of Alsace-Lorraine, which has unsettled the peace of the world for nearly fifty years, should be righted in order that peace may once more be made secure in the interest of all.

9. A readjustment of the frontiers of Italy should be effected along clearly recognizable lines of nationality.

10. The peoples of Austria-Hungary, whose place among the nations we wish to see safeguarded and assured, should be accorded the freest opportunity of autonomous development.

11. Rumania, Serbia and Montenegro should be evacuated, occupied territories restored, Serbia accorded free and secure access to the sea, and the relations of the several Balkan States to one another determined by friendly counsel along historically established lines of allegiance and nationality; the international guarantees of the political and economic independence and territorial integrity of the several Balkan States should be entered into.

12. The Turkish portions of the present Ottoman Empire should be assured a secure sovereignty, but the other nationalities which are now under Turkish rule should be assured an undoubted security of life and an absolutely unmolested opportunity of autonomous development; and the Dardanelles should be permanently opened as a free passage to the ships and commerce of all nations under international guarantees.

13. An independent Polish state should be erected which should include the territories inhabited by indisputably Polish populations which should be assured a free and assured access to the sea, and whose political and economic independence and territorial integrity should be guaranteed by international covenant.

14. A general association of nations must be formed under specific covenants for the purpose of affording mutual guarantees of political independence and territorial integrity to great and small states alike.

TO PUNISH HUN "FRIGHTFULNESS"

INSTEAD OF AWAKENING TERROR, it is evident from a reading of the American press that Germany only arouses a fierce desire for revenge by the ruin and pillage that blacken the line of her retreat. "Ruthlessness is a blade of two edges," remarks the *Chicago Tribune*, and for every act of destruction avoidable in the ordinary progress of warfare Germany must pay. If Germany surrenders, there must be indemnity, and "if the war goes over the Rhine, there must be destruction in kind." This thought is voiced by sundry other journals, including the *Washington Post*, which tells us that "if the Allies will give notice that the destruction of Brussels will mean the destruction of Berlin, and then faithfully execute their threat, the insensate Germans, from Junker to peasant, will know and remember for all time to come that civilization will surely punish them for crime." We should know well enough by this time, says the *Spokane Spokesman-Review*, that it is useless to appeal to the enemy's sense of decency and right. He must be controlled by fear, and now that he is beginning to fear the invasion of his home soil, he should be given to understand that strict retribution will be exacted for acts of vandalism. The *Baltimore Sun* recalls that in his retirement in 1917 Hindenburg made "as complete a desert of the abandoned terrane as could be found anywhere on the face of the earth," and reports now coming from France and Flanders indicate there has been no change in the "policy of incendiarism and desolating cruelty." The *Seattle Times* notes that German leaders openly gloat over the fact that the Empire has been spared the suffering and the losses inflicted by its armies upon

A GLIMPSE INTO THE FUTURE: THE AMERICAN ARMY MARCHING DOWN ENTER DEN LINDEN.

Secretary McAdoo said in his speech on September 24: "Now that we have the Kaiser and his brutal hordes on the run, let us not relax effort but intensify effort. Keep hitting hard and smashing harder. That is the way to win surely and quickly. That is the way to eliminate the Rhine, that is the way to open an American parade on Unter den Linden."

"NOBODY LOVES ME"

—BROOKLYN DAILY EAGLE

France, Belgium, Servia, Poland, and Roumania, and it maintains that "to make peace before Germany has experienced a measure of the wanton suffering it now plans to inflict upon Belgium and the portion of northern France which it still holds, but which it will be forced to relinquish, would be a hideous travesty on justice." The *Charleston American*, which before our entry into the war was never suspected of being pro-Ally, thinks that a warning of reprisal to Germany by the Allies would be "somewhat curious," for—

"If it be, as we are led to believe, the determination of the Allies to rend Germany in a thousand tatters, what is the meaning of this warning, which likewise implies an agreement; for surely if Germany desist in her course the meaning of the note must be that the Allies will be equally gentle and considerate, and all the tremendous destruction which Germany has already committed will be unavenged."

"It is stated that the United States will be asked to join in these remonstrances. It is a matter well worth considering whether after all this is a wise course."

Much as it revolts the natural kindly sentiments of our own people to exact reprisals, observes the *Philadelphia Inquirer*, it must be remembered that "we are not treating with civilized men, but with brutes," and if we give the Hun a dose of his own medicine he will begin to whimper for salvation, for "every brute is a coward, and the German is particularly cowardly when he is at a disadvantage." A semi-official statement on German wantonness is given by Mr. Jules Cambon, the former French Ambassador at Washington and one of the foremost figures in French affairs, who is quoted in an Associated Press dispatch from Paris as saying:

"At the moment the Central Empires address themselves to President Wilson to obtain an armistice and begin negotiations for peace the German armies renew the horrors they have been committing in all the occupied territories."

"St. Quentin, Lens, Cambrai, Douai are burned, mined, ruined. Having formerly been Prefect of the Department of the North, I know what this new terror means to the regions devastated by the German armies. These represent the richest territory of France, where the largest French industrial establishments are located. All these centers have a glorious past. They are filled with splendid monuments and museums and libraries of priceless treasures. In Cambrai stands the tomb of the illustrious Fénelon."

"One can not view without profound sadness all the ruins the German invaders are leaving behind them—ruins that represent not only material losses, but also moral losses."

"The conduct of the German armies is an outrage to civilization and humanity."

The *Buffalo Express* notes that the city of St. Quentin had a population of 56,000 when the war began, and when the French recovered the place they found not one man, woman, or child to be rescued. Even the aged, the infants, and the invalids had been removed or were dead. The city is badly damaged and homes have been looted of everything valuable where they have not been destroyed. Speaking of this despicable deed, the *Providence Journal* says that organized wickedness sums up the whole German four-year campaign, and "everything that is repellent in the primitive savage is made more repellent by the trained ingenuity of the veneered barbarian." The *Chicago Post* urges that the Allied Council in a note to "his Satanic Majesty of Potsdam," solemnly pledge themselves that for every city hereafter destroyed by his "retreating imps" a city of like size in Germany will be burned to ashes—beginning preferably with Berlin. The *Post* avers that such reprisal is "sanctioned by international law," and is the only kind of language that the "blond beast" will understand or heed. The *New York Sun* proposes a table of approximately equivalent retributive values as follows:

"For Cambrai	Mülheim
"For St. Quentin	Bonn
"For Lille	Düsseldorf
"For Bruges	Coblenz
"For Antwerp	Frankfort
"For Brussels	Cologne
"For Liège	Hanover

"We have no doubt that this table can be improved in detail and extended in geographical application. Perhaps the method of prevention and protection which it suggests can be rendered most effective, not by promising to destroy the equivalent German city, but by promising to hold it and its inhabitants to convict labor until it has paid the last pfennig of its nation's shameful debt for the destruction of the French or Belgian city set against it in the foregoing list."

"Which plan of reprisal would seem more dreadful to Hunnish apprehensions? We confess we don't know."

BUT HE WILL STILL BE A LEOPARD.

HOW WILLIAM GETS READY FOR PEACE.

OUR UNREADINESS FOR PEACE

WE ARE UNPREPARED FOR PEACE just as we were unprepared for war, and to avoid disaster as an afterglow of war, immediate action is imperative. This is the thought of various editorial observers, some of whom believe it is unimportant whether the industrial reconstruction necessary when peace comes be entrusted to a legislative commission, as proposed by Senator Weeks (Rep.), of Massachusetts; or to a Federal commission, as planned by Senator Overman, of North Carolina, so long as it is done by somebody. It is high time for statesmen to give their most conscientious study to after-war problems, remarks the *Boston Transcript*, and the *Boston Herald* says the watchword to-day is the same as that of two years ago, and that watchword is "Prepare." Then it was to prepare for a contingency only apprehended for the future, but now it is to prepare for an event certain to occur. At that time we might or might not have avoided war, but peace is sure to come sooner or later. One highly complex problem we face, as the *Pittsburg Gazette-Times* points out, is the demobilization of the American Army, and we read:

"When people think of the end of the war there arises in their minds a picture of an almost instantaneous return home of the millions of men who have gone to Europe to fight or to support the fighters. A moment's reflection serves to dispel that illusion. What it required, or will have required, two years or more to transport abroad can not be brought home in a few days or weeks. Quite likely it will take as long or longer to bring the men home as it took to get them hence. But even that gradual restoration will impose a vast strain upon home industry unless plans are wisely worked out in advance for the reabsorption of the mighty host into civil life."

Introducing his resolution for a legislative reconstruction committee, Senator John W. Weeks points out that since early in 1916 the various belligerent nations have been "investigating and studying every conceivable question relating to after-war conditions and their relation to the social and industrial life of the country," and they have, "at least tentatively, adopted plans for carrying out the policies required by the new era we must face." The Weeks resolution, in which the House concurred, provides for the creation of a committee to be known as the Joint Congressional Committee on Reconstruction, which is to be composed of six Senators and six Representatives in Congress,

Three of the Senators shall be selected by the Democratic caucus, three by the Republican conference, and the six Representatives in Congress shall be similarly chosen. The subjects to be investigated by the committee and to be reported to Congress from time to time with recommendations as to additional legislation or otherwise may be summarized as follows:

- "1. Problems affecting labor.
- "2. Problems affecting capital and credit.
- "3. Problems affecting public utilities.
- "4. Problems resulting from the demobilization of our industrial and military war-resources.
- "5. Problems affecting our foreign trade.
- "6. Problems affecting the continuance of existing industries and the establishment of new industries.
- "7. Problems relating to agriculture.
- "8. Problems affecting the adequate production and effective distribution of coal, gasoline, and other fuels.
- "9. Problems relating to shipping, including shipyards, and especially in regard to the sale, continuance of ownership, or leasing of both yards and ships.
- "10. Housing conditions and the disposition of houses constructed by the Government during the war.
- "11. War-legislation now on the statute-books, with reference to its repeal, extension, or amendment.
- "12. And in general all matters necessarily arising during the change from the activities of war to the pursuits of peace, including those that may be referred to it by the Senate or House of Representatives."

What is known as the Administration's plan appears in the bill offered by Senator Overman (Dem.), which provides that a commission be established, to be known as the Federal Commission on Reconstruction, which shall be composed of five commissioners to be "appointed by the President, by and with the advice and consent of the Senate." Not more than three of the commissioners shall be members of the same political party. Each commissioner would receive a salary of ten thousand dollars a year, and any of them might be removed by the President for cause. The commission would cease to exist two years after the cessation of hostilities of the present war unless Congress provided otherwise. The special tasks of the commission are named as follows:

- "(a) The financing, regulation, control, and development of the merchant marine.
- "(b) The development, financing, expansion, and direction of foreign trade.
- "(c) The reorganization, financing, and readjustment of indus-

tries engaged in war-work by way of reconverting them to normal production.

"(d) Technical education and industrial research as a means of developing and strengthening industry.

"(e) The redistribution and employment of labor in agricultural and industrial pursuits and the problems of labor growing out of demobilization.

"(f) The supply, distribution, and availability of raw materials and foodstuffs.

"(g) The conservation and development of national resources.

"(h) Inland transportation by rail and water.

"(i) The reorganization of government departments, bureaus, commissions, or offices with a view to putting the Government on an economical and efficient peace basis.

"(k) The consolidation of such acts and parts of acts of Congress which relate to the same subject-matter, but which now appear at various places in the statutes."

The *Chicago Tribune* (Rep.) objects strongly to the Overman plan, because it "places in the hands of the Executive an instrumentality essentially partizan, and in this case likely also to be sectional and not importantly representative," but—

"Waiving the question of partizanship, and considering the issue on a higher plane, we can not see how Congress, without confessing a deplorable weakness and sad deterioration, can afford to surrender to the Executive this vast responsibility for guiding the national energies through the reconstructive period. We think conscientious Democrats ought to feel as zealous in the defense of this function of Congress as Republicans."

The old-time balance of power in our Government, thinks the *New York Tribune* (Rep.), was destroyed in the war by the concentration of power in the hands of the Executive. This was inevitable, and much suggests that it was wise, yet the *New York* daily hopes that after the war there will come "a strong and healthy reaction against paternalism and the endless multiplication of Federal commissions." But the *Dallas News* (Dem.) believes it would be much better to entrust reconstruction to a commission appointed by the President than to a joint committee of Congress. The reasons are many, and most of them manifest, according to this journal, which mentions chiefly that the questions of which the problem is made up are for the most part of a scientific and somewhat technical nature, and "there are few men in Congress who could bring to their examination the knowledge which would be possessed by a body of men chosen by the President." *The News* adds:

"It is hardly necessary to observe, furthermore, that most of those questions would be half-prejudged by the members of a congressional committee, whereas we might confidently expect that a body made up of men chosen by the President would be animated by a spirit of scientific inquiry in considering them. The task of the body, however constituted, would be merely to gather facts. Doubtless it would be expected to make recommendations also, but it would be left to Congress to accept, reject, or modify them, and they would have no constraining force except such as they might derive from the favor of public opinion. May it be that it is a reluctance to being put under the constraint of public opinion that makes members of Congress unwilling to have the inquiry made by men chosen by the President? The precise and important point is that we are more likely to get correct information from a commission than from a joint committee of Congress."

AN "AMERICAN ATROCITY"

THE BARBAROUS AMERICAN SHOTGUN is now listed with such war-weapons as poison-gas and liquid fire, if we are to believe Germany's protest, and some of our editors find it hard to decide whether the solemn expostulation deserves wrath or laughter. The German objection to our use of the shotgun, we learn from Associated Press dispatches, was made in an ultimatum to the United States through the Swiss legation that if no satisfactory answer were forthcoming

by October 1 reprisals would be taken, and it was pointed out to this Government that a prisoner on whom a shotgun or shotgun ammunition is found forfeits his life. As we hold a hundred German prisoners to every ten Americans in enemy prison-camps, we can indulge on a larger scale in reprisal, say some editorial observers, as they note Secretary Lansing's reply to the ultimatum, which reads in part as follows:

"If the German Government should carry out its threat in a single instance, it will be the right and duty of the United States to make such reprisals as will best protect the American forces, and notice is hereby given of the intention of the Government of the United States to make such reprisals."

Altho this reply is clothed in diplomatic language, remarks the *Philadelphia Inquirer*, "even the thick-witted men who are

rocking the German throne at this hour must understand its meaning." Germany's protest against the use of shotguns, agree several of our editors, brings to the "verge of temperamental explosion" every American who reflects on the facts thus stated by the *St. Paul Dispatch*:

"The Hun, who initiated the use of gas which causes its victims to die in anguish or to linger on in unspeakable suffering; the Hun who initiated the use of flame-throwers to burn their victims alive, the Hun who uses saw-tooth bayonets and cries 'Kamerad' when throwing a bomb, the Hun who has killed scores of children in France and England, who has torpedoed without warning any number of non-combatant vessels carrying women and children, who has destroyed plainly marked Red-Cross hospitals and ships filled with wounded, who has driven helpless civilians into slavery and outraged their women, the Hun who has stood behind the Turk in his drowning and disemboweling of Armenians, this Hun threatens to execute American prisoners of war who are caught with shotguns or shotgun ammunition on their persons!

"The real objection of the Hun, of course, to the use of shotguns is that they are efficient. Charged with buckshot, they make the same kind of wounds as rifle-bullets. But they have the power, at short range, of making more of them and of spreading out like the contents of a shell, insuring a hit even if the marksmanship is inferior and scaring the daylights out of the Huns, who already are filled with panic by the daring and resourcefulness of the 'brown devils.'"

The *Louisville Post* doubts whether it will be necessary to resort to reprisals, because Germany is now "weakening all along the line," and the *Savannah Press* considers her protest "similar to the objection to the use of a rope on the part of a man who is going to be hanged." The *Boston Globe* assures us our boys "wouldn't hesitate to use a shotgun even on the Kaiser," while the *Peoria Transcript* inquires rather caustically whether it is not still customary "to shoot skunks with shotguns."

THAT AMERICAN SHOTGUN.

—Caption in the *New York Evening World*.

KING COTTON IN TROUBLE

KING COTTON has not been immune from the recent epidemic of disturbances peculiar to crowned heads. "The War Industries Board has at last got around to the point of trying to fix a price on old King Cotton," announces the *South Bend Tribune* with glee, which must inevitably remind many good Southerners of a Russian Bolshevik. "For eighteen months . . . the price on King Cotton has been steadily rising until now it is about the costliest staple for sale in the United States. What an awful shock it must be to those Southern Senators to think of sacred King Cotton being dethroned, put upon the same level with other war-necessities!" But the *Charleston (S. C.) News and Courier* has a soft answer for this and much other wrath of a similar nature when it remarks reassuringly that "whatever President Wilson does in the cotton price-fixing business will be all right with the people of South Carolina." The fourth short crop of cotton in successive years, a demand increased by its use in the manufacture of explosives, and a hundred other war-necessities, together with multiplying costs of production, as the *Springfield (Mass.) Republican* and several other papers point out, put cotton in a position to demand whatever it wanted. The price rose on the Government's announcement of the lowest crop percentage ever recorded, 55.7 as of August 5, and then broke violently on further information as to the likelihood of price regulation. The low point reached was something over thirty-two cents a pound, as compared with 1914 prices of less than ten cents. While a committee of the War Industries Board takes testimony in the cotton-growing States, the *Atlanta Journal* presents these facts by way of solemn protest:

"It is a matter of common knowledge that while most American products reached pinnacle prices in the earlier stages of the European War, yielding royal profits to their producers, cotton fell to starvation figures in the autumn of 1914, and for many a month remained unmarketable at anything like intrinsic value. The rank and file of cotton-farmers are just now recovering from the setback of those distressing times in which they were forced to pile debt upon debt to meet the bare emergencies of existence. Far from bearing any resemblance to profiteers, they are as a class still much behind the average prosperity enjoyed by the food-farmers of the West and by industrial labor everywhere. Nor are the highest prices they have recently received for their crop at all excessive in comparison with those of other basic commodities. . . . Has not the price of wool and iron and steel

and corn and every other necessity also advanced, in some cases more than trebling?"

The *Montgomery (Ala.) Advertiser* calls for a minimum price of thirty-five cents per pound, if regulation really must be put in force, and the *Atlanta Constitution* employs bold-face type to express its conviction that as yet "no emergency has arisen that would justify the Government in modifying the prevailing price of cotton." Both the *Hartford (Conn.) Courant* and the *Springfield (Mass.) Republican* find points to commend in these views, but the *Houston (Texas) Chronicle*, in the midst of the cotton belt, takes a more liberal stand. "The indicated purpose to fix a price on cotton will find little opposition in the South," declares *The Chronicle*, "even tho, for the immediate present, it may seem to interfere with natural opportunities." Commenting on the situation in a subsequent editorial, the same authority answers both pro-cotton and anti-cotton extremists:

"The people of this section do not believe that President Wilson has made an irreparable blunder in recommending a fix price on this staple. Neither do they think the Administration is about to sell them out to Northern buyers.

"They are not unappreciative of their obligations as citizens of a common country or as patriots fighting for a common cause.

"They are not unmindful of the fact that unity of command and unity of effort demand unity of sacrifice.

"They are willing to take their medicine with the rest, and to tote fair with the wheat-farmers, the coal-producers, the steel-founders, and all other toilers for whom the Government has found it necessary to fix rates and compensation.

"If cotton is our principal crop, we shall try to remember what wheat means to the great Central States, and if the price is fixt at a little lower level than we could wish, we shall recall that wheat was driven down something like 25 per cent."

This confidence in the Government is not misplaced, according to a writer in the *New York Tribune*, who repeats echoes that have come both from the data-collecting committee and the distribution committee which are handling the matter for the War Industries Board. Chairman Baruch, of the Board, has announced that "stabilization" rather than "fixt prices" will be the plan in the cotton industry, and, altho the *New York Times* predicts that the coming cotton crop will be distributed "under government supervision," the *Tribune* authority concludes:

"As they come to understand the scheme, the cotton farmers are ceasing to worry about either price-fixing or stabilizing. Their committee is on the ground in Washington, and it is said that it will depart praising what it came to denounce."

IMPORTANT ANNOUNCEMENT TO OUR READERS

FOR more than four years the publishers of periodicals have had to face the rising tide of costs. Fully as much—perhaps more—than other lines of business, they have felt the fast-increasing burdens of the war.

THE publishers of THE LITERARY DIGEST have watched the prices of other magazines advance from ten to fifteen cents a copy, from fifteen to twenty cents, and in some instances from twenty to twenty-five cents. By increased economies in operation and by careful and painstaking business planning they have so far been able to maintain the low subscription prices of THE LITERARY DIGEST, hoping that for the duration of the war it would not be necessary to place any share of this burden of increased cost on the subscribers.

WE regret to say that this is no longer possible and that the time has come when it is imperative that we make a slight advance in our subscription rates. You may have noticed the announcement in last week's issue that the annual subscription rate for THE LITERARY DIGEST is now \$4 instead of \$3.

IT is almost unnecessary for us to explain to our readers the reasons for this action. The simple statement that the present low subscription price of THE DIGEST has long since ceased to cover even the bare manufacturing cost of the magazine is almost sufficient.

WE are just completing new contracts for our paper supply for the coming twelve months. The advances in the cost of the paper alone needed to supply an individual year's subscription of fifty-two numbers of THE LITERARY DIGEST will be \$1.28 more than the price we paid for the same amount of paper prior to America's entry into the war.

TO this total must be added the printing and binding costs, that are advancing step by step with all the other processes that enter into the making of THE LITERARY DIGEST. A new schedule of printing and binding prices recently went into effect, adding \$1,200 a week to our operating costs. This is only one step in the

successive advances that we have experienced in this particular branch of manufacture. Added to all these are the increases in editorial expenses and all the multifarious charges that are included under the general term "overhead charges."

THESE facts will clearly indicate that the dollar increase we ask for a year's subscription for THE LITERARY DIGEST does not even cover the increase in the manufacturing cost of the magazine. In view of this we believe our many friends will consider this advance reasonable, just, and conservative.

WE do not wish to leave our readers under the impression that this advance in price is permanent. When the war is over and normal and natural economic reactions bring about a decrease in the cost of labor and material, our subscribers can expect a corresponding reduction in the cost of their magazine.

IN figuring this increase in price we have taken no account of the increase in the second-class postage-rates. Last July a zone-postage law became effective—an unjust and most objectionable system that was abolished during President Lincoln's administration. This law establishes a complicated system of postal-rates for all publications that will eventually result in a heavy postage tax on magazine subscribers.

EVEN though Congress by its new act has made magazines tax-collectors, we do not intend as yet to place this new burden on the shoulders of our subscribers. We do not intend to impose this new Government levy until we are convinced that this law has been permanently placed upon the statute-books. It is still our earnest hope—our confident belief—that Congress will reconsider and repeal a law inimical to the best interests of the nation—a law that interrupts the free and constant interchange of ideas throughout our country, and so threatens the unity of thought and feeling of America.

THE LITERARY DIGEST.

FOREIGN - COMMENT

SURRENDER FIRST, THEN PEACE

EVERY AMERICAN WAR has ended in the surrender of the enemy forces, and Germany's repeated efforts to turn the conflict into a debate meet only the message that Grant sent to Buckner. The slogan of our allies in Europe, too, is "No peace till Germany surrenders unconditionally." They hold that all peace moves made now are mere efforts to stave off the results of the crushing defeat that the Huns realize is coming to them. The *Paris Figaro* puts the case in a nutshell when it says:

"Germany wishes to stop the war at the moment she is going to be beaten, and knows it. Let us suppose the proposition is accepted. Immediately in Germany there would be a delirium of joy. The people are electrified, and the Kaiser has retaken them into his hands. The humiliation of having demanded peace would disappear rapidly. He becomes the hero of heroes. He has resisted a world-coalition."

French opinion lays stress upon the fact that we can not trust the Germans until they are in such a position that treachery is no longer possible. As the *Paris Matin* puts it:

"After many victorious weeks our soldiers are asked to lay down their arms, to stop short in the midst of their triumphs, and let the Germans retreat quietly to their frontier with their arms and baggage and entrench themselves so as to use their resistance as an argument to weigh upon peace negotiations."

"Thus they propose to defraud us of the final results of our sacrifices. If Germany really wants peace, the only way for her to obtain an armistice is to do like the Bulgarians, to give proper guarantees that the armistice will not be utilized to prepare fresh attacks."

"If Germany really wants to take President Wilson's points as the basis for discussion, let her begin by accepting them; without this there can be no negotiations any more than there can be an armistice without conditions which the responsible military commanders consider indispensable for the safety of our armies."

The Germans believe that President Wilson is so inexperienced in diplomacy, says the *Paris Temps*, that they look upon him as an ideal cat to pull their chestnuts out of the fire. However, thinks the Paris organ, they have picked upon the wrong man:

"Germany only invokes President Wilson's principles to make us let fall our arms. Then, when the fighting has ceased, when the German troops have regained their breath, when the Imperial Government has become popular and strong, the German diplomats will undermine and overturn, one by one, the pretended bases of negotiation. It is easy to understand that the Kaiser's staff approves of Prince Maximilian's policy, but Maximilian, with Ludendorff and Scheidemann, is mistaken in attributing so much naïveté to President Wilson."

In London the determination to have nothing to do with any German peace offer short of absolute surrender is as strong as it is in Paris. London, too, expresses the utmost confidence in the wisdom of President Wilson. Public opinion in the

British capital bids us look upon Prince Max of Baden—the new Chancellor—and observe the "democratic camouflage." As the *London Morning Post* remarks:

"The new Chancellor has lost no time. His action is the result of conferences and agreements between the Pan-Germans and other parties in which, as heretofore, the military dictatorship has directed the course of affairs. So much is clear. Prince Max of Baden was appointed by the German Emperor, not by the Reichstag nor by the people whom the Chancellor affects to represent. He is responsible to his sovereign alone, and when he has served his Majesty's turn, he will be incontinently dismissed like his predecessors."

"It is important to understand what is the position of the new German Government, because upon the nature of that position depends the validity of the peace note, President Wilson, to whom the note is addressed, has plainly declared that he will entertain no proposals whatever which are made by governments of the Central Empires."

"The Imperial Chancellor speaks in the name of the German Government, which is unaltered. His attempt to represent recent superficial changes as a democratic reform is a little too palpable. Therefore the peace note fails to fulfil the condition postulated by President Wilson."

"The policy of peace, like the policy of war, is agreed among the Allies and America, acting in concert, nor can any proposal address to one among them be entertained. Belgium has already been separately approached by Germany and France by Austria. Germany is doubtless prepared to make further separate overtures as the circumstances may suggest. These maneuvers will be in vain."

The *London Daily Express* has a few words to say:

"A German politician recently deplored that 'no confidence is felt abroad in our intentions or the sincerity of our declarations.' Exactly. While Prince Max was talking to his 'humanity' brief in Berlin, Douai was in flames. The Germans are de-

stroying every town and village from which they are driven in France. German submarines continue to sink merchant ships and murder their crews. While these things go on, what nauseous humbug it is for a German statesman to talk of his clear conscience and his 'inner peace.'

"The whole idea of the speech is to save, not Germany, but the Hohenzollerns and Junkers. The whole idea of the Allies is to destroy, not Germany, but the Hohenzollerns and Junkers. It is not for a beaten nation to suggest terms or to bother about labor and humanity. Both labor and humanity may safely be left to free peoples. Nor do President Wilson's terms supply the basis of negotiation. They must be accepted or rejected. Hitherto they have been contemptuously rejected. If they are now accepted, let Prince Max say so."

"An armistice as a mere subterfuge for talk would be intolerable at this juncture. If Germany really wants an armistice she must have it on the same terms as Bulgaria. Let her withdraw her armies from all occupied territory and let her give security for the acceptance of the Wilson terms by the surrender of her arms and fortresses. That was Bulgaria's road to peace, it is the only road. Germany may not yet be ready to tread it, but she will be when Foch has hammered her armies for a few weeks longer."

GERMANY'S NEW PEACE ANGEL

Prince Maximilian of Baden, the new German Chancellor, who tries to mix victory with defeat by asking peace and yet saying: "Thanks to the incomparable heroism of our army, which will live as an immortal, glorious page in the history of the German people for all times, the front is unbroken. This proud consciousness permits us to look to the future with confidence."

NO ECONOMIC BOYCOTT?

THE DELIBERATE DESTRUCTION, apparently so wanton, that has marked the line of German retreat has revealed its true character. It is a part of the foe's trade plans—an effort to cripple France and Belgium commercially after the war. Belgium was long ago stripped of all her

FACE TO FACE WITH IT.

Fritz von Deutschland—"Neffter did I such un-usual und disgusting feelings haf! Efferytings vas becoming downside up!"

—Dystander (London).

machinery, which is now busy turning out German products to compete with us when peace comes. The German policy was revealed in all its nakedness when the Allies entered St. Quentin, and is thus described by Mr. Ridguier, the Deputy from that city to the French Chamber of Deputies. He writes:

"The greater part of the city is still intact, but such destruction as has been accomplished has been most systematic. Weaving- and spinning-mills, lace-factories, all metallurgical works—everything, in a word, which would give St. Quentin the possibility of competing with German trade after the war—have been destroyed. This is the blackest evidence against Germany, so far as St. Quentin is concerned—the absolute annihilation of all the industrial possibilities in this busy manufacturing town of 45,000 inhabitants. . . .

"The Town Hall has not suffered much, but all the lead roofing has been carried off, as well as the contents of the famous ancient belfry. In the Mayor's room the French soldiers discovered thousands of commercial records, account-books, and receipts, all of which had apparently been thoroughly examined. The suggestion is that the Germans systematically recorded all the commercial information they could gather, with a view to utilizing it when they resume foreign trade after the war.

"The evidence revealed in this and other ways that the Germans are systematically utilizing the world-struggle to obtain weapons to prosecute a new commercial war against France when the present conflict ends is strengthening daily the determination of the people of France to insist on implacable reprisals and a commercial boycott of Germany after peace is declared."

GERMAN FITNESS FOR PEACE-LEAGUE MEMBERSHIP

FUTURE PEACE may be imperilled if Germany is excluded from the Peace League; but it may also be equally endangered if Germany is within the circle. There we have the dilemma, and the debate over it is now in full cry. President Wilson has definitely declared that he favors admitting Germany to full membership, without any adverse discriminations, economic or otherwise, on the idea that no cause for rancor must be left in the remade world, to start new wars. If Germany doesn't behave, then he would impose penalties. But others favor the penalties now, and are for blackballing Germany's candidacy for membership in the Peace Club forthwith. French and British comment on the President's plan reveals large areas of doubt about its workability. As the *Paris Journal des Débats*, for one, puts it, "In truth, this program is as yet neither very clear nor very practical." This great Paris organ opines that if a league of nations is to be formed at all, it must be done now "among those having solid confidence in each other, with provisions for the gradual admission of others when sufficient guaranties are offered." Opinion in London runs in a somewhat confused stream. The only paper that whole-heartedly indorses the President is the pacifist *Daily News*, while the rest of them take up a laudatory but non-committal attitude. The general opinion seems to be that "now is the accepted time" for forming a league, the nucleus of which is already in existence in the alliance against Germany. Some papers are frankly puzzled at what they term the President's "curious attitude" on the subject of economic retaliation, and many hold that the economic weapon is the only one which can be successfully used in bring-

PLAYING SMALLER.

The Kaiser makes a change of instruments.

—Punch (London).

ing a defeated Germany to a penitent frame of mind. As the *London Evening Standard* puts it:

"No time should be lost in coming to a general arrangement among the Allies for the unrestricted use of the economic weapon against an unregenerate Germany. . . . President Wilson's full ideal can hardly be realized unless we begin to

build at once on the foundations we have. We see no reason why a beginning should not be made at once, setting up machinery for a supreme court of arbitration and penalties for any Power which provokes war. The most effective deterrent would undoubtedly be the economic boycott by all members of the league and arrangements to use it forthwith must exercise a powerful influence on the present war."

The *London Outlook* thinks that the President's attitude is

THE AUTOCRAT OF WASHINGTON.

—Kladderadatsch (Berlin).

The Germans' old idea of propitiating the man from whom they expect to obtain an advantageous peace.

one of "magnanimity toward the Germans," a sentiment which it recognizes as being present both in England and America. It warns us that any generosity to the Germans will be misunderstood, especially any extension of a friendly hand in commerce. It says:

"The resumption of free trading with Germany—particularly a Germany undefeated—would mean the reintroduction of all those dishonest and 'blackleg' commercial methods by which, before the war, our shops were filled with subsidized German goods while our own machines often stood idle and our workers emigrated or starved.

"This desire, or disposition, to let Germany down lightly needs careful examination. And for this reason: Our British generosity—not to say stupidity—being what it is, there is a great danger that we shall concede extremely generous terms to the enemy, and in so doing neglect some of our own vital interests. There is grave danger that, in spite of all we have seen and ought to have learned, we may make our plans without due appreciation of German cupidity. Certain it is that if our peace advocates have their way, Prussianism will be permanently entrenched on the Continent and pretty firmly established in this country, and that trading conditions will be such that British labor will often be unemployed while our markets are again filled with German bounty-fed products. While so much is said in favor of the policy of generosity—the policy of shaking hands with the enemy and trying to be good friends when the fight is over—something should be said on the other side. . . .

"When we are invited by men in responsible positions not

only to let the enemy down lightly in the settlement of the war, but to resume free, unregulated trade intercourse with him after the war—to open again our ports and markets to the Germans, free of tariff, toll, or tax, so that they may again 'blackleg' our traders and drive both capital and labor out of this country—well, it is time to ask the reason why, and to consider what a grave injustice we should thereby be doing our own people, including many of the men now fighting for us. To a fair rival, an honest foe, and a clean fighter—generosity by all means! But the German character is such that it would certainly mistake generosity for weakness."

Mr. Lloyd George, the British Premier, takes the attitude that Germany can only be admitted to a league of nations at a period after the war when she has already shown distinct signs of repentance and reformation. He said in his speech at Manchester:

"I want to say to those who have the same horror of war as I have, who would like to see any rational means of bringing this madness to an end, do not let us be misled into the belief that the establishment of a league of nations without power will in itself secure the world against that catastrophe. A league of nations with a Prussian military power triumphant! Why, it would be a league of fox and geese—one fox and many geese, many at first, then gradually diminishing in number. Read the Brest-Litovsk treaty. Poland was once a greater nation than Prussia and in its day as great as France. The Teuton has absorbed it. Unless there is victory the plans for the new world on which we hope to see the dawn bursting—those plans might as well be shelved. I tell you the best time, the best thought, the best energy, the best resources of a nation devoted to averting conflict or preparing for it are useless unless you stamp out for all time the rule of brute force which has challenged humanity in this war.

"I am for a league of nations. In fact, the league of nations has begun. The British Empire is a league of nations. The Allied countries who are fighting the battle of international right are all a league of nations. If, after the war, Germany repudiates and condemns her perfidy, or, rather, the perfidy of her rulers, then a Germany freed from military domination will be welcome into the great league of nations, but the only sure foundation is a complete victory for the cause of justice and international freedom which the Allied nations are now carrying along the road of triumph through barbed-wire entanglements, deep implacements, and the serried ranks of a redoubtable foe."

Mr. Balfour, Britain's Foreign Minister, replying to the President's speech, is too polite to take actual issue with the President, but, reading between the lines, we can see that he does not believe that the formation of a league of nations to include Germany is a possibility at the coming Peace Conference. In his speech at the Guildhall in London, he said:

"Personally, I am very much of the President's mind, that to allow this occasion to sink into the past would be to lose one of the great opportunities given mankind permanently to put international relations upon a sound, lasting, and moral footing, and you must so arrange the map of Europe and the world that great occasions for wars will not overwhelm you.

"If you are going to render permanent German domination over Russia, especially eastern Russia, and the small peoples along the Baltic; if you refuse to redress the wrongs of Poland; if the subordinated peoples in the Austrian Empire are to be left under the heel of the German and Magyar minorities; if the Balkans again are to be the scene of bloody wars and the occasion of hostilities among their neighbors; if the Turk is to be allowed to resume his bloody sway over the territories torn from him; . . . if Greece is to be threatened, as in the past, by the domination of the Central Powers; if Serbia is not to be restored after all her appalling sacrifices and glorious gallantry; if France is not to resume her full place in western Europe, and if Belgium is not to be restored in full measure; if all those evils are not potentially to recur—then you must do something more than merely establish a league of nations.

"You must put these wrongs right before a league of nations can be made to work. You must give it a clean slate to work upon. Then and then only will your league of nations work.

"Therefore, in order to make a league of nations possible complete victory is absolutely necessary. Germany can only be a member of a league of nations when the international system has been reformed by a great, wise, and all-embracing

peace, and that can never take place until Germany not merely has been obliged to change her profession of faith, but until Germany finds herself in a position where all her dreams of world-domination are torn to pieces and she is left powerful, indeed as she will be left powerful doubtless, prosperous doubtless, and wealthy, but no longer a tyrant who can use the nations which she is in a position to influence to serve her own dreams of world-empire."

Turning to purely neutral opinion, we find the same doubt expressed as to whether the President's ideals swim at any time into the region of practical politics. The powerful Madrid *Liberal* describes the President's speech as—

"the noblest thing that has been thought or said since the beginning of the war. It is the epitome of the general spirit of humanity and of those aspirations which dwell in the depths of every conscience and every mind that is free from covetous egotism."

"Perhaps President Wilson's program may be too idealistic. We may perhaps think that it is not possible to sacrifice all material interests to the moral progress of the world, but we may forget that this doctrine, so noble and so human, may perhaps be guaranteed by the mighty power of the United States, and that any imperfections which may be found in practice will be gradually corrected."

MAKING DEMOCRACY SAFE FOR THE WORLD

THE VIRUS OF THE BOLSHEVIKI seems to have infected the proletariat of the world, and this fact is arousing considerable apprehension in that stronghold of conservatism, the United Kingdom of Great Britain and Ireland. The conservative and aristocratic element there are looking forward with mixed feelings to the period of social reconstruction that must inevitably follow the war. This subject is treated with great frankness by England's foremost woman philosopher, Miss Maude D. Petre, in her book on "Democracy of the Cross Roads," where she assures the workers that too much money, leisure, and power would not be good for them. "The world must be made safe for democracy," says President Wilson. "Yes," replies Miss Petre, "but must we not also insist that democracy must be made safe for the world?" Miss Petre, who, oddly enough, is a Radical, argues:

"The seat of power might be shifted without any one of its vices being eliminated, and we might have new rulers with all the faults and ambitions minus the training and experience of the old ones."

"After the war we are going to have a workingman's world," said one of Miss Petre's soldier patients in the Red-Cross hospital in which the lady philosopher is working during the war, and this remark was the genesis of her book. Commenting on her patient's remark, Miss Petre says:

"To his uneducated mind the proper return to the people for the hardships they have endured would be a world in which they could make everything good for themselves at the expense of others. If such a spirit were to prevail, then the world might become safe for democracy, but democracy would certainly not be safe for the world."

"A democratic country is not in itself more disinterested than an aristocratic or even an autocratic form of political life. Can any one honestly maintain that the working classes or the people in general are at present manifesting more disinterestedness than the privileged classes against whom they are tilting?"

"More money, less work—that is a good program, but it is not a program of human love and fellowship, nor is it necessarily a program of moral betterment."

The writer maintains that in these times we have fallen under the fetishism of mere words, and we are apt to believe that there is some magical saving grace in the mere word "Democracy":

"Democracy is, in itself, neither the ruin nor the salvation of a land; it is a means, not an end. It abolishes selfish privilege,

it diffuses the goods of life among all, it fashions a wider and fuller society; but then the further task begins of leading men on to a nobler use of the advantages they have obtained."

"If the autocratic system of government, which is so largely responsible for the present world-tragedy, has been tried and found wanting to the call of humanity, we must not deceive

THE SHADOW.

—*Evening News* (London).

ourselves with the notion that democracy can be trusted without training or probation. It is the system of values that must be changed, and not the method of their distribution."

"It is not a question of how much money each man should have, but of what part money should fulfil in human society. If this should be the last great war, there is yet a task before society as mighty and as important as the abolition of militarism, and that is the abolition of unbridled commercialism."

She remarks that reformers and dreamers seem to think that the poor as such are essentially noble, and assures us that this is a fallacy:

"Human nature is not in itself the noblest creation imaginable. The poor are no whit better than the rich, for material poverty has no essential connection with the poverty of spirit. . . . Two things must be wished for the rising democracy. First, a sense of responsibility; secondly, a power of self-criticism. Let the leaders of labor have done with the faults of others and begin seriously on their own. Let them realize that it is now up to them to make the world and their own country as safe in the arms of democracy as democracy is to be safe in the coming world."

THE HUN'S "KINDNESS" TO THE TURK—The Turks have lost their only large battleship. The Berlin *Lokal Anzeiger* announces that the German authorities have removed the former *Goeben* to Sebastopol, oblivious of the fact that Turkey had bought and paid for her. The London *Daily Graphic* comments:

"Turkey has every cause to regret the day when she joined the Central Powers. The Ottoman Government is bankrupt, and a recent effort to raise an internal loan has been a disastrous failure. Yet Germany has persistently refused any help. Again, when a food commissioner paid a visit to Berlin a few weeks ago to secure food-supplies for Turkey, he was sent away empty-handed. Further, when Turkish forces were sent to invade the Caucasus, they were swiftly halted by a stern hint from Berlin. To this catalog of grievances must be added the loss of territory and prestige which Turkey has suffered in Mesopotamia and Palestine. That fact has been sneeringly emphasized by the German press on several occasions."

SCIENCE - AND - INVENTION

NO WOOL FAMINE

THE DANGER of a wool famine is not so great as was feared, according to information gathered by the War Service Committee of the woolen industry; that is, so far as stocks of wool held by manufacturers are concerned. Instead of being obliged to confine their output entirely to war-orders, not a few factories, we are told editorially by *The Textile*

but it does not mean that there is likelihood of any change, in the immediate future at least, of officials' attitude regarding the allocation of wool for civilian needs. Nor is the supposition warranted that the same care in the conservation of raw material that has characterized the past course of textile manufacturers should not be observed in the months to come. A great deal has been done to restrict supplies of raw material over a longer

period than that of ordinary consumption. Adulteration has been the order of the day, and doubtless will continue. Only by using substitutes could the supply which is now evident have been possible, and a continuation of this satisfactory status can only be made certain by further economy on the part of manufacturers.

"Doubtless those producers who have heeded the warning of government officials to conserve their wool will receive the greatest degree of consideration in the future. On the other hand, there may be a few who have not heeded this warning who will find it difficult to obtain supplies with which to continue the operation of their machinery. With all, however, it will be a case of waiting until those in authority have complete information as to the amount of wool which this country is to receive from abroad before it can be expected that any pronouncement will be made regarding the disposition of wool for civilian production.

"Undoubtedly the crucial test of the industry's ability to take care of the civilian trade will come on the next heavy-weight season. . . . If there is no decision on the part of government officials with respect to the apportionment of wool, so that manufacturers may lay their plans for the heavy-weight season of 1919, by which a fair proportion of their usual product can be assured, the consequences are likely to be serious."

Meanwhile, the War Industries Board, under date of September 11, has announced in the daily

press that war-relief organizations will continue to receive their supply of knitting-yarn to be made into woolen garments for American soldiers and sailors, despite a program of restricted production by spinners approved by the board. And George E. Scott, acting manager of the Red Cross, according to a dispatch from Washington to *The Tribune* (New York), declares that his organization controls something like a million and a half pounds of wool; which will be available for knitters. Explaining the effects of the Industries Board's curtailment of the supply of knitting-yarn, Chairman Scott is reported as saying:

"When the War Industries Board some time ago advised the Red Cross that future production of knitting-yarn would be greatly reduced, we immediately began to purchase all yarns

COTTON AND WOOLEN SWEATERS—WHICH IS WHICH?

To save the wool, "fluffed cotton," says a Philadelphia paper, "may be used in double or triple strands to make warm knitted garments for the men in the service at perhaps less than half the cost of the same amount of wool, with the same heating properties." The sweater in the left-hand picture is cotton; the one at the right is a Red-Cross woolen garment.

World Journal (New York, September 21), are preparing to turn out woolen goods for civilian wear for the next season. Of course, this paper goes on to say, these calculations may be upset by further requests from the Government for additional machinery to be placed on the production of war-goods. Many Federal contracts will be completed shortly after the first of the year, and then there is no apparent reason, the editor thinks, why the mills can not be devoted to regular business. We are warned, however, against the conclusion that this means plenty of wool. Says the writer:

"This apparently improved situation would seem to discount the statement from official sources that all the wool-supply for the current year would be needed and taken by the Government,

suitable for our knitting. As a result we have to-day in stock or on order 1,400,000 pounds of yarn for distribution to our chapters. It is hoped we may obtain some additional yarn from wool unsuitable for government uses. The expected total, however, will be considerably below the 10,000,000 pounds used last year.

"While the total of yarn we can obtain is being determined we are studying how to use our supply to produce only garments which are most essential. When a conclusion is reached we shall announce our full program of knitting.

"In addition to this stock of yarn, the Red Cross has ready for distribution 600,000 sweaters, 134,000 mufflers, 384,000 wristlets, 228,000 helmets, and 1,328,000 pairs of socks, a total of 2,674,000 articles. We are hopeful, therefore, that these and such additional garments as we shall be able to make will enable us to meet the more urgent requirements of our men during the coming winter."

There are still others who point out that knitting may be indulged in freely even by those who have no wool at all. For instance, a writer in the Philadelphia *North American* calls attention to the value of fluffed cotton as a substitute. He writes:

"Here, at last, is a substitute for one of the necessary articles listed under the heading 'Munitions of War,' which combines all the advantages of the original, and has a goodly list of its own to add besides.

"Fluffed cotton, as the name implies, is a strictly cotton product. The fuzzy, furry quality, which enables it to work up so admirably, is produced by a particular carding process which results in an appearance approaching Angora wool. For this reason, it is sometimes mistaken for what is known as the domestic Angora, and was originally used for adding the decorative finishing-touches to knitted sweaters and hats. Its extreme reasonableness in price, however, not only in comparison to the domestic Angora but to the regular wool yarns and flosses, and its adaptability to every sort of knitted garment, soon won it a much wider range of use and popularity.

"Fluffed cotton may be procured in virtually all of the popular wool shades and in three degrees of weight. Owing to its composition, garments made of it wash even better than those made of all wool, and if the drying process is carefully done, the long hairs, which are its most attractive feature, will rise from the thread just as soft and silky as before the water touched it.

"There is no danger, however, of those same hairs presenting the same working difficulties as do those on the genuine Angora. For these are neither so long nor so numerous, nor do they become dislodged from the thread either while the garment is being made or worn.

"In every instance where wool has or can be used fluffed cotton may be substituted. It is admirable for children's sweaters and caps and scarfs, because it washes so serviceably. It may be developed into either sleeveless or kimono sweaters without danger that the garment will stretch and lose its shape, for there is very little 'give' to the cotton thread. It may be used perfectly well as a substitute for wool embroidery on serge frocks and suits, and it can be crocheted into hat and tams as readily as the regular wool floss. Moreover, and this is perhaps the most important of all, it may be used in double or triple strands to make warm knitted garments for the men in the service at perhaps less than half the cost of the same amount of wool, with the same heating properties. And white or soft gray in the light-weight works into admirable summer socks for the men in the trenches.

"Here at last is a substitute worthy of the name. It might almost be called a synonym, it fills so adequately the place of wool. For besides being far cheaper and just as practical and adaptable as wool, its use represents a real patriotic service and conservation."

RUBBER OUTRUBBERED

A NEW COMPOSITION that is just like india-rubber, "only more so," is editorially announced by *The Scientific American* (New York, September 7). The editor prefaces his account by the statement that this invention is typical of many that are appearing just now, in that it is the

discovery of a new profession—the "by-products engineer." The specialty of this type of engineer is the utilization of hitherto worthless by-products. No one, we are reminded, can increase the amount of matter or substance in the world. All that the inventor can do is to devise new combinations of it; and this particular worker is skilled in ways to make use of that which has always been considered useless. It is this kind of worker who has just discovered a way to make rubber harder, tougher, and more elastic by combining it with a hitherto valueless by-product. We read:

"He had for some time had in mind a reinforced rubber fabric, patterned more or less upon reinforced concrete, and to be formed by filling in a tubular or spongy mass with rubber. But he had searched high and low for the proper base, without success. He had tried various metals, and everything else he could think of; but none of them added strength to the rubber without a disproportionate sacrifice of elasticity. And there the matter rested when the man with the idea stumbled across what

he insists is the largest single waste product that remains unutilized.

"This product is fish-scale. In the case of one or two less common varieties of fish, it has been customary to make an artificial pearl from the scale. But with this exception, the vast amount of scale removed from fish in canneries and wholesale markets and retail stores has been an absolute waste, with not even a suggestion of possible utilization. Like flue-gases and cinder heaps before the by-products engineer got hold of them, it has been actually a nuisance which had to be got out of the way with as little expense as possible.

"When this state of affairs came to his attention, our man got a supply of fish-scale, and investigated its structure and properties—purely by second nature, because it was a waste product. But when he found that it was a cellular mass, of tubular structure, as resilient as rubber but much tougher, and that it made no difference at all what kind of a fish it came from, his interest in it ceased to be one based on general principles. He at once tried it out as a base for his cherished reinforced rubber, and found that it worked like a charm; it made the rubber tough, without robbing it of its elasticity.

"This of itself would have been sufficiently pleasing; but the final consummation, which came later, by sheer accident, made it look like the proverbial three-tenths of a dollar. Rubber is hardened, or vulcanized, by treating it with sulfur. To make a long story short, the inventor discovered that fish-scale would take the same sulfur treatment, with the same result. So after he has rubberized his fish-scale and got a tough, elastic fabric, he can vulcanize the combination, and get a hard, tough, elastic fabric.

"He has accordingly taken out as broad patent protection as he could induce his Uncle Samuel to give him, and is now busily engaged in finding out just how far he can go in the rubber business with his new material. The most exhaustive tire tests have had no effect upon his optimism save to increase it; and indeed, when a man begins to talk about a rubber that shall be far harder and far tougher than rubber has ever before been made, without loss of resiliency, it would seem that he has something to talk about."

TO SAVE WOOL FOR THE SOLDIERS.

She is wearing a cotton sweater.

WILL OUR ROADS STAND TRUCK TRAFFIC?

THE INCREASED USE OF TRUCKS on ordinary loads, for commercial and military purposes, threatens our highway system with early ruin, or so thinks Mr. S. Whinery, of New York, whose opinions are printed by *The Engineering News-Record* (New York). Mr. Whinery points out that our highways are now being used more and more for a class of traffic that has been carried hitherto over railroads in heavy freight-cars. Trucks are growing larger and are operated at higher speeds. Large capital is being invested in their manufacture and use, and the interests that control them will before long be powerful, if they are not so already. Shall we rebuild our roads to correspond, or shall we require those who use them to pay for their "way" as well as their rolling-stock? Mr. Whinery believes that matters have reached such a point that a roadway heavy enough for this new class of traffic would cost about as much as a light industrial railway. He explains that he refers to trucks intended to carry loads greater than four tons, and proceeds:

"Our experience has now clearly shown that even our best present highways are quickly destroyed by the excessive wheel-loads and high speed of these trucks. . . . If it can be conclusively shown by satisfactory evidence that the use of these trucks on the highways is, in normal times, necessary for the accommodation and promotion of the commercial and industrial interests of the country at large, and therefore beneficial to all classes of the people to an extent that will justify the enormous expenditure required, there can be but one answer. If, on the other hand, it can not be shown conclusively that such an expenditure will yield a reasonable profit on the investment, or if it appears that provision for the use of heavy trucks will benefit a comparatively small class at the expense of the great mass of the taxpayers who must pay for the building of our public roads, a different answer is warranted. There is undoubtedly much to be said on both sides of the question. It needs careful, scientific, and economic study and investigation, which so far it has not received. The arguments presented have been mostly those of special interests, the manufacturers and salesmen of trucks, and the often ill-considered views of the good-roads enthusiasts. The arguments on the other side have not been fully and properly presented to the public. Particularly, the enormous cost of building highways of the character that will be necessary to withstand the traffic of heavy power trucks has not been fully realized. . . .

"To provide a highway capable of carrying such loads without rapid deterioration would call for a roadway surface approximating that of our best city pavements, and a concrete foundation from 50 to 100 per cent. stronger and more rigid than is now found adequate for city streets.

"Such a roadway twenty feet wide (and no less width would be sufficient) with its incidental items would cost at prewar prices not less than \$40,000 per mile. This does not include the reduction of gradients now considered satisfactory, which the truck interests might with good reason demand.

"There are said to be more than 2,000,000 miles of public roads in the United States, of which some 235,000 miles were reported as 'improved' at the end of 1914. If we assume that 8 per cent. of the whole would have to be built or rebuilt, as main or secondary roads, in order to carry out a scheme of general heavy truck use, at an average cost of \$25,000 per mile, the total first cost would be \$4,000,000,000, or about \$40 per capita for the whole population of the country."

This writer does not believe that it is generally realized that the reconstruction of our highway system, to fit it for the use of heavy power-trucks, would involve anything like so great an expenditure, and he thinks that when the people fully realize it they will be opposed to any such scheme. He goes on:

"Arguing from the present congested condition, due to the war, of rail- and water-transportation, it is asserted that these agencies have broken down and can no longer furnish the facilities that our expanding business demands. Such an assertion is at least premature. . . .

"If, however, it shall eventually be found that the steam railroads and the waterways are inadequate, and the highways

must be resorted to, it may be worth while to consider whether the construction of enormously expensive roadways is the best solution of the problem.

"One possible substitute would be the construction, along the sides of the roadways, of light industrial railroads for the use of commercial vehicles. Most of our highways are now—or could be, readily and cheaply—graded to such width as to permit the building of a single track on each side of the roadway proper. The cost of such a single track, ample for the use of trucks up to fifteen-ton capacity, would probably not exceed in normal times after the war \$10,000 per mile, or \$20,000 per mile for the two tracks.

"Assuming that the roadway for ordinary business or pleasure-travel could be built for \$12,000 per mile, the total first cost would still be less than that of a roadway adequate for the trucks. The truck-wheels could be constructed with steel treads and flanges placed on the inner sides of the rubber tires, of such radius that they would not interfere with the operation of the trucks upon ordinary roadways, and portable switches or turnoffs could be carried, enabling the trucks to leave the rails and take to cross or diverging roads or streets where necessary. . . .

"It is not unlikely, if the truck traffic promises to be anything like as large as its advocates predict it will be in the future, that private corporations might undertake to build and maintain the tracks, on the basis of a ten-mile tariff charge sufficient to make the investment profitable, while fair and reasonable to the patrons. The saving of power, the higher speed attainable, and the freedom from roadway accidents would help to compensate for such charges, if they did not compensate wholly for them.

"In any event it would be just and proper that the interests specially benefited by the construction and maintenance of such railroads should, directly or indirectly, bear a large share of the cost."

SHALL WE KEEP ON SAVING DAYLIGHT?

ON SUNDAY, October 27, the clocks will be set back one hour, and our first experiment in "saving daylight" will come to an end. The general feeling seems to be that it has been a success. Indeed, some enthusiastic souls are advocating a continuance of "Wilson's time" throughout the year, oblivious of the fact that while daylight is saved at one end of the summer day by the adoption of the plan, there would be loss at the other end by prolonging it through the winter months. The measure, we are told editorially by *The Electric Railway Journal*, has undoubtedly been effective in conserving the health, wealth, and mineral resources of the nation. While no dependable figures are available on the total fuel-saving, it has been estimated that it will have been responsible for the conservation of from 1,000,000 to 1,500,000 tons of coal during the seven months of its operation. Electric railways have had some of the benefit of this economical measure, and the people as a whole probably have profited by the enjoyment of extra leisure during daylight hours. The writer goes on:

"The fundamental principle of purpose of the daylight-saving plan is to synchronize the period of work with the rising of the sun rather than with the time (noon) when the sun reaches its meridian; so that during the summer when the days are long the period of recreation after work can be taken while there is natural light rather than during a time of artificial light. As the sun rises some three hours earlier in June than in December in the latitude of New York the present plan, in which work is begun only one hour earlier in summer than it is in winter, does not fully make up for this variation in the time of sunrise. However, it does so to some extent, and as well as could be done with any system involving only two changes of time, one in the spring and the other in the autumn.

"The suggestion has been made by some enthusiasts for the present daylight-saving plan that it should be continued throughout the year. They believe that people are now so accustomed to rising an hour earlier than they otherwise would that they would continue cheerfully to do so during the winter. These advocates, however, overlook the fact that such a plan would require most people to get up a considerable time before sunrise. They would thus have to use artificial light in the morning instead of in the evening, so that there would be no saving.

Courtesy of "The Engineering News-Record," New York.

A RAILROAD-TRAIN OUT FOR A FAINT ON A RURAL HIGHWAY.

Moreover, such a measure would be very unpopular, because while most people do not object to sitting up in the evening with artificial light they do object to being obliged to use it after rising in the morning. We are afraid that if the plan were followed throughout the year the tendency in winter would be gradually to delay the times for beginning and ending work, and the hours being thus fixed for winter conditions could not easily be changed back during the summer.

"Another point worth mentioning, a psychological one, is that if people used much light in the morning they would forget to turn off this light until some time after the necessity for it had ceased. They could not be expected to keep the matter constantly on their minds; hence another incidental advantage and economy in shifting the clock hands back to their normal place in the winter-time."

NEW SWISS ROUTE TO SALT WATER

SHAKESPEARE'S "BREAK" in speaking of the "coast of Bohemia" is familiar. But in these days of huge artificial waterways neither that country nor any other inland region has any excuse for remaining isolated from the sea. Switzerland is already connected with salt water through the Rhine, and the question of reaching the Mediterranean through the French river system after the war has been thoroughly dismist of late. A Swiss Association for Navigation from the Rhône to the Rhine has been formed, and its president, Paul Balmer, has just been addressing a body of French engineers and business men at Paris, under the auspices of the French Naval League. A writer in *The Scientific American Supplement* (New York, September 7) is of the opinion that this problem is of great interest for the economic future of the two countries. It is also intimately connected with the project for making the Rhône navigable upon the whole or most of its course, which has been occupying the attention of engineers in both countries. Mr. Balmer sets forth the main lines of the project as follows:

"We must start with the idea that the waterway system of Switzerland is now connected to the Rhine, but that this country has no similar outlet on the French side. But it would be a great advantage to be able to make suitable connection with the Rhône, and it is this idea which is to be promoted at the present time. Engineers consider that it is quite feasible to do this, and, in fact, the question is not one of recent date, but has been under examination for a long time since, and the great economic advantages which the two countries could obtain in case the Rhône were made navigable have been already exhaustively considered and clearly pointed out.

"In Switzerland, the waterway from Bâle to Geneva already exists, and it now remains to make connection on the French

side between Marseilles and Geneva by way of the Rhône. Engineering work on this river consists in the construction of locks all the way along at the proper distances, up to within a short distance from Geneva; then comes the important work on the stream commencing with the great barrage proposed at Genisat, and this will solve the problem of navigation from this point to Geneva, at the same time employing the power of the Rhône for the great 300,000 horse-power project to which we referred before. This electric station, it will be remembered, will rank among the most important in Europe. The Rhône is now very narrow in many places in this region, but the proposed engineering work will open it up for navigation as far as Geneva. This will be the final step to be taken in making the Rhône navigable throughout its course, and it will thus be joined on to the Swiss waterway system. Bâle, or Basle, will then be placed at practically an equal distance from the northern port of Rotterdam on the one hand and the southern port of Marseilles on the other, and the Swiss river system will be connected with France through the Rhône. The events of the war seemed to show to what a great degree the commercial relations between Switzerland and France could be increased, even with the present limited transportation resources. For instance, traffic between the Mediterranean port of Cette and Switzerland—this port handles much of the Swiss freight—was only 50,000 tons, while in 1916 it had increased to 500,000 tons. What is needed at the present time is the proper legislation, in order to carry out the project, which will surely be of great benefit to the commercial relations between the two countries."

RAILROADING ON A COUNTRY ROAD—Heavy single pieces of construction machinery are very frequently moved long distances under their own power, but it is not often that a whole construction-train is transported across country as a unit. How this has been done at the Germantown dam for the Miami Conservancy District in Ohio is described in a recent issue of *The Miami Conservancy Bulletin*, as quoted in *The Engineering News-Record* (New York). We read:

"No railway runs near the site of the dam, so it was necessary to run a standard-gauge construction-train, with two locomotives, on its own tracks and under its own power on the country highway and village streets, about three and one-half miles. The distance was not covered in one run, but in short lengths, the rails being taken up behind the train and relaid in front as the journey proceeded. Grades were encountered that were too steep for the entire train to climb, even when driven by both locomotives. To overcome this, a siding had to be built at the top of the hill seen in the background in the view. The front locomotive dragged the cars up the slope one at a time and stored them on this siding, where they were made up once more into a train and moved ahead again out upon the main line."

LETTERS - AND - ART

Photograph by Paul Thompson.

THE ALTAR OF LIBERTY.

Standing on the west side of Madison Square, this imposing architectural feature of the Loan Drive is the center each day at 12 o'clock of tributes to our Allies. It will remain throughout the war, and may be perpetuated in permanent materials.

"THE AVENUE OF THE ALLIES"

NEVER HAS STREET-DECORATION in New York reached the pitch attained by the Liberty Loan Committee. Fifth Avenue becomes for the time being "The Avenue of the Allies," and so impressive are the results that the cry is inevitably raised to have this tribute to our associates in arms perpetuated for all time. "The significance of this name is now obvious," says Mr. Alfred Pinneo, writing to the *New York Times*, "and the act would typify a unity of feeling—a true alliance of heart that is our best guaranty of enduring friendship and partnership with those great peoples who, by their heroic struggle, have redeemed the world from the dominion of the Beast." The remarkable thing about the present occasion is, as Miriam Teichner observes in the *New York Globe*, that "from Madison Square to Fifty-ninth Street, Fifth Avenue has been metamorphosed into a great win-the-war picture-gallery." Under the flags of many nations that "slant from windows until the avenue is a gay carnival-vista of color, under the crimson-and-white Liberty-bond pennants with their terse slogan, 'They Fight! You Lend!' the Fifth Avenue crowds shoulder and elbow their way to the window-displays which crystallize the nation's war-spirit in this win-the-war art-gallery." It is pointed out that no peace period, nothing but a war-era, could have produced the pictures that are on exhibition in shop-windows:

"They are of war's humor as well as of its horror, but a sustained thought runs alike through the gay and the grim, like a *motif*, heard and heard again, and harped upon with insistence—the *motif* of hatred for the thing that Germany has done to the

world, and the determination that never again will this thing be allowed to happen.

"Those shop-windows on Fifth Avenue are bringing forth such comment now as they have never before elicited. Exclamations arise almost involuntarily from the crowd which surges about a window showing from a distance nothing but a froth of women's lingerie or the sleek shine of furs or the gleam of metals and gems. For, framed by these accustomed things, the crowd sees pictured war's *Schrecklichkeit* in all its blood, its filth, its horror. Starving women plead from the midst of satins and velvets; maimed soldiers writhe with a background of pale plush; shrieking children flee from pursuing demons out of a fluff of clothing destined for happy times."

The names of the donors recall some of the most notable features of our ordinary current exhibitions. There are works by Joseph Pennell, Jonas Lie, Gari Melchers, Willy Pogany, George Bellows, and Gutzon Borglum. Again, says this observer, "there are unknown painters whose work shows the unmistakable earmarks of the unskilled, but about whose patriotism there is nothing amateurish." We are given a survey:

"The art exhibit begins at Madison Square with the Altar of Liberty, inscribed with the sentiments of statesmen of the Allied countries. Above Clemenceau's name is the statement, 'We will fight until the hour when the enemy comes to understand that bargaining between crime and right is no longer possible. We want a just, strong peace, protecting against the abominations of the past.'

"That statement by Clemenceau may be said to strike the key-note for the Fifth Avenue exhibit. 'A just and strong peace,' and the duty of the public to work toward it and for it, directly and indirectly, is the message of every picture shown. Almost every one of these pictures shows a 1918 date-line.

"Walking up Fifth Avenue from Madison Square, the tourist in this war-gallery sees in Brentano's window Lichtenauer's poster, 'Combined effort will win the war. Be of that effort,' with its pageantry of allegorical female figures, bearing aloft a burden of ships, of war-supplies, of all the various and sundry impedimenta of war. In the window of Mason & Hamlin, 313 Fifth Avenue, John Ward Dunsmore strikes a novel note with his picture of President Wilson alone in his study and its Liberty-bond message, 'Lighten His Worries.'

"In McCutcheon's window Carroll Bill, of Boston, shows a burning fishing-smack on a smooth lift of green water, and asks the public to guarantee safety for our fishermen. Altman's has a great statue of Liberty at the main entrance and numerous window displays. A notable collection of Pennell etchings is to be seen in Kurzman's window, showing scenes in the airplane field, at the hangar, and in shipyards and munition-plants. The war-industries are infused here with a picture quality and a poetry all their own. . . .

"Full of life and energy is A. C. Goodwin's portrayal of shipyards, with a giant hull in the making, with its slogan, 'Liberty Bonds Guarantee Endless Tonnage,' in the Woolworth window. Actual shipyard scenes, by Hugh Ferriss, in characteristic vein, make the windows of Himebaugh & Browne a real treat to the art-enthusiast. In the Rogers Peet window the Kaiser wounds with his bayonet the crucified figure of Christ, at whose feet a surge of white corpses washes upward, like foam. This picture is by Spear, of Boston. A powerful portrayal of the agony and terror which follow the torpedoing of a Red-Cross ship is made by Hopkinson in the windows of Florette, and Willy Pogany, a few steps farther, has an allegorical America with her foot on the war-god, while, in the background, children come with gifts of fruits and flowers.

"Terrified peasants, fleeing with their little household goods past all the young beauty of spring trees, plead, with their creator, Francis C. Jones, 'Stop This!' in Youmans' window at No. 581. The Ehrlich Galleries show dry points and lithographs by Nuytens, Puyse, and Mielzner on war-subjects."

Emotion may have been aroused in all its phases before the visitor has traversed the space between Twenty-third Street and Fifty-ninth on the east side. The west side has also its full quota:

"'The Germans Arrive,' by George Bellows, in the window of Scott & Fowles, 500 Fifth Avenue, is perhaps the picture about which the crowds hang longest in a sort of fascinated horror; for this picture shows the Germans at their work. One invader holds the neck of a tortured man in the firm grip of his muscular, gray-sleeved elbow. The sword of a second is raised, dripping, from its completed task; where the man's hands should be there are dark, dripping blobs of raw flesh; one severed hand lies, red-flecked, in the foreground. In the eyes of this man there is madness. In the background Germans surround a woman. . . .

"In the Spanish Art Galleries, at 734 Fifth Avenue, Charles S. Chapman's pictured procession of war—marching men, aviators, trucks, cannon, with its significant words, 'We are sure of them; are they sure of us?' F. W. Benson has painted a mother and two frightened children fleeing from the terror behind, which is displayed in the Duveen Brothers' window, with the words, 'Liberty bonds guarantee immunity from frightfulness.'"

The New York *Evening Post* comments on the fact that "it is what happened in Belgium and northern France that more than anything else stirred American anger." Our particular grievances sink out of sight:

"No one looking at the representations of homes in flames, civilians shot down, and women led away, or paintings, like George Bellows's, of the maiming of a Belgian boy, would learn from them that the immediate cause of our entry into the conflict was the unrestrained submarine warfare. There is remarkably little to remind us of German crimes on the sea. Perhaps this is in part due to the fact that for us this seems so much more a land war than a sea war. Our thoughts are more with the men in France than with those on the seas. But long before the submarine warfare had resulted in its worst atrocities, the

reports of the crimes in Belgium had torn nine out of ten Americans away from any neutrality of feeling."

Another writer to *The Times*, who pleads that this moment should not pass away without leaving its material mark, puts a philosophic claim for "The Avenue of the Allies":

Copyrighted, 1918, by Carl Melchers

"ALLIES."

Painted by Carl Melchers. It presents a note of cheerfulness in contrast to the horrors and sadness of most of the themes chosen by our artists whose work is shown on the Avenue of the Allies for urging the Liberty Loan.

"The decoration of Fifth Avenue with the flags of our twenty-two Allies, one for each block, is not only among the gayest and most beautiful civic demonstrations of a city which has always led its fellows in such pageantry; it is the expression of a historic moment, of a noble mood and emotion, which all must wish to make permanent—or, if that is impossible, at least a deep and abiding memory. In this greatest crisis of history, twenty-two nations, of the utmost diversity in size, in economic interests, in historic traditions, and in racial character, stand shoulder by shoulder, each giving gladly its utmost treasures of life and of wealth in the cause of world-wide liberty and of justice. . . .

"How are such events permanently signalized, such memories kept alive? One way is to embody them in the daily nomenclature of ourselves and our children—in the names of our streets. . . .

"Doubtless the high and generous mood of to-day will pale in the lapse of decades. Trade rivalries will begin again, racial misunderstandings supervene. That is the way of the workaday world. Yet much will be gained if there is permanent record of the fact, as gay and as beautiful as may be, that when the trumpets of liberty and justice sounded a nobler spirit was born; that the peoples of the mountains and the peoples of the seas stood shoulder to shoulder as brothers, offering up the best of their wealth, the best of their youth, upon the sacred altar."

NOT ENOUGH BOOKS FOR THE ARMY

THE "AVERAGE MAN" was a generous giver when he was asked to go through his library for books for the soldiers' reading. Something short of three million volumes were donated, but these have been found to be inadequate in number. They were mostly fiction—in fact, says Frank Parker Stockbridge, National Director of Information, Second Library War Fund, "almost all of them that can be used are fiction." This fact explains why the American Library Association needs \$4,500,000, the apportionment granted it out of the fund of \$470,000,000 to be raised in the Welfare Drive soon to be on us. The Library fund staggered a good many people, who ask what need there is for the money when the people gave so many books. "Almost every house, in the larger cities at least, and in many of the smaller communities, was visited by Boy Scouts and others collecting books for soldiers. There was something visible, tangible, and the public remembers it." But the books that the soldiers are asking for and that the Government is asking the Library Association to supply, says Mr. Stockbridge, "are technical books, scientific works, text-books of every kind, books on history, books on foreign languages. In short, the whole list of books that can be classified as educational." The "average man's" library is not up to date enough in books of this class to provide the soldier with what he must have. As Mr. Stockbridge writes in *War Libraries* (New York), the official organ of the War Service Committee of the American Library Association:

"Of course there are some standardized sciences in which the book issued ten or fifteen or even fifty years ago is as valuable as the most recent one, but there are very few sciences, and none of the arts, in which the old book is of current value. Gray's 'Anatomy' is still standard, altho it was first published seventy-five years ago. There has been no change in the propositions of Euclid, and the standard works on trigonometry and higher algebra do not need to be of the 1918 edition. But when we have to provide a book on the psychology of color for the use of the camouflage corps, it has to be a new book. The chemistry of high explosives is a subject on which we can not get books from the 'average man's book-shelves.' Neither do the 'average man's book-shelves' yield books to meet such demands as that which one of our librarians recently encountered, from a Greek soldier who wanted a book to help him teach an Italian soldier how to read English.

"From a Southwestern camp a few days ago came the report that the draft had brought in thousands of Mexicans who could not read English, and a demand for the immediate shipment of books in Spanish. We supplied the demand, but of course we had to buy the books, as we have to buy the books in Yiddish, Polish, Lithuanian, French, Italian, German, Scandinavian, Russian, Chinese, Arabic, and the other languages making up the forty different tongues in our polyglot Army, for all of which we endeavor to supply the reading need."

The most striking phenomenon about the American Army is that it is a "reading army," and we are assured that "its members are reading far less for recreation than the average citizen reads." The fiction circulation is declared to be less than 50 per cent. of the total, while in the public library 70 per cent. of the total is so classified. We are further told what the money is needed for:

"We have in the service hundreds of librarians. Some have given up large salaries to work during the war for their bare expenses, and others have been loaned by their libraries, which continue their salaries; but even with salaries cut down to the least possible minimum the expense of building and equipping libraries and library stations, of collecting, shipping, and transporting books, of maintaining central offices and distributing and dispatch stations, amounts to a very considerable sum. A single camp-library, such as the one at Camp Funston, for example, has something like two hundred branches in and around the camp."

From Paris comes a report published in *News Service* about the use of books on the other side and the methods of transporting them:

"To transport these books, the Government allows the Y. M. C. A. cargo space for fifty tons a month, about 100,000 volumes. This was not enough. Sammy is a bookworm and needs 200,000. So Y. M. C. A. and Knights of Columbus secretaries on board transports bring over, in addition, as many packages as the captains will permit. Also they bring the magazines on which you placed one-cent stamps. These are sorted and bundled in New York for distribution to front-line trenches, where there is no time for consecutive reading of books. While speaking of ships—250,000 volumes are placed on board our war-ships for our sailors' reading. . . .

"On each volume is a bookplate which General Pershing has signed, reading as follows: 'These books come overseas from home. To read them is a privilege; to restore them promptly, unharmed, a duty.' Inside the cover of each volume is the regulation library pocket for a card for the name of the man who borrows it, and the usual fly-leaf record. There is the usual rule that books may not be kept out longer than four or five days, but the army readers usually return the volumes in three days. In a collection of three thousand volumes which were turned over every three days, only ten or twelve books were lost in a period of several months. Signs on the library walls explain the difficulty of getting books to France and ask the soldiers to 'play square with the other fellow.' And the soldier has played square. Of course, the debarkation ports were first to be outfitted with libraries, but by September more than two hundred points had them. . . .

"Recently the Paris office of the 'Y' sent down a photographer to take a picture of a soldier reading a book to show the folk back home that their contributions were appreciated. The Paris secretary responsible for this move was delighted to see, when the print was made, a photograph of a soldier reading 'Robinson Crusoe.' He had selected several copies of that desert-island story for this library and gloated over the visible proof of his good judgment. Then the photographer brought him down out of control by explaining that the soldier who posed took the only book left in the library excepting four other copies of 'Robinson Crusoe.' Why poor 'Robinson' was neglected no one could explain, unless it was that every boy had read it in early youth."

The *Chicago Daily News* has printed a list of favorites compiled from reports from thirty-five camps and base-hospital libraries containing from 200 to 100,000 volumes and serving some 1,500,000 men: "It presents clearly for the first time," says this paper, "the average non-technical reading tastes of the entire American Army and Navy." This is the list:

Fiction.

1. All Novels by Zane Grey.
2. Tarzan Books, by Edgar Rice Burroughs.
3. Rex Beach's Western Stories.
4. Anything by Jack London.
5. Harold Bell Wright's Western Stories.

Personal Experience.

1. "Over the Top," by Knapp.
2. "Private Paul."
3. "My Four Years in Germany," by Gerard.
4. Ian Hay's "First Hundred Thousand."
5. Pat O'Brien's "Outwitting the Hun."

Humor.

1. Anything by Mark Twain.
2. Stephen Leacock's Nonsense.
3. "Dere Mable," by Lieutenant Streeter.
4. Irvin Cobb's Stories.
5. Baerndorfer's Cartoons.

Poetry.

1. Robert W. Service.
2. Rudyard Kipling.
3. The "Rubaiyat" of Omar Khayyam.

Devotion Stories.

1. Books by Conan Doyle.
2. Books by Anna Katherine Green.
3. Books by E. Phillips Oppenheim.
4. Books by Louis Vance.
5. Books by Arthur B. Reeve.

Helpful Books.

1. Cabot's "What Men Live By."
2. Wilson's "When a Man Comes to Himself."
3. Fairbank's "Live and Laugh."

Literature.

1. Shaw.
2. Wilde.
3. Emerson.

The *Ladies' Home Journal* (October) states that in a canvass taken among our troops "over there" as to the periodicals they like best to receive from home, the three heading the list are (1.) THE LITERARY DIGEST, (2.) *The Saturday Evening Post*, and (3.) *The Ladies' Home Journal*.

DANCING "DOING ITS BIT"

THE PEOPLE'S FAVORITE AMUSEMENT before the war, dancing, took time to fall into its stride in the progress of events. In France it stopt entirely; people were too sad to dance. In England it persisted mainly as an amusement for men on leave from the front. With us it had had a dwindling popularity.

It has now and then found the excuse of furthering war-charity, but as our boys have more and more gone overseas, it has seemed not quite fair to be gay in this manner. Professional dancers, the petted darlings of short seasons ago, who have not been quick to carry arms instead of shaking legs, have met with no end of opprobrium. But dancing has again returned, and is now going through a phase that takes on all the features of the real folk-dance. The "Block Dance" has held sway in New York even to the extent of superseding the street *festas* that were so scrupulously observed by Italians, for example, on recurrent festivals of the Church. Now one will see young Americans of foreign blood costumed as Uncle Sam or Martha Washington dancing on the asphalt to strains of modern ragtime. *The Jersey Journal* (Jersey City) informs us that the block

dance has "become an institution in Jersey City, and if there is any other city in the country where such events are held in like number, or with the same success, that city has yet to be heard from." We thus see the apotheosis of the dance:

"As a vehicle for the expression of patriotism Jersey City folk have found the block dance irresistible, as is attested by the crowds that turn out every time one is held. Nor does it matter whether the dance is held in the best residential sections or in the quarters where the poor dwell—the story is always the same: lavish decorations in the American colors, a good band, a big crowd, and a big sum of money for the local chapter of the American Red Cross.

"Nor is it difficult to understand why this favorite amusement, in which lithe limbs keep time to music, and which formerly always required a waxed floor, should suddenly be transferred to the asphalt pavements of our streets. Every block is proud of the number of its young men who have gone forth to fight for 'Old Glory,' and it is but necessary to state that funds are required to provide things needed by these boys in khaki to command instant attention and cooperation. As a means of raising funds for the local chapter of the Red Cross the block dance surpasses everything else tried here. For instance, the residents in the Sparrow Hill section of Hudson City held a dance the other night and over \$2,000 was realized. True, this was a record amount for such events, but the fact is not to be lost sight of that were these residents to attempt to realize \$2,000 by any other means they would find the task a far more difficult one. And, then, too, when it is considered that many blocks have raised over \$1,500 by the same means, it is easy to realize why the block dance gains in popularity.

"While the raising of funds for the Red Cross is the main object, the block dance has many other features to recommend

it as an ideal war-time pastime. Chief among these is the gathering of neighbors for a night of patriotic devotion. No block dance is complete unless there is a service-flag raising or some similar patriotic ceremony, and this, along with the decoration of the homes in the national colors and the illumination of the streets by means of Japanese lanterns or strings of incandescent electric lamps, serves to keep alive not only the patriotic spirit, but also the spirit of neighborliness.

FIRST-AID AT SEICHEPREY: "THEIR BLOOD AND YOUR MONEY WILL WIN THE WAR." Painted by S. J. Woolf from sketches made during the first engagement in which the American troops participated, and now being exhibited in the Avenue of the Allies for the Liberty Loan.

"The usual public dances in the halls have, in a large measure, been abandoned for the duration of the war, and a curb has also been put on entertainments and like events, so the block dance proves a most welcome substitute. As an institution fostered almost exclusively by Jersey City, let it continue on its useful course."

WOOLING SIR WALTER TO EARTH—If the shades of old or forgotten authors glow over the tributes of later generations, Sir Walter Scott must have felt an imperative call to return to earthly scenes. So a writer in *The Westminster Gazette* (London) feels as he tells one of the most pathetic stories of the war:

"Apropos of Mr. Birrell's discourse about soldiers and books let me tell a story. There was a boy who lay dying for six months in an English hospital, one of the nicest boys I ever knew, a fair-haired, blue-eyed lad from the North Country. He had been brought back from France shot through the spine, and was a hopeless case from the beginning. For all the six months never a word of complaint escaped him, and he seemed always to be smiling. He had one great consolation: he had become acquainted for the first time with the Waverley novels, and in his last days he was reading 'Ivanhoe.' When he became too weak to read for himself the nurse took it from him and read aloud to him. She was reading on the last day of all, when the *padre* came and his father and mother were at the bedside, and being a good lad, he kissed his parents affectionately and listened very attentively to the prayers, but the moment they were over he turned to the nurse and said, in a whisper: 'Please go on reading, and as fast as you can, for I do so want to know the end.' And so she read him out of the world with the great fight of *Bois-Guilbert* and *Ivanhoe*. I am sure the spirit of Walter Scott was at that death-bed."

RELIGION-AND-SOCIAL-SERVICE

"MORAL FLABBINESS" IN PEACE TALK

"IT IS RELIGIOUS to hate the Kaiser," says Dr. James R. Day, Chancellor of Syracuse University, "because the Bible teaches us to hate the devil and all his works." Dr. Day, reported by the *New York Sun*, spoke thus to the students of Syracuse at the opening session of the university

as a military institution. He added that "It would be a blessing if we could turn the beast of Berlin over to God and say, 'Lord, inflict violent wrath upon this creature.'" In looking in other directions both here and in England it is seen that complaint is made because violent wrath is not sufficiently invoked. A writer in the *London Spectator* inveighs against "British apathy" in respect to the true character of the German. "Even after four years of atrocities committed in the name of *Kultur*, hardly any

class in England, except our merchant seamen, would appear to have grasped the true character of our enemies." The same sort of thing in the United States leads Bishop Quayle, in *The Northwestern Christian Advocate* (Chicago), to point to "a moral flabbiness in discussing the German which has a sinister aspect." He speaks especially in relation to peace talk which periodically wells up after a German overture. "All this indiscriminate, flabby, spineless, godless talk about loving the Germans ministers to a wrong peace, to a peace which will not last overnight. . . . Sentimentality of the Henry Ford type will leave America not only the laughing-stock of Germany, but the imbecile in the German's ruthless hands." Prince Maximilian's bait is that he pretends he speaks in behalf of the German people, between whom and the German Government we have been wont to make discrimination. Bishop Quayle faces that fact too:

"Let us set down sternly that we are at war with the Germans, not the Junkers, not autoeracy, not Prussianism, not the kaiser (spelled with a small 'k'). All that is camouflage and dangerous, because it obscures the truth. The German people is what we war with. The German people is committing the unspeakable horrors which set the whole world aghast. The German people is not and has not been conducting war. It is and has been conducting murder. Hold fast to that. The Supreme Court of New York declared the sinking of the *Lusitania* an act of piracy. Piracy is not war. All decencies, honors, humanities, international agreements, and laws have been smashed by them day and night from the first rape of Belgium to now. The new atrocity which appeared this week was spraying prisoners with burning oil. This is Germany's most recent jest. It makes them laugh so!

"They have violated every treaty with the United States; they have lied from start to finish and to everybody. A treaty was a scrap of paper. This week the Prussian lords have dishonored a prince who was Ambassador to England at the opening of this war because he has published the truth saying that neither France nor England wanted war, Germany brought it on; and the

Emperor has sustained the action. In other words, Germany in 1918 has put to public shame the one man among them who has told the truth in Germany about Germany — the truth which the whole world knows without any confirmation from Germany.

"Germany has ravished the women of Belgium, Serbia, Roumania, Poland, Armenia; Germany murdered the passengers of the *Lusitania* and struck a medal to celebrate that German triumph, dating it two days before the horrible occurrence; Germany has ruined cathedrals and cities in sheer wanton fury in such fashion as has not been

done in all the wars waged in Europe since the days of the building of the cathedrals; Germany has poisoned wells, crucified inhabitants and soldiers, burned people in their houses, and this by system; Germany has denatured men and boys, has wantonly defaced the living and the dying and the dead. An eyewitness tells of seeing women dead at a table with their tongues nailed to the table and left to die. Germany has stolen things little and big; playthings from children, finery from women, pictures of incalculable worth, bank-deposits, railroads, factories; Germany has sunk hospital-ships, has bombed hospitals and Red-Cross camps; Germany has disclosed neither decency nor honor from the day it started war nor has a single voice in Germany to date been lifted up against the orgies of ruthlessness which turn the soul sick and which constitute the chief barbarity of history; Germany remains unblushing and unconscious of its indecency; Germany's egotism still struts like a kaiser; and to climax its horrid crimes, Germany has inflicted compulsory polygamy on the virgins of its own land."

The English writer does not make his list of accusations quite so long, but he passes on to a conclusion that is calculated to stir whatever apathy is left in English nature:

"Since the first entry of the Germans into Belgium one fiendish atrocity has succeeded another. In the light of recent events the now almost forgotten *Lusitania* outrage seems venial. Hospitals crammed with our wounded and dying have been purposely blown to fragments, prisoners of war insulted, starved, tortured, and murdered, hospital-ships blazing with Red-Cross lights and emblems wantonly torpedoed, boat-loads of seamen of all nations turned adrift without food or water to face almost certain death, nuns and women of every age ravished, cathedrals and churches uselessly burned. Still the British public shows hardly a sign of indignation.

The ordinary Englishman, totally ignorant as he generally

is of the Continent, has not yet realized that long before 1914 Christianity had ceased to exist among the younger generation of Germans. No doubt elderly people still profess Christianity, just as in the reign of Constantine there were doubtless old-fashioned Romans who sacrificed on the sly to Pan or hankered after the pleasant gladiatorial shows of their youth. But since 1870 a new race of Germans has arisen. This race knows neither pity nor truth. A thing of beauty is there but to be befouled or destroyed. Chivalry it regards as sentimental rubbish fit only for the mental lumber-room. Murder, lust, and cruelty, and drink alone are worthy of the Berserker race. Is it necessary to support these statements with examples showing the unutterable degradation of the modern German, who seems fouler as he approaches the apex of the social pyramid? The world rings with the details of his crimes, which would hardly have been condoned by Ezzelino da Romano or the Marquis de Sade, perhaps the only Frenchman who has ever had a numerous following in the Fatherland.

"Let us for once speak out. The German has definitely shown that he is a pariah unfit to associate even with ordinary criminals. We can not extirpate him, but we can so deal with him that he will wail for a century; we can refuse to have any dealings with either him or his produce. If this is not done, let us be under no illusions. He is far more disciplined, efficient, and enduring than any of the races he is fighting. Every man, woman, and child beyond the Rhine means to see this business through, food or no food. Their puny army of cranks, peace apostles, and defeatists is long ago either in prison or hanged. *Wellmacht oder Untergang* is their motto. Does any sane man believe that this war is to be the last, that democracies are inherently peace-loving, that the much-boomed league of nations is going to change human nature and bring about the millennium? This time the weight of metal is probably too great for Germany to win; but the German race are the strongest, most pertinacious, and dangerous on earth. They stick, and will stick, at nothing to achieve their ends. In the long run, unless we and our allies set our house in order and excise the cancer of party warfare, the German will dominate the world. For what is the creed which he has substituted for the Sermon on the Mount? (see Professor Cramb's 'Germany and England'):

"Ye have heard how in old times it was said, Blessed are the meek, for they shall inherit the earth; but I say unto you, Blessed are the valiant, for they shall make the earth their throne. And ye have heard men say, Blessed are the poor in spirit; but I

CATHOLIC ANXIETY OVER ROMAN PROTESTANTISM

THE RACE between Protestantism and secularism on the one hand with Catholicism on the other in Rome gives a disquieting feeling to some Catholic journals. Which of the two forces opposing Catholicism shows the greater proportionate advance in recent years it is hard to tell, secular-

French official photograph.

WHAT GERMANS LEFT AT VLAMERTINGHE.

This village church is typical of hundreds left behind as the Hun withdraws toward his frontier.

Ministry of Information.

WHICH THE VIRGIN ONCE SEEMED TO PROTECT.

Many painters have drawn this cathedral at Albert with the statue of the virgin overhanging the city from the tower, seemingly in watchful care. Now tower and statue are gone.

say unto you, Blessed are the great in soul and the free in spirit, for they shall enter into Valhalla. And ye have heard men say, Blessed are the peacemakers; but I say unto you, Blessed are the war-makers, for they shall be called, if not the children of Jahve, the children of Odin, who is greater than Jahve."

ism seeming to show the greater vitality. The Catholic journal *America* (New York) speaks of the Protestant "hope of supplanting Catholicism in Italy, and especially in Rome," as being "a matter of common knowledge." It further represents the popular impression that "such an attempt was doomed to failure from the very outset, and that it was idle to entertain any fears of its success." This impression is disturbed, tho, by the August number of *Les Nouvelles Religieuses* (Paris), which gives a statistical survey of religious conditions in the peninsula and points out the gravity of the danger from the Catholic point of view. "The warnings of Leo XIII., Pius X., and Benedict XV. are shown to have been only too well founded," says *America*, "and the writer does not hesitate to pronounce the situation serious." Moreover, he feels that it "will rapidly become worse unless Catholics find some way to remedy it." We see that—

"Protestantism is growing and indifference is alarmingly on the increase. In 1862 there were 32,975 Protestants of various sects in Italy, in 1901 there were 65,595, in 1911 the number had grown to 123,253, which means that in ten years it had almost doubled. The writer believes that the official registration of Protestants would be still greater were it not that human respect prevented certain Italians from publicly proclaiming their apostasy. Figures show, however, that the Protestant propaganda is more successful in depriving Italians of all religious belief than in converting them to heresy. In 1901 there were in all Italy only 36,092 persons who professed to have no religious affiliations, ten years later the number of those who were without faith was not less than 874,532. If to this number be added the 353,404 persons who in 1911 refused to make any statement as to their attitude toward religion, we find that at that date these two categories embraced about 5 per cent. of the entire population, and that in ten years they had almost doubled."

A conservative view maintains that if Protestantism has not gained in the Holy City during the past ten years, it has not,

on the other hand, lost. There were also 13,117 more Romans in 1911 who profest no religion than there were in 1901. During the same period the number of those who refused to state what religion they profest had increased by 8,378. Finally:

"Not many years ago a Methodist minister prophesied that if Protestant propaganda in Italy were generously supported the near future would witness a separation of the Italian people from the Seat of Truth unparalleled since the inauguration of the Reformation in Germany by Luther in the sixteenth century. His wish, as the writer in *Les Nouvelles Religieuses* remarks, was father to his thought, but it indicates the aim and the hope of Protestantism, and, in view of the statistics given above, furnishes grounds for serious consideration to every loyal child of the Church."

PRUSSIANISM BALKED BY ARCHBISHOP IRELAND

ARCHBISHOP IRELAND dies at a time when current events bring into high relief the value of one of his great services to the country. It is not a Catholic journal which recalls this either, but the *New York Morning Telegraph*, devoted mainly to sports and amusements, which deals forcibly tho briefly with, as it says, "the most notable as well as the most unsuccessful of Prussian propagandas in the United States." The success of Archbishop Ireland, who led the fight against "Cahenslyism," as the movement to Germanize the parochial schools was called, throws a side-light on the present. "The spontaneous and instant manner in which members of the Roman Catholic Church in America submerged and forgot sectarianism and made positive puncture with all other religionists in the war of democracy against Prussianism," says *The Telegraph*, "is easier to understand in the light of the life and utterances of such churchmen as John Ireland, Metropolitan of the Roman Catholic province of St. Paul and Archbishop of that diocese." We read:

"The history of that Potsdam-inspired conspiracy to Germanize the Roman Catholics of this country by the extension of the Teuton arts and language through the German Catholic parish schools, teachers, and priesthood probably never attracted the attention of a majority of the laity in or out of the Roman Catholic Church. But it was a diabolically ingenious conspiracy which ramified from the kindergartens of the German parishes into the highest circles and professorial faculties of the Catholic University at Washington. If it had its origin among the Teuton Catholics of Berlin and Cologne, also it had a mighty lobby at the Vatican, and the College of Cardinals itself was not too remote for its machinations.

"How that subtle scheme to Prussianize American Catholics of German blood or affiliations was exposed and defeated is now an almost forgotten chapter in the annals of the Roman Catholic Church in America, but John Ireland, of St. Paul, was foremost in the fight to defeat it, carrying the issue in person to the Vatican itself and ultimately winning a complete victory for the Americanism of Catholics in this country. There were other churchmen and prelates of high degree who rallied around Archbishop Ireland, but he was their protagonist, and the almost universal loyalty to the flag which Catholics of America are now showing is intensified by his championship of the American idea of religious liberty as well as of political democracy."

EPITAPHS IN FRANCE—To win the right epitaph may be said, perhaps, to be one of the actuating motives of the soldier. *Hamlet's* warning to *Polonius* was that he "will better have a bad epitaph" than an actor's "ill report" while he lived, shows what fears might beset the soul in the shades. The *New York Globe* is impressed by some of the inscriptions scribbled by soldiers on the little wooden crosses that mark the graves of other soldiers, which a Canadian officer has brought from over there. Here is one:

Here lies the body of Elmer Opp,
Who fourteen times went over the top.

And every time he brought a Boche,
Till a sniper got him at last, b'gosh!

"And another, markedly different in sentiment, reads:

Churchill faked it—he lies at rest;
Nobody grieved when he went west;
Whence he came or where he goes
Nobody cares, nobody knows.

"No leisurely literature, conceived and written in the silence of the sanetum or studio, in these lines. Here are the hatred and scorn which every real fighting man feels for the chap who turns coward. Here is the tribute paid to the unsung hero with his booty of *Boches*. Here, too, in the case of both coward and hero is the humor which is the never-failing, saving grace of the soldier, the humor without which he could never fight as he has fought and is still fighting.

"All over France are little wooden crosses raised for unknown soldiers and simple verses scribbled by unknown rimesters. And the soldiers who lie under the little wooden crosses—with the few exceptions who faked, like Churchill—and the soldiers who, with gaiety, penciled the little epitaphs upon the wood—all are heroes."

EASTER IN A DRESSING-STATION

WHAT EASTER SUNDAY brought to an American serving in the hospital corps of the British Army is told in a letter from Lieut. Otto P. Sharp to his father, a clergyman of the Methodist Church in Massachusetts. Lieutenant Sharp, who has been wounded, has received the *Croix de Guerre* from the French Government for gallantry under fire and for giving his blood through transfusion to help save the life of a seriously wounded soldier. This passage from his letter printed in *Zion's Herald* (Boston) is a good illustration of the practical religion of the trenches:

"Good Friday found me in this country, after a long and tedious journey. Slept for the night in a little town which was filled with French and English and several thousand fleeing folk. Left next morning early and installed ourselves fifteen kilometers farther on—eight kilometers from the advancing enemy—in a tremendous metallurgical factory. At five the first wounded arrived, and we had our hands full until two o'clock in the morning, when the bombardment got so bad that we had to move back to the town we came from. Here we found a hat-factory which we took over at nine o'clock Easter morning, and at three it was cleaned out, fumigated (five buildings, two stories), operating barracks set up, beds put in, and all. The old priest of the town scared up several hundred shirts, men's and otherwise, the mayor found some stoves, we got our boxes unpacked, and at three the first cars arrived.

"At five we had 250 wounded, at nine we were simply swamped. Every conceivable corner of the place was covered with stretchers, and the poor fellows who could walk were lined up along the walls waiting for attention. Finally, we overflowed, and at one time had thirty automobiles waiting to be unloaded. The serious question was that of evacuation. The cars couldn't go fast enough, and there were not enough of them. Every single man had to have an injection of serum (antitetanus), and the majority had to be rebandaged. We were a bit busy, five of us and myself, and it was morning before we knew it. I took all the English lads, except the very, very bad ones, for I could talk to them and find out what was the matter and know whether I was hurting them or not. Lots of them died—we just could not save them, there were too few of us.

"I'll never forget that Easter Sunday and night—that big hall where the wounded came in first, the smell of the blood, the nauseating odor of the gangrene-gas, that horrible thing that kills so many of them and works with such rapidity, the cries of the suffering, the wheeze of those hit in the lungs, the yells for something to drink, the crash of rain on the roof, the calls for stretcher-bearers, the trickling of sweat in my eyes, the unconsciousness of everything but the little detail of the moment, the pulling out of a piece of shell or a bullet with the accompanying groans, the fall over a stretcher-handle, the death-struggles of one poor lad, the ravings of another, the lack of hunger, the absence of fatigue, the burning of the soles of my feet, the call for the priest, the continuous recurring thought that this was Easter—peace on earth, good will!—the coming of the morning, three hours of oblivion in sleep, and the same thing over again."

WAR-TIME-FOOD-PROBLEMS

Prepared for THE LITERARY DIGEST by the UNITED STATES FOOD ADMINISTRATION
and especially designed for High School Use

KEEPING UP STEAM

MOST OF US have had a chance to observe, at one time or another, the case of a poor person who suddenly "comes into money," through a legacy or similar unexpected occurrence. As a person of small income he has always been thrifty and foresighted, painstaking in paying his debts and in maintaining a savings-bank account. And he is often equally wise after the advent of his new wealth. But not infrequently he is dazzled by the sudden change in circumstances; he lets all his old habits go by the board, squanders his money, overlooks his creditors, and in general "blows himself," with the final result that he finds himself in more desperate financial straits than he had ever known in his days of slender income.

One may try to gloss over this man's folly on the ground that the choice was his, and that his wastefulness hurt no one but himself.

But as long as this war continues, no such excuse can be given in this country for overconsumption or waste of food, because such acts hurt others besides ourselves. In fact, they actually endanger the Allied success in the war.

NO TIME TO LET UP—And yet there are actually people today who have the idea that at present there is less need to practise food-conservation in this country than during the past. They somehow think—that is, if they take the trouble to think—that because we have successfully helped feed the Allies for the past year, and because this is the season when crop reports come in, that gives them the right to slacken in their efforts to save food.

No notion can be more false. None more actively mischievous in slowing up Allied accomplishment in the war. And, since it is our war, none more lacking in patriotism.

Suppose you have been living up to your patriotic obligations in your eating habits since we entered the war. That does not give you the right to relax now—just when extra efforts are needed.

Food problems have not ceased abruptly. They never cease abruptly, with a clock, as it were, like turning off a light or an engine. And they are not going to during this war.

That is why nobody must get into the way of thinking that our food problems are suddenly at an end, and that personal responsibility is no longer necessary. Quite the reverse is true.

Some—not all—of our crops have come up to expectations. But a large crop in itself does not possess any special magic. It does not mean that the war will therefore end automatically, or that there will be more ships or fewer submarines, or that the soldiers and civilians in England, France, and Italy will be less in need of food from us.

WHY RESERVES ARE NEEDED—It should constantly be remembered that the Allies are all of them eating bread which contains a mixture of other cereals besides wheat. Certainly the least that we can do—we whose actual hardship in the war is so much less than theirs—is to use other cereals besides wheat in our bread and in all cooking in the same ratio that the Allies are forced to do. Only in this way can we justly claim that we are sitting down with them at a common table.

Now, of course, one great advantage afforded any country which has as large a food-growing acreage and as large food-production as ours is the possibility of a working margin in food-stuffs. That is, it produces an annual food-supply which provides great variety and flexibility in usefulness.

The food-production of the United States, provided people do not immediately begin to make unscrupulous inroads upon

it—like rats attacking a pile of grain—furnishes an inestimable advantage for feeding other countries, and leads to smoothness and speed of action. Fires have been put out by extemporized bucket-brigades, but with nothing like the ease afforded by a reservoir, which feeds pipes and hose.

A reserve stock helps to keep up a full head of steam. A locomotive might conceivably run without a tender, if it stopped every mile or so for coal or water; but the tender carrying a reserve stock of both is what enables the locomotive to keep up steam at all times. In like fashion, a large stock of food sent from this country will help the Allies to keep up steam during war-time.

MORE FOOD MUST BE SHIPPED—And it is necessary to keep up steam constantly in order to bring this war to a successful conclusion. Every ounce of food, like every ounce of fighting energy, will help to achieve this just that much sooner. Such speed means shortening hardship among the Allies and lessening the final toll of life for them and for our armies.

By contributing foodstuffs from our store to the limit of our power, we permit the Allies to get food by the short haul from the United States. And thereby we release just that many more ships to take over our soldiers and their equipment. In other

words, by giving our food instead of forcing the Allies to look elsewhere for provisions, we secure the utmost possible use from every ton of available Allied shipping.

During our first year in the war we sent over a large quantity of foodstuffs. But during the coming year we must be prepared to send still more. The Allied armies and civilians, our own army, the Belgian Relief, and certain neutrals who are dependent on us will require, as nearly as international food-councils have been able to estimate, 5,730,000 tons of food-supplies more than we sent them the first year.

That is, we must ship nearly half as much again as our last year's exports. Or, in other words, more than three times as many tons of foodstuffs as for the last three annual prewar shipments.

Clearly this is no easy task, to be accomplished offhand by any sort of mere, casual conservation or semisacrifice. On the contrary, it is the sternest sort of task, more difficult even than last year's. Yet it can be accomplished successfully provided the effort be earnest enough and universal enough. To accomplish it, this nation must reduce its consumption of the bread-stuffs, and of meats and fats—that is, beef, pork, poultry, dairy, and vegetable oil products. But this does not mean curtailment in the use of milk for children.

BUILDING THE RESERVE—For all these reasons, where there is any surplus food in this country, it is necessary to export it overseas. More important still, it is necessary to create this surplus. That will lessen the hardship of the Allies and prevent their anxiety over future food-stringency; it will counteract a continuous and steady withdrawal of our men from food-production to other necessary war-activities; it will get the maximum of usefulness from Allied shipping tonnage; and, finally, by all these means it will speed final success in the war.

Therefore, no one nowadays should consider the present as a time to slacken conservation measures or to abandon wisely formed habits of eating. This is no time to "take off the lid," but rather a great opportunity to save staple foods, which can be shipped at any time or to any place where most needed. That is an ideal and a task for each individual to make his own during the coming months.

	Average 3-year Prewar Shipments	Shipped Year ending July 1, 1918	Must Ship Year ending July 1, 1919	Increase this year over last year
	Tons	Tons	Tons	Tons
Meats and Fats (Beef, Pork, Dairy, Poultry, and Vego- table Oil Products)	645,000	1,550,000	2,600,000	1,050,000
Bread Stuffs (Wheat and sub- stitutes in terms of grain)	3,320,000	6,300,000	10,100,000	3,800,000

REVIEWS OF NEW BOOKS

NOTABLE BOOKS ON THE WAR

GERMANY'S PREPARED ECONOMIC WAR

Hauser, Henri. *Germany's Commercial Grip on the World. Her Business Methods Explained.* Translated by Manfred Emanuel. With a Preface by J. Laurence Laughlin. Pp. 232. New York: Charles Scribner's Sons. \$1.50 net. Postage, 10 cents.

A book with four prefaces and a foreword implies importance. In one of the prefaces Professor Laughlin says:

"As Chéradame has exposed the Pan-Germanistic designs of Germany in the East, so Henri Hauser in this volume has reported in striking fashion her economic and industrial methods of penetration into other countries. Chéradame's work is supplemented by that of Hauser. The former has shown how Germany expects to profit by the war; the latter has explained how she gained the economic power to strike the blow."

Mr. Hauser's volume contains much matter deliberately thought out, and a mass of information which business men and statesmen may well ponder thoughtfully. If it be true, as Professor Laughlin comments, that "every country is face to face with a commercial menace, no matter how the war ends," big business everywhere, and even lesser businesses all over the world, must soon reach wise conclusions about markets and production and profits or face failures and final disaster.

Henri Hauser, as his name suggests, is a Frenchman—a professor in Dijon University. He wrote, primarily, for France. He analyzed a commercial situation, an economic problem, with France ever first in his mind. His analysis, however, may be as helpful to America. His conclusions may have as much force on this side the sea. The first paragraph of his introduction reads:

"The war which Germany has let loose on the world sets before the public opinion of Europe a question which seemed to have been reserved, up to these last few years, for the study of economists or historians. How the poor Germany of 1870, with scarcely a place in economic geography, has risen in some forty years to become one of the great forces of the world; how—borrowing the saying of Prince Frederick Charles on the eve of Metz—she has succeeded in supplementing her victory on the field of battle by conquests in the industrial arena—these are phenomena which demand the close consideration of men of affairs, commercial and industrial."

Later, Mr. Hauser asks:

"What necessity had Germany to wage war, to risk her all on a single throw of the dice, when all she needed to do was to wait, to allow the force of circumstances full play so that she might gain in complete peace more advantages than could ever be won for her by the most glorious of victories?"

Germanic expansion required markets, logically. These demanded colonies. "Russia is for Germany a reservoir of labor and a market. France is for Germany a bank and a supplier of minerals." Germany must draw on both countries to maintain her growth and increase her power. This fact became compulsory as to Germany's near neighbors. In those foreign fields where German colonies had been planted there must not be limitations and there must be expansion for the future:

"Not content with besieging, with attempting to surmount the frontiers of the enemy, German industry plants itself during open peace, in the very heart of the countries which she wishes to enslave, in the positions whose importance the economic strategy has revealed to her."

After other statements of fact, and some

FOWNES

An unalterable high standard of glove-making, since 1777. War conditions emphasize the assurance of quality which that name carries.

Leather, fur, silk and fabric. At the Principal Shops.

American art and skill have produced FILOSETTE surpassing any fabric glove imported before the war.

The name is always in the glove.

This Solves the Syrup Problem

CRESCENT MFG. CO.
SEATTLE, WASH.

Simply dip in water—

Then turn the cap—

Then apply, and the lather is ready

A Self-Lathering Brush

The Latest and the Greatest Shaving Aid

Now comes the Warner Fountain Shaving Brush, with the soap in the brush, to complete your shaving outfit. It comes in a compact metal case—soap and brush together. The soap is in the handle, in a tightly-sealed container.

Turn a cap, and a bit of soap spouts into the heart of the brush. Just enough soap, and in just the right place. There is no waste, no mussiness. You are ready for instant lathering.

When you have shaved, enclose the brush by slipping up the telescoping handle. Then the damp brush can harm nothing, even in your grip.

It remains ever-ready, a perfect lather in a perfect brush. A turn of the thumb combines them. The lather is always identical. It is formed inside the brush, so it doesn't drip. The brush pays for itself in soap-saving. And it lasts a life-time.

Use it once and you will wonder how you ever got along without it. It is so quick, so convenient, so luxurious, so sanitary. You would not return to the old mussy methods for ten times what this brush costs.

A Fountain of Soap Is Inside

The Warner Fountain Shaving Brush is a five-year development. It has been perfected by the ablest of experts. Every detail is right. The brush is a Rubberset, with long, soft bristles which can't come out.

That is guaranteed. The brush part is removable for occasional sterilization.

The soap is Mennen's Creamy Antiseptic Soap—the perfect shaving soap. It comes in cartridges which are constantly self-sealing. When one runs out you simply insert another. Each cartridge has cream for 60 shaves at least.

Everything has been done to make this in all ways the greatest soap brush in the world.

To Get It At Once

Many dealers now have the Warner Fountain Shaving Brush. If yours hasn't it, don't wait. Send us \$4.00, and we will mail it to you under guarantee. Buy one for a soldier or a sailor at the same time. There is nothing that he needs more.

Think What She Can Do

With Puffed Rice, Puffed Wheat and Corn Puffs on hand, think of the possibilities.

Three kinds of bubble grains to serve, each with a different flavor.

All can be served like other cereals, or served with melted butter.

All taste like airy nut meats. Salt or lightly buttered, and they become food confections. They are ideal tidbits for hungry children after school.

Nothing else is half so welcome in a bowl of milk. The grains are thin, crisp, toasted, porous—puffed to eight times normal size.

Corn syrup fudge is made light and nutty by stirring in Puffed Rice or Corn Puffs.

Any fruit dish is made doubly delightful with these flimsy, flavory globules scattered in it.

They make an airy, nut-like garnish for ice cream. And they are ever-ready toasted wafers for a soup.

bits of prophecy, Mr. Hauser concludes, manifestly thinking of France: "We must study competition in its world-wide aspect as between nation and nation." Even commerce and industry, he thus clearly concedes, must recognize human brotherhood, international relation.

"We can see only one means of acting with efficiency, and that is not to act alone. It is to be wished that the Entente, after having triumphed on the field of battle, shall find itself still united to-morrow in the domain of economies. To boycott Germany is a dream, a nightmare. But here as elsewhere the Entente has the duty of establishing loyalty to international relations. If we are inspired by this policy, not only will France regain the place to which her position on three seas, the wealth of her soil, the qualities of her inhabitants, and her history entitle her, but we shall also have restored to every nation, to the small as to the great, the means of developing freely the resources which they derive from Nature and from their genius."

DIPLOMACY AND THE WAR IN THE NEAR EAST

Woods, H. Charles, F.R.G.S. *The Cradle of the War. The Near East and Pan-Germanism.* Illustrated. Five maps. 8vo, pp. xxii-360. Boston: Little, Brown & Co.

Schreiner, George Abel. *From Berlin to Bagdad. Behind the Scenes in the Near East.* Illustrated. Pp. xiv-371. New York: Harper & Brothers.

One could hardly find two books the themes of which are so closely alike which yet differ so radically in substance and treatment as these. Mr. Woods's volume is based in part on his Lowell lectures of last winter, and has, appropriately, an introduction by President Lowell, of Harvard. It is historical and diplomatic in its contents, and concerns the Balkans before the war and during it, with chapters on Military Highways, the Dardanelles Campaign, the Riddle of Saloniki, the Bagdad Railway and the War, and *Mittel Europa*. How the war was cradled in the Balkans, (that occurrences there (a long list of them!) were the occasion but not the cause of war, what were the interests of Germany in this corridor of approach to Britain's Eastern Empire since the Kaiser ascended the throne in 1888, and the necessity for the world's peace of entirely eliminating Germany as a source of danger in this direction, form the contents of Mr. Woods's able discussion. In estimating its value we have to remember that recent events in the various theaters of war have brought the settlement measurably nearer. But in order that this settlement may be as nearly just, and therefore permanent, as the many intricate and conflicting claims and elements permit, intimate knowledge is required of those claims, of their foundation in race and nationality, also of the ambitions, mistakes, prejudices, and wrongs that have made Turkey and the Balkans seethe over warlike fires for so many years. To give this knowledge is Mr. Woods's aim. He briefly describes the sixty years of the Balkans preceding 1914 in one chapter. Six chapters describe recent developments in relation to the different nationalities and Turkey, while accounts of the campaigns in the Dardanelles and the occupation of Saloniki bring the account down to 1917. He concludes that the Teutonic Powers worked continuously to stimulate unrest. As to the future, only regard for the claims of nationality and access to the sea, plus as natural boundaries as these other claims will permit, can bring abiding rest, good-will, and peace. But the solution, e.g., as to Macedonia, will be very difficult.

Mr. Schreiner was for nine months Associated Press correspondent in Turkey during the Gallipoli campaign and the

They Spend Years On One Soup To Bring You New Delights

Everybody wonders at a Van Camp Soup. Such richness, such flavor was never before attained in a soup of its kind. It is always there, exactly the same—a savor that's unmatched. And a million users wonder how we get it.

This Is the Way

The basic recipe is always the best we can obtain. Most of them came from Paris. Some of them won prizes in French culinary contests.

A famous chef from the Hotel Ritz first made up these soups in our kitchens. And each was a queen soup as he made it.

But later we placed scientific cooks in charge of the Van Camp kitchens. These are experts, college trained in the new-day culinary arts.

They applied their methods to each Van Camp Soup. Every ingredient was studied and a standard was fixed for each.

Every material was brought up to this standard. Some are selected by analysis, some by other methods. So nothing below the finest grade gets into a Van Camp Soup.

Hundreds of Blends

Then they compare many different blends—sometimes hundreds of them. They compare methods of preparation. Years have been spent in this way to perfect a single soup.

Every step is recorded. Eventually a formula is evolved for creating an ideal soup. It gives minute directions, and often covers pages. That formula is exactly followed—and forever—by trained experts in our kitchens.

Always Alike

As a final result each soup attains the pinnacle of quality. The basic recipe, once famous, seems a very crude soup in comparison.

The perfected soup comes ready to serve. It costs but a little, and is always alike. It brings to your table a finer soup than Parisian chefs can serve.

Get a few cans from your grocer. Compare them with the soups you know. After that we shall never need to ask you to insist on Van Camp's Soups.

VAN CAMP'S
Soups—18 Kinds

Other Van Camp products include Pork and Beans—Evaporated Milk—Spaghetti—Peanut Butter—Chili Con Carne—Catsup—Chili Sauce, etc.

Taylor Instrument Companies
Rochester, N. Y.

Saloniki occupation. He had audience with the Sultan, was in correspondence with the leaders of the Young Turks, including Enver Pasha and Talaat Bey. He knew von Sanders and von Usedom. And he was thrown into association with Halideh Edib Hannym Effendi, the noted Turkish "writer, poet, and feminist." He therefore saw things from the inside of the Turkish position, especially the relation of women in Turkey to the future. His volume is entirely descriptive and impressionistic. Besides seeing the attack on the Dardanelles and the Gallipoli fighting, he went through Asia Minor, into Armenia (where he reviewed some of the results of Kurdish and Turkish massacres), into Syria (Aleppo, Damascus, etc.), and back to Constantinople. The narrative is lively, intimate, and interesting. It reveals Ottoman incompetency in management and government, to say nothing of traits a thousand times worse, partial results of which are being proved now in Palestine. The volume is easy to read, and pictures Turkey from the inside during a critical period in a way different from anything thus far published.

OTHER WAR-BOOKS

Wetterlé, Abbé E. *Behind the Scenes in the Reichstag.* Sixteen Years of Parliamentary Life in Germany. With a Prefatory Letter by René Daumle, Member of the French Academy. Translated from the French by George Frederic Lees. Pp. 256. New York: George H. Doran Company.

On the last page of this book we read: "An old German prophecy (dating, it is said, from the fifteenth century) announces that the day will come when the Emperor—alone, wounded, abandoned by everybody, and driven into the Forest of Teutoburg—will cry out, 'Where are my people? Where is my army?' This prophecy, known to all Germany, will come to pass, and on that day the world, delivered at last from the Prussian nightmare, will joyfully celebrate the Festival of Peace, definitely reconquered."

Abbé Wetterlé was long one of the eleven deputies representing Alsace-Lorraine. Essentially French, he never came to love Germany. He could boldly ask in the Reichstag, "What has been done to merit our affection?" He dared say plain things to members of the German Parliament—as when, being asked by a colleague to sign a certain petition on behalf of Finland, he answered: "I will sign this paper on the day you authorize the French Chamber to ask the Reichstag, officially, to put an end to the servitude of the inhabitants of Alsace-Lorraine." His pen-pictures of German legislators and administrators, numerous and illuminating, are drawn with a free hand and entire fearlessness. As, for instance, this etching of William II. as "the military brute who will accept no contradiction and considers he has a right to lash those who he thinks are incapable of defending themselves." And this of Prince von Bülow: "The most crafty of courtiers. He easily forgets his promises, and breaks his engagements without scruple. Lying, which he always accompanies by a captivating smile, costs him no effort whatever. Stupendously ambitious, he will pass over the body of his best friend when his personal interests dictate that inelegant action."

Lauzanne, Stéphane. *Fighting France.* With an Introduction by James M. Beck, LL.D. Translated by John L. B. Williams, A.M. Pp. 231. New York: D. Appleton & Co. \$1.50 net. Postage, 10 cents.

To read this book is to get a new and vivid impression of French patriotism. Its author is a lieutenant in the French Army,

a Chevalier of the Legion of Honor, and editor of the *Matin*. He writes with vigor, with grace, and with force. Did space permit, we would like to quote his entire story of the battle of the Marne—that first battle, so surely to be recalled as the second Marne contest is being fought out while this review is being written. Many reasons led to German defeat then, the concluding one being thus stated by Lieutenant Lauzanne:

"Finally, at the very hour when the fighting spirit of the French Army had never been higher, the fighting spirit of the German Army had never been lower. It was low because the physical strength of the Germans was low, worn out, and broken by the shameful orgies, the disgraceful drinking, which had reduced these men to the level of swine. It was low because the German fighting men had been led to believe that they would have to fight no longer, that the great effort was ended, that there was no French Army to put a stop to their pillaging and burning."

Farnam, Ruth S. *A Nation at Bay.* What an American Woman Saw and Did in Suffering Serbia. With thirty illustrations. Pp. 229. Indianapolis: The Bobbs-Merrill Company. \$1.50 net. Postage, 12 cents.

Mrs. Farnam is justly proud of the facts that she is a sergeant in the Servian Army; that she has been as far as any person could go on the Servian battle-front; that she has cared for the wounded in Servian hospitals and has raised funds in America for the Servian sufferers. And as this terrible war began on Serbia's account, according to record, and as Mrs. Farnam spent much time in that remote country, she did well to recite her observations and experiences there. Writing of it descriptively, at first, she says:

"The country is very beautiful, with rolling hills and fertile valleys, and in no place in the world have I seen such a profusion of wild flowers; while the cloud-flecked sky which is characteristic of Serbia, the fleeting shadows over the glowing meadows, the broad plains with their golden crops, and the myriads of bending fruit-trees make up a picture that can never be forgotten."

Her sympathy for Serbia is intense, and so is that of her reader before the book's end.

Churchill, Winston. *A Traveler in War-Time.* With an Essay on the American Contribution and the Democratic Idea. Illustrated. Pp. 172. New York: The Macmillan Company. \$1.25 net. Postage, 10 cents.

The author of "Richard Carvel" and "The Crisis," and other novels, here gives us interesting experiences as a traveler in Great Britain and France, and supplements these with some thoughtful pages as an essayist. He went abroad, this last time, wishing "to be free for the moment to accept and record the chance invitation or adventure, wherever met with, at the front, in the streets of Paris, in Ireland, or on the London omnibus." Thus free, his three travel chapters are charmingly informal, and the most positive impression which they convey is that of a changing social order—a growing democracy of feeling—where social order has been pronounced for generations if not for cycles. No other pages that we have seen so strongly indicate this.

Kronle, Lieut. Milutin. *Servia Crucified.* Pp. 305. Boston and New York: Houghton Mifflin Company. \$1.50 net. Postage, 12 cents.

Here we have the whole moving tragedy of Servia's martyrdom compressed within the covers of a single volume by a Servian officer who took part in some of the grimmest and most thrilling episodes of the war in Eastern Europe. This is a book that gives

To Manufacturers Engaged in Essential Industries or in War Work

THE United States Government has found it necessary, in order to effect a general saving of fuel, iron and steel, to considerably curtail the business of *all stove manufacturing concerns*.

This leaves us, or will very shortly, with a large excess capacity available for war work, or work classed as "Essential" on which U. S. priority orders are available. This concern, one of the largest and best known in our industry, in the country, was established in 1846. We now have a big up-to-date plant, equipped in the most modern manner and backed by a corps of experienced men, capable of handling any proposition in our line which you can put up to us.

We especially solicit work from other manufacturers, in the following lines:

- 1—Vitreous Porcelain Enameling on Steel or Cast Iron—all colors.
- 2—Sheet Metal Work—all kinds.
- 3—Nickel Plating and Polishing.
- 4—Japanning on Steel or Cast Iron and Electro Galvanizing.
- 5—Gray Iron Castings—all kinds.

For handling Vitreous Porcelain Enamel Work, we have a big capacity and one of the largest and best equipped enameling plants in the U. S.

For Sheet Metal Work, we have sheet steel and metal stamping machinery for employment of 100 men.

For Nickel Plating and Polishing, we have capacity for the employment of 100 men with all modern equipment.

For Japanning and Electro Galvanizing on steel or cast iron, our company is well equipped—has large capacity for both.

For handling Gray Iron Castings, we have 100 moulding machines with capacity for 250 moulders. Also cleaning mill capacity for foundry output including sand blast.

We are also in a position to make all types of stoves, ranges and furnaces, as well as cast iron garbage incinerators, cast iron latrine incinerators, (Conley Pat.), Army ranges, hotel ranges, etc. We have manufactured, at various times, a considerable line of Enameled Hospital Supplies and kindred lines and can handle any work of this nature required. The floor space available is about 360,000 sq. ft. We employ over 600 men and are in a position to serve you promptly and efficiently. We make a specialty of handling big jobs on short notice, and have a wide reputation for doing things *right and on time*.

Tell us about your needs and we will have our representative call—or will take the matter up with you by mail—and estimate on the cost, time of delivery, etc. **WRITE, TELEPHONE or WIRE US AT OUR EXPENSE.**

THE BUCK'S STOVE & RANGE COMPANY
Dept. M, St. Louis, Missouri

as the horrible side of the great tragedy of the nations without any attempt to gloss or minimize the darkness of the picture, but it affords wonderful contrasts in the heroic patriotism of the defeated Servian Army and their splendid fight as they retreated before overwhelming numbers, singing their war-ballads with undaunted courage, inspired by their music to constant deeds of daring, and meeting death manfully with a song on their lips. The whole volume is instinct with a love of beauty, a comprehension of the pathos and the unforgettable sadness of roughly severed human relations, of ruined homes, smoking villages, and the destruction and despair that one finds everywhere in the wake of battling armies. The author has a charming style and a way of describing incidents that is particularly realistic. He has, moreover, a tender heart and a veritable passion of love for his country and his fellow strugglers for freedom. His description of the death of his chosen companion in a hospital, with the dying man's prophecy of better days to come for a suffering world; of a company of soldiers forced to dig a trench through a graveyard and arrested in the act of removing a newly buried corpse by the mother of the dead man; and of a little orphan child picked up and carried along by a regiment, who escapes all dangers of shot and shell only to die at last of diphtheria in spite of all the efforts of his rough foster-fathers, are veritable little masterpieces and stand out as among the best and most vivid passages of descriptive writing produced during the war. A book that will well repay reading, both as the record of an eyewitness of many strange events and also as a literary production of real merit.

Depew, Albert N. Gunner Depew. With illustrations and maps. Pp. 312. Chicago: The Reilly & Britton Company. \$1.50 net. Postage, 12 cents.

A simple, straightforward narrative by a typical American sailor boy of his experiences in the Great War by flood and field. The young man tells an amazing story of what he heard and saw in two years packed with fighting in various parts of Europe, as a soldier of the famous Foreign Legion at Dixmude, as a gunner on the French battle-ship *Concord* at the Dardanelles, in the trenches at Gallipoli, where he won the *croix de guerre*, on a French transport which was captured by the German raider *Morce*, then on the *Yarrowdale*, and lastly in a German prison-camp, where he underwent three months of torture and semi-starvation, from which he was finally rescued through the intervention of Ambassador Gerard. His story forms a terrible indictment of German cruelty; some of his statements of what he actually witnessed would be almost incredible were it not for the mass of corroborative evidence at hand. He started out with the impression that the Germans were clean fighters, gathered from his acquaintance with sailors of the Imperial Navy while serving as a gunner on a United States battle-ship, but he soon found cause to revise this opinion. His book should be read by all who have any lingering doubts as to the ferocity of the *Boche* as well as by every lover of hardy adventure and good red-blooded fighting under most thrilling conditions.

Jack's Only Hope.—SHE—"I trust, Jack, dear, that our marriage will not be against your father's will."

HE—"I'm sure I hope not; it would be mighty hard for us if he should change it."
—*Boston Transcript*, Digitized by Google

CURRENT POETRY

AUTUMNAL out-of-doors is the theme of much of the verse in the fall numbers of the poetry magazines, and much of that which is not autumnal in the letter is so in the spirit. The perennial glory of the trees and the tonic of the winds share attention with the melancholy minor strains of the death of beauty and hope, the knowledge that "the old things go, not one lasts," as Carl Sandburg says in *Poetry: A Magazine of Verse*. But this magazine has one glad call to the true lovers of the season:

FREEDOM

BY OLIVE RUNNER

Give me the long, straight road before me,
A clear, cold day with a nipping air,
Tall, bare trees to run on beside me,
A heart that is light and free from care,
Then let me go—I care not whither.
My feet may lead, for my spirit shall be
Free as the brook that flows to the river,
Free as the river that flows to the sea.

Quite at the other pole of the autumn spirit is this song of baffled life, also taken from *Poetry*:

THE HOPE

BY JOHN COWPER POWYS

The hope I hold
The heering demon-days
Deride, and reason plays,
Snug as a raven on a gallows-tree,
Its ancient game with me,
Flapping its wings and lewdly gibbering,
"Life is a humorous thing!"
But on I fare, clutching—
It is not gold,
The hope I hold.

The hope I hold
Deliante cruelty
Snatches at, passing by;
And, like a vine-leaf, fallen from its place
Upon a tortured face,
Offers its fragrance to betray, sighs low,
"Life is a humorous show!"
But on I fare, clutching—
It is not gold,
The hope I hold.

The hope I hold
Nature herself with glee
Derides. And destiny
With evil goblin laughter indicates
The adamant gates,
And with a maniac-chuckle rallies me,
"That way is closed, you see!"
But I fare on, clutching—
It is not gold,
The hope I hold.

O hope, whose face in madness I have kissed,
O hope, that art a mirage and a mist,
Shall I destroy thee now, and laugh thereat—
It is too late for that.

"There is somewhat low, even in hope," said the Sage of Concord, and it is the more wholesome philosophy which can speak with the refreshing gaiety of these bits from *Contemporary Verse*:

RECOGNITION

BY JEAN BUCHANAN

A sunset benediction
Resaid in afterglow—
A memory of the gladdest thing
That happened long ago—
A Prophet carried upward
In chariot of fire—
The morning stars together
Singing in holy choir—
All things to love belonging
In light made manifold—
And—just a maple passing
In autumn cloth of gold.

THE FIRS IN AUTUMN

BY ANTOINETTE DE COURSEY PATTERSON

Such gay old chaps, the firs, who in the fall
Link arms with scarlet oak or golden larch;
And stand, as tho at some high carnival,
Ready to lead the march!

In more serious vein this poem from *The Dial* tells the complacency nature grants to her lovers:

RENEWAL

BY JAMES ROBERT

... And so, I am alone again?
But I shall run unto a barren place, and there
Shall wait, and call, and harken till there come
Once more to me the trooping winds of dawn;
And I shall give them drunken shout for shout,
And we shall laugh, and laugh . . . old friends
. . . old friends.

... Alone, you say?
But I shall sit upon my hilltop and be still,
And wait, and gaze, until the riders of the east
Come pricking through the paling dusk and lift
Their flaming spears above the farthest hill;
While with a rush of tearing cloud, behold
Ruddy and warm with labor, comes the sun—
The sun, my Brother; greet him well, old world.

One says I am alone . . .
They do not know, they have not seen or heard;
For when the dark comes I shall go again
To that remembered pasture by the lake,
There watch until a ripple whispering wakes
And softly as of old I see her come
Across the lake in white robes treading, to
The moon, my Sister, to our rendezvous,
And we shall share the gossip of the stars,
And tell old tales, and rest, and be content.

The same tale is more passionately told in this wise poem in *Contemporary Verse*:

RED-BLOODED

BY ROSE HENDERSON

"Unfeeling," they said to my soul; "Unhuman,"
they cried to my heart.
"What do you know in your bloodless zeal of the
passions that leap and dart?"
But I thrill to the joy of the stars. I answer the
throb of the sea,
And I walk sublime
To the desert rime
Of the wind's wild threnody.

I can match you your leaping blood with a fever
as swift and high,
But I do not boast that my spirit breath is
throttled and stifled thereby.
The sun flames out of the east and the fields
laugh back with bloom.
The rain beats white
Through the dim storm light,
And the spent earth meets her doom.

But fierce as the thrill of flesh and warm as the
pulse of clay
Is the fire that sweeps through the gold-crowned
heights, where my seared soul wings its way.
And is it so dull a thing to catch at the shining
gold,
To know the feel
Of the chaste blue steel
When our little red lust is cold?

The beauty that does not pass with the
seasons is in this expression of the summer-
time soul of poetry, altho here and there
the muse stumbles:

MY GARDEN IS A PLEASANT PLACE

BY LOUISE DRISCOLL

My garden is a pleasant place
Of sun glory and leaf grace.
There is an ancient cherry-tree
Where yellow warblers sing to me.
And an old grape-arbor where
A robin builds her nest, and there
Above the lima beans and peas
She croons her little melodies.
Her blue eggs hidden in the green
Fastness of that leafy screen.
Here are striped zinnias that bees
Fly far to visit; and sweet-peas,

Like little butterflies new-born,
And over by the tasseled corn
Are sunflowers and hollyhocks.
And pink and yellow four-o'clocks.
Here are humming-birds that come
To seek the tall delphinium.
Songless bird and scentless flower
Communing in a golden hour.

There is no blue like the blue cup
The tall delphinium holds up,
Not sky, nor distant hill, nor sea,
Sapphire, nor lapis lazuli.

My lilac-trees are old and tall,
I can not reach their bloom at all.
They send their perfume over trees
And roofs and streets, to find the bees.

I wish some power would touch my ear
With magic touch, and make me hear
What all the blossoms say, and so
I might know what the winged things know.
I'd hear the sunflower's mellow pipe.
"Goldfinch, goldfinch, my seeds are ripe!"
I'd hear the pale wisteria sing.
"Moon moth, moon moth, I'm blossoming!"

I'd hear the evening primrose cry,
"O firefly! Come, firefly!"
And I would learn the jeweled word
The ruby-throated humming-bird
Drops into cups of larkspur blue,
And I would sing them all for you!

My garden is a pleasant place
Of moon glory and wind grace.
O friend, wherever you may be,
Will you not come to visit me?
Over fields and streams and hills,
I'll pipe like yellow daffodils.
And every little wind that blows
Shall take my message as it goes.
A heart may travel very far
To come where its desires are.
Oh, may some power touch your ear,
And grant me grace, and make you hear!

All too typical of the temper of these
days is this poem with the pang in its
couplet, which we take from *The Sonnet*:

HAPPY COUNTRY

BY HELEN GRAY CONE

Here by the bright blue creek the good ships lie
A-building, and the hammers beat and beat.
And the wood-smell is pleasant in the heat;
The strong ribs curve against the marsh and sky.
Here the old men are mowing in the sun,
And the hay-sweetness blends with the wild rose;
At the field's edge the scarlet lily glows;
The great clouds sail, and the swift shadows run,
And the broad undulant meadows gloat and
smile:
Over the russet redtop warm winds pass,
The swallow swoops and swerves, the cattle
stand
In the cool of shallow brooks—and all the while
Peace larks asleep, she dreams of some sad
land
Leagues over sea, where youth is mown as grass.

In her volume "Coal and Candlelight"
(John Lane Company, New York), Helen
Parry Eden has this sonnet of faith and
mysticism:

**"SIDERA SUNT TESTES ET MATUTINA
PRUINA"**

BY HELEN PARRY EDEN

The stars are witness and the morning frost;
The shuttered inn, the icy lane, the hoar
Alley transmuted at the keen moon's cost
To silver birch from leaden sycamore.
The shivering steps, the door that barely stands
Ajar, the altar's week-day thrift of gold,
The hasty breath that dews my helpless hands.
At what white heat I come through this white
cold:
How before day blows up the smoldering sun
I feed my ashen hope with kindling phrase,
Cast fuel on my faith, watch the flame run
From brand to brand of love and by that blaze
Pillow my head upon His Heart whereon
Lay but last night the love-locks of St. John!

AUTO TUBE

"TON TESTED"

Betters Its Last Year's Performance

A year ago we submitted a "Ton Tested" Tube to the now famous test of lifting a five-passenger touring car weighing 2990 pounds.

We kept this Tube a year and again tested it, this time increasing the load to 3755 pounds. As before, the Tube "came back" to normal shape with no sign of injury.

Thus is shown not only the remarkable strength and elasticity of the "Ton Tested" Tube, but its lasting quality as well.

It can be carried indefinitely as a "spare" without checking, cracking, or weakening at the folds or corners; is unharmed by exposure to light and air; will not tear beyond the immediate location of a cut; is unaffected by prolonged heating up and cooling down; indefinitely withstands wear, tear, and long service-friction in the casing. *Guaranteed* tensile strength $1\frac{1}{2}$ tons per square inch.

Backed by the name of the actual maker and costs no more than ordinary tubes.

HARRISON'S ANTOXIDE

(A du Pont Product)

is a foe to rust. It stops rust's action, because it permeates the rust or scale, checks its progress and actually protects the metal underneath. It preserves the metal from oxidization because it effectively safeguards the surface from air and moisture. For this reason, it is incomparable for painting iron fences, drains and all kinds of metal work. Comes in five standard shades—red, bronze, green, maroon and black.

Check Antoxide in the coupon. Sign and send it in. Get the full information.

PERSONAL GLIMPSES

HOW THEY DISCOVERED OUR ARMY WAS THE REAL THING

EVERYBODY knows it now, of course. Including Hindenburg. Maybe he knows it better than anybody else, because he has had it hammered into him. Everybody now realizes that America has an army, with real generals and a regular High Command, and everything. But when we first landed in France that interesting and important information was almost the exclusive property of one man, and his name was John J. Pershing. It seems that the British thought the safest plan would be to have the American units shepherded under the British High Command, and the French thought they should be under the French High Command, forgetting that after all there might just possibly be an American High Command. Their intentions, of course, were the very best in the world, and Pershing took it in perfectly good humor, knowing that the test of war would be enough. And it was. Mr. Martin Green tells us all about it in the *New York Evening World*. He writes:

Our advance military forces went into France untried and under suspicion. There were in the high commands of the French and British armies a few officers who had visited West Point and knew the thoroughness of the education we give our officers. They were a minority.

In practice the General Staff—the planning and executive force—is the key-stone of the military structure. Without able high command an army, composed tho it may be of the bravest individuals, is an impotent institution. Plainly speaking, the British and French military authorities did not think a year ago that we had the high command.

Into this atmosphere of distrust went General Pershing with a few soldiers. He had come from a standing start four thousand miles away. He was in an impoverished and nerve-torn country. He was confronted with the task of not only building up an army, but building up the machinery to hold that army to the limit of its fighting function, and I violate no military confidence when I say that it was one of the most formidable tasks that ever confronted a soldier.

General Pershing, however, was more than a soldier in this crisis. He had his military problems to consider, and in addition there were crowded upon him diplomatic problems which were up to him and nobody else. He was, in a sense, a military-ambassadorial crusader, and he accepted the responsibility.

The winter of 1917-18 was a dark and gloomy period in France. The only ray of light in the outlook was the slow but continual rolling up of American aid. Clemenceau stood like a rock in his belief in the indomitable spirit of the French people and the French armies. The problem was how to use the Americans.

God knows we were not making much of a showing outside of our ability to contribute money. As a military factor we were nil. The French officers detailed to our units in liaison reported that we had the foundation of a great fighting force, but

that we were lacking in the essential elements of command.

The British Army wanted to take charge of our forces and mix our units with British units—or else allow us to keep our units intact, but under British staff command. The French Army wanted us to fight with the French under French command; this was in the days before there was unity of action under Foch—a condition which General Pershing, as history will show, played no small part in bringing about.

But during the whole of this trying time General Pershing maintained one position—that the forces of the United States must remain American under American command. He was "always willing to utilize his troops to their best advantage, but he was rigid in his insistence that the Stars and Stripes, in the final period of the war, should fly over American soldiers, and that these American soldiers should play their part under American officers." Mr. Green continues:

Gradually it dawned upon the understanding of the military powers of our allies that the military establishment of the United States as related to command was not such a tardy establishment after all. We had given to the Allied Powers against Germany a collection of officers who had seen warfare and studied warfare. We had sifted in a conglomeration of men who were intelligent to start with and were willing to learn. We were landing in France in our reserve officer forces thousands upon thousands of young men who had acquired in a few months of intensive training war-knowledge of a superior kind, based upon American intelligence and adaptability.

Our officers went to schools in which French and British officers were instructors, and soon the scholars were on a par with their teachers. But still we had done very little fighting. We were in the try-out stage. One man watching our growth was sure of us. That was General Pershing.

Came the German advance in March—that swift, overwhelming rush which threatened to cut the Allied forces in two, reach the Channel ports, touch the Atlantic coast at the mouth of the Seine, and isolate France from England. General Pershing promptly offered soldiers to meet the emergency, and the 1st Division of the old regular Army was sent to Picardy to hold a sector of the line below Amiens.

The 1st Division was the veteran unit of our forces. It had been the first in the trenches. But the cautious French military power would not allow it to launch an offensive—and the American policy is always to be on the offensive—until that day in May when we went across No Man's Land and took Cantigny. At that time the 1st Division had been in training almost six months.

Always under French direction but American command, the American units had preserved their identity. During the winter the 2d Division, which includes the wonderful 5th and 6th Marines, the 26th Division, from New England, and the 42d Division—the famous Rainbow outfit, including the old New York 69th—had been in training in the trenches. They were ready.

Then happened the miracle of this war. Hostilities had developed so rapidly that the veteran divisions—always, mind, under American command—had made good and

New Power To Failing Feet

MUSCULAR pains in the back, legs and feet so frequently mean weak arches. Don't neglect them a minute.

The Coward Arch Support Shoe remolds the delicate bony span of the foot gently and gradually. It restores the relaxed muscles and tendons to their duties. It releases cramped toes and guides the renewal of every normal foot function. Comfortable from the first wearing. We are experienced in fitting by mail. Address Dept. F.

Office for Travelers 123 Pall Mall LONDON, S. W.

they needed support. And what came to their support?

The 3d Division of the old regular Army, which, to use the expression of its grizzled commander, General Dickman, of the West Point class of 1881, "went into the American battle of the Marne like a bridegroom"; the untried 28th Division, composed of Pennsylvania State militiamen; the 4th Division of the regular Army, which had seen some training—all these units made good.

American armed force had shown its strength in fighting prowess and in command. We sent several divisions into battle which had been through only preliminary training in France. Two of these divisions, in which New York is interested, because they are composed exclusively of New York boys, are the 27th, composed of national guardsmen, and the 77th, composed of selected soldiers who had their preliminary training at Yaphank. Both have made good—the 27th, with the British, under American command; the 77th, with the newly formed American Army, commanded by General Pershing.

All under American command! The American Army in France is fighting under the Star-Spangled Banner, and John J. Pershing is in supreme control of the American forces over there under Woodrow Wilson over here, and some day when the Kaiser is immured in the Mattheawan of nations this John J. Pershing, who doesn't talk much, may see fit to tell the people of the United States what he had to overcome to make things as they are.

YANKEE TRUCK-DRIVER "BUSTS" A PRUSSIAN OFFICER

A YANKEE truck-driver and a Prussian officer clashed back of the Château-Thierry front, as runs the authentic report of a returned American officer, and when the clash was over the Yankee truck-driver had found a way to remove from the Prussian officer the arrogance for which all Prussian officers are justly famous.

The tale was relayed from the front to Camp Dix, N. J., and thence to the New York Sun, which repeats it thus:

After depositing supplies and ammunition at the front, the big army trucks were filled with German prisoners who were to be taken to the rear. A German captain, member of a famous Prussian regiment, was among the detail of prisoners assigned to ride in the truck of which this particular driver had charge. The *Baches* had filled the body of the car when the driver noticed that the captain had not joined them.

"Climb in there!" he ordered.
"Look at my uniform! Don't you recognize that I'm a captain? You don't expect me to ride with them?" he said in perfect English, indicating his erstwhile soldiers, as if they were so many caged dogs. Then he demanded a place on the driver's seat, where there were already two slightly wounded American soldiers waiting to get back to dressing-stations.

"Nothing doing! I'm particular about my company! Get in with your gang, and be quick about it!" said the Yankee.

"Throw off those American swine and make room for me on that front seat!" ordered the Prussian. "I'm a captain and—"

He got no farther. The driver slid a grimy fist into his pocket and whipt out a big penknife, while the other hand shot

down, gript the Prussian by the collar, and a powerful arm jerked him from the ground as if he had been a child.

"Captain, eh? Well, we won't let that worry you long! See here!" And as he spoke, the hand with the knife deftly clipped the insignia from the officer's shoulders.

"You're busted!" he said. "You're a private now! Get back in the ranks with the rest of them!" And he dropt the sputtering Prussian into the back of the truck among the other prisoners.

FRANCE'S NAVAL EFFORT AS SEEN BY AN ENGLISHMAN

SUDDENLY and terribly summoned to meet the attack of her old enemy on land, France's part in keeping the seas open for the Allies was small early in the war; but now, after four years, writes an English naval critic in the Manchester *Guardian*, "she is equipped for the continuous sea-struggle of the hard and monotonous character that submarine fighting has thrust upon the Allies, and every month the scale and ingenuity of her naval resources increase."

All of this is particularly important to Americans, because upon these French resources and ingenuity depends the safety of our troop-transports. Her two special tasks now, explains the writer, are first—

With the assistance of her Allies to guard the Mediterranean, where she has supreme control and across which she draws her supplies of colonial troops, which since the beginning have played so fine a part in the war; and, secondly, to safeguard and organize her Atlantic ports, into which the man-strength of America is streaming in its hundreds of thousands. In one such Atlantic port a small party of British journalists, of which the writer is one, is now seeing something of what that work means and the wonderful ingenuities and economies of France's newest methods of sea warfare.

A word about the port. Its ancient citadel rises like the Tower of London stuck upon the waters, and beside and above it, tier on tier, rises France of the seventeenth and eighteenth centuries, with the windows in the long, well-proportioned facades like hundreds of eyes looking down on the harbor where the legions of the New World are landing. The astonishing medley of peoples in this port can best be indicated by an experience. After an interesting but not dramatic trip we reached the port, gathering on our way a new sense of the distances to be guarded and swept and the aspects of convoys, with their protectors on the water and in the air. As we came ashore we saw Chinese and Siamese laborers unloading, and at another point a dingy multitude of German prisoners at leisurely work. A boat-load of Italians were pushing off from the pier, sitting close together and singing to the accompaniment of a stout man with a mandolin in the bow. English sailors were arriving in a pin-nace, while Portuguese, French, Senegalese looked on. The white caps with red top-knot of the French sailors were everywhere, but almost more numerous was the little white cockled cap of the American sailor or the flat-brimmed khaki hat of the American soldier.

The story of the port reflects the story

*That's the Dot
Always lift the
side with the
Dot*

IF YOU have an automobile, it is probably fitted with Lift-the-Dot Fasteners.

The Lift-the-Dot Fastener is a snap fastener which, when snapped together, locks securely on three of its four sides. It may be unlocked easily by simply lifting on the fourth side. This fourth side is always indicated by a dot on the face of the socket—hence the name—Lift-the-Dot.

Because of this unusual locking feature and because of its superiority over all other curtain fasteners in compactness and beauty of design, the Lift-the-Dot has come to be the recognized, standard fastener for automobiles and carriages.

In addition to its extensive use for vehicles the Lift-the-Dot is coming into increasingly general use for **trunks, bags, leather and sporting goods** and in numerous other ways where an easily operated, positively locking fastening device is required.

It is impossible for Lift-the-Dot Fasteners to stick and cause curtains to tear when the dotted side of socket is lifted as shown above.

LIFT *the* DOT Fasteners

Lift-the-Dot Fasteners are protected by basic patents. All persons are warned against infringing on or buying infringements of our patents or trade marks.

if you find them loafing on the job or laying off or wasting raw material—yet at the same time **YOU** are **WASTING HUMAN LABOR** and **WASTING MONEY** by doing without a *Multigraph*. It's oftentimes considered wise to see an oculist yourself before you try to correct *distorted vision in your men*. If you are getting your printed matter out by methods that make it cost you hundreds of dollars more per year—or maybe thousands—than it would cost you on a *Multigraph*, what right have you to talk to men about **WASTING RAW MATERIAL**?

If you are getting it out by methods that necessitate the use of messengers and telephoning and waiting and delays that take the snap and pep all out of business, what right have you to talk to workers in the shop about loafing on the job and using *dilly-dally tactics that block the wheels of business*?

If you are getting your printing done by methods that waste the time and thought and nervous energy of yourself and your department heads—thus lessening productive effort just as much as if you all quit work in the middle of the afternoon and played penochle in your offices—what right have you to talk to men about laying off for half a day or two or three days every week?

If you will get together all your printing costs for the last twelve months, if you will find out what you've paid for printing circulars and mailing cards and bulletins and price lists, for printing envelopes and letterheads and form letters, for printing factory and office forms and order blanks, or for printing or imprinting tags or labels—and then figure what you would have saved if you had cut those costs from 25 to 75% by doing your printing on a *Multigraph*, you'll understand what a **WASTE** it means to do without it.

And if it were possible for you to figure up the number of productive hours that have been lost because you *didn't have a Multigraph*, the long delays, the running back and forth to outside shops—if it were possible to figure that, you'd find *another waste* far greater than the dollars paid in excess printing costs.

All over the United States, and not only in the United States, but also in *Canada*, in *England*, and in *France*, in all those places where men and money are needed most, the *Multigraph* is *releasing human labor*, and *releasing money* and *cutting days to hours*, thus performing a most vital and important function at a time when men and money and time have greater value than they ever had before.

If you don't already realize what a *Multigraph* would accomplish in your business, then most certainly you ought to investigate at once, no matter whether you're a retail merchant, a jobber or manufacturer—no matter what your business is, *if you're using printed matter*. Its value is most easily demonstrable to any man or woman who *really wants RESULTS*, who has an honest and sincere desire to cut out **WASTE**. We'll gladly send full details if you'll fill the coupon out below and mail it in.

You Can't Buy a Multigraph Unless You Need It

U. S. Government munitions of a most particular and exacting nature require the entire capacity of our new plant as well as a large portion of our old one, working night and day. Government work takes unquestioned precedence. All else is secondary. But unless government demands of a magnitude not now foreseen arise, we shall be able to continue supplying the urgent need for *Multigraphs*.

THE AMERICAN MULTIGRAPH CO.

Operate with one hand!

WITH the SUNDSTRAND you never have to risk errors by laying down papers, or removing eyes or left hand from your column of figures. The SUNDSTRAND is a modern "one-hand" adding machine.

With the SUNDSTRAND you have only 10 keys to memorize—all at your finger tips—and all in "one-two-three" order. When operating your keyboard—hand remains almost motionless. The handle pull is short and snappy.

These are some of the reasons why SUNDSTRAND operators acquire lightning-speed through "touch" operation. And why anybody—from executive to office boy—can add, multiply, subtract and divide—faster, easier and more accurately with the SUNDSTRAND.

The SUNDSTRAND marks a long step forward in adding machine efficiency.

of the war. It was to be a short war, so 1,100 of the 6,000 workmen in the arsenal were taken into the Army; ships were stripped of search-lights and artillery (217 guns being taken ashore and sent to the front); the naval work of the port and arsenal went down. The naval factory produced articles for the Army, and the 75's were well fed from these factories when they were saving France. To-day the effort of the town has largely returned to naval work, and in some of the patrol ships I noticed army 75's remounted for submarine strating. Only a couple of hundred women were employed in the chief ammunition-factory at the beginning of the war, and it was not till this year that the numbers reached 1,500. Soldiers, colored laborers, and prisoners came to work in the enlarged factories. I was told that altogether the individual efficiency had doubled. The export of munitions to Russia—much of which still lies at Archangel—and the import of horses from America were the events here of 1916. Next year the staffs were reduced when Russia dropped out of the war. Now the port is again at the top of its effort with the coming of the Americans.

During the past three days we have been privileged to see the work of safeguarding the coast from mines and submarines. Much of it, of course, does not differ from the same class of work in our ports, but, as might be expected from the nation from whom we learned such sea ideas in the past as, for instance, the use of flat sails, the French have developed most things in their own way and are constantly experimenting with new devices. One's first general impression of France's naval as of her military effort is the remarkable economies which go with her efficiency. Her method seems to be to think out clearly and logically what the particular jobs are, and to produce a craft that will do its particular job whether it can do any other or not. It must be good enough for the work, but it need not be too good for it. Her motor-launches include a number of the hard-working standardized American type which came over under their own steam with the loss of only one out of fifty. Another one had a mishap, lost her course, and finally made land with all her blankets sewn together for sails and only half a cup of water left for each man. Her most characteristic type is the *camouflee*, which, working with Diesel engines, can steam for 3,000 miles at ten knots an hour without refueling, and so could go to America under her own power. Her available speed is, of course, much higher. She carries guns big enough to deal with any submarine, as well as depth charges, and her very low draft allows her to travel over mine-fields that would hit a destroyer. Her size is about 400 tons. An important point about this useful, serviceable type is that she costs about a third of one of our mine-sweeping sloops, which do much the same work. The weather was good, and we had no opportunity to observe their value in a rough sea. Most of the fittings were from old ships, and everything that can be used again had been worked in.

Another department was the mine-sweeping. Here the French use an economical form of trawl that is not used by our trawler mine-sweepers, altho something of the kind is used by our other craft. The main idea is that the sweep is towed astern, being held out by floats (or *cochons*), and the trawl itself, of course, has ingenious under-water appliances for keeping it at the required depth, and a new device for

Elgin—

"Guiding star of the Service"

TONIGHT in No Man's Land! Through all that wild inferno—shrieking shells and spewing shrapnel and stuttering machine guns and clanking, crunching tanks—on the tiniest and cheeriest of mechanisms hangs the destiny of the world.

Never before, in all history's wars, has Time played so appallingly vital a part. The grim significance of "zero hour" has burned this deep into the minds of our boys over there: unless their watches are in step with those of the fire-control, they will be wiped out by their own guns. Desperate, blood-bought raids over the top, useless if delivered out of unison, become irresistible when timed to the tick of an Elgin.

Over six continents and seven seas, Elgin Watches are guiding stars to the noble adventurers of the world. They are pathfinders for our Emergency Fleet. They are the trusted companions of a great Polar explorer. They are the reliance of intrepid government scientists in the trackless wilderness. They are the official chronometers of our destroyers and torpedo boats.

Thousands of Elgins are used by the Government in our Navy—tens of thousands by our Signal Corps—and along that surging battle-line in France hundreds of thousands of Elgins are in hourly use by the fighting men of America and her gallant Allies—

—a war essential of the first rank.

cutting the mine adrift whenever it touches the trawl-line. I had an interesting trip in a captive balloon towed by the mine-sweeper, but the day was unfavorable for that sort of spotting. It was a curious experience, particularly the mounting and dismounting on a rope hoist. The mine danger is continuous, especially at a port where great ships crammed with troops are always arriving, but so effective is the sweeping that there have been no losses among them. But the channels must be swept every day, and sometimes all day, for the unseen submarines are steadily sowing these devilish appliances with increasing force of charge. "For the moral of it all is," as the Duchess so truly said to Alice in Wonderland, "the more there is of mine the less there is of yours."

LETTERS FROM THE FRONT TO THE FOLKS AT HOME

PRODIGALITY of artillery-fire is enough to convince any man that this war is "unbelievably gigantic in its proportions," writes Corporal Paul Warwick to his parents at Albany, Ga. His description of the firing and its effect in the trenches is published in the *Albany Herald*:

There is a constant thumping away of the batteries on both sides, practically never ceasing. "Minnenwerfers," French "seventy-fives," six and three-inch batteries join in their international chorus to fill the day and night with noise of explosions. Most of the German shells give you notice of their approach by a long, weird whine. But there is one species, the Austrian "SS," that is stingy with its warning. All you hear is a short hiss and a bang, and a loud bang at that. Gas-shells drop occasionally and lack the loudness of bursting that the high explosives possess. They make about the same kind of a flopping noise that you get when you slam an unusually large and extraordinarily putrescent tomato against the side of a brick wall. With every volley of the "H. E.'s" (high explosives) there are usually a few gas-shells.

The excitement and the tensy that pervade the trenches and the surrounding terrane when something is "going on" is altogether different and apart from anything else. It is a kind of mingled eagerness and caution that puts you on tenterhooks. Every man is so eager to come through without being nervous, or, what is worse, "showing yellow," that he bends over backward, as it were, in the effort. It's similar to an occurrence on the boat when we came over. Some little thing happened that put the whole boat into excitement for a little while, and naturally every one began to crowd to the life-boats. Not "crowd" either, for there was never a particle of disorder. Every man was more unperturbed than was natural; he wanted to impress others with his calm. So that the result was a quiet exodus from every corner of the ship to the boats, with at least 90 per cent. of the men quietly repeating: "Take your time, men, don't get excited." The same feeling a man who has eaten in an army mess-hall for several months has when he is "invited out" to dinner. He is so afraid that he will pull some colossal bone that he overdoes the propriety effect and is on an uncomfortable strain all the time.

Another thing, we are not worried so much by continuous and heavy firing as we are by desultory firing, just now and

Aviation wireless! Its *great speed* is even outmatched by the Mimeograph—for while the wireless is sending one message to one receiver, the Mimeograph will start hundreds on their various ways. Fast? While the Mimeograph duplicates the typewritten or handwritten page with a sharp exactness that practically makes every copy an original, its remarkable advantage is the *rapidity* of its execution. Simply click off the message on the typewriter and it is ready to print—five thousand an hour. Diagrams, illustrations, plans, signatures, etc., may be quickly traced on the same stencil—and duplicated in the one operation. Get new booklet “L” from A. B. Dick Company, Chicago—and New York.

IF YOU CAN'T DO THIS YOU HAVE

FLATFOOT

How to Overcome It

Place your heels together and point the toes away from you. If the space between the ball and the heel is not arched enough, you really must take action. **YOU HAVE FLATFOOT.** The chances are 4 to 1 that you must take it. Make this test NOW. It is only a question of time when such a condition, if not corrected, will not only cause you constant pain and annoyance, but rob you of all the pleasure and benefits derived from walking.

A Valuable Book On The Subject—FREE
"FLAT FOOT: Its prevention and Cure" is the title of a book by Henry MacFadden, that has delivered thousands of men and women from the torments of this malady. Send this book extremely early. Before the edition given, and you can secure your feet in their own time and comfort and avoid all worry, discomfort and pain.

PHYSICAL CULTURE PUBLISHING CO.

then, you don't know when. If they are giving you a perfect barrage, consistent, you know it's there and it can't be helped. But if they drop one shell now, and a little later drop another, you don't know what to expect and are naturally a little wary.

Family anxiety for news from the boys at the front is, if anything, rather weak in comparison with the intense craving our boys have for letters from home. The arrival of the mail-bag stirs them almost as strongly as the order to attack; when it fails to appear at the expected time, they become anxious and glum. A cheerful letter from father, mother, sister, or sweetheart, one scholarly private was heard to remark, "makes me think this station is like that of the herald Mercury new-lighted on a heaven-kissing hill."

Arthur E. Hungerford voices the view of officers and men on this important matter when he writes:

Won't you urge the folks back home to write more frequently? Ask them not to wait till the men answer their letters. Urge not only the families to write, but friends also. Every letter means much.

I wish I could tell you of a scene on the battle-field during the great advance. It had rained for days. The men had outstripped the artillery and the supplies and were living on emergency rations. It was almost impossible to supply them with hot meals because they were pushing on so fast.

The losses had been very heavy. The battalion had just been relieved by fresh troops. It had halted in the woods. The men were tired and hungry—and yet in fine spirits. A runner arrived and shouted "Mail from home."

The first hot meal in two or three days was ready, but the men got their letters first. One could pick out by the faces of the men those who got letters and those whose friends "had forgot" or "who did not care enough to write." Men who got letters read them to chums who did not. The battalion had been made over.

Captain Pierson of the Canadian Army says that it was the letters from home that held the line in the dark winter of 1914-15. Tho a great victory has been won, the end is not yet in sight. Our men have a great task before them. They must win many battles. They must fight against great odds. They must live in the field in time of battle without adequate shelter and without hot meals. They must work hard, harder than the folks back home dream. Some of them will be wounded and some will be killed. They will do these things and fight their way to victory no matter whether the folks back home write or not; but the letters from home will make things easier and brighter and better and "keep the home fires burning."

Sometimes it is hard for the men over here to write. In the back areas and the quiet sectors, the Y. M. C. A. has writing-rooms and ample supplies of paper and envelopes. In time of battle it sends paper and envelopes—and they are in great demand—to the front lines. The men write as they get a chance; but these opportunities for writing are few and far between. For instance, at present, a soldier in our front lines is living in a shallow pit, about three feet wide and six feet long. He may not venture from it in daylight. As long as he remains in it he is practically safe, except for a direct hit by a shell. Shell fragments always fly up at an

angle from the point of contact and the man on the ground or under the ground escapes unless a piece of shell or rock falls on him.

Then, it may rain. The soldier may lose his fountain pen or pencil. A hundred things may happen to prevent him writing. And then the letters may be lost on the way home. For these reasons the folks back home should write regularly no matter whether they receive replies or not.

Please remind them of another thing, and that is that their failure to receive letters does not mean that their particular soldier is sick or has been wounded or killed. It simply means that he has been unable to write or that his letters have been lost by the torpedoing of the boat carrying them. No news in this case is good news. The Army promptly notifies the nearest of kin when a man is wounded or killed. There is no use worrying about what has happened to him till the official notice of wounds or death is received.

Since an army travels on its stomach, it is unwise to insult that important organ in any way. Our boys at the front have not kicked about the quantity or quality of the food supplied, but they object to the circulation of stories giving the impression that mess-tables are groaning with all the delicacies of the season.

Members of the 5th Regiment of the United States Marines were annoyed by Lieut. Carl K. Hill's account of the food provided for Intermediate Supply Depot No. 2 of the A. E. F. in France in our issue of July 27. The lieutenant told of oatmeal for breakfast three times a week, bacon and eggs once a week, rice pudding, salmon croquets, corn pies, jam, raisin cobblers, prune pudding, etc., in addition to tenderloin steaks and ordinary vegetables, such as beans, peas, and potatoes. He denounced as utter rot the stuff about "the boys over here getting nothing but slum, bully-beef, and hardtack," and said "the person who spread such a report is not only a liar but a friend of Bill Kaiser."

What drew a heavy fire of resentment from the marines, writes Stafford B. Hobbs from the headquarters of the regiment, was the attempt of Lieutenant Hill to "describe a typical A. E. F. menu." The objector continues:

This is an impossibility for any one, as the food-program is most variable. Especially when men are fed from rolling-kitchens, which perhaps might be styled "movable feasts." It is not to be supposed that the men get the same food as officers with only a trifling difference of more frequent desserts. A statement is made that: "Whoever says the boys over here are fed chiefly on slum, bully-beef, and hardtack is not only a liar but a friend of Bill Kaiser."

This statement is very bold and has already aroused much consternation. We can not help wondering if the party who wrote this Base Port letter can define "monkey meat," "gold fish, or "goulash in light marching order." We do not for a minute question the policy of the Quartermaster Department in feeding us on some of the commonest known food-items on an A. E. F. bill of fare, for sometimes it is unavoidable, but at the same time we want

Da-cote

YOU will find it a quick, easy job in these war times to finish your car yourself with Da-cote Motor Car Enamel, and the result will please you. Your car will look almost like new.

Of course, a Da-cote job isn't the same that a professional painter would give you. He works in a dust-proof room. He has the skill of the man who makes painting his life work. Such a finish as he will put on your car is the best.

The painter is one of Murphy's best customers. If you go to him, very likely he will use Murphy's materials on your car. Naturally, we recommend his

work as of a high grade, and worth all it costs.

If, however, you are willing to sacrifice this most perfect finish, get a can of Da-cote Motor Car Enamel for a dollar or two and do your own painting.

We know how to make motor car enamels. Murphy materials are used on over half of the fine cars made in the United States. Da-cote consists of the finest motor car varnish, ground with the best pigments.

Da-cote flows on like cream, leaving no brush marks, and quickly hardens into a clear, brilliant coat which will hold its lustre under constant washing and exposure.

*Dries
over
night*

Da-cote comes in black and white and in eight popular colors. We would like to send you a color book and tell you the name of the nearest Murphy Merchant.

Westinghouse

ELECTRIC UTILITIES FOR THE HOUSEHOLD

"They Cost So Little to Use"

When your dealer tells you this about electric household appliances, such as Westinghouse Toaster-Stoves, Turnover Toasters, Percolators, Irons and the like, he means just what he says.

It would be reasonable, of course, for you to expect that such convenience, such time-saving and labor-saving as Westinghouse Electric Ware makes possible, should come high, but they don't.

That's because Westinghouse Ware consumes so little current and because, even with daily use, the total number of hours a month the appliances are actually in operation is small.

For example, a Westinghouse Electric Iron, with current at the average rates, would cost from 2 to 5 cents an hour to use. And how many hours a month would you use it?

Certainly it's little, if any, cheaper to keep coal or gas fires going under a number of irons, with most of the heat escaping into the room. The difference can't begin to pay for the time wasted, the inconvenience and the extra work required.

Moreover, a Westinghouse Toaster-Stove or Turnover Toaster costs even less to use than a West-

inghouse Iron, and a Westinghouse Percolator still less.

As for Westinghouse Sew-Motors, Fans, Curling Irons, and Warming Pads, they use such an exceedingly small amount of current as to make operating expense an insignificant item. On an average a 10-inch fan, for instance, will run six hours for one cent.

You'll scarcely notice the little difference that Westinghouse Electric Ware will make in your monthly bill. The difference it makes in your home, however, is something you can't overlook.

Westinghouse Electric Ware saves time, steps and fuel. It helps to answer the perplexing servant problem.

It makes meals more enjoyable, takes the toil out of ironing and sewing and simplifies other household tasks.

WESTINGHOUSE ELECTRIC & MANUFACTURING COMPANY
East Pittsburgh, Pa.

"I Take More Pride in My Car Now" *Says the Ford or Chevrolet Owner*

"Yes, it is more beautiful than I ever thought could be, but that's only a part of the greater value. The trimness is fine, but the fact that I can change a wheel in three minutes, without hard work or dirty clothes, means more to me.

"Then the car rides so much easier—just a smooth, gliding progress. And I've found the tires last so much longer—the wires distribute the road heat, you know.

"With beauty, quick change, easier riding, more tire mileage and a higher value, I'm glad I have Dayton Wire Wheels on my car."

That's the story of many a Ford or Chevrolet 490 owner. You, too, will be delighted with Daytons. May be had in all standard colors. Wheel carriers for spare wheel can be furnished. Be sure the name Dayton is on the hub cap.

See your dealer. If he cannot supply you, write to us, mentioning his name, and we will send you a booklet that tells why Dayton Wire Wheels ride easier, last longer and save your tires. Write for it today.

Service stations in all principal cities.

full credit for living on it. Oatmeal has appeared on our menu once in the last six months and some of the delicacies mentioned on Depot No. 2's program are unknown in these regions. Still, we are a healthy bunch and can get as many, if not more, miles to the gallon on Uncle Sam's java as any fighting men over here. We thrive on our commonplace diet, and as a proof of it one has but to glance at the records us marines have made over here.

If you can give but a small amount of space in THE LITERARY DIGEST to correct the erroneous impressions caused by this letter you reprinted from the Morristown (Tenn.) *Republican*, you will not only give the "Folks at Home" a better idea of what is "going on at the front," but greatly relieve the feelings of the men of this outfit who feel that those printed statements have done them an injustice.

Ralph M. Hoggatt expresses the indignation of himself and comrades over some of Lieutenant Hill's statements, and adds:

We came over in the first contingent and have been in France fourteen months. We sincerely believe we have seen every phase of army life over here, from provost guard to "hand-to-hand" fighting with the "Hun," and sincerely believe, with all due respect to Lieutenant Hill's rank, we are in a better position to make statements as to the food we eat.

While back in S. O. S. the company to which I am attached had very good food in good variety; but then we were stationed in Base 1, Intermediate Section, L. of C. While in training, near the front, our food was still good, but less of a variety. At the front our food was not as plentiful as before, and we had slum three times a day with coffee for breakfast and supper, which at times was very poor. While in rest billets our food was the same as in the trenches, with one exception. The Y. M. C. A. had eggs brought in the Y. M. C. A. truck, which were sold to the companies and that morning we had bacon and eggs. After leaving that sector, we were transported to a reserve post just back of the active front. On the trip we ate "bully-beef" and "hardtack," as we do always while aboard a train. After being taken as far as the railroad could transport us, we were on the march for two days, during which time, when practical, we ate slum and at other times when the rolling-kitchens could not be used, we ate "bully-beef."

At that time we were then put on French rations, which consisted of tinned beef, which is far worse than ours, and which the boys named "monkey meat," French war-bread, some fresh beef, but not much, salt pork, some rice, flour, and a few other things, such as raisins, etc. Then after ten days orders came to be ready in fifty minutes to leave. We stood by all night and left the next morning without breakfast. After a short hike, we went aboard *camions* and rode twenty-four hours without food as no emergency rations had been given out. Then we marched fourteen kilometers before we had anything to eat. During four days my unit lay in reserve, during which time we cooked our own food in our mess-pans. Sometimes we foraged and got fresh beef, rabbits, chickens, etc., but lived mostly on canned rations and hard bread. While in actual engagements, and they were many, hot and furious at that, eating became a matter of some one being lucky enough to get through with rations and water and having time to eat a bite, as well as the inclination.

While at the hospital food was fairly good, altho while at one hospital I still had slum and canned beef hash for meals. The replacement camps are fairly good for serving food. Back in reserve again we have been eating rice, oatmeal, flapjacks, or bacon and potatoes for breakfast, while the other two meals consist of slum and coffee, or else boiled beef, potatoes, and coffee. The bread has been bad, however, being moldy at times. I don't want people to get the idea that we are very dissatisfied or are grumbling. We are not. It is our portion of war and we take it as such, knowing the sooner we win this war the sooner such things will stop, and that we will be eating such enticing food, as Lieutenant Hill describes.

Service of the rear is necessary and we know that perhaps the men are doing all they can for the man at the front. However, we who are at the front, undergoing the real hardships and privations of war and sacrificing perhaps our lives, don't like for some S. O. S. man to call us liars, and friends of Bill Kaiser; because if Lieutenant Hill will look at accounts in newspapers and notice the number of D. S. C.'s awarded he should be convinced we are not friends of "Bill." Also, if he will notice, our German nickname "Devil Dog" shows that "Bill" does not consider us friends. Our bunch is a happy-go-lucky crowd, and are ready for anything that comes our way, and, altho being Naval Hospital Corpsmen and non-combatants, we are glad that we have served with the marines at the front, and have gone over the top as first-aid men with them.

Nothing is more appreciated by soldiers than "sweets," writes Whitney Tullsen, former sporting editor of the Moline (Ill.) Dispatch, who is now serving in France. The war-game, he says, "makes one crave for them like he never did in civil life." This taste does not interfere with the stern duties of the front; it promotes martial efficiency, because the sooner the *Buches* are licked, suggests the former newspaper man, the sooner will the victors be back in the States among the edible good things of the earth.

Private Tullsen's first fighting experience is given in the same letter to *The Dispatch*:

We got in our first mix in the big counter-slam which started the Huns tin-canning back home, and as result of our first fighting our regiment was given a citation by the French which, we are told, no other United States regiment has received. We ricked 'em for a couple of perfectly good forests, a valley full of dugouts, and a couple of towns which shall be silent here. I can't pronounce 'em, anyway.

We went up agin all the works, machine guns galore, gas, shrapnel, snipers, and there's none of them I like better than the others. I would rather be in a nice-confetti charge for a change. When the shrapnel tears up an acre or two of regular ground and slaps you in the face with it, you feel like the forlorn farmhand. Where are my summer's wages? When we haven't been battling at close range, we've had our share of living under shell-fire. The day we went into the mix, I was a sick guy, cramps, fever, and other ailments. When I came out I was perfectly well. They scared all the various ills out of my system.

The way it looks here, we've got 'em walloped to a whisper, and it's only a question of time ~~WH~~ they sneeze out, but

The Thrift Smoke

You don't smoke a pipe once and throw it away. You smoke it month after month, using the grade of tobacco you like in its most economical form! If it's a good pipe, and if you treat it right, the longer you smoke it the sweeter and mellower it gets. But there's even one more economy when you smoke the

Wellington

THE UNIVERSAL PIPE

The W.D.C. triangle trademark has been the sign of supreme pipe value for more than 50 years. It is not only an easy Wellington, but also an pipe that we make of every other style, size and grade. Price for price, there is no better pipe than a W.D.C.

Tobacco burns dry in a Wellington from top to bottom, and you smoke it with pleasure down to the very last grain. No waste there! The well catches all moisture, and keeps it away from the tobacco and your mouth. There is no bubbling. No tobacco crumbs can come through. The top opening of the bit sends the clean, dry smoke up away from your tongue.

The bowl of every Wellington is genuine French Briar, seasoned by our own special process and guaranteed against cracking or burning through.

Good dealers have Wellington Pipes in many sizes, shapes and grades at 75 cents and up. Get yours—and be thrifty and happy forever after.

USE ELECTRICITY

The Clean, Low-Cost Power for Every Home

GET IT DONE quickly, cleanly, with minimum effort and cost. Use electricity!

For years men have been inventing and perfecting electrical devices. Today there is a practical, economical application of electrical power to nearly every division of household work.

Your central station is generating electric power in great quantity. To utilize it in your home is to save coal, time and money—lessen your need for servants.

*Your Electrical Contractor, Dealer
or Architect can inform you*

ELECTRICAL utility has advanced with seven league strides. It will pay you to keep in touch. Many electrical devices are announced in the advertising pages of the magazines and newspapers. They are safe and efficient. Give them your attention.

Have your electrical contractor or dealer show and demonstrate the actual equipment for you.

If you are rebuilding or remodeling, ask your architect to sketch for you the possibilities of electrical power—and give him a free hand in planning and executing. Remember that electricity is no longer a luxury—it is a wonderful, economical aid in the home. Efficiently utilized, it increases human capacity and raises the standard of living.

★ ★ ★

REMEMBER, also, that quality in every item of electrical equipment is essential to economy and satisfaction in operation.

Only materials and equipment made by the most highly perfected methods of scientific precision and skill can deliver continuously full-measure service.

Such a product is Habirshaw Wire. A standard of the electrical industry from the very beginning of its development, Habirshaw wire is used by skilled and experienced contractors throughout the world.

Be sure to employ only qualified electrical contractors upon all electrical work. Be particular about small jobs as well as important installations. And always specify that all materials and equipment shall be of the Habirshaw standard of quality—and you will be assured of the utmost in service that the wonderful, modern power of electricity can give.

For more than 30 years—practically from the beginning of the electrical industry—

HABIRSHAW

"Proven by the test of time"

Insulated Wire

has been accepted as a standard of quality all over the world.

maybe that will be some time yet. The Americans are doing some great scrapping and the French, English, and wops are taking on a new lease of life since our forces got going. It's almost as dangerous coming up after the Germans have retreated as it is to fight them, as they leave traps in every conceivable place and it's unsafe to touch anything. They leave snipers behind every place, and as an example of their methods they chain their gunners to their machine guns to make sure they'll stick around and pot a few of us. We are often forced to go thirsty past a tempting spring, hot and tired, because we fear they have poisoned it.

Everywhere you go here, there is nothing but ruin. Every village is shot all to pieces, every field torn by big shell; and we have gone through forests where you would have difficulty finding one tree untouched by shell or bullet. Just loss in dead men, dead horses, and all sorts of abandoned battle-equipment and you have an idea of the way things look here. We never even hear a bird sing. It sure is one joyless dump and I'd give anything for the sight of a real town again, with one real light shining out of a window at night. I'm a little hazy on what hell is like, but compared with war it must be a place where you sit with your feet on the mantel, smoking your pipe, and blowing the foam off a cold one.

They are taking good care of us here, as we are getting plenty of chow, and tobacco is issued to us quite often. We sleep nearly all the time in dugouts now, as there is a chance there for the shrapnel to miss us. My bunkie and I have a nice modern apartment here, four by six, decorated profusely with two blankets and a tomato-can, in which we wash—when we do wash. The clay falls down our necks when we sleep and into our chow when we eat and the rain runs over the bunk when it pours, but we consider we've got some teepee.

Strange adventures have befallen some of our men in France, especially after shell-shock. Many of their stories are agreeably entertaining, while others send cold shivers down the back. Arthur C. Gardner, of Jerome, Ariz., tells of his strange experience in a letter published in the *Verdy Daily Copper News*:

Early in the morning of the first day in the hospital, a couple of red-headed woodpeckers started to build a nest in one ear and a circus band played weird, strange pieces in the other. It became oppressively hot. Things took on an ethereal, unnatural aspect. That night small sections of the Aurora Borealis chased each other in an unbroken cycle around and around the billet. On the second day, with the well-ordered precision of a vaudeville bill, the woodpeckers gave way to a trained quartet of lady boiler-makers and the band to a troupe of Swiss bell-ringers. Then an early winter set in—thunder and lightning and terrible blizzards followed in a tiresome sequence. I rather imagine it was slight shell-shock and had it all charged up to Heinie, but the battalion doctor seemed anxious to argue the point; not that he was defending the Hun, but it was simply professional with him.

Awfully nice chap, the doctor, not at all narrow-minded. He admitted very frankly that one was bound to tire of hands and strings of cow-bells in barber-shop harmony on a hot day, and he owned up to the three feet of snow outside the billet. Then he

The Cough that Spoiled the Party

Hallowe'en. Surprise party. The guests are met, in elaborate costume, and stowed away behind drawn portieres. *S-s-s-sh!* Here she comes. Everybody still. Wait till we get our masks on! The unsuspecting hostess brushes by, not three

feet away. And then—a gurgle, a struggle, a cough behind the curtain. Somebody giggles. Someone else says "Hush." And then it's all off—she snatches back the curtains—finds them all unmasked—the surprise is spoiled!

It isn't fair to yourself or anybody else to go around coughing. The worst of it is, it's so unnecessary.

Smith Brothers S-B Cough Drops relieve coughing. And they often keep a cough from developing into a sore throat or cold. Keep a box in your pocket, another in your desk, another at home.

Pure. No drugs. Just enough charcoal to sweeten the stomach.

One placed in the mouth at bed-time will keep the breathing passages clear.

Drop that Cough
SMITH BROTHERS of Poughkeepsie

held my hand a long time and after studying the life-line carefully told me that I was going on a long journey. Very capable man, this doctor, but I wondered how he knew. As a kid I had often walked in my sleep, but imagined I had outgrown it. But I couldn't have walked very far, for when I woke up I was in an ambulance and stretcher which took me to a field ambulance-camp. There I met the finest major-doctor ever. He was so kindly and so paternal in his interest. I shall always remember him. He was not at all like my battalion doctor—no arguing about him. He suggested that I take on the rest-camp for a week and gave me a letter of introduction to some friends.

Keeping up with the *Boche* retreat makes lively running for the American troops. Gordon Fairclough, a member of the 2d Battalion, Radio Corps, 151st Field-Artillery, which has been chasing Germans in the general direction of Berlin, says they "sure do beat it, and beat it fast." In a letter to his parents in St. Paul, Minn., which appears in *The Daily News* of that city, he says:

To give you an idea of how fast the enemy retreated. We pulled up to a place one night that was to be our headquarters. When we arrived there the infantry was so far ahead of us with the Germans before them that we traveled all that night to a new position. *Pas mauvais, non?*

This wood that we had for our H. Q. was about two and a half kilometers from the front line. You notice I do not say "trenches." There were no trenches. The infantry fought in the wheat-fields, in woods, and on open ground.

Later on, when we advanced through these places where fighting had been heavy, the ground was literally strewn with dead *Boches*. I have never been so sick of seeing dead men in my life. You can't imagine what it is to see everything wrecked—trees blown down—ground ripped up—dead horses and men lying around—it's awful.

When we set up in the woods it was comparatively quiet. No shells were landing very near—yet. The place had been a German artillery "*echelon*," or place where the horses are kept when the batteries are in position. The greatest of confusion prevailed in the place. They had left very hurriedly, leaving numerous articles of equipment.

We pulled the radio wagon into a place under the trees and began to camouflage it. I was up on the seat putting a bough on the top when—*Whe-o-e*—the familiar whistle of an approaching shell greeted us. We all crouched down awaiting the inevitable, as we could tell by the song it sang that it was coming near. Plop! It proved to be a "dud," landing three feet from the wagon. We all stood up, took off our tin hats, and sang the Doxology over, because if it had exploded I would no doubt be writing you from Base Hospital No. 1323.

We put up the radio station on the outskirts of the wood, and had the receiving apparatus in the small *abri*. This *abri* consisted of a six-foot trench covered with logs which the Germans had very kindly left for us. They evidently took careful note of its exact location, because the second day we located in it we got a beautiful air-burst directly over the place, killing a man, two horses tied to near-by trees, and wounding two men.

Brush Teeth In This Way for a Week

All Statements Approved by High Dental Authorities

Watch the Film Go

Dental science has obtained a new and better method of teeth cleaning. Able authorities have proved it by clinical tests.

It is now embodied in a dentifrice called Pepsodent. And we offer you a One-Week tube to show its unique results.

Its object is to end the film on teeth—the cause of most tooth troubles—that slimy film which gets into crevices and stays, and which resists the tooth brush.

That film is what discolors—not

your teeth. It hardens into tartar. It holds food which ferments and forms acid. It holds the acid in contact with the teeth to cause decay.

Millions of germs breed in it. They, with tartar, are the chief cause of pyorrhea. So that film is the great tooth destroyer.

Old methods of tooth brushing fail to end film. That is why brushed teeth discolor and decay. This new method does remove it, and we urge you to prove it by a simple one-week test.

A New Dental Era

Dental authorities have watched the Pepsodent action in thousands of cases. Years of proving show that this product marks a new dental era.

It is based on pepsin, the digestant of albumin. The film is albuminous matter. The object is to dissolve the film, then to constantly prevent its accumulation.

Old methods for using pepsin were impossible on teeth. Pepsin must be activated, and the usual agent is an acid which destroys enamel.

But modern science has discovered a harmless activating method. Five governments have already granted patents. That

method is employed in Pepsodent. And it solves the problem of this film as nothing else has done.

The result is a dentifrice which, authorities say, must supersede the old kinds. You will know that when you try it.

Send the coupon for a One-Week tube. Use it like any tooth paste and watch results. Note how clean your teeth feel after using. Mark the absence of the film. See how teeth whiten as the fixed film disappears.

Those results are essential to your teeth's protection. You will want them always when you see them once. Cut out the coupon now.

Return your empty tooth paste tubes to the nearest Red Cross Station

That part of the woods seemed to be getting more than its share of shells, so we moved the P. C. (*Poste de Commande*, a term we use which was adopted from the French and means the location of the commanding officer) to another part about one kilometer distant. There we were very lucky, getting no shells; but we did get a visit from a *Boche Gotha*, or bombing plane.

The first thing we generally do when we arrive at an open place is to dig ourselves in. We had dug a large hole and put the radio station in it. Well, nothing happened for a couple of days—shells went whistling merrily over our heads, but none decided to pay us a visit, or as you might say, "drop in on us."

One night, just after it had become dark, the *Gotha* came flying over. We can always tell a bomber, as it is a larger and heavier plane than the observer or battle-plane and always flies at a low altitude. Some one saw it just before she reached the edge of the woods and yelled, "Duck, fellows; here's a bomber."

You remember how I used to dive off the spring-board at Russell Beach? That's the way I got down in that hole, about five feet deep, with two or three fellows after me. She dropped three bombs on the road, which was used extensively by caissons (hauling ammunition) very near us, but all was well.

SALVATION-ARMY PIE AND PRAYERS AT THE FRONT

"THE Salvation Army recognizes that, to a hungry doughboy, pie is more potent than prayer," says a writer in the *New York Times*; and he follows that powerful and punchy pronouncement with brief mention of the fact that "The American Salvation Army in France is rapidly winning recruits—not with tans, bouquine and bass drum, but with the doughnut and the apple pie."

Since Dr. Cook lured his Eskimos to the north pole by means of gumdrops, proper food rightly administered has never accomplished greater miracles than it is working every day on the Western Front. The "S. A." not only supplies food, but much warm, almost "motherly," affection to go with it, says the *Times* writer, and he quotes an authority at the front:

"When it grows more mature the Salvation Army in France is going to be the 'big mother' of the A. E. F., or I'm much mistaken," said a certain American general "over there" in discussing the work being done for soldiers by the organization. "The reason they are becoming so popular," he continued, "is that they treat every doughboy, rich or poor, rough or refined, as if they loved him. You have only to read the soldiers' letters, as we do in censoring the mail, to realize how much the 'S. A.' has done for our lads, and is doing every day."

It has often been said that the way to a man's heart is through his stomach. So the Salvation Army workers feed first and pray afterward, and the system has had remarkable results in France. In one day, for example, two Salvation Army ladies, close to the American front, made 1,500 doughnuts, 2,500 cookies, and 50

'Ever-Ready' Safety Razor

AMERICAN SAFETY RAZOR CO., Inc.,

BROOKLYN, N. Y.

pies, not including countless cups of coffee and cocoa.

When one stops to consider that up to June 1 last there were only eighty Salvation Army workers in France the bulk of their accomplishment to date is little short of miraculous. Already they have erected twenty-four huts, twenty of which are in the exposed sections, where the doughnut-makers are constantly menaced by shell-fire.

There are at present, or there were up to a very short time ago, fifty men and thirty women doing this Salvation Army work. The lassies have handed out doughnuts and hot coffee to our boys close to the firing-line that once the roof of their hut was blown off and the splinters demolished the tables and other furniture. The inmates would have suffered the fate of the furniture had not been for the American general in charge at this point, who had made the take shelter in his own dugout. When the fire had subsided they returned to their hut, which they found a wreck.

"Yes, the shelling does get on my nerves, at times," confessed a red-haired "S. A." lass, who served me a chunk of chocolate cake and a cup of coffee in the American sector only a few miles from the German lines. "but I always think how much worse it must be for the boys in the trenches. At times it frightens me when the concussion from shells jars the pans off the tables. Those pans make a terrible racket. But what makes me hopping mad is when the jar of a shell spills our flour all over the floor of the hut! It's a nuisance to clean up and gets my goat!"

There is one noble Salvation Army woman, well past fifty years of age, who has been under shell-fire many times ministering to "her boys," as she lovingly calls them. She is "Mother Burdick" from Dallas, Texas, and there is hardly a minute in the day when she is not busily darning socks, sewing on buttons or mending caps for her khaki-clad family. She treats all the doughboys as if they were her own sons, and no shell can frighten her from a soldier's sock once she has started darning it.

Another picturesque "S. A." worker is Maj. John E. Atkins, fifty-three, who with the battalion of Maj. Theodore Roosevelt, Jr. Major Atkins is the chaplain, and frequently holds religious services for the men in the trenches. He has been with the doughboys from the time they first entered the trenches and has come to be a sort of mascot to the boys. He is always optimistic and never preaches except when he is actually "on the job." There are few men attached to the American Army who are better liked. "O the-Job" Atkins, they call him.

I spent an afternoon with Colonel Barker, and he gave me a detailed account of the Army's activities at the front. Colonel Barker is a middle-aged man, unassuming appearance, but he is a human dynamo in action and the possessor of executive ability which would have won success for him in any field of human endeavor. He has charge of all the Salvation Army property in the United States and has been a trusted officer in the army for twenty-six years. It was in San Francisco that he was first converted to the cause, and he has been stationed in Los Angeles, Boston, and Buffalo. For twelve years he was in New York, looking after the executive and business side of the work, until he was selected by the Commander of the Salvation Army to go

Ten Thousand Footsteps You Could Have Saved

WE hear a great deal about overhead charges—but there isn't much said about *underfoot* expense. How much of it is there in your plant? How much does footwork eat into your profits? How much man-power do you employ in toting, carrying and fetching, that *could* be doing a man's real work in production? Yesterday, one man alone took ten thousand footsteps that could have been saved by Lamsonizing your factory.

Lamson Conveyors are the mechanical toters and carriers. They put a stop to footwork and *underfoot* expense. They reduce overhead charges. They collect and deliver parts from one machine room to another. They tote merchandise. They assemble orders and take the goods to the shipping room—and from there to truck or freight-car.

Lamson Conveyors take heavy castings or fragile china to the place that you want them to go. They can't tire. They never lag. They can't make mistakes. Lamson Conveyors operate with orderly, organized regularity. Their route is direct. Nothing can divert them from their work. Their daily capacity is constant—and walls or floors can't stop them.

They go through, while a man goes

'round. They make production flow smoothly and *get the goods out of the works*. The illustration pictures a Lamson Gravity Conveyor. It puts the right thing into the right hands at the right time. Its uses are almost countless.

There's a Lamson Conveying method for every peculiar business, and made to fit *requirements*. Perhaps you need only one Lamson method. It may be that you need a combination. If you are using man-power for toting, for carrying, for pushing a hand-truck, a Lamson man can quickly show you how the Lamson Idea will make a daily saving that will mean much to you—in hard cash. He'll come at your call. If you prefer, send first for our concise Conveyor Book. We'll start it toward you quick-step.

Lamson Conveyors

Big Increase in Porcelain Efficiency

Half Again as Much Resistance to Current When Heated

In the high-speed, high-compression motors of today spark plugs must work in heat undreamed of a short time ago.

Yet under intense heat the porcelain insulator that once worked perfectly, actually becomes a conductor of the electric current—fails to supply the explosive spark.

But science has now more than kept pace.

Experiment 3450 in the tenth year of unremitting original research work in

our porcelain laboratories has produced a porcelain with half again as much resistance to current when heated.

Champion Dependability takes so long a step forward that it seems well nigh inconceivable that any future motor will ever again develop heat enough to threaten short-circuiting through the porcelain insulator.

This greater dependability is yours if you merely take the pains to see that "Champion" is on the porcelain of your spark plugs as well as on the box.

Champion Spark Plug Company, Toledo, Ohio

Champion Spark Plug Company of Canada, Limited, Windsor, Ont.

France and organize the army's forces for service at the front.

Colonel Barker gives some account of the beginnings of Salvation Army work in France, which followed upon his visit, in July, 1917, to all of the American camps, at the request of General Pershing. The first hut was put up by 170 doughboys, who volunteered for the service. To quote the Salvation Army leader:

"They carried it in sections from one end of the French town, in which they were billeted, to the other, and in six hours and twenty minutes they had erected the hut and were having a concert with a phonograph and piano when I arrived on the scene. During those first few months we put up, in all, seven huts.

"We have, by the way, a supply of tents, sixty feet by twenty in size, which can be erected in two hours. These tents follow the boys on the hike. Then, too, we have some smaller portable tents which the officers of the Salvation Army use as living quarters when they can not secure billets.

"Almost at once the Salvation Army was recognized by the American military authorities in France as a militarized unit, and it has all the privileges and appurtenances of such, subject to the army rules and regulations approved by the American authorities.

"It didn't take me long to realize that the influence of good women upon the soldiers was very great. Our lassies were permitted to work in the camps, and the results were so encouraging that other organizations began to follow our lead. At present many of our lassies are busy in the camps and their willing services are constantly in demand. Our officers, men and women, eat chow with the doughboys, and many of our men are assigned to companies and draw regular rations with the men.

"At the front-line trenches our men are now living in dugouts, where it is so dangerous that the lassies are no longer permitted to work there, altho they have done so in the past and are still willing to do so. The supplies for these men and for the army's huts are sent at night by automobile-trucks. Often they are delivered under heavy fire.

"Of course, we have religious meetings—meetings which interest the doughboys and occupy their attention. We never have paid entertainers for these meetings, but our huts at the front are always crowded and the lads seem to enjoy them. Our main idea is to keep them interested and entertained, because the monotony of a soldier's life close to the front is appalling, and there must be something to take his thoughts away from himself and keep him in a wholesome and normal frame of mind. Our religion helps us to do right, think right, and live right, and without preaching we strive to make the doughboys see things from our point of view. I find this can be more easily accomplished by approaching the men in the character of friend rather than preacher.

"Our huts are recreation centers for large numbers of troops, and we try to make them as comfortable and as homelike as possible. There are tables, benches, and chairs, a piano, and perhaps a phonograph with a supply of records; writing materials, a library of books, current magazines and newspapers, and games for the boys, such as checkers, dominoes, and whatnot. We have canteens where chocolate, candies,

and other sweets are sold at about cost. Coffee and cocoa are supplied in cold weather and cold temperance drinks in hot weather. Our lassies make pies, doughnuts, biscuit, and cookies, which we sell to the men at the lowest possible prices. And if a doughboy is 'broke' he needn't be afraid to come around, for he can have whatever he wants on trust."

There was the case of a whole battalion of Americans who had not been paid for three months, due to some regrettable hitch. Uncomplimentary mention of this hitch, which seems to have had large ramifications, has turned up in various directions, but this particular battalion, to add to their troubles, had received notice that they were soon to go into the trenches.

Trenches are bad enough, but trenches without funds for canteen supplies are worse. The Salvation Army, says Colonel Barker, literally "went to the front" for those soldiers:

"Without any delay or 'red tape' we sent \$5,000 worth of canteen supplies to these men and 'jawboned' the entire battalion. To 'jawbone' means, in the doughboy vernacular, 'to trust.' Nor did we have any reason to regret our prompt action, for these doughboys paid us every cent they owed just as soon as they received their money. Each man acted as his own bookkeeper and their accounts were straight as a string.

"And here is another concrete illustration of what we are trying to do for the soldier: If the doughboy has a watch and the spring breaks or something else happens to it, half the time he doesn't know where to take it to be repaired—and watches are a necessity in war. He goes to a Salvation Army lass and tells her his plight, and she takes the watch, gives him a receipt for it, sends it to Paris, and later returns it in good order to the soldier, charging him only the actual cost of the repair and the postage. We try to be on hand in every emergency.

"One of the most important branches of our work is the maintenance of field canteens at night, where hot coffee and cocoa are served to the boys free of charge. These canteens are great comforts to units on their way to the front, or who are returning from the trenches, cold and tired. The hot drinks taste mighty good to men who have tramped through mud and often rain, and I can't tell you how much they appreciate this small service.

"The American soldiers, by the way, have the greatest admiration and respect for these hard-working 'S. A.' lassies and are chivalrous in their treatment of them. It is not an unusual sight to see the doughboys helping them in their work about the huts. They carry water, chop wood, are always on hand when heavy boxes of supplies have to be moved, and do their best to help keep our huts clean and homelike. In every possible way they try to show their gratitude.

"One of the things we try to do is to keep the graves of American soldiers decorated. Our workers lay flowers and flags with tender hands upon the mounds in lonely graveyards back of the devastated grounds. In the hospitals they write letters for the men who can't do it themselves."

Thus Colonel Barker. And they are doing it—this little band, whose members are as ready with a substantial "handout" as they are with soul uplift. The sound of their hearty voices upraised in a good old-fashioned hymn has given many a weary doughboy a brief moment back at his own fireside and imbued him with new courage for the work that lay before him.

From Kinnikinik to Edgeworth

LARUS & BROTHER CO.,
Richmond, Va.

Gentlemen:

I have been smoking a pipe for 57 years, from the time of entering the U. S. Army, September, 1861. Served 4 years and during that time was stuck on "Kinnikinik."

Have smoked every good brand on the market since, and find nothing that suits my taste equal to the Edgeworth smoke.

Yours truly,

(Signed) Major

Present age 74 years, 2 months.

From Kinnikinik to Edgeworth—57 years!

It was a long journey. It sounds like a tale from some ancient tome. It's as if a man joined a caravan at Kinnikinik, a city in the Far East, travelled for 57 years, and finally arrived at Edgeworth. He was a

traveller rather than a man of words. He mentioned no way-stations.

As a matter of fact, many men make as long a journey as that from the tobacco they first like to the one they finally like.

Most men are as finicky about the tobacco they smoke as a woman of taste is about selecting her hats.

A pipe-smoker knows what kind of tobacco he wants—when he gets it. But usually he reaches it only through a long process of elimination. He smokes many kinds for a time. When at last he finds a tobacco that really satisfies him, nothing can pry him loose from it.

He is so mightily pleased at his success in finding it that he wants others to use it.

Every real man has his pet tobacco. He is generous with it. He may be a natural hoarder of other things, but to save you from wasting all the time he did hunting for it, he will give you a pipeful of "the best tobacco in the world."

Sometimes it is the best tobacco that you have ever smoked. Sometimes it isn't.

One's judgment of pipe-tobacco is so wholly a matter of taste that one can only assume that another will like your favorite kind.

Our favorite kind is Edgeworth. We make it and believe in it, and it has received rather wide approval, but we know better than to attempt to force it on you.

At the same time, we believe in it enough to back it. We would like to learn what you think of it.

Merely send us your address on a postcard together with that of the local dealer supplying you with tobacco, and we will mail to you generous samples of Edgeworth Tobacco in both forms—Plug Slice and Ready-Rubbed.

Edgeworth Plug Slice is made up of thin, moist slices pressed into cakes. A slice, rubbed between the hands, makes an average pipe-load.

Edgeworth Ready-Rubbed comes ready for instant use. Pour it straight into your pipe.

Edgeworth is put up in sizes convenient for all purchasers. Edgeworth Ready-Rubbed in pocket-size packages sells for 15c; larger sizes, 30c and 65c; tin humidior, \$1.25; in glass jars, \$1.30. Edgeworth Plug Slice costs 15c, 30c, 65c and \$1.20.

For the free samples upon which we would like your judgment, address Larus & Brother Co., 5 South 21st Street, Richmond, Va.

To Retail Tobacco Merchants—If your jobber cannot supply you with Edgeworth, Larus & Brother Company will gladly send you prepaid by parcel post a one- or two-dozen cation of any size of Plug Slice or Ready-Rubbed for the same price you would pay the jobber.

At Quarantine.—EXAMINING SURGEON—"Have you any sears?"
ROOKIE MARINE APPLICANT—"No, sir, but I have some cigarets in my coat over there."—*The Marine.*

Probably Meant Florida.—"So the doctor told you to go to a warmer climate. What was the nature of the trouble you consulted him about?"
 "I went there to collect a bill."—*Boston Transcript.*

Dog's Wonderful Bite.—"What has become of the greyhound you had?"
 "Killed himself."
 "Really?"
 "Yes, tried to catch a fly on the small of his back and miscalculated. Bit himself in two."—*Tit-Bits.*

Greatness.—"Remember, son, Garfield drove mules on a tow-path and Lincoln spilt rails."
 "I know, dad; but say, did any of these Presidents ever crank a cold motor in a blizzard for half an hour before he discovered that he didn't have any gasoline?"—*Richmond Times-Dispatch.*

What's in a Name?—Tommy's uncle asked him the name of May's young man.
 "I call him April Showers," replied Tommy.
 "April Showers!" cried his astonished uncle. "Whatever makes you call him such a ridiculous name as that?"
 "Because he brings May flowers," Tommy explained.—*Tit-Bits.*

Another War-Casualty.—"You don't seem to feel so enthusiastic as usual about speech-making."
 "Well," answered Senator Sorghum, "times have changed and it isn't so easy for a man in a silk hat and a frock-coat to stand out before a lot of men in khaki uniforms or overalls and assert that he is saving the country all by himself."—*Washington Star.*

Before and Behind.—"One of my pupils," says a Buffalo teacher, "could not understand why I thought that the following paragraph from his composition on 'A Hunting Adventure' lacked animation and effectiveness: 'Pursued by the relentless hunter, the panting gazelle sprang from cliff to cliff. At last she could go no farther. Before her yawned the chasm, and behind her the hunter.'"—*Montreal Daily Star.*

Accepts His Advice.—SUFFERER—"I have a terrible toothache and want something to cure it."
FRIEND—"Now, you don't need any medicine. I had toothache yesterday, and I went home and my loving wife kissed me and so consoled me that the pain soon passed away. Why don't you try the trick?"
SUFFERER—"I think I will. Is your wife home now?"—*Vancouver Daily Province.*

A Little of Both.—Aunt Nancy was visiting an army camp and as she approached some rookies were sitting on their heels and then rising to a standing position in perfect unison.
 "What are the boys doing now?" she asked.
 "Why, those are the setting-up exercises," explained an obliging sergeant.
 "Humph," remarked auntie. "Looks to me more like settin' down exercises."—*Indianapolis Star.*

On Duty!

COFFEE is the American fighter's mainstay. He gets the best and drinks it by the pint.

Every day 800,000 cups of Barrington Hall the Baker-ized Coffee are brewed and sent overseas to the battle front in concentrated form.

So, too, in your own home, this splendid coffee will make you fit to do your part. It costs no more per cup than ordinary coffee because it makes more cups per pound.

If Barrington Hall is not sold by your grocer, send us his name and we will mail you a generous sample.

REASON AND SENTIMENT

are two forces which should be balanced evenly in man. When one or the other tips the beam we have a one-sided nature and warped development. Closes this title.

A Great Book by Dr. Paul Dubois
The famous French specialist in mental and nervous diseases, ably translated into English, takes up and considers the whole question of the need for restraining impulse by common sense. The advice given is practical, simple, and efficacious. Every young man and woman should read it carefully and apply it in the daily affairs of life. 128 pp., cloth, 50 cents net; by mail, 55 cents.

THE BARNES COMPANY, 624 Fourth Avenue, New York

FORGETFULNESS

has caused the fair selection of a life's hope and ambition to go on in smoke more often than when a one-sided human failing. If your mind wanders, if you would hold positions of importance and responsibility, you must stop forgetting. The cultivation of a retentive memory for facts, faces, figures, and the like can be accomplished with ease, no matter what your handicap may be, by the study of *Loeb's Memory System*—masterful, scientific, practical knowledge that secures results. Write today for free booklet, "How to Remember" and protect yourself against disaster. **Frank & Wagnall Company, Dept. 211, New York**

ROUGH ON RATS

Clear your house and keep it free of rats and mice with old reliable "Rough On Rats." Kills them all quickly — and they "Don't Die in the House"

"Rough on Rats" successfully exterminates these pests where other preparations fail. Mix it with foods that rats and mice will eat. Change the kind of food whenever necessary. Don't be pestered—get "Rough on Rats" at drug and general stores. Send for booklet, "Eradicating Rats and Mice".

CURRENT EVENTS

THE WAR

THE WESTERN FRONT

October 2.—The *Paris Matin* announces that the Germans are evacuating Lille and that all means of transportation have been requisitioned to take away the booty.

Paris reports St. Quentin in the hands of the French and that the troops have also entered Moy. Good progress is being made in the Argonne and to the west. Two thousand prisoners were taken between the Vesle and the Aisne.

In admitting the loss of St. Quentin, an official Berlin statement says the German troops were withdrawn to positions in the rear.

A dispatch from British Headquarters states that the whole of the Hindenburg system below Bellicourt tunnel is now in British hands.

British relieve an American contingent in an advanced position between Cambrai and St. Quentin which had been surrounded by Germans for three days. The ground was strewn with German dead.

General Pershing reports that the booty taken by our troops in the advance between the Meuse and the Argonne includes 120 guns of all calibers, 750 trench-mortars, 300 machine guns, 100 heavy tank-guns, thousands of artillery-shells, and a vast quantity of small-arms ammunition.

October 3.—Paris reports that from September 10 to 30 the Allied armies in France and Belgium captured 2,844 officers, 120,192 men, and more than 6,000 machine guns. From July 15 to September 30 the Allies have captured 5,518 officers, 248,949 men, 3,069 cannon, over 23,000 machine guns, and hundreds of mine-throwers.

A French official report states that the gains made by the French armies operating from St. Quentin to the Argonne have closed the only avenue of escape for the Germans on the west side of the Argonne Forest and cleared the country north and west of Reims. Over 2,800 prisoners were captured.

Of the original population of 56,000 in St. Quentin, wires an American correspondent, not an old man, woman, or child has been left by the Germans. Hale or sick, young and old have been carried away.

London reports that British attacks have again shattered vital German defenses between St. Quentin and Cambrai. The Germans have lost heavily in futile counter-attacks and many prisoners were taken. In Flanders the Germans have evacuated Armentières and Lens, both of which the British occupied. British and Belgian troops have captured several villages in the neighborhood of Roulers. The number of prisoners taken by the British in the St. Quentin fighting is estimated at 5,000. During the week ending to-day the Allies captured 60,000 men and 1,000 guns on the Western Front.

A dispatch from French Headquarters states Challerange has been taken. The troops have advanced to the southern edge of the village of Mouron, closing the western exit from the Argonne Forest to the Germans.

October 4.—London receives information of indications of an early German abandonment of the entire Belgian coast. Removal of guns from the Flanders coast has already begun.

The British make more progress north-east of St. Quentin and toward Lille.

American troops join Gouraud's army in strong thrust north of Somme-Py.

The Pierce-Arrow Car has a *new engine*

THE Dual Valve Engine retains for the Pierce-Arrow Car all the advantages of the six-cylinder power plant, with so much additional power that the necessity of shifting gears is much reduced. The car will slow down to five miles an hour in traffic, mount any ordinary hill, speed up to seventy miles (if desired) without shifting from high gear.

It offers more power, more speed, more comfort with less gasoline, without increased weight and less gear shifting.

This new engine is the natural development of the constant aiming at greater comfort. Power is comfort—power and ease of its application. The Dual Valve Engine gives the Pierce-Arrow both.

\$3.50

You'll never need to ask "What is the price?" when the shoe salesman is showing you W. L. Douglas shoes because the actual value is determined and the retail price fixed at the factory before W. L. Douglas name and the retail price is stamped on the bottom. The stamped price is W. L. Douglas personal guarantee that the shoes are always worth the price paid for them.

Stamping the price on every pair of shoes as a protection against high prices and unreasonable profits is only one example of the constant endeavor of W. L. Douglas to protect his customers. W. L. Douglas name on shoes is his pledge that they are the best in materials, workmanship and style possible to produce at the price. Into every pair go the results of sixty-six years experience in making shoes, dating back to the time when W. L. Douglas was a lad of seven, pegging shoes.

The quality of W. L. Douglas product is guaranteed by more than 40 years experience in making fine shoes. The smart styles are the leaders in the fashion centers of America. They are made in a well-equipped factory at Brockton, Mass., by the highest paid, skilled shoemakers, under the direction and supervision of experienced men, all working with an honest determination to make the best shoes for the price that money can buy. The retail prices are the same everywhere. They cost no more in San Francisco than they do in New York.

CAUTION—Before you buy be sure W. L. Douglas name and the retail price is stamped on the bottom and the inside top flap. If the stamped price has been mutilated, BEWARE OF FRAUD.

For sale by 100 W. L. Douglas stores and over 5000 W. L. Douglas dealers, or can be ordered direct from W. L. Douglas by mail. Send for booklet telling how to order shoes through the mail, postage free.

BROCKTON - MASS.

In the advance on the crest of Mont Blanc the Allies captured 3,000 prisoners.

Another dispatch states that the Americans are astride the Kriemhilde line, the last organized defense system between them and the Belgian border. The Germans continue retreating in the Armentières sector. The British are now well to the east of Lens.

October 5.—Paris reports that the German retreat before Gouraud's Army is perceptibly quickening. Fort Brimont is captured by the French troops.

French and Americans make gains of two or three miles during an attack on a 30-mile front between the Meuse River and the Monts of Champagne.

Berthelot's Army has crossed the Aisne Canal at new points and reaches the outskirts of Hermevicourt. In five days this army has captured 2,500 men and 31 cannon.

General Haig reports the enemy giving up the high ground north of the wedge the British hold through the German defensive system. The British take La Terrière and a section of the Hindenburg line and are across the Scheldt between Crevecoeur and Le Catelet.

Preceding their withdrawal, states a Paris dispatch, the Germans set fire to Douai and many villages near Cambrai.

In the Belgian offensive, which began a week ago, 10,500 prisoners and 350 guns were taken. The entire Flanders ridge was won in the first forty-eight hours.

October 6.—An Amsterdam dispatch states that the Germans have removed their guns and coast defenses from Knoeke and have fired the wharves and docks at Bruges. Work has been stopped at Zeebrugge and the entire garrison of Moerkerke has been withdrawn.

The Franco-Americans under Gouraud make eight-mile gains near Reims, forcing the enemy to abandon powerful positions. On the British front an attack northeast of Arras resulted in the capture of Fresnoy. One thousand prisoners were taken in the fighting of October 5, when Beurevoir and Montbrehain were captured.

A dispatch from the Champagne front says the American advance has been easier. Four and a half miles have been gained from the starting point and up to this afternoon 1,700 prisoners, including forty-eight officers, have been captured.

October 7.—Dispatches from the front note that the Americans have forced the enemy out of Chatel-Chéhery, northwest of Apremont; Franco-American troops have taken St. Etienne on the Arnes, and other forces penetrate Hauvigne, north of the river.

Berlin announces officially that General Pershing has begun a new attack on the fifteen-mile front between the Argonne Forest and the Meuse River.

The French have captured Berry-au-Bac. Attacking northeast of Arras the British take Oppy and Biache-St-Vaast. Laon in flames indicates that the Germans intend soon to give the town up.

October 8.—Three tremendous blows are dealt the foe in France. British, French, and Americans tear away the last defenses of the Hindenburg line on a twenty-mile front between Cambrai and St. Quentin, advancing an average distance of three miles, with a maximum penetration of five miles. General Pershing's Army, including French units, assault on a seven-mile front east of the Meuse above Verdun, gaining two miles. Gouraud's Army, in which many Americans are incorporated, attack on a front of four or five miles from Machault, north of St. Etienne, and advance two miles.

The Goggles that Protect

"If You Please" not "Verboten"

If we were ruled as the Hun rules, gasless Sundays would not have been requested—they would have been **ordered**, with dire penalties for disobedience.

But we are not Huns—thank God! Here in America the people govern—reason rules.

Given the facts, the American people think out their own answer.

Prodigal use of gasoline threatens a shortage. The Fuel Administration summarily could have **ordered** us not to use gasoline on Sunday—and made us obey.

Instead the fuel authorities **asked** us not to use our cars on Sunday, unless it was absolutely necessary.

Voluntarily the American people made Sunday a gasless day.

In the same spirit—to the same end—that the Fuel Administration asks you to conserve gasoline, we ask you to conserve Weed Chains.

Prodigal use of Weed Chains—the unnecessary use of cars in bad road weather—means a shortage in Weed Chains.

There must be no lack of power and traction for trucks and essential passenger cars.

There must be no checking nor curtailing of transportation for win-the-war industries.

You know chains are as necessary for traction, to insure safety on slippery pavements and muddy and snowy roads, as gasoline is necessary to give the engine power.

You know Weed Chains are the only chains that insure this traction and safety without cutting tires to pieces.

"If You Please"

You Are Asked to Subscribe to This Pledge:

To save gasoline I will stop my engine when I leave my car idle.

To save my Weed Chains I will use my car in bad road weather only when necessity compels.

If I use my car when roads are slippery I will not leave the garage without putting on my Weed Chains.

To safeguard against accidents and repairs, I will put on my Weed Chains at the first drop of rain.

To prolong the life of my Weed Chains I will take them off the moment the roads are safe; later I will make sure they are cleaned and dried.

REO

From A Hearse To A Hurry-Up Wagon

THIS REO "SPEED WAGON" chassis is adaptable to that wide range of usefulness.

THOUSANDS are already in use in high class funeral equipments while tens of thousands are serving in hundreds of different lines of commercial activity.

THE PREFERENCE FOR REOS among funeral directors is significant too—for in no other class of business is a silent, smooth-running motor and an absolutely dependable chassis so essential.

OF COURSE the greatest demand, by far, is for the two standard types of "Speed Wagons"—the familiar Stake Body and the popular Canopy Covered Express.

THESE TWO TYPES are adaptable to about seventy-five per cent of normal delivering and trucking.

FOR CITY, SUBURBAN and rural use, these types are ideal.

BUT WE DO SELL a large number of chassis equipped as shown below, with driver's cab and heavy wood sills only.

ON THESE SILLS you can mount any special type of body you may need or prefer for your own special service.

AND YOU CAN SECURE, from your Reo distributor, dimensions and full data so that your special body may be made and ready to mount in the hour that your Reo is delivered to you.

IN MANY CASES—in most cases in fact—the old body can be taken from your now obsolete horse-drawn truck and, with slight modifications, mounted on this Reo chassis.

WHEN THAT IS DONE you can feel confident that you have the sturdiest, most consistent, most dependable motor truck it is possible to procure.

FOR THE VERY WORDS Reo and Reliability are synonyms—and Reos have long been famous for their Low Upkeep.

THE ONLY CONCERN you need have is—can you get a Reo?

ONLY WAY is to see your Reo distributor at once, place your order and be in line for an early delivery.

TODAY won't be a minute too soon.

Reo Motor Car Company

Lansing, Michigan

This Reo was the first Motor Truck to be equipped with electric lights and self starter—one reason for its greater efficiency and fuel economy.

One of hundreds of types of Hearse Bodies on standard Reo "Speed Wagon" chassis

Standard type Stake Body on the same Reo chassis

The Famous Reo "Speed Wagon"—express with canopy top.

Reo "Speed Wagon"

Chassis with Cab and Sills—ready to receive any type of body

"THE
GOLD STANDARD
OF VALUES"

General Haig, with the aid of Americans captures Brancourt and Premont in an advance of three miles, taking many fortified farms and woods. The Allies are still moving forward everywhere.

The American "lost" battalion in the Argonne Forest is rescued virtually intact.

Paris reports that the last shells fell upon Reims on October 4, when the Germans retired over the hills to save the guns that fired the parting shots.

THE CENTRAL POWERS

October 2.—Amsterdam reports the arrival at the German frontier of the second Russian shipment of gold on account of war-indemnity.

October 3.—The Prussian Upper House has rejected suffrage based on vocations and passed an equal direct suffrage measure, with the addition of an extra vote for persons over fifty years of age.

German newspapers are showing anxiety about the situation on the Western Front. They see great peril in the present "decisive" battle.

A dispatch from Vienna states that during a discussion of the peace question in the Austrian Chamber of Deputies the Socialists presented terms resembling those of President Wilson's.

The appointment of Prince Maximilian of Baden as German Imperial Chancellor is announced by Berlin newspapers.

October 4.—Deputies Grober, Centrist, and Scheidemann, Majority Social-Democrat, have been appointed Secretaries of State without portfolios in the Berlin Cabinet.

London learns from official quarters that German residents of Sofia and Constantinople, including officers and their families, are leaving hastily and going through Roumania to Germany.

Paris reports that the French Government has issued a solemn warning to Germany and her allies that the devastation of territory from which they retreat will be punished inexorably.

October 5.—The Austro-Hungarian minister at Stockholm is charged to request the Swedish Government to transmit to President Wilson a proposal to conclude a general armistice with him and his allies and start negotiations for peace without delay.

A dispatch from Amsterdam reports that immediate suspension of hostilities has been proposed in the Reichstag by Prince Maximilian, the Imperial German Chancellor, and that plenipotentiaries be sent to a neutral place to discuss peace problems with representatives of the Entente Allies.

October 6.—The *Neueste Nachrichten*, of Munich, says an indescribable panic broke out on the Berlin Stock Exchange on October 5, shipping and armament company shares being especially affected.

Amsterdam forwards the text of Germany's new peace note sent to President Wilson through the Swiss Government. It accepts the President's program as set forth in speeches and messages to Congress as a "basis of discussion" and "requests the immediate conclusion of an armistice on land and water and in the air."

A Berlin dispatch states that the Kaiser has issued a proclamation to the German Army and Navy in which, after announcing that the Macedonian front had crumbled, he states that, in accord with his allies, "I have resolved once more to offer peace to the enemy, but I will only extend my hand for an honorable peace."

October 7.—It is reported in Rome that the Vatican rejected a request from Austria that the Pope should undertake steps toward peace.

The Teuton maneuver is denounced in the Senate at Washington and a resolution is introduced that before an armistice Germany must disband her Army, surrender her Navy and all weapons, pay for all the damage she has done, and give Alsace-Lorraine back to France.

President Wilson is reported conferring with the Premiers of the Entente nations over the form of answer to be made to Germany's peace proposals.

The Italian Embassy at Washington gives out a dispatch from Rome declaring that, realizing the danger of his position, the enemy has "decided to intensify his peace efforts in order to slacken the resistance of the Entente nations."

Amsterdam reports that excited crowds in Berlin are making the city resound with shouts of "Peace has come!" and "Peace at last!"

Another dispatch from Amsterdam states that Count Tisza, former Austrian Premier, declares the Dual Monarchy will give Italy patches of the Austrian territory she now holds, grant autonomy to its own various races, and give part of Galicia to Poland.

October 8.—A dispatch from Bern reports that the Kaiser, addressing the German soldiers at Ruffach, Alsace, late in September, said that neither the French nor the Americans can break through their front in Alsace-Lorraine, which would be "defended by the last drop of our blood."

Replying to the German peace proposal through Secretary Lansing, President Wilson asks if the Imperial Government accepts the terms laid down in his address to Congress on January 8 and in later addresses, and "feels bound to say" that he could not propose an armistice to the Allied governments unless the forces of the Central Powers are withdrawn everywhere from invaded territory. He also asks the German Chancellor whether he represents the people or the autocracy.

THE BALKAN SITUATION

October 2.—London reports that Serbia is being evacuated by Bulgarian troops, who are returning to their own territory.

A semi-official Servian note says it is feared that the Austro-Hungarian Government is arranging with the police authorities to excite peaceful Servians, Croats, and Slovenes to revolt so that they may be imprisoned and their property confiscated.

Two Roumanian leaders have arrived in Paris and state that as long as ten weeks ago the Germans were showing distrust of the Bulgarians by digging trenches along the whole length of the Danube.

October 3.—The Austrian War Office states that, owing to events on the Bulgarian front, "we have withdrawn our divisions from Albania. Berat fell into the hands of the enemy without a fight."

Rome reports that the Italians have started a great offensive in Albania. They have occupied Fieri and Berat, and "the enemy is fleeing."

October 4.—Paris dispatches state that, following up the Bulgarian evacuation, Greek troops continue to press into Greek Macedonia.

Copenhagen receives a dispatch from Sofia stating that King Ferdinand of Bulgaria abdicated October 3 in favor of Crown Prince Boris.

A Servian official statement reports Austrian and German reinforcements repulsed and driven back toward the Turkish frontier.

October 6.—London reports that Servian forces have entered Vranje, fifty miles

Inflamed gums—the cause of tooth-base decay

JUST as the strength of a building is dependent upon its foundations, so are healthy teeth dependent upon healthy gums.

Permit the gums to become inflamed or flabby and you weaken the foundation of the teeth. This condition is called Pyorrhea (Riggs Disease). Loosening of teeth is a direct result. And, worse, spreading gums invite painful tooth-base decay. They act, too, as so many doorways for the germs which cause the fatal disease of melita.

Pyorrhea (Riggs Disease) attacks four out of five people who are over forty. And many under that age, also. Its first symptoms are tender gums. So you should look to your gums! Use Forhan's, which positively prevents Pyorrhea and in time and used consistently, it quickly relieves tender or bleeding gums. It makes the gum harder and, accordingly, gives to the teeth the sound foundation they need. It also scientifically cleans the teeth, which feel particularly smooth to the tongue after using Forhan's.

If your shrinkage has already set in, start using Forhan's and consult a dentist immediately for special treatment.

Every Bristle Gripped Everlastingly in Hard Rubber

Over a hundred styles and sizes in Rubber Hair and Machete Bristles.

Protects the Brush, the Bag, and the Baggage, too!

Four sizes, three in Jerry's Shaver and one in Black's Shaver.

We can't put more wear into the brush, but proper care will help you get more wear out of it. Dribrush holders are 100% efficient in preventing shaving brush troubles. If your dealer cannot supply you, send us his name and 25c. and receive, postpaid, one of the fiber holders, the right size for the average brush.

RUBBERSET COMPANY (R. A. C. P. Co.), NEWARK, N. J.

northeast of Uskup, and taken several hundred prisoners. The enemy is retiring in disorder.

October 7.—A Sofia dispatch to the Berlin *Tageblatt* says that Bulgaria notified the Central Powers on October 5 that they must quit Bulgarian territory within a month.

London reports that Serbian troops are pursuing the Austro-Germans north of Vranje in the direction of Nish and have captured 1,500 prisoners and twelve guns.

October 8.—Heavy fighting is reported in the Godilice Pass between Serbians and Austrians, barring the road to Nish. The Serbians capture Djep Ridge on the Morava River, taking 2,000 prisoners, including a large contingent of Germans.

IN PALESTINE

October 2.—The British War Office announces that General Allenby's forces occupied Damascus on October 1, taking over 7,000 prisoners.

October 3.—London reports that Australian mounted troops have captured a Turkish column northeast of Damascus, securing 1,500 prisoners, two cannons and forty machine guns.

Washington hears that, owing to the disaster in Palestine, the Turkish forces in Persia have been ordered to withdraw. It is also reported that the British will reoccupy Baku.

From the start of his offensive on September 18, states a London dispatch, Allenby has taken 71,000 men and 372 guns, and King Hussein's Arabs report 8,000 additional prisoners. The cavalry is clearing the country north of Damascus.

October 8.—The British War Office reports that General Allenby's cavalry occupy Zahleh and Rayak, respectively, thirty-three and thirty miles northwest of Damascus. In the coastal area the enemy has evacuated Beirut and retired northward.

THE WAR IN THE AIR

October 2.—London reports the bombing of the Treves railway by the British independent air-force.

French bombarding squadrons surprise gatherings of enemy aircraft in the region of Contreuve and Mont St. Martin. Ten enemy airplanes were destroyed and a balloon set on fire.

In the course of the fighting over northern France and Belgium last week states a London dispatch, British air men destroyed 124 enemy machines, drove down forty-six out of control, and shot down thirty-four German kite balloons in flames. Ninety British machines were reported missing.

In the American attack west of the Meuse our aviators, says a dispatch from the front, brought down seven enemy machines in spite of unusual daring activity on the part of the German fliers.

British and Italian airplanes cooperate with the Allied fleet during the bombardment of Durazzo.

THE WAR AT SEA

October 3.—Premier Orlando makes the announcement in Rome that American, British, and Italian war-ships have destroyed the Austrian naval base and war-ships anchored at Durazzo. Except a slight injury to a British cruiser by a torpedo from an enemy submarine, no losses or damage were suffered by the Allied squadron.

Washington announces that the *Tampabay*, formerly a coast-guard cutter, but recently used in convoy service, was lost with all on board through a submarine attack off the English coast on September 26.

Man efficiency for manufacturing efficiency

is demanded in Government Production. Light and Ventilation are primary requisites. Hence, the nation-wide use of Fenestra Solid Steel Windows in factories turning out Government work. The Bullard Machine Tool Company is one of the plants so engaged. F. W. Post, of that company, writes:

"We are firm believers in sunlight and sanitary shop conditions, which are only obtainable with large window areas and steel sash. On maintenance trips of inspection, I do not have to point to Fenestra."

Fenestra will materially aid you in solving your plant problems. Let us prove it. Detroit Steel Products Company, 4201 E. Grand Boulevard, Detroit.

Fenestra

SOLID STEEL WINDOWS

Executive offices of the American International Shipbuilding Corporation, at Hog Island, Pa., in which the toilets are all equipped with ONLIWON HYGIENE.

IF we were to hang a pennant on our Factory for every institution serving the U. S. A. in which ONLIWON HYGIENE is aiding to guard the health of the workers, you would be unable to see a stick or stone of our enormous plant.

THE ONLIWON HYGIENE

is the combination of an interfolded package of sanitary toilet paper and a cabinet which protects each sheet from dust and germs, serves just two sheets at a time and prevents waste and littered floors.

ONLIWON Toilet Paper is of fine quality, but medium in price—made of highest grade materials—1,000 soft, firm, full-sized sheets, cut and folded by machines—comes to you in a compact package, untouched and uncontaminated, ready to insert in the cabinet.

ONLIWON Cabinets are so simple that not a minute is required to insert the paper. They are attractive—very durable—nothing to get out of order—no knobs to turn or levers to press—no sharp corners to catch your clothing—they will not mar walls or woodwork—no new holes to bore—just replace your old unsightly fixtures—you can do it yourself, easily and quickly.

SIGNET INK
THE PERMANENT INK

October 4.—Two enemy submarines shell the port of Cezimbra, eighteen miles south of Lisbon. The enemy fled when the shore guns replied.

A dispatch from Rome states that American submarine chasers destroyed two enemy submarines during the bombardment of Durazzo.

Washington dispatches say the evacuation of Zeebrugge and Ostend will not materially affect the submarine situation. American and Allied naval officers believe that the Belgian coast boat flotilla was practically put out of action when concrete-laden ships were sunk in their entrance by the British.

Rome reports that enemy submarines have been effectively fought in the Mediterranean. The Italian Navy has reduced losses from a maximum of seventeen monthly to two. Admiral Del Bono declares the present situation highly satisfactory.

German submarines are again active off the Atlantic coast. An Italian freighter is torpedoed 300 miles off Sandy Hook. Two life-boats containing 21 men each are missing.

AFFAIRS IN RUSSIA

October 1.—A dispatch from Archangel states that the Americans are holding the farthest point reached by any of the Allied forces in the advance southward from the city. They are now within forty miles of Velsk, the Bolshevik stronghold.

October 3.—Stockholm reports the receipt of Petrograd dispatches dated September 30, announcing that the Czechoslovaks have captured Kazan. The Maximalist newspapers bitterly reprehend the Lettish soldiers who surrendered to the Czechs after the fall of the city.

October 4.—Washington reports that replies to Secretary Lansing's note asking foreign nations for an expression of condemnation of the lawless element in Russia show that the civilized world is practically a unit in condemning the Bolsheviks.

A dispatch from American headquarters on the Vaga River reports patrol encounters nightly in the woods and hemp-fields and that the Americans are turning natives against the Bolsheviks.

October 7.—Washington reports that the immediate aims of the new Russian Government, formed at the convention at Ufa last month, include liberation of Russia from the power of the Bolshevik Soviets, annihilation of the Brest-Litovsk treaty, restoration of treaties with the Allied nations, and continuation of the war against the German coalition.

Representatives of the Siberian Government who have arrived in Norway to purchase large quantities of agricultural machinery state that 360,000 tons of the grain harvest of 1917 are stored in the Omsk district.

Stockholm receives a wireless dispatch from Moscow reporting that the Bolshevik Government has declared its intention of adhering to the Brest-Litovsk treaty.

FOREIGN

October 2.—The London *Standard* learns on good authority that Turkey has made further indirect approaches to the Allies through financial channels which are being considered by the British War Cabinet.

The British Admiralty announces that the tonnage of merchant vessels completed in the United Kingdom during September amounted to 144,772, which is 20,000 tons in excess of the figures for August.

October 3.—A dispatch from Paris states that the American Red Cross has given

\$20,000 for the reestablishment of Belgian refugees in France in the lace-making industry.

October 4.—A Budapest newspaper says the proclamation of the independence of Bohemia will be issued shortly.

Madrid reports that King Alfonso is recovering from an attack of Spanish influenza.

Paris is rejoicing over the capture of Lens, the coal fields long in German control holding out a prospect for winter cheer in France.

October 8.—Zurich reports that the Turkish Cabinet has resigned and that the people in Constantinople are in revolt.

A dispatch from Athens states that delegates from the government of Smyrna, Turkey, are expected in that city with an offer of peace to the Entente Powers.

DOMESTIC

October 2.—A Washington dispatch states that the American and Allied governments are considering serving an ultimatum to Germany, demanding the immediate abandonment of its practice of destroying Belgian and French towns after evacuating them and wiping out vineyards, on pain of Allied reprisals when we reach German soil.

The Director-General of the Emergency Fleet Corporation reports that the epidemic of Spanish influenza has put 10 per cent. of the shipyard workers in the Fall River district, Hog Island, and as far south as Baltimore, temporarily on the ineffective list and is seriously interfering with rapid ship-construction.

The Shipping Board's additional program contemplates the building of 210 steel and 244 wooden ships at an average cost of \$1,000,000 each.

The Federal woman-suffrage amendment, which failed in the Senate October 1 by two votes less than the requisite two-thirds majority, is returned to the Senate calendar in position for future action.

Regulations issued by the War Industries Board prescribe fixt prices for shoes. This is the first step in a general policy for price-control of clothing.

Reports received at the Surgeon-General's office in Washington show that Spanish influenza prevails in forty-three States. The Philadelphia Board of Health orders churches, theaters, schools, and all places of public assemblage closed in the city. In Chicago the police have been ordered to arrest not only violators of the spitting ordinance, but every person found coughing or sneezing without using a handkerchief. The epidemic is reported waning in Boston.

October 4.—A series of explosions wrecks the Gillespie shell-loading works at Morgan, N. J. The loss of life is estimated at one hundred workmen.

Owing to the spread of Spanish influenza in New York, the Health Board issues a program of opening and closing hours for stores and offices to mitigate travel-congestion in the "rush hours." Theater hours are also curtailed. During the twenty-four hours ending at 10 A.M., 1,695 new cases of the disease and 188 of pneumonia were reported. The State Health Commissioner announces that \$50,000 is immediately available for fighting the disease in the State.

Washington reports that there are now 1,800,000 American troops abroad.

The American Defense Society sends letters to all branches of the organization warning them against the new German propaganda and urging them to oppose with all their influence any peace except one based on the unconditional surrender of the Central Powers.

Pains, Callouses or Cramps There?

*Are Your Feet Tired and
Painful at Night?*

The finger points to the location of the Anterior Transverse Arch—a very important part of the foot structure providing flexibility, toe action and gracefulness of carriage.

When this arch weakens and one or more of the bones are depressed, unequal pressure is produced, the weight is unevenly distributed, causing a burning sensation, callouses, tender spots, contracted toes and a cramp-like pain known as Morton's Toe or Metatarsalgia, which frequently extends into the limbs. The foot widens and spreads over the shoe, the small and great toe joints become inflamed and enlarged—bodily fatigue and nervousness result.

For this condition Dr. Scholl's Anterior Metatarsal Arch Supports are especially designed to reach the vital spot and give immediate relief and comfort. They support the weakened parts, remove the abnormal pressure and assist nature in effecting a permanent correction.

Dr Scholl's Foot Comfort Appliances

are scientifically constructed to bring quick relief and correct the cause of tired, aching feet, bunions, weak ankles, broken-down arches, flat foot, over-lapping toes, enlarged toe joints, corns, callouses, etc.

The heavy strain thrown upon the feet by war activities is readily overcome and the feet made comfortable and efficient through the use of these simple, effective devices.

An Expert Will Fit You

Dr. Scholl's Foot Comfort Appliances and Remedies can be purchased at leading shoe and department stores where a foot expert will fit you with the proper appliance; also stylish, comfortable, easy shoes. These experts have studied foot anatomy and Practipedics, the science of giving foot comfort. They are rendering a distinct service to your community and deserve your patronage.

Valuable Booklet Free. "The Feet and Their Care," by Dr. Wm. M. Scholl, recognized foot authority, will be sent free upon request.

How Long Will You Live?

This is a supremely important question, the answer to which depends, in the main, on your manner of living.

HOW TO LIVE

by Professor Irving Fisher and Eugene Lyman Fisk, M.D., of the Life Extension Institute, with a Foreword by William Howard Taft, points out the way to rational living along modern scientific lines. It is a great book that will add years to your life if faithfully followed. Buy it and study it, and your days will be long in the land.

Dr. A. T. McCormack, Secretary of the State Board of Health of Kentucky, HAS JUST BOUGHT TWELVE COPIES.

In giving his order he writes: "Will you be kind enough to send twelve copies of your new book, 'How to Live,' one to each member of the Board? . . . Every man and woman in the United States who desires to be healthy and to live long, should be familiar with its contents. Here is an expert's advice. Can YOU afford to ignore it?"

WINTER CAMPS and SCHOOLS

MANY parents are seeking information about healthful and instructive places for boys and girls of various ages and development, who for some reason cannot attend public or private schools.

It is very simple to reach a conclusion with the assistance of THE DIGEST.

Write to us or send direct for descriptive announcements of Camps and Schools with out-of-door facilities the year round, which appear in

THE LITERARY DIGEST

Delmonico's, one of the world's famous restaurants, passed into the hands of receivers because of inability to pay claims of three creditors totaling \$798.

The American supply service, states a dispatch from France, overtopped its August record by 10 per cent. American ports handled a daily average of 25,808 tons of freight.

October 5.—Renewed explosions occur at the Gillespie shell-loading plant, in New Jersey, the country for miles around being bombarded by bursting projectiles. Morgan and South Amboy are wrecked and 60,000 persons flee from adjacent towns. Windows are shattered in New York and traffic on the bridges and tubes running underneath the rivers suspended for several hours in the afternoon. Estimates of the number of victims of the explosions range from 50 to 200 dead and several hundred injured. The property loss exceeds \$18,000,000.

October 5.—Six hospitals are commandeered in New York City to establish wards for the exclusive treatment of influenza victims. All public gathering places are closed in Cincinnati, and other cities East and West are ordering churches, schools, and saloons closed.

October 6.—New orders barring German alien women from entering restricted district zones go into effect in New York.

Operatives of the Department of Justice are searching for two enemy aliens who fled from South Amboy on the night of the first explosion at the shell-loading works at Morgan.

October 7.—In the decreasing number of cases of Spanish influenza New York health department officials see indications that the peak of the epidemic has been passed. During the last twenty-four hours 1,588 cases were reported. In south Jersey and Pennsylvania the disease continues to spread. Boston reports that it is apparently under control in Massachusetts.

Five big tobacco firms and fourteen individuals of New York City are indicted by the Federal grand jury for violation of the Sherman Anti-trust and Wilson Tariff laws.

October 8.—The Perth Amboy Council of Defense passes a resolution declaring that the disaster at the Gillespie shell-loading works was due to faulty construction and incompetent management, and registering "its emphatic protest against the reconstruction and operation of the works under the conditions which made the disaster possible."

The Ordnance Department asks the House Appropriations Committee to add \$1,100,000,000 to its estimates of \$2,667,000,000 to carry out the Department's part of the enlarged army program, making a total appropriation of \$3,767,000,000.

The Shipping Board announces that American shipyards established another world's record in September by delivering seventy-four vessels, of 362,635 dead-weight tons. One vessel of 6,695 tons was received on the contract awarded to Japanese yards.

Spanish influenza takes a sudden jump in New York City, 2,503 new cases and 282 of pneumonia being reported. The smaller moving-picture houses are ordered to exclude every child under twelve years of age and provide continuous ventilation during all performances.

The New York State Industrial Commission reports that five per cent. more workers were employed in industrial activities in the State during August than in the corresponding month of 1917. Aggregate wages in August were thirty-six per cent. greater than a year ago.

THE FRANKLIN CAR

And the Present-Day Standard of Motor Car Service

Frequently special conditions give new significance to old facts. And *now* is the time when conditions give added importance to the long established economy facts of the Franklin Car—a steady day-by-day delivery of

*20 miles to the gallon of gasoline—
instead of the usual 10*

*10,000 miles to the set of tires—
instead of the usual 5,000*

For when the Nation is geared to tremendous effort, the aid of an efficient automobile can do much to bring about the vitally necessary economy of gasoline and tires.

The simple Franklin facts speak for themselves.

If all cars were as efficient as the Franklin, on the basis of its daily performance, the automobile owners of the country would save this year 400,000,000 gallons of gasoline and would cut their tire bills \$192,000,000.

For sixteen years the Franklin Car has delivered an economy consistently ahead of the times. Besides this performance in the hands of owners, it has won every prominent official economy test ever held.

Moreover, the Franklin depreciates 50% slower than the average car—an important fact today when conditions demand that motor cars give longer service than ever before.

Its ability to render this remarkable economy and long life is due to engineering principles involving the simplicity of Direct Air Cooling, Light Weight and Resilient Construction, as opposed to water cooling, heavy weight and rigid construction.

The Franklin Car delivers a war-time motoring service simply because the Franklin Company has held true to the principle that the main object in owning an automobile is transportation, with the greatest comfort, safety and reliability—at the least expense.

FRANKLIN AUTOMOBILE COMPANY, SYRACUSE, N. Y.

*Orders for Franklin Cars for post-war delivery will
be filled in the order of their receipt by our dealers.*

Conserve Help

Many business concerns have lost a large number of their employees thru the war. Doubtless you have. You may release more and at the same time perform a patriotic duty by using a central organization that will supply you with complete dependable information in practically every line of business.

Babson's Reports will take the place of all such employees that you release, either voluntarily or otherwise. Write us about your business and let us tell you what we have for your line.

Avoid worry. Cease depending on rumors or luck. Recognize that all action is followed by equal reaction. Work with a definite policy based on fundamental statistics.

INVESTMENTS - AND - FINANCE

HOW STOCK MARKET AVERAGES HAVE VARIED IN TWO YEARS

IN the subjoined diagram, taken from the New York Times Annualist, the narrow black line shows the closing average prices of fifty stocks, half industrials and half railroads, at the dates indicated in the upper margin. The wider black area shows the high and low average prices of the twenty-five industrials included in the fifty and the white area the corresponding figures for the twenty-five rails. The lines begin at a time when Germany was suffering severely from her failure at Verdun and from losses in men and territory from the great Allied Somme offensive. The subsequent rapid decline (November to February) embraces the period of Bethmann-Hollweg's sensational peace offensive, followed a few weeks later by Germany's intensified submarine warfare. The lowest point of all (December, 1917) was

reached after Germany's successful counter-thrust for Cambrai, her "peace offensive" with the Bolsheviks at Brest-Litovsk, and the taking over of our railroads by the Government. The low prices that have since persisted have in large measure been due to the tremendous demands on capital made by war-industries, income-tax payments, and Liberty Loan purchases. Not even Foch's victories have been able to remove this influence in keeping stocks at low prices.

lions each. Grain arriving in Buffalo is immediately transferred to the barges by floating elevators. A 10,000-ton steamer has been loaded in one day at Duluth for Buffalo, and many transactions are reported for smaller cargoes. Tonnage has been in great demand at Lake Michigan ports. It is expected that barges will be kept busy on the canal for the remainder of the season.

Complaints have been made that the canal in certain sections is not deep enough to enable the deepest draft barges to pass without grinding the bottom. In reply to a question as to when the canal would be completed to its full depth of twelve feet for its entire length, State Engineer Frank M. Williams recently replied:

"The channel construction should be entirely completed by next spring. All of the terminals, however, will not be fully equipped and in operation on that date, altho most of them may be in fairly usable

reached after Germany's successful counter-thrust for Cambrai, her "peace offensive" with the Bolsheviks at Brest-Litovsk, and the taking over of our railroads by the Government. The low prices that have since persisted have in large measure been due to the tremendous demands on capital made by war-industries, income-tax payments, and Liberty Loan purchases. Not even Foch's victories have been able to remove this influence in keeping stocks at low prices.

BUSINESS ON THE GREAT BARGE CANAL

Now that the New York Barge Canal, from Buffalo to the Hudson River, with branches to Lake Champlain, Lake Ontario, and the "Finger Lakes," has been in operation for a few months, some of the data to hand are interesting as showing what may result for future operations. Traffic has been increasing rapidly, and State officials say everything points to big results during the remainder of the season. New boats are arriving in Buffalo almost daily. Boats are loaded in Buffalo with grain and return immediately to the seaboard. Occasionally, besides grain, they take on copper and flour. These boats have a carrying cargo capacity of 500

shape. As soon as sections of the canal are finished by the State Engineer, they are turned over to the Superintendent of Public Works for operation and maintenance. It will be necessary for that department to remove such slides as may occur and also to dredge such silt as may be deposited. Not many sections of the canal, however, are subject to slides and these will be greatly reduced in extent as time passes and the canal banks are found to have taken their natural angle of repose. Inasmuch as a large portion of the canal lies in the beds of natural streams, bars are bound to occasionally form at the entrances of tributary streams, particularly at times of exceptional flood. These, of course, must be removed.

INTEREST RATES AFTER THE WAR

Predictions have been made that the end of the war will see a world-wide demand for capital that will bring about a sharp increase in interest rates. Writers have assumed that as there will be a rush by European nations to incur new obligations to finance the work of reconstruction and to refund maturing issues, this result must necessarily follow. Other opinion, however, has noted that as this war is unlike any other, historical precedents may not govern conditions in 1919 or 1920 and so the world may experience different results.

Jiffy-Jell

A Fruity, Economical,
Ready-Sweetened
Dessert

Fruit Flavors
in Vials

Pineapple

Loganberry—the Favorite Berry Flavor

A Bottle in
Each Package

Loganberry

Dessert Molds With It

(See the Gift Offers Made Below)

The two favorite flavors in Jiffy-Jell are Loganberry and Pineapple. And these offers are made to induce you to try them.

The flavors are made from the fresh ripe fruit. They come sealed in glass vials—a bottle in each package—so the fresh-fruit flavor keeps.

The flavors are highly concentrated. Half a ripe pineapple, for instance, is used to flavor a single Jiffy-Jell dessert. So these delightful dainties have a wealth of fruity taste.

The Queen Dessert

Jiffy-Jell is queen of gelatine desserts. It is made with rare-grade gelatine by the greatest of gelatine experts.

All its fruit flavors are made from fruit. All are condensed, so the flavor is abundant. All come in liquid form—in glass—so they keep their fragrant freshness.

These things are true of no other dessert. See what these features mean to you in the finest of our flavors.

No Sugar—No Flour

Jiffy-Jell desserts come ready-sweetened. They bring to you quick, luscious, fruity desserts without using sugar or flour.

They are very economical. A single package of Jiffy-Jell serves six people in mold form. If you whip it, it serves twelve.

Jiffy-Jell in lime-fruit flavor makes tart, green salad jell. Mix in cooked or uncooked vegetables—left-overs will do.

Mint Jiffy-Jell makes an instant garnish jell, rich in fresh-mint flavor.

and Clapton, London, Eng.

writer in the *New York Times Annualist* has been reminded of "a number of interesting precedents suggesting what may happen when peace is made." With the overthrow of Napoleon at Waterloo, one of the most destructive series of wars in history came to an end and governmental borrowing "was on an enormous scale, but, despite this, money became easy." British 3 per cent. consols rose from 60 to 90 during the period from 1815 to 1824, and Great Britain "refunded large amounts of debt on more favorable terms." The Franco-Prussian War destroyed wealth amounting to more than \$1,000,000,000, "but the average price of consols was only 2 per cent. lower in 1871 than in 1869. The Bank of England's discount rate fell from 4.10 per cent. in 1872 to 2.61 per cent. in 1876. The losses in our own Civil War approximated \$5,000,000,000, and just before the close the United States paid 6 per cent. on long-term borrowings and 7 per cent. for temporary loans. By 1868 the money rate was down to 2.10 per cent."

THE RAILROADS AFTER THE WAR

Railroad company officers, "with deepening conviction that the country will refuse to make another great experiment in the economies of transportation amid all the other problems of post-bellum readjustment," as *The Wall Street Journal* remarks, are preparing to offer a definite program of railroad regulation when the war is over. With these plans as yet in the earliest stage and subject to modification as long as Federal control lasts, the present guiding principle is "to evolve a treatment of the program which will preserve what was valuable in the old régime, incorporate with it every sound and beneficial practice developed under Federal control, and incidentally eliminate such of the ancient faults as may have survived the centralized control of the war-period." Long before there was any definite prospect that the United States would enter the war, a committee of railroad executives "had framed what they regarded as a progressive treatment of the railroad problem." It was known chiefly for its proposal to "do away with the jurisdiction of the State commissions, over-rates, security issues, and operating practices, and to amplify the Federal jurisdiction over those subjects," it being almost everywhere conceded now that the State commissions "have been permanently relegated to purely police powers over interstate railroads and their commerce." The writer adds:

"Two other features of the same plan were Federal incorporation, with authority vested in the national commission to regulate security issues, and regional consolidations of roads. The latter idea had not been worked out in detail but was expected to eliminate the financially weak companies or to join them up with stronger organizations and so to simplify the financing of all roads as well as rate-making."

"The kind and degree of consolidation which should follow the war is a question on which opinions in railroad circles still differ widely. Some railroad officers hold that consolidated regional railroads are not a necessity and that natural consolidations, as when the facilities of one road extend or complement those of another, will suffice for an indefinite time to come. Where the financially weak roads can not advantageously become parts of a larger system, they hold, they can be reorganized by themselves on some basis of property valuation. That having been done, their subsequent financing would be comparatively simple, especially if a change had then come over the spirit of the rate-making powers, as it appears likely to do."

STOP That Radiator Leak

With Liquid

RADIATOR NEVERLEAK

"Look for the Sunburst on the Can"

Soldering is unnecessary! You can save that \$10 to \$25 repair charges, save dismantling of your radiator, make a positive repair in 5 to 10 minutes, by simply pouring a can of Radiator Neverleak into the water in your radiator, that's all! You don't even have to drain the water off.

Mends Cracked Water Jackets

Radiator Neverleak mends the leak anywhere in cooling system, even cracked water jackets. It is guaranteed to satisfy or money refunded. It positively will not clog or interfere with the cooling system.

Ford size can, 50c. Larger size, 75c.
Carry a can as regular equipment. At all dealers or sent direct.

PARSIFAL An Intimate Appreciative Description of this Masterpiece. By R. H. Hawes. Cloth, 40 cents.
FUNK & WAGNALLS COMPANY, New York

Balfour, Viviani, and Joffre

Just published under this title a complete report of their speeches and public utterances in America, as well as those of the Italian, Belgian, and Russian Commanders, from April to June, 1917, together with a description of the arrival and reception of the American forces in France, as collected and arranged from contemporary accounts by Francis W. Haines, Editor of *Great Epochs in American History*, etc.

This timely book, which also contains descriptions of the reception accorded to the distinguished visitors in various cities, serves admirably to crystallize the enthusiasm aroused in this country at the time of their coming and to preserve for reference the eloquent addresses made by them upon this important historic occasion.

As a guide to the aims and ideals of the various allied nations, as expressed by their representatives, this volume will be found of great practical service.

Cloth, 124th, \$2.00 net; by mail, \$2.40.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current use of words, the Funk & Wagnall New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"A. P.," Jersey City, N. J.—"Can you give me briefly the meaning of the words *cafard* and *massif*, which I have noted recently in the newspapers?"

Cafard is a French word which designates "(1) A hypocrite; a Pharisee. (2) A tattler, as in a school: one who tattles, minding every one's business but his own. (3) [Slang] The moon: a nickname given to it by thieves because when it shines it prevents their operations." *Massif* is also a French word which was taken over into English in the sixteenth century. Geologically a *massif* is: "(1) The dominant, central mass of a mountain ridge more or less defined by longitudinal or transverse valleys. (2) A diastrophic block, or any isolated central dependent mass."

According to the latest edition of Cassell's New French-English Dictionary (1905) the word designates, among other things, "a group, clump, cluster (of trees, flowers); grove; solid mass, group (of masonry)." Agriculturally the word is used to designate a thickly wooded hillside—that is, a region in which the woodland completely obscures the views of what is beyond—and it seems to be in this sense of the word that it has been used in the newspapers.

Geographically *massif* is used to define a group of hills clustered, more or less symmetrically, around a central point, hence the hilly region of central France is known as the "Massif Central." This section embraces that part of France which lies between latitude 44 degrees and 46 degrees north, and longitude 0 degree 45 minutes and 4 degrees 47 minutes east of Greenwich. Of this region the Massifs of Cantal, of Sancy, and of the Banne d'Ordanche, of which the altitude is, roughly, 8,300 feet, form part and are supplemented by eleven hilly districts known as the (1) Monts de la Marche, (2) Monts du Limousin, (3) Monts d'Auvergne, (4) Monts d'Aubrac, (5) Monts du Charolais, (6) Monts du Beaujolais, (7) Monts du Lyonnais, (8) Monts du Forez, (9) Monts du Livarols, (10) Monts du Vivarais, and (11) Monts de la Margeride.

In arboriculture *massif* designates a special plan of planting trees in which the height attained by the different varieties plays an important part.

"C. M. A.," Baltimore, Md.—"Please give the correct pronunciations of *persiflage*, *massage*, *garage*, *badinage*, and *tapis*."

Persiflage, per'si'flazh—e as in get, i as in police, a as in art, sh as z as in azure. *Massage*, ma'sazh—s as in art, sh as in azure. There are some persons who prefer mas'ij—a as in fat, i as in habit. *Garage*, ga'rash—a as in artistic, a as in art, ch as z in azure. In the cant of the stable gar'tij is used: a as in fat, i as in habit. *Badinage*, ba'di'nazh—a as in artistic, i as in police, a as in art, z as in azure; or bad'i-nij—a as in fat, i's as in habit. *Tapis*, te'pis or ta'pi—e as in they, i as in is or a as in artistic and i as in police.

"E. A. H.," West Orange, N. J.—"Does the word *whereabouts* take a singular or plural verb? Is 'His whereabouts was unknown' correct?"

The singular form *whereabout* may be found in Shakespeare's "Macbeth" (act II, sc. 1) in Wordsworth's "Evening Voluntaries" (vii), and elsewhere. Nowadays, the word *whereabouts*, altho plural in form, is commonly used as a singular. "Husband and wife disappeared; their whereabouts is a mystery." Therefore, according to modern practice, the sentence you give is correct.

"M. F. E.," Hanover, N. H.—"Kindly tell me if there is any authority for pronouncing biography as if the first syllable were spelled bee."

There is not. The i is diphthongal as in "isle."

"K. F. N.," Hamakua, Main Hawaii.—"(1) What rules should one follow in the use of the word *got*? Is it perfectly correct to say, 'I got your letter.' 'I have got the apple?' (2) Which is correct, *insanitary* or *unsanitary*?"

(1) The word *got* is correctly used for acquired or obtained, but is incorrectly used to denote simple possession and correctly implies effort to secure something. Sometimes it is used redundantly;

Provide your boy or girl with an emergency fund

The men and women who are going overseas on the Great Crusade deserve every possible provision for their welfare. Would it not add to their comfort and feeling of security to have a little sum in safe and convenient form for use in an emergency? Would it not add to your peace of mind to supply them with such a fund?

'A. B. A.' American Bankers Association Cheques

are the safest, handiest 'travel and emergency money.' They can be used only after the rightful owner has countersigned them, and they are accepted like cash in all countries of the Allies and neutrals to pay for goods and services. They are of convenient denominations and are issued in a neat, handy pocket case. Before your boy or girl sails take him or her to any bank and obtain an assortment of \$10, \$20, \$50 and \$100 Cheques. The holder must sign the Cheques and should be present when they are purchased. If your bank is not prepared to sell you 'A. B. A.' Cheques, apply to

BANKERS TRUST COMPANY, New York City

Yale Door Closers complete the door

You can't fail to pull the door open. How many times do you fail to push it closed?

Knobs on doors are accepted conveniences for pulling doors open. You insist on having them.

Yale Door Closers on doors are accepted devices for closing doors that have been pulled open. They control them quickly, without the slam, always, positively.

They keep out drafts and dust, promoting your comfort and health, conserving warmth.

Yale Door Closers may be had in proper size and finish for every type door in your house.

They are one of the famous Yale products: Yale Night Latches, Padlocks, Builders' Hardware, Cabinet Locks and Chain Blocks.

as, "He has got it"; the simpler form, "He has it" is preferable. "We have got to do it," while emphatic, is less so than "we must do it." (2) Both words are in good use, and the matter of use or preference is purely one of personal choice.

"P. A., Mount Vernon, N. Y.—"I have recently seen the word *caterpillar* applied to human beings, and also noted the use of 'to caterpillar' as a verb, as in the sentence 'I shall be compelled to caterpillar the postage on future shipments.' What can you tell me about these uses?"

Away back in Latimer's time (1552) a caterpillar was "a rapacious or extortionate person" (Standard Dictionary, s. v.). The worthy Latimer described "the children of this world as covetous persons, extortioners, oppressors, caterpillars, users."

Now, as "the infinitive has to a great extent the construction of a noun" (Fernald "English Grammar Simplified," p. 82) and as "the English language often uses one part of speech with the construction of another—a noun as an adjective, an adjective as a noun," etc. (*Ibidem*, "A Working Grammar of the English Language," p. vi), the construction "to caterpillar" may be taken to mean "to extort." As used in the sentence cited above, "to caterpillar the postage," the meaning is that the postage will be added to the cost of purchase of goods in future.

To Phillips, Milton's nephew, the caterpillars were "envious persons, that do mischief without any provocation" (1658), but Stephen Gosson, the noted opposer of the movies of his time (1579), classified these persons by name in the title of his famous "Schoole of Abuse, Conteyning a Pleasant Inuective against Poets, Pipers, Plaiers, Iesters, and such like Caterpillars of a Commonwealth."

In provincial England, notably in Herefordshire, the verb "to caterpillar" is used to-day and means "to torment, plague, or render helpless." There such an expression as "I was never so caterpillared in my life," is in frequent use.

"G. C., Eatonton, Ga.—"Please give me the correct pronunciation and meaning of the word *Schrecklichkeit*."

Schrecklichkeit is a German word and is pronounced *shrek'lih-kait*—sh as in ship, e as in get, i as in hit, h as ch in loch, and ai as in aisle. The word means "Frightfulness, dreadfulness, terrible-ness."

How To Get Rich

—by following a plan clearly explained in "The Book of Thrift," the new guide to financial success by T. D. MACGREGOR. You can do it if you get a copy of this remarkable book and yourself adopt its plan of saving and investing.

All the wisdom of genuine thrift is packed within the covers of this 350-page volume, and it is all yours for one dollar.

The Book of Thrift

Why and How to Save and What to Do With Your Savings

Mr. MACGREGOR has been as much editor as author in that he has brought together and set down in most interesting and practical form the best results of the study, observation and practical experience of thousands of thrifty men and women. Not the least valuable of the book's twenty chapters is that containing helpful quotations from the lips of one hundred and sixty-eight successful men and women of every age and clime. Other features of the book of inestimable value are the true stories of success through systematic saving and wise investing, compound interest tables, and practical hints for saving in the home, the office, the factory and the farm.

TOPICS - OF - THE - DAY

CAUSES OF THE GREAT GERMAN DEFEAT

THAT "ONLY MILITARY REASONS" could have compelled the groveling Teuton pleas for peace was clear enough even if a leading German newspaper had not made the open confession. "Only military reasons," in the shape of Allied victories "from Dixmude to Damascus," accounted for the reported revival of gaiety in Paris while neutral observers told how in Berlin "everybody wants to group together just as before great disasters." Only military reasons, editors assure us, can account for the revolutionary outbreaks in the Central Empires and the Teutonic governments' panicky moves toward self-democratization. These October days have been fruitful enough in significant military events. Early in the month the Hindenburg line, "the impregnable Zion of Prussian Militarism," as one editor calls it, with its trench system, and redoubts, and gun-emplacements, and dugouts, and luxurious officers' quarters, "became a reminiscence," to use another newspaper phrase. So quickly and completely was it smashed by Haig, and so quickly did the foe withdraw from his long-held positions, that a Cambrai dispatch significantly reported: "The infantry is marching in columns of four through villages hastily abandoned by the enemy." On the 11th newspaper readers could scarcely believe the statements to the effect that Belgian authorities were directing Belgian residents in England to be ready to return to their homeland; within two weeks the German armies were leaving West Flanders. In the first weeks of October, the *Brooklyn Eagle* notes, "the battle to decide whether or not the enemy would stay in France and Belgium this winter" was fought and won. Not only have the Allied forces broken through the Hindenburg line, taken the Chemin des Dames and Laon, and forced the Germans from the Flanders fields, but all along they have been, as the same paper puts it, "giving the Hun his daily defeat." As the Germans give up western Belgium and northern France, Foch is making their retreat costly in man-power and war-materials, and "in plain words," says the *Newark News*, "such reductions mean the destruction of the German armies." It is largely a question of weather, writes Mr. C. H. Grasty from Paris to the *New York Times*: "with enough good fighting days before the mud slows everything down, the wounds that the German beast will lick in his winter quarters will be wounds he won't recover from." With the German host outflanked in Belgium and the Champagne, the battle-line, as one press-writer remarks, assumes "the shape of a vast trap thrusting its jaws out to engulf the German armies." No wonder, observes Mr. McPherson in the *New York Tribune*, that Ludendorff "sent Prince Maximilian into the market to buy a truce for him on the best terms possible," as he saw the German defense everywhere "getting more brittle," German units getting "hopelessly intermixed," the big German fighting machine "beginning to function awkwardly and painfully," and "no line of safety in sight, even on the French and Belgian border." Foch has been concurrently taking territory and destroying the German military establishment, this authority

continues. His natural ambition, we are told, is to make the retreat of the German armies—still a long way from home soil—"if not as costly as Napoleon's retreat from Moscow, at least as costly as his retreat from Leipzig. Germany's power to continue the war ought to be definitely snuffed out before Ludendorff extricates himself from northern France and Belgium and establishes what are left of his two hundred odd divisions of March last on a line covering the west bank of the Rhine."

In one of the darkest moments for the Allied cause last spring, General Foch confidently told Mr. Lloyd George that even then he preferred his own position on the map to Hindenburg's. Our editors remember this now as they ascribe "the present military supremacy of the armies of the United States and of the Allies in the field" to Foch's military genius and foresight and Hindenburg's or Ludendorff's lack of those qualities. Americans like to compare Foch to Grant. The *Boston Transcript* recalls Grant's "hammering blows," and quotes these words from the Union commander's final report as a perfectly good definition of the Foch strategy:

"I, therefore, determined, first, to use the greatest number of troops practicable against the armed forces of the enemy, preventing him from using the same force at different seasons against first one and then another of our armies and the possibility of repose for refitting and producing necessary supplies for carrying on resistance. Secondly, to hammer continuously against the armed force of the enemy and his resources, until, by mere attrition, if in no other way, there should be nothing left for him but an equal submission with the loyal section of our common country to the constitution and laws of the land."

We are reminded by the *Detroit Free Press* that Foch saw the fatal weakness in the German plan of offensive to be the need of long pauses for rest and preparation between the gigantic blows. In these pauses the Allies were able to rally and reform, and so eventually to work the Germans' undoing. Foch devised a strategy of delivering blows on a smaller scale, whereby he has been enabled "to work concentrations and preparations with sufficient forces for fresh blows to fall constantly in new sectors immediately upon the cessation of fighting on other fronts." By this method, continues the *Detroit Free Press*, "he has been able to shift his blows from the Vesle to the Aisne, from the Aisne to the Somme, from the Somme to the Oise, from the Oise to the Lys, from the Lys to the Somme again, from the Somme to the Scarpe, and now from the Scarpe to the Aisne." Instead of "three periods" of intensive fighting of approximately a week each, such as Hindenburg staged, what we have had is three solid months of continuous battling with never a rest for the enemy. Now the smash-through between Cambrai and St. Quentin wins the applause of the onlooker, now the attack on the right wing in Champagne and the Argonne seems all important, again the mighty blows which drive the Germans from the coast cities of Flanders seem to be decisive. But in the end, observes the *New York Evening Post*, "it will be hard to say which has been the decisive stroke in the storm of blows which

Foch is raining down with right and left hand. From whichever direction the knockout may come, the result will really have been attained by the two-fisted attack." The essential aim of the Foch plan, as the *Philadelphia North American* sees it, "has been to keep the German rearward movement going"; "therefore, the required proof of Foch's success is not the feat of breaking through, but the accomplishment of conducting an offensive campaign that is as powerful after nine weeks as it was at the beginning." It seems to the *Newark News* that the

soldiers after all." A military authority already quoted, Mr. William L. McPherson, says that Germany's present defeat is primarily due to the general who devised the German west front campaign of last spring—presumably Ludendorff. According to this writer—

"If the Germans in March last had elected to stay in the Hindenburg lines they would not now be begging for peace. Allied unity of command would probably not yet have been achieved. The flow of American troops to France would not have been accelerated. The Macedonian front would not have crumbled. Germany would have had troops to spare to defend Macedonia and Palestine and keep Bulgaria and Turkey at least partially contributing members of the Quadruple Alliance. She would also have had enough troops left to develop and organize her power in the conquered Russian provinces—perhaps to exploit those provinces to her own military benefit.

"Germany's real hope of victory lay in solidifying her grip in the East and in playing for a deadlock in the West."

While some writers have praised Germany's retreat tactics, Mr. McPherson finds them sadly at fault. In getting out of his "salients" in France, Ludendorff lost after July 18, 260,000 prisoners and 3,700 guns, only to find himself in equally vulnerable new salients caused by Allied penetration at weak points. We read further:

"Every German retreat since July 18 last has been dilatory and lumbering. Hence the excessive losses in prisoners and guns. Ludendorff has not mastered the art of retirement. In 1914 von Moltke the Younger got a group of defeated German armies back from below the Marne to the north of the Aisne at maximum speed and with scarcely any losses. He knew where he was going and why. Ludendorff, on the contrary, has always shown great indecision and confusion of purpose in his retreats and has had to pay an enormous price for these shortcomings. Yet some mysterious influence keeps him in command. For which the Allies have every reason to be thankful. Nothing could suit Foch better than to have Ludendorff run true to form in the grand withdrawal to the French and Belgian border which is now starting."

But as several American editors point out, Germany is being beaten by inferiority of resources as well as by inferiority of leadership. Foch, they remark, apparently has all the tools he needs, he has the divisions to maneuver with, the guns with which to blast his way through, the tanks with which to defy the German machine guns, abundant airplanes and means of transport. The *New York Evening Post* thinks it far from improbable that Hindenburg did, as rumored, initiate the German peace plea "because of the drying up of the sources of munitions and war-material; Germany has reached the end of her resources." It was known in Holland last August, according to a *New York Tribune* correspondent, that Ludendorff had "stated privately that the failure to get raw material was making the situation serious, and added that only the captures of the March offensive saved a crisis earlier." A German officer, recently taken prisoner, could scarcely believe his eyes when he saw the great masses of artillery and motor-transports behind the Allied lines and said, "we are well off as to shells, but you seem to have an endless supply." Captured German orders, says Mr. Duranty in the *New York Times*, "show the shortage of horses, artillery, and the lack of war-material of all sorts." One such order, for instance, "refers to the jamming of machine guns due to substitution of iron for copper cartridge-cases and the inferior quality of ersatz grease, wherewith the guns are lubricated." In another dispatch this writer says that the number of guns per German battery has been reduced by from three to four in many cases and many artillery units have been suppressed. In three months, he continues, "the Allies have

From the New York "Herald."

REDEEMING THE FLANDERS FIELDS.

Marshal's purpose is to "canalize the German retreat as he canalized the German advances"—

"He is evidently determined to make Germany go out the way she came in, through the narrow Belgian pass. Germany chose it because it was the easy way to come in, but it will be a difficult way to go out, and it will carry Ludendorff's armies to the lowlands of the Rhine, which do not lend themselves to strong defenses."

Germany suffered in the field from the combination of Foch's superior methods of attack and "the inherent faults of Ludendorff's strategy" last spring, contends Mr. Walter Duranty in one of his dispatches to the *New York Times*. As we read:

"Ludendorff had promised victory by the use of shock divisions formed by emasculation of the rest of the army. Attack after attack was pushed home to the point of exhaustion, but always the Allies were able to bar the road ere it was too late.

"Finally Foch judged the German Army to be sufficiently exhausted and struck in turn. Since then the enemy has had no respite. Instead of intermittent offensives launched after long preparation the Allied attacks have been continuous. The dispirited Germans, to whom a victorious end of the war had been promised before August, have been hammered incessantly. Salient after salient created has bitten holes in their line and sooner or later compelled wide and costly retirement."

Another writer in the same newspaper avers that the break in German morale both at home and in the field has been in no small measure due to the discovery that they are beaten in the department of military science and not merely by the weight of numbers; "their once worshiped chiefs are only second-rate

destroyed or captured over 5,000 cannon—a full quarter of the total artillery force of Germany. At the same time the forced 'combing out' of workmen from the factories has seriously lowered production, and this weakness grows daily more pronounced and dangerous." A dispatch from Bern received by way of Paris and Washington says that even in ordinary times German factories had difficulty in keeping up the supply of artillery; "but since the Allies' advance, with the capture of 4,000 cannon and of nearly 25,000 machine guns, Germany is no longer able to make up for her losses, as the dearth of the particular kind of steel used in the making of guns begins to be felt." Germany's ability to keep on fighting is, of course, largely a matter of resources, and it is significant that the coal-mines around Lens and Laon have been recovered by the British and French and that General Pershing is striking at the iron-mine region in the Argonne and is within artillery-range of the iron-mines around Metz. Moreover, Germany's hold on the mineral resources of the Balkans and Asia Minor is being broken.

German loss of man-power is estimated by the New York *Evening Post*, on the basis of the dispatches, at 900,000 between the middle of July and the middle of October, 300,000 in prisoners and 600,000 in killed and wounded, and, even allowing for the return of the slightly wounded, it is plain to this newspaper "that the Germans have permanently lost more than the entire strength of their 1920 class," which General Mallette, the French military expert, writing for the New York *World*, sets at something under 500,000. In the meantime American troops are reaching France at the rate of 250,000 a month, as officially announced in Washington. Probably 2,000,000 of our men are already on French soil. Most of these, of course, are still in training, but two field armies have been formed and are fighting under the command of Generals Liggett and Bullard, respectively, while a third field army is in process of formation.

As to the quality of the Allied troops, little perhaps needs to be said. One correspondent has seen the French *poilus* grow young again at victory's fountain of youth. A captured German officer at the point of death said that as a professional soldier he admired the French "as the world's finest soldiers." The British achievements at Cambrai won eager plaudits from the French, and never, writes General F. D. Maurice, "have British grit and valor accomplished more."

But without exaggerating our own importance or deeming our men better fighters than the Frenchmen or the British, we naturally take most interest in the achievements of our own soldiers, whose first appearance in the Allied battle-line at Cantigny and Château-Thierry marked the turning of the tide which now runs so strongly against Germany. They won their spurs in large-scale fighting at St. Mihiel, after which the American Army was given the post of honor in the Argonne. Here Pershing's men have been meeting some of the most determined resistance that the Germans have made during recent weeks. Here, says one military authority, the American First Army has the hardest rôle of all to play in the present offensive. Here, another writer points out, Germany has called upon the Prussian Guards to withstand the assaults of the Yanks and has sent in three times as many reinforcements to each division in the line as at Cambrai. We have expert German testimony to the importance of the job given to our men north of Verdun; an intercepted order of General von der Marwitz stated that upon German resistance here "depends the fate of a great part of the Western Front, perhaps of the nation." The New York *Evening Post* thus explains the strategic importance of this part of the Allied offensive:

"The whole Allied forward movement from the North Sea to the Meuse is the swinging back of a huge door, with the Allies, from Belgium to Gouraud, pushing irresistibly against the broad surface of the door, but the Americans on the Meuse hammering on the hinges. The door can yield, as it has been yielding

everywhere along its broad front from the North Sea to the Aisne, but if it gives on the hinges it means German disaster. Before the German frontier is reached, the door may swing back eighty miles from Ostend to Antwerp, sixty miles before it reaches Brussels from Courtrai, sixty miles before it reaches Namur from Solesmes, fifty-five miles before it reaches Mézières from Rethel. But less than twenty miles from where the Americans stand to-day would bring them to Montmédy and Longuyon and the cutting of the German line of communications and the loss of the Briey region. That is why German resistance is most desperate in front of Liggett's men. Having seen at Château-Thierry what they could do in the way of keeping a door shut, Foch has now given the Americans the chance of showing what they can do in the way of bursting a door open."

Besides this army, small American units are fighting at various points along the line "like the sharp teeth in a buzz-saw," to use

—Ketten in the Los Angeles Express.

one enthusiastic correspondent's vigorous phrase. These "un-noted American victories," says the New York *Evening Sun* editorially, must not be overlooked, for these American troops who are barely mentioned in dispatches have played a gallant and essential part in the breaking up of the German line in Champagne and near Cambrai.

Germany is daily expecting an American attack in Lorraine or Alsace, according to the dispatches. While she is becoming increasingly aware of the activities of American airmen, the bombardment of the Rhine cities has so far largely been the work of British airmen. But, says the Kansas City *Times*, "when America takes the air in force with the great squadrons of planes now assembling in France, the Rhine Valley, which is the great supply-artery of the whole German military system, will be brought under the Allied guns and put out of business," and "Mayence, Coblenz, Düsseldorf, Essen, will share the fate of the Lower Rhine towns." In this connection, we may note that it has recently been brought out in testimony before a committee of the House of Representatives at Washington that we already have 8,390 trained American fliers. Mr. John D. Ryan, in charge of our aircraft production, was with our forces at St. Mihiel and in the Argonne, and is quoted as saying that "in both these offensives the air forces were stronger in numbers and perhaps as high in efficiency as in any battle of the war."

A detailed chronological statement of the successive events of the campaigns in France and Flanders, as well as in the other theaters of war, will be found under the heading of "Current Events," on page 62.

PASSING SENTENCE ON THE KAISER AND ON HIS PEOPLE

CAN DEMOCRACY IN GERMANY make Germany safe for the world, and the world in turn "safe for democracy," is the question asked by thoughtful writers as they note the loud rumblings of revolution in Germany and realize that the rule of the Hohenzollern dynasty may be ended. It is obvious that President Wilson at least will more readily talk peace with the democratic Germany than with the Kaiser's Government, but American opinion is by no means unanimous in believing that the German ship of state can escape the storm of Allied vengeance merely by throwing overboard the Imperial pilot. German papers are now placing the responsibility for German ruin upon the person of the Emperor and seem to think that Germany may be received as an equal among nations by deposing him. The Socialist New York *Call* perhaps goes further than most Americans when it declares that when the news comes "that Kaiserism in Germany is going down with a mighty crash and that the people of Germany wish to speak for themselves," then "the people of other nations will be glad to speak with them and then true peace parleys will bring the great world-war to an end." Secretary Lansing in a recent address urged the American people to discriminate carefully between the military dictators of Central Europe and the people who have served them, "between the ignorant and the intelligent, between the responsible and irresponsible, between the master and the serf." Mr. Lansing, it should be noted, has, however, pointed out that the mere abdication of the Kaiser would not be of itself greatly significant. "If it is simply setting up one of his sons in his place the situation would not be changed in the least," says the Secretary; "but if he should abdicate in favor of a democratic Germany it would mean something."

The abdication of William II. would not alone be sufficient punishment for that ruler to satisfy all Americans. St. Helena is a word which has occurred to many an editor. Others hear of castles in Scandinavia toward which Hohenzollern eyes have been wistfully turning during recent weeks. But there seems to be considerable editorial reluctance to allow the destroyer of Belgium to enjoy a peaceful old age. As the Phila-

delphia *Evening Ledger* notes, William himself has introduced to the world an appalling variety of tortures. Indeed, it says, "if the Allies were to apply to the Kaiser some of his own methods civilized opinion would be outraged, of course, and yet the law of compensation would but follow its normal course." Thus William, instead of being exiled, might be "gassed to death" or "mutilated like the children of Belgium, or crucified." People who are more merciful and respectful, remarks the Chicago *Daily News*, "are willing to court-martial him and shoot him instead of hanging him like a dog." But even so, the Chicago daily sees objections to such a course. It remembers how Charles I. of England was killed by his enemies and later "got into the English church ritual as 'Charles, King and Martyr';" indeed, "almost every executed monarch has founded a political party thriving on his 'martyrdom,'" and "we want no unnecessary and avoidable sentimentality about Hohenzollernism in Germany." Besides, *The Daily News* continues—

"It is not a matter merely of Hohenzollerns. It is not a matter merely of one man or of one family. It is a matter of a whole great class within the German people. This class, . . . rejoicingly and masterfully composes the structure and provides the steam for the hideous engine of which the Kaiser is the lever-puller. In justice, if we executed the Kaiser, we should have to execute this whole class—which is impossible."

"Our task is not to execute anybody, except certain commanders who have been guilty of deliberate devilish atrocities. Our task is to bring the Germans to the point of themselves spewing forth all Hohenzollerns and all Junkers and all other such people out of their system. We should foil ourselves if we tried, by executions or the like, to perform an abdominal political operation on the body of Germany. Our task is to give Germany an emetic."

Toward such an end, writes David Lawrence in the New York *Evening Post*, is President Wilson's present policy directed. He is aiming at the same time to hasten the defeat of the German military machine and to insure permanent peace when that machine has been crushed. Just now, declares Mr. Lawrence, the greatest emphasis must be "laid on the fact that Mr. Wilson

WHY WILLIAM WEEPS.

The German peace overtures began with the note of October 6, our readers will remember, asking for an armistice. The President on the 8th countered with certain queries, which Germany, on the 12th, answered by signifying its acceptance of the Wilson peace terms, and its willingness to evacuate occupied territory preparatory to an armistice, and declaring that the Chancellor had spoken for both German Government and German people.

"The unqualified acceptance by the present German Government and by a large majority of the Reichstag of the terms laid down by the President of the United States of America in his address to the Congress of the United States on the 8th of January, 1918, and in his subsequent addresses, justifies the President in making a frank and direct statement of his decision

—Harding in the *Brooklyn Eagle*.

"It is necessary also in order that there may be no possibility of misunderstanding that the President should very solemnly call the attention of the Government of Germany to the language

and plain intent of one of the terms of peace which the German Government has now accepted. It is contained in the address of the President delivered at Mount Vernon on the Fourth of July last. It is as follows:

"The destruction of every arbitrary power anywhere that can separately, secretly, and of its single choice disturb the peace of the world, or, if it can not be presently destroyed, at least its reduction to virtual impotency."

"The power which has hitherto controlled the German nation is of the sort here described. It is within the choice of the German nation to alter it. The President's words just quoted naturally constitute a condition precedent to peace, if peace is to come by the action of the German people themselves. The President feels bound to say that the whole process of peace will, in his judgment, depend upon the definiteness and the satisfactory character of the guaranties which can be given in this fundamental matter. It is indispensable that the governments associated against Germany should know beyond a peradventure with whom they are dealing."

This note received the almost unanimous approval of the American and Allied press. Even critics of the Administration like Senator Lodge declared themselves delighted with it. Such a reply, in the opinion of some newspapers, might just as well have been sent when the first German note came. To others the lack of any hint of punishment for Germany seems an unfortunate omission. In general, it is held as the practical equivalent of an insistence upon Germany's absolute surrender.

MORE "U"-BOAT SAVAGERY

AN OUTBURST of submarine lawlessness and ferocity, coming at the time when Germany was asking for peace on the plea of a changed Government and a contrite heart, has "created an impression in England," on the authority of a correspondent of the *New York Times*, "only second to that caused by the loss of the *Lusitania*." Scarcely less is the wrath aroused over here. "Deliberate, foul, cruel murder," declares the *Philadelphia Inquirer*, summing up popular feeling aroused by the destruction of three ships, two of them passenger-steamers carrying women and children, under circumstances which, in the words of the *New York Evening Sun*, offered "not even the pirate's excuse of a search for booty. It was brutal, savage killing for the pure lust of slaughter." President Wilson's dignified declaration that this Government can not consider an armistice with a Government whose submarines "are engaged in sinking passenger-ships at sea, and not the ships alone, but the very boats in which their passengers and crews seek to make their way to safety," is quoted by the *Washington Post*, which adds: "The brutalized lords of Germany committed no act of folly that was more surely destined to work their own undoing than when they gave orders to kill women and children by submarine torpedo."

The *Leinster*, whose destruction was accompanied by the greatest loss of life of the three recent victims, was a small Irish mail- and passenger-steamer plying between Kingstown and Holyhead. She was torpedoed twice while near the Irish coast, and sank in fifteen minutes, carrying down 480 of her 687 passengers. More than forty bodies were counted the following morning afloat amid the wreckage near the spot where the steamer had gone down. An Englishwoman writes to the *New York Times*:

"To convey to your readers the exact atrociousness of this culminating murder, ask them to imagine the torpedoing of one of the Fall River boats full of men, women, and children, peaceful folk all. And such an event is not at all improbable. The Fall River route is more than four times as long as that between Holyhead and Kingstown, and I doubt if as yet it is as well patrolled."

A particularly significant feature of this sinking is the fact that it has gone home to Irish hearts as has no other bit of German barbarousness. As T. P. O'Connor writes in the *London Daily Chronicle*:

"It takes an Irishman accustomed to cross the Irish Channel

to realize in all its poignancy the tragedy just faced in the Irish seas. On these packet-boats you found all Ireland in microcosm—superior landlord, priest, merchant, politician—and often you looked with something of a renewed call of the blood to some Madonna face of a little Irish girl that was returning from the sanctuary of a convent school; or, if the passage were from Ireland to England, you saw a bride beginning her honeymoon 'with love light in her eye,' to quote from one of our most popular of Irish ballads.

"Babes often sat in their mothers' laps, probably a young officer's wife or some young Irishman starting out, as I did myself, from Ireland's poverty and hopelessness, as in old Ireland now passed away, and opening its little eyes on this strange, sinister disturbing portent of the sea.

"Such was doubtless the kind of boat-load that the *Leinster* carried on the morning of last Thursday. I see by the reports that there were many women and children on board. Stealthily, murderously, the German submarine approached and fired first one bomb, which might still leave possibility of the vessel's struggling to land or at least surviving long enough to save its passengers, and then, to make the devilish, murderous work sure, there came a second explosion and they were all thrown on the surging cold waves, men and women and babes, and left to die amid their helpless screams.

"Irish men, Irish women, Irish babes, and their blood have now been added to the proud conquest of German culture."

Then, following this "proud conquest," came the sinking of another passenger-steamer, the Japanese liner *Hirano Maru*, some three hundred miles off the Irish coast, with only 29 survivors out of 200 passengers and a crew of 120. The American destroyer *Sterrett*, coming to the rescue of the men, women, and children struggling in the water, was fired upon by the U-boat. Among the victims were Americans, Englishmen, Japanese, and many neutrals. An American cargo transport, the *Ticonderoga*, was the third victim, with 17 survivors out of a crew and passenger-list of 250 men. Life-boats were shot away, and the helpless crew were shelled steadily after the ship had surrendered. The one boat-load of survivors which managed to get away was made fast by a rope to the U-boat, and only the parting of the rope when the submarine unexpectedly submerged gave this boat's company a chance for their lives, 1,700 miles off the Atlantic coast. Eleven hundred victims were sacrificed in these three attacks.

Germany's distraught mental condition is shown again in a statement by Herr Erzberger that the Government deplores the *Leinster* massacre, accompanied by another statement from a leading German paper that worse is still to come. Evidently the official "regretters" are to have a busy season. Erzberger is German Secretary of State without portfolio and has given the Berlin correspondent of the Holland News Bureau his own sympathetic view of the matter. He is quoted in a special dispatch to the *New York Times*:

"It is not necessary for me to state that I look upon this incident with extraordinary regret. Only with deep sympathy can I hear of the fate which has befallen innocent women and children. My attitude toward such events is well known. Already in the year 1915, when I was in Rome, I expressed regret at the many sacrifices of the *Lusitania*. This regret increases to real pain in this sad case. Here is the hand of destiny, for which we can not be made responsible. I was not in a position to discuss it with the Chancellor or my colleagues, but can assure you that the whole Government stands united with my view-point. There is no doubt about that.

"It is the duty of all Governments taking part not to allow the disastrous event to stand as an obstacle in the way of peace action. Just here it has been shown how right the German proposal was for the completion of an immediate armistice."

The *Rhenish Westphalian Gazette* emphasizes this suggestion by predicting that German submarine warfare will reach a climax during the coming winter, with a hoped-for "economic crisis of unanticipated dimensions in Entente countries." This view finds some confirmation in the recent warning of Sir Eric Geddes, First Lord of the British Admiralty, that German submarine effort is "greater than it ever was."

BIRDS OF A FEATHER.

WAR AND THE NEW CONGRESS

THE BELIEF that men may rise from "their dead selves to higher things" is badly shattered in the minds of some editors as they note how the approaching Congressional elections bring back into play all old-time political strategy and recrimination. The Republicans assert their right to control in Congress, we are told, because they allege that their record shows they have supported the President's war-policies more generously than even his own party, while, on the other hand, some Democratic editors insist that if the Democratic majority in the House were to be lost, it would be practically an admission to the Central Empires that the Wilson War Administration has failed of the support of the nation. But the independent *Rochester Herald* remarks that we are only "going through the motions of a campaign this fall." It will be conducted along party lines because we have developed the machinery for conducting it that way, and because we must preserve old alignments for the days of peace when new issues will appear, but we shall not "get tremendously excited over the results after we have made certain that there is no disloyalty in any of the candidates that stand a chance for election." The *Springfield Republican* (Ind.) thinks that the strenuous efforts of party politicians to conduct a non-partizan campaign show that "their training for such a job has been distressingly inadequate," and the *New York Evening Post* (Ind.) believes that unless the President "throws his personality into the fray—the strong probability is that the November elections will be decided in a straight party fight of the old familiar sort." Mr. C. C. Brainerd, a Washington correspondent of the *Brooklyn Eagle* (Ind. Dem.), writes that politics is getting warmer all the time, "to the deep regret of a host of war-workers, who wish that politics, for the present, was where the Kaiser ought to be." The Republican machine politicians are playing for any advantage they can obtain, and the Democrats likewise, and according to this informant—

"Neither party can show a clean slate so far as the war-business is concerned, altho both parties can muster a large majority of strict loyalists.

"There is no clear-cut consistency on either side. And that is what makes the whole industry of political pot-boiling so unwelcome to the large body of war-workers, who care nothing about politics at this time, but who care everything for the winning of the war and who are trying to keep their minds on the

big things, rather than the side issues. The fact that the Republicans are hungry and want to get in does not interest them any more than does the fact that the Democrats, who are well fed, want to stay in."

Whether or not there will be a Democratic Congress, writes Mr. David Lawrence from Washington to the *Chicago Daily News* (Ind.), depends most on one man, President Wilson, and we are told that if he should fail to express a preference—

"It will be construed as indifference on his part to the outcome, a tacit admission that it matters very little to him whether the Republicans get control or the Democrats keep it. If he expresses a preference for his own party, the Republican leaders will bombard him with criticism. They want him to stay out. They are confident that if he doesn't interfere, the country will visit punishment on the Democrats. As for the President, the American people have followed him on war-measures with enthusiastic response. Whether he can gain from them support on a domestic question as he did in 1916, no one here except the partizan cares to predict. But an overthrow in Congress of the Democratic party has an international as well as a national aspect. Mr. Wilson may go before the country with the same request for a vote of confidence that Lloyd George is shortly to ask in Great Britain on the theory that Germany would profit by the confusion of a political revolution.

The *Seattle Post-Intelligencer* (Ind. Rep.) thinks that if the war is to be kept out of politics and politics kept out of the war, the party in power must understand the delicacy of the situation and exercise a scrupulous restraint, and this journal adds:

"Mr. Wilson is the leader of the party, for political purposes, but is, for far more serious purposes, the leader of the American people, and as such must stand immune from any criticism on the part of his purely political opponents. For his party or the members of his official family to utilize his national leadership, to trade on this immunity, directly or indirectly, for partizan benefit, would be highly improper in these times, no matter how well established such conduct was in the past.

"The President naturally can hardly be expected to disavow every presumption on the part of his partizan followers whose zeal may exceed their sense of the proprieties. It is upon them, rather than on the President, that the duty of keeping politics out of the war devolves. There is no issue between the Republicans and the Democrats on the war, and there will be none under any circumstances."

The competition between the Democrats and the Republicans over which party is supporting the President most sincerely and effectively, we read in the *Indianapolis News* (Ind.), is becoming "distressing to the plain, law-abiding citizen who likes to see

the domestic peace kept even in war-time," and while the prize contended for in this competition is not known to the non-political onlooker, "undoubtedly it is worth while, as the most expert party managers are striving for it."

The *Chicago Tribune* (Ind. Rep.) charges the Democrats in Congress with trickery in their attempt "to confuse patriotic motives and impulses and partizan motives and impulses," and this Middle Western daily proceeds:

"We believe that a Republican Congress will serve the country better than a Democratic Congress, and that belief arises from a conviction that the Republican party is more free from sectional defects, more a national party, less parochial, and less sectional than the Democratic.

"This is demonstrable. The Republican party does not find its nucleus in a section. The Democratic party does find its nucleus in the South. The Republican party does not inherit the antipathies and prejudices of a section. It is not dominated, or at least frequently controlled, by this parochialism.

"In the largest sense, the Republican party is a national party, and because it is, we think that even a Democratic Government in a nation, facing the largest national and international questions, would be better served by a Congress dominated by a national party than a Congress dominated by a parochial party."

The *San Francisco Chronicle* (Ind.) tells us the Republican party as such, through its constituted leaders, is entitled to such confidence and freedom of consultation on war-measures as shall give it official standing as a participant in the prosecution of the war and in responsibility for all that is done. In due time we shall be confronted with the policies of peace, and this journal believes that "it is essential that the Republican party shall resume control of Congress, because it stands for the immediate restoration of liberty, which we cheerfully surrender during the war, but which it is the obvious intent of controlling influences in the Democratic party that we shall never again enjoy."

The *Philadelphia Press* (Rep.) avers that the Democratic party has not sound ideas as to domestic economic policies and warns us that the "excitement of the war should not eliminate

the memory of the conditions that prevailed in the United States before the war began."

In sharp retort to such clamor for a Republican Congress, the *New York World* (Ind. Dem.) points out that the burden of proof is on the Republicans, and it questions how a Republican Congress can hasten the winning of the war, can assure a more satisfactory peace, can make a good or bad effect abroad, and how it will be "easier or harder for the President to work harmoniously with a Republican Congress than with a Democratic Congress." This New York daily adds:

"Twenty years ago, when there was a Republican Administration in power, and the United States was at war, the Republican leaders had positive and definite opinions as to the evil that would necessarily result from a Republican defeat in the Congressional elections and the choice of a Democratic Congress.

"Theodore Roosevelt, then a candidate for Governor of New York, expressed the issue in this fashion:

"Remember that whether you will or not, your vote this year will be viewed by the nations of Europe from one standpoint only. They will draw no fine distinctions. A refusal to sustain the President this year will, in their eyes, be read as a refusal to sustain the war and to sustain the efforts of our peace commission to secure the fruits of war."

"If these arguments were valid in 1898, they must be a thousand times valid in 1918, when the fate of the world rests upon the United States and its Government."

The *Brooklyn Eagle* (Ind. Dem.) tells us that "Republicans know that an anti-Wilson campaign is a campaign of despair," and "a pro-Wilson campaign to elect an anti-Wilson Congress is about the most ridiculous of all anomalies," while the *St. Louis Post-Dispatch* (Ind.) observes:

"We do not urge the election of a great Democratic majority in Congress; we do not urge the defeat of a single Republican candidate now in Congress who is loyally supporting the war. We do suggest the danger of a congressional reversal. We believe that a change of congressional control would be unwise. It would be bad public policy which might confuse the counsels of the Allies, hearten the enemy, and delay the winning of the victory and the peace which are now in sight."

TOPICS IN BRIEF

THE Kaiser must be taught there can be no wreck without a reckoning.—*Newark News*.

PRUSSIA may obtain peace, but the process of administering it will resemble forcible feeding.—*Wall Street Journal*.

DON'T try to tell anybody the war is three thousand miles away. Especially anybody from Perth Amboy, N. J.—*Detroit News*.

THERE can be no concert of the nations until Germany has learned to play second fiddle instead of the big bass drum.—*Anaconda Standard*.

"We'll make this peace, not Germany," declares the Colonel. Which should be sufficient hint to friend Max to surrender before 1920.—*Chicago Tribune*.

If you eat peaches, prunes, etc., do not forget to pit your might against the Kaiser.—*St. Louis Star*.

IT is not true that the Kaiser has reached the end of his rope. When he does that, his feet will lack four or five feet of reaching the ground.—*Houston Post*.

THE limit of sorrow and distress the Kaiser has inflicted upon his own people will not be reached unless he abdicates in favor of the Crown Prince.—*Anaconda Standard*.

THE Kaiser says he is disposed to be forgiving and generous toward Germany's enemies. He has no idea yet, tho, how generous he is going to be.—*Kansas City Star*.

EVERY once in a while, when humanity gets scared, it abides by the sensible laws of cleanliness and physical care laid down when the first trees bloomed.—*Newark News*.

WOODROW seems to be a sort of diplomatic sportsman, and probably wants to see the Kaiser wiggle a little on the hook, now that he is securely hooked, before he lands him.—*Columbus Dispatch*.

ELEVEN STARS IN HIS CROWN.

This patriotic Georgian has eleven sons in the service of his country, and three more at home ready to go.

FOREIGN - COMMENT

THE VOICE OF BRITISH LABOR

A CURIOUS ANOMALY has arisen in British labor circles. While the rank and file of labor, say the English papers, are wholeheartedly out to win the war, their supposed leaders, such men as Arthur Henderson, Ramsay MacDonald, and Philip Snowden, are openly avowed pacifists, and have managed in some way to remain in power as the spokesmen of the workers. The *London New Witness*, a strong anticapitalist weekly, says:

"The reason for this apparent difference is not far to seek. The overwhelming majority of trade-unionists are heartily in favor of the war and of the policy of fighting to a victorious finish. Certain of their leaders, however, while maintaining the trade-union position, have pacifist leanings, and the difficulty arises that if the rank and file of the movement register their disapproval of these tendencies, it will follow that such disapproval will be held to extend to their conduct of trade-union matters. Thus labor as a whole would present a divided front to the outside world, and what is even more important, men of ability who have admittedly done much to co-ordinate and strengthen labor's resistance to capital would find themselves at a disadvantage. The small proportion of pacifists in the labor movement have become prominent because for the most part they hold official positions in their unions. And the reason for this is that at every local branch, however small, it will generally be found that the ordinary type of workman, at once a staunch trade-unionist and a sincere patriot, will not trouble to put in so many attendances as the man who is tinged with internationalism, and who in support of his creed will go to any trouble to obtain control of the machinery of labor."

Commenting rather acridly upon the official labor-leaders, the *London Spectator* remarks:

"It is not too much to hope that the spectacle of such leadership as this, with its confused thought and muddled morals, will not escape the attention and the censure of the many hundreds of thousands of patient sheep who have hitherto allowed themselves to be folded according to the misleading verdicts of the card vote. As we have pointed out on previous occasions, the mass of workingmen allowed themselves to be led by the few who take the trouble to gather responsibility into their hands. When these few men in each union have decided upon a policy, a simple majority vote counts as tho it were the voice of the whole union. Yet even the majority vote as often as not is obtained by the simple fact that there is no other policy in the field. Only the few politically minded persons have troubled to take action. All the time the real feelings of the workingman are represented by such a spontaneous outburst of en-

thusiasm as was seen when the news of the great British victory was announced at the Trade-Union Congress. It would be difficult to conceive anything more truly undemocratic than the present system. The people who profess to speak for the majority really stand for a minority masquerading as a majority."

Writing in the Socialist *London Clarion* on "The Voice of Labor," Alexander M. Thompson thus bears witness:

(Through official channels.)
A UNIQUE EVENT.
For the first time in history a British king decorates for valor an American soldier on French soil.

"I have traveled far this week to hear it, from London to Newcastle and Durham, to Barnsley, to Cardiff and Maesteg, and back again to Derby. I have heard it in tradesmen's offices, in clubs, hotels, workers' houses, railway-carriages, conference-halls, and even down a coal-pit. And the more I hear it the more convinced I become that the voice of labor is certainly not that of the most fluent or loudest speakers at labor conferences. The voice of labor, like that of Mr. Thomas Atkins, is disposed occasionally to grouse, and not without good reason. But the voice of labor is unquestionably, and emphatically for fighting German truculence to its knees, in order that its plots against the peace of Europe may be decisively squashed, and that peace may be restored on a safer basis than our generation has known. . . .

"The chief concern of the mass of the people is undoubtedly to win the war, and thereby secure a permanent peace. The chief concern of the most glib mouthpieces of labor is by every possible means to prevent the victory of the Allies, and thereby secure—a Bolshevik peace."

Another London Socialist weekly, *The New Age*, writes:

"The onus of a democratic settlement falls upon the Allied labor movement. We do not mind by what means they choose to carry out their task, whether by a personal conference with German labor or by the public appeal of one labor movement to another; but that they can not leave everything to the governing classes and the armies, and trust democracy to come out of the settlement, we are certain. By virtue not only of their past claims but of their whole future, the Allied labor parties owe it as a duty to see that Germany is democratized."

Whatever else British labor may be, it is not socialistic. At least here is the opinion of that veteran Socialist, Robert Blatchford, the editor of the *London Clarion*:

"On the whole, I do not think Socialists need worry. Let us get the war over and the sailors and soldiers back home and then we may be able to arrive at some broader and higher ideal of socialism and democracy than we are likely to get from the workers and their leaders who think more of what they are going to get than of what they are going to give. The people are not ready for socialism yet. They are not wise enough, nor good enough. When they are, socialism will establish itself."

THROUGH RAPINE TO PEACE

"TORCH IN HAND, the enemy comes offering us peace," remarked a French officer as he gazed upon the ruins of what—a week ago—was Cambrai. "France," he said, "can never forget nor forgive this." Nor can the allies of France, if we can judge from the comments in the

military purposes; there has been so much that is sheer wanton damage. Destruction for destruction's sake seems to have been their motto.

"From Ypres down to Soissons there is not a village that is not absolutely destroyed. When one travels day after day over this pitilessly ruined country one gets some idea of how the French must feel, some understanding of the bitterness of their people toward the enemy."

The *London Daily Mail*, commenting on yet another piece of this sort of thing, says:

"The wanton and wicked destruction by the Huns of the French town of Ham can not be justified by any conceivable military excuse. It comes in an hour of Allied victories, and as it is fresh evidence of the policy which the Huns have deliberately adopted, so it is important for the Allied commands to deal with it.

"We have before suggested that the effective method of preventing further acts of this kind is to warn the Hun clearly that for every French or Belgian town destroyed a German town will be razed. There is substantial support for this proposal in the French Chamber. Is there anything to prevent the British, French, and Americans from announcing that 'a town for a town' shall first be applied, say, to such a Prussian center as Saarbrück, which is only fifty-five miles from General Pershing's present front?"

Demanding vengeance, the London papers are filled with protests. The *London Daily Telegraph* remarks:

"Germany must be given to understand that reparation must be exacted to the uttermost farthing, whatever the German Government of the day may be, whether repentant or unrepentant."

Secretary Lansing has announced that an ultimatum threatening reprisals has been under consideration by the Allies. It is believed that the only reason for delay in sending forward such an ultimatum grows out of a reluctance on the part of the Allies to adopt a policy of ruthless vandalism such as has marked evacuation by the Germans.

NORWAY'S VIEW OF PEACE—Unlike her neighbor Sweden, Norway has never lost any love on the Hun. According to the *Christiania Tidens Tegn*, the Norwegian Government will do nothing to help a negotiated peace:

"Any uncalled-for action would harmonize but poorly with the line of policy we have followed up to now. But even if bound to remain spectators, we have our clear sympathies. The submarine war and the blood of a thousand Norwegian sailors have had the effect of reducing the number of Germany's friends, while the number of those who understand that the interests of the Allies are also ours is increasing. We all now also understand that peace must not be obtained at any price and that several questions regarding small neutral countries must first be settled. Even if the Scandinavian countries have certainly no interest in seeing Germany crushed they have an interest in seeing that Russia and Finland do not become German annexes. In common with entire humanity, neutral states have an interest in seeing that the coming peace is not an unstable compromise, but such as to secure durable and just relations between all civilized states.

"Whether such a peace is now obtainable depends in the first place on the Central Powers themselves. If they are willing to accept loyally the principle of nationality and freedom, peace might be concluded this very year, but we believe that the state whose military and civil exhaustion has now provoked a peace proposal presents, through her old-fashioned constitution and her adherence to retrograde principles, the most severe obstacle to the realization of the desired settlement. Anyhow, the final settlement must be made with those who have sacrificed their blood and wealth and engaged in superhuman efforts to benefit the whole of humanity."

French official photograph.

HOW THE HUNS WAGE WAR.

The cathedral at Noyon, the only public building that the Germans have not utterly destroyed, and they do not seem to have left very much of that. The Allies propose that we exact "an eye for an eye and a tooth for a tooth" by destroying an equivalent number of German towns. How we have fought up to now the photograph on the next page shows.

European press. While the enemy is "in the act of suing for peace, he continues to exhibit all the Hun devilishness and hopes for generosity on our part," says the *London Morning Post*. Let us see just what he is doing. It will be recalled, says *The Canadian Press*, that Canadian cavalry penetrated into Cambrai before the Germans evacuated it. At that time—

"When the Canadians entered Cambrai the great public square of the Place d'Armes was virtually intact, the Allies having refrained from shelling the city. Now it is a mass of ruins. The explosions began at nine o'clock and have continued ever since. All day, in every part of the town, there were explosions of incendiary bombs with time-fuses attached, and these were followed immediately by outbursts of fire. In one short street a dozen houses simultaneously burst into flames.

"The town hall, the bishop's palace, and other buildings were blown to pieces. The cathedral still stands, but only with its ruined chancel. Fire is lapping the base of the great belfry tower.

"As the hours went by the universal character of the destruction developed. The sun was obscured partly and it seemed like a fiery ball in the smoke and thick dust of falling walls."

This is not an isolated instance of the curious manner in which the Huns sue for peace. Sir Martin Conway, the director of the British Imperial War Museum, writes to the *London Evening Standard*:

"I came back from my visit to the front wanting vengeance on the Germans. I do not think England at all appreciates how enormous the damage is that the Germans have done. In town after town and in hundreds of villages there is absolute ruin.

"There can be no possibility of making peace with the Germans without expiation for the atrocious manner in which they have waged war. There can be no pretense of destruction for

GERMANY'S COLONIAL CRIMES

THE STUBBORN DETERMINATION to regain her colonies that Germany shows is equaled only by steadfast resolve of the British that, whatever else happens, Germany shall never again be a colonial power. "Only military reasons," cries the *Kölnische Zeitung*, "could compel us to accept President Wilson's conditions. It is possible that Germany may require counter-guaranties—for example, the evacuation of the colonies occupied by the Allies." To this the London *Evening Standard* replies: "There are two points upon which Great Britain will firmly insist at the peace conference. One, indemnity for all shipping losses sustained on account of submarines, including mercantile shipping of belligerent and neutral Powers, and the surrender of the German Navy. The other, the retention of the German colonies, which belong of right to the people on the spot, namely, the self-governing democracies of Australasia and South Africa." This attitude, says *The Standard*, is dictated not from any desire for territorial aggrandizement on the part of Great Britain, but from sheer humanity which forbids the delivery of helpless peoples to German cruelty and lust. The South-African administrator of the captured German Southwest Africa has just issued his report, and, says the London *Daily News*, whose summary we quote, the behavior of the Germans there, "to the hapless natives is a picture of bestial depravity." The official report says:

"The natives were reduced almost to a state of slavery, families even being separated to suit the convenience of employers. Their women were habitually maltreated by the Germans, who took them into forced concubinage. They were in the end deliberately goaded into rebellions which were suppressed with deliberate and ruthless cruelty, and which resulted in the practical extermination of the tribes involved."

"The effect of the ruthless policy pursued may be gathered from the following comparisons of tribal populations in 1904, before the rebellion, and the populations according to the official German census of 1911:

	1904.	1911.
Hereros	80,000	15,100
Hottentots	20,000	9,800
Berg Damaras	30,000	12,800

Thus, 80 per cent. of the Herero population and more than half the Hottentot and Berg Damara races had disappeared."

The London *Daily Telegraph* gives us in its comment on this report a few side-lights on the suppression of the Herero rebellion:

"For more than a year, with the full connivance of the Kaiser and the German Government at Berlin, this little band of German cutthroats slaughtered the Hereros—men, women, and children alike—wherever they found them, in circumstances of the most sickening cruelty, which are set forth in the pages of this terrible Blue Book. We will quote one single incident only. Von Trotha and his staff halted one day near a hut where an old woman was digging for wild onions. A zealous German soldier, named König, jumped off his horse and shot her through the forehead at point-blank range. Thinking that she would beg for mercy, he said, before he fired, 'I am going to kill you.' She simply looked up and replied, 'I thank you.' Death was the only friend of this martyred race. The Germans drove the Hereros into the bush, and then poisoned the water-holes on the desert borders. When at length they deemed that the time

had come to make peace with the pitiful remnant of the race, they sent a few thousands down to Luderitzbucht, where, as one of the Herero chiefs described it, 'they died like flies that had been poisoned' from the wet sea-fogs. The survivors—their spirit crushed and broken—were mere chattels and slaves of the German settlers, victims at pleasure of their brutality and their lust, and so they remained till the forces of the South-African Union restored to them once more the hope of freedom

HOW THE ALLIES DO BATTLE.

The Metz has been under bombardment from American guns, this beautiful cathedral has not once been hit. Unlike the Germans, we do not indulge—even in war—in wanton and savage destruction, but they may force us to retaliate, if they continue their rapine.

which ten years of unspeakable suffering had well-nigh crushed out."

It must not be supposed that there were no human Germans. The London *Morning Post* in discussing this point says:

"The facts here are not in dispute. They are recorded in the finding of a German Court, which is constrained to the following ruling: 'Severely beating a woman a short time before childbirth with a riding sjambok is treatment dangerous to life, especially when the woman has been beaten on two consecutive days, and on the first occasion so severely that she collapsed.' So we see that even German administration draws the line somewhere in the permitted treatment of the African native. But what more damning evidence could be required than the leniency of this judicial censure? Be it remembered, also, that the tale now told of German Southwest Africa, with its ruthless extinction of the Hereros, is equally true of every part of Africa where the German has set foot. The German system has been to establish what is in effect the most inhuman form of slavery, imposed by wholesale floggings, hangings, and massacres, so that, as Herr Erzberger exclaimed in the Reichstag, the German plantation system is 'manured with the blood of the natives.'"

After quoting even more horrible parts of the report, *The Morning Post* concludes:

"That is why under no circumstances ought the Allies to assent willingly to the return to Germany of her African colonies. Such a step would be a betrayal of the native, a surrender to barbarism, the handing over of millions of weak and helpless people to the most cruel and ferocious form of government. We have received in our African campaigns invaluable aid from natives who relied on our protection, and who thereby incurred the bitter enmity of their German oppressors. To hand them over to the cruel vengeance that would await them if German rule were restored would be an act the shame of which could never be wiped out again."

FOCH AS THE HUNS SEE HIM

THE CHORUS OF DERISION in which the German press indulged during the summer whenever the name of Marshal Foch was mentioned has died away and the German papers have changed their tone to one of grudging acknowledgment of the military genius of the Allies' Generalissimo. Still the Germans are reluctant to admit that anybody but a German knows anything, and so General Baron von Ardenne in the *Berliner Tageblatt* seeks to prove that Foch has learned all his strategy from German teachers such as Clausewitz and Moltke, but most of all from a book by Schlieffen entitled "Cannae." The Baron opines:

"It may certainly be assumed that this book is not a stranger to Marshal Foch, for it is a noteworthy fact that the deductions drawn by Count Schlieffen from his preference for the flank attack have been fully respected by Foch in his recent strategy. . . . It is plain that Marshal Foch is a many-sided leader and one who does not cling to one scheme, which the Gallie character so obviously tends to do. Thus he has not followed the example of his predecessors, who always fought their great breakthrough battles on one and the same basis, and in one and the same direction. He has always made his strategical attacks take place upon different battle-fields at some distance from one another and coming from different directions. He has tried thereby to turn to account the moment of surprise and by the many-sidedness of his attacks throw the German command into confusion, to make their defensive measures eccentric, and to induce them to throw in their reserves prematurely."

As time goes on, the Germans seem to be getting a greater and greater respect for the genius of the Marshal, and Colonel Gädke comes out with this whole-hearted tribute in the Berlin Socialist *Vorwärts*:

"We must acknowledge that Foch never for an instant lost his head when Paris was endangered early in the summer. He took over the unified command at a moment when things were very unfavorable for the Entente. We must also not forget that Foch has been splendidly supported by France, Britain, and America. American troops landed daily. Daily also arrived new supplies of tanks, guns, and shells. The resources of England and France literally streamed into his hands. Foch has not been guilty of the blunder of neglecting to make use of the superiority of forces and resources now at his disposal. He was not compelled to attack, he attacked of his own free will in order to effect a revolutionary change in the situation. But the

decisive victory was not vouchsafed him because he was opposed by two equally capable fencers."

This admission of Allied superiority in men and material is not at all to the liking of the *Frankfurter Zeitung*, whose military critic has practically staked his reputation on the conflicts in the West being a battle of the reserves. So he finds himself more or less bound to declare that Foch's reserves have really all been exhausted by this time, only somehow or other "Marshal Foch has been able, evidently with unusual energy, to produce reserves, French, English, and, above all, American substitutes." Our critic continues:

"But the quality is poor, and to succeed in any measure Foch needs a numerical superiority of at least three to one. If his attacks seem to have less powerful effects than the corresponding actions of the German command, it is because he has not the necessary number of shock troops and reserves at his disposal, or that stronger forces are necessary on the side of the French and English than on the German for the attainment of a corresponding success. We gather that both are the case."

It is a little amusing after reading this oracle to find Captain von Salzmann wishing in the Berlin *Vossische Zeitung* that poor old Hindenburg had at his disposal the "magnificent reserves which Marshal Foch can command." The Captain tells us that the German idol would do such magnificent things if he only had the men:

"I am far from asserting that Foch is not a worthy opponent; quite the reverse. But what has Foch hitherto attained? He has nowhere on the entire front been able to produce on the German side that disorder which would alone have rendered possible a rupture of the German lines. So long as Hindenburg and Ludendorff can maintain their divisions, their artillery, their airmen, and their supplies in the manner they have hitherto done, there is no danger, and we have no reason to fear that this state of affairs will alter in the immediate future. If Hindenburg and Ludendorff had at their disposal the inexhaustible human material and supplies which Foch has, then German soldiers would long ago have been not only in Paris but spread over the entire world."

Now that President Wilson insists that Marshal Foch must decide "the process of evacuation and the conditions of an armistice," we may expect the German papers suddenly to discover a series of virtues in the French Generalissimo hitherto entirely unsuspected.

LONDON'S OPINION OF THE HUN'S PEACE DRIVE

SCIENCE - AND - INVENTION

FAMOUS "DEVIL-DOG" U. S. MARINES, "FIRST TO FIGHT" AND "FIRST TO BITE"
 "Daily we see them," says a London paper, "their faces tanned, smilingly exhibiting perfect sets of teeth."

EUROPE ADMIRING YANKEE TEETH

AMERICAN DENTISTS have always been considered the best in the world. And apparently our young men have been wise enough to take advantage of the opportunity thus presented. Their teeth, as exhibited in the ranks of our Army overseas, are commented on with surprise by observers of the Allied nations, who contrast the dental outfits of their own armies unfavorably with ours. Says a writer in the *London Daily Mail*, as quoted by Dr. W. A. Evans in his department, "How to Keep Well," in the *Chicago Tribune*:

"One thing about the American soldiers and sailors must strike English people when they see these gallant fighters, and that is the soundness and general whiteness of their teeth. It is all the more striking in that it is such a contrast to the teeth of the British people.

"From childhood the Yank is taught to take care of his teeth. He has tooth-drill thrice daily and visits his dentist at fix intervals, say every three or four months. If by chance a tooth does decay the rot is at once arrested by a filling. The result of all this is that our U. S. cousins, besides adding to their appearance, gain in health by having good, clean teeth, and when war came very few men were turned down by the military authorities for having decayed teeth. So daily we see them, their faces tanned, smilingly exhibiting perfect sets of teeth. It is a distinctive mark of the American—as distinctive as his uniform or his slang.

"Now, take our own case. Daily you see young boys and girls with mouths full of decayed teeth. Bad teeth hinder digestion, and indigestion is the curse of many a man's life. Mothers should see to it that their children use their tooth-brushes daily, after every meal, if possible.

"The U. S. soldiers have set us a splendid example in this matter. They fairly shame the ordinary Tommy by the brilliance of their molars, but they will do so no longer if young English mothers will only wake up to the fact that bad teeth cause bad health, and that doctors' and dentists' bills will be saved by the regular use of the tooth-brush."

Dr. Evans comments on this as follows:

"The army surgeon who sends me this paper from France writes me that the British who pass through his hands—and his command having been incorporated in the British Army, he has had ample opportunity to judge—have miserably poor teeth. The Scotchman's teeth are especially bad. The world never saw better fighters than these snaggle-tooth Scots and English, but they would get on better in the hospital and camp if their teeth were better.

"The American dentist has made good. For a generation he

has been teaching his people to brush their teeth, to keep their mouths clean, and to eat hard foods, foods which require chewing. A considerable portion of the boys in the Army have gone through the schools since medical school inspection and dental inspection are being carried out, and the children were being instructed in the care of the teeth. We have not come all the way, but we have come further than our British cousins have. When we come to caring for the soldiers the dentists have also made good. They have volunteered better than any other group has. Some time ago the lists were closed, since as many dentists had gone into the Army as there was provision for. As the result of the work done by American dentists when our soldiers were growing up, as well as by their service to the armies in the field, more dentistry and better dentistry will be done in Europe."

WAR'S LESSON FOR PEACE—One of the lessons learned in the present war, says *The Hardwood Record* (Chicago), is that loss from disease may be greatly reduced. This should apply in the business of civil life as well as in the business of war. The American Army has made the discovery and set the pace. It goes on:

"During the Mexican War in 1847 the death-rate from disease per year was one in ten of the men in the Army; during our Civil War it was one in twenty-five; during the Spanish-American War it was one in forty; and in the Russo-Japanese War the rate of death by disease fell to one in fifty. During the present war the death-rate from disease among American troops has been falling, and the latest report indicates only one in five hundred per year. This applies to soldiers abroad and at home. It is only one-third as high as the death-rate among men of military age in civil life, showing that health is three times as good in the Army as out of it.

"A lesson that can be turned to practical account ought to be learned from these records. If it is possible so to reduce loss from disease in the Army, why not reduce it equally low in the civil life? It is a matter of enforcing rules of sanitation. The people are constantly being called upon to economize and conserve; and why not conserve health, which is the one great asset that can be conserved? It would mean a great deal to factories and works where many men are employed if the loss of time and of life by disease could be cut down to the lowest level. It could be done by protecting food and drinking water from contamination; by protecting sleeping quarters against invasion by germ-carrying mosquitoes; by keeping premises clean; by vaccination against contagious diseases, and in other similar measures which are strictly enforced in the Army. Much progress has been made by manufacturers along these lines, but many practicable preventive measures are not being taken to protect the health of employees, and a death-rate from disease three times greater than that in the Army is the result."

GREAT HEAPS OF FRUIT-PITS AT THE GAS-MASK FACTORY. EACH MASK USES SEVEN POUNDS OF THEM.

PEACH-STONES FOR GAS-MASKS

THE REASON WHY the pits of stone-fruits and the shells of nuts are good material for gas-masks is simply because, when converted into charcoal, they are found to absorb a larger percentage of the poisonous gases than the charcoal made from woody matter of other kinds. It is easy to provide a chemical that will neutralize one particular gas, but when the familiar fifty-seven varieties are outnumbered by the products of the German gas-factories, it becomes necessary to carry a special mask for each or to discard the idea of chemical neutralization and adopt another that will take care of all gases alike, which is what has been done in the selection of porous varieties of charcoal. Says a writer in *The Scientific American* (New York, October 5):

"Early in the use of gas, before the full possibilities of the attack were recognized, the attempt was made to supply the wearer of the mask with a separate reagent for each separate gas employed by the foe. But as the number of gases available for the attack increased, it became evident that this procedure had decided limits. . . . So the defense was directed into another channel, and a single universal reagent was sought—a substance which, placed in the mask, would react with any poison-gas that might be encountered, but would pass pure air without any alteration.

"Now this is a pretty large order, and complete attainment is doubtless out of the question. But the chemist has a resource which we have not yet touched. In order to secure protection against the hostile gases, the substances in the mask need not necessarily react chemically with these, in the ordinary sense of that word. It will be quite sufficient if they absorb them. . . . There are various substances which possess in greater or less degree this power of absorbing gases—the platinum sponge employed in the manufacture of sulfuric acid is an example raised to the 5th power. But not all of them can be induced to omit from their sphere of influence air, the commonest of all

gaseous media, and the one which must receive free passage through the gas-mask. Carbon, however, and in particular carbon in the form of charcoal, meets the situation nicely. It does not absorb air, and it does absorb other gases freely.

"But charcoal occurs in various forms, according to the particular vegetable source from which it is manufactured; and the various forms possess varying degrees of gas absorptivity. After exhaustive tests the chemists find that first rank must be given to charcoal produced from peach-stones, the pits of apricots, prunes, plums, olives, and cherries, date-seeds, and the shells of Brazil-nuts, hickory-nuts, walnuts, and butternuts. What to-morrow may bring forth in gas-mask manufacture no man can say, for the last thing that a chemist would think of doing would be sitting down with his hands crossed, in confidence that the final word had been written in any of his chapters; but to-day we make our gas-masks with charcoal from the sources mentioned.

"For every soldier in the fight there has to be a gas-mask. Four million soldiers does not mean four million gas-masks, because all the four million are not destined for actual fighting, and because those who are so destined are not all fighting at once. But every mask takes seven pounds of seeds and shells, and a million masks—a reasonable minimum—means seven million pounds of the raw materials. Thirty-five hundred tons of fruit-pits and nut-shells is a great quantity; it is a quantity that can not be obtained save by the cooperation of every consumer of nuts and fruit. It is for this reason that the Government has appealed to all of us to save these items out of the garbage-pail and turn them over to the Red-Cross agent who will collect them. Other shells and pits would constitute adulteration, and so must not be mingled with the ones enumerated. Especial emphasis might well be placed upon this clause, as it applies to coconut shells; for these are being conserved, too, for gas-mask manufacture. The charcoal from them is available; but it is different from that from the other sources, and requires different treatment; so the coconut shells must be kept separate.

"The process of manufacturing the gas-masks would make a most interesting story; but during the continuance of the war it is of course a story which can not be told. Our pictures merely show several of the most obvious steps. It is clear enough that

PACKING THE CARBON TO SAVE THE LIVES OF THEIR SOLDIER BOYS.

the pits and shells must be collected and burned into charcoal in furnaces of a standard type; and the enemy will hardly get much aid or comfort from the knowledge that before the unit containing the charcoal is allowed to go into a mask it is subjected to a severe preliminary test, to determine whether its charcoal screen is of sufficient density. But beyond this picture and story can not go far.

"We may, however, still say a word about the inspection of the finished masks. This is done by a specially selected force; and since a mask once passed by this force will not be tested again until some American soldier puts it on in the face of a gas-attack, every effort is made to keep the inspectors keyed up to concert pitch. Sometimes this may even be carried to extremes; we learn on good authority of one serious-minded inspectress who worried so conscientiously lest a defective mask be passed by her to cause the death of one of our boys in khaki that she lost five pounds a week for an incredible period, and had finally to give up the work to some one whose mental processes were less intimately connected with physical reactions. We are also told that as an inducement to the inspectors to do good work, each of them is from time to time sent into a gas-chamber protected by a mask selected at random from those which he has passed himself."

It is reassuring to know that in the battles now raging our boys are equipped with gas-masks twenty times as efficient as the German ones. Says an authorized statement given out by the War Department and published in the daily press of October 6:

"German forces opposed to the steady advance of the American line on the Lorraine front have brought into play every method of defense considered effective in modern warfare. They are making a particularly heavy use of poison-gas. Pershing's men have been unceasingly bombarded with mustard-shells, and every effort has been made to drench the American advanced positions with deadly fumes. It is a remarkable tribute to the chemical warfare work in the United States that these efforts to block the progress of the offensive have proved utterly futile.

"The American attacking forces are protected against gas by masks which actual field tests prove give twenty times the

protection afforded by German gas-masks. There is not, as a matter of fact, a single case on record of an American soldier falling victim to a gas-attack when protected by the mask that is now being manufactured in the United States on a vast quantity basis.

"Fortunately, every American soldier who goes to France is a gas-mask expert. He has been trained to adjust his 'land preservers' with almost incredible speed. The mask is put on with just five motions of the arms and hands. The man who fails to accomplish the feat within a time limit of six seconds is left behind when his unit goes to the front.

"Recently, in a practice drill, one company of American fighting men set a record of four seconds from the time the order was given to the final adjustment by the slowest man.

"It is an interesting fact that American gas-masks stand up under tests that German masks can not meet. German masks will not give protection against a high concentration of gas. This was demonstrated recently when the British assembled a sufficiently large battery of projectors to put seventy tons of phosgene gas into the air at once, with consequences quite well known to the German General Staff. There is no concentration of gas that American masks will not defy. This has been proved, not only on the battle-field, but in the experimental stations in this country, where determined attempts to break down the resistance of United States Army masks by heavy gas-concentrations were absolutely unsuccessful.

"The American gas-mask was developed by actual manufacture. The proper authorities obtained complete information about the French and British masks and full data as to the efficiency they demonstrated under German gas-attacks. Armed with this knowledge, an order for the making of several thousand masks was placed in this country. Members of the force of 300 officers and 2,000 enlisted men who are responsible for the production of this modern weapon of defense showed the courage of their convictions by volunteering for experiments. They donned the masks and exposed themselves to actual gas-attacks. From time to time American ingenuity and inventive genius suggested improvements in the original methods. As a result, the officers of our allies are unanimous in the frank admission that the American mask is the best on the Western Front."

A GAS-MASK DRILL. OUR MASKS ARE TWENTY TIMES AS EFFICIENT AS THE GERMAN ONES.

SEEING THROUGH BRICK WALLS

IN THESE DAYS of enforced fuel-economy the fireman needs more than ever to know what is going on inside his furnace and boiler. Modern practise is marked by the invention and development of devices that might enable him to do this much more accurately than formerly, so that he would be practically able to "see through walls of brick and steel," as it is somewhat picturesquely put by an editorial writer in *The Electric Railway Journal* (New York). And yet, we are told, altho such measuring instruments are commonly used in connection with power-generation, especially in electrical practise, they have been woefully neglected in the boiler-room. Instruments for "seeing through walls" are already on the market, and more and better ones will be available when they are demanded by the men who operate our boilers and furnaces. We read:

"The day is past when a fireman, no matter how skilful and faithful to his task he may be, can by sighting at the fire over his corneob pipe tell whether a boiler is successfully doing its work. The steam-gage, the pop-valve, and the gage-cocks, introduced as they were to keep the boiler from starting off on privately conducted sky-rocket trips, give no indications relative to a lot of other necessary things.

"To-day not only the development of new methods and processes, but the successful operation of existing processes, is largely dependent on the use of instruments which tell the story of what is happening on the inside of things. In the field of electrical engineering, for instance, such instruments have attained a very high degree of perfection. The power output of a 50,000-kilowatt generator is measured as easily as is the time of day, and the oscillograph has permitted a study of the currents inside a machine almost as readily as a schoolboy studies the motions of a pollywog with a magnifying glass. And, take it all in all, a battery of steam-boilers is to-day a more complicated thing to operate than is an electrical generator. We need to know whether each boiler is doing its share instead of 'loafing,' how much fuel and water are going into it, the amount and quality of its output, the amount of unburned fuel in the ash-pile and the smoke, the draft, the amount of excess air, and the amount of heat going up the chimney. It takes more than our five senses to tell us about these things. . . .

"Many instruments, more or less perfect, for determining the above details and relations are on the market. More and better ones will appear when boiler-users learn of their need and value. Even now records are available where plants burning as little as six hundred tons of coal per month have paid for a complete instrument equipment out of the fuel savings of a very few months. Obviously the meters must be well selected and conveniently located and, in general, recording instruments are best. In any event meters that will assist the fireman are the ones needed. The old idea of meters to 'show up' the men is all wrong. The men should be instructed as to proper use of the instruments and stimulated to use them in securing better results as the product of the efforts. Only when it is put up to the men that the instruments are helpers and not detectives will the best results be secured."

FOREST - FIRES A WAR-EVIL—The President, we are told by *Science* (New York), has authorized a loan of one million dollars to the Forest Service for fire-fighting expenses, to meet emergency conditions in the national forests of the Northwest and the Pacific coast.

"The loan was made from the special defense fund of fifty million dollars placed at the disposal of the President by Congress. It is recognized that the protection of the national forests is an important and essential war-activity. Forestry officials regard the present fire season in the Northwest as in some ways the most serious with which the Government has ever had to cope. Early drought, high winds, electrical storms, labor shortage, and depletion of the regular protective force as a result of the war have combined to make the fire conditions unprecedentedly bad. Necessity for resort to the Presidential fund is due to the fact that the appropriation bill for the Department of Agriculture for the current year has not yet been passed."

IRONING OUT IRON

CRACKS IN METAL PIPE are now "ironed out" by a new process described in *The Scientific American Supplement*. As in the "ironing" of cloth, the process involves the application of heat and pressure at the same time and is a practical method of eliminating the results of so-called "fatigue." Metal affected by fatigue crystallizes, becoming brittle and breaking easily. The loss of time and money in the California oil-fields, where considerable pipe and other metal is ruined annually in this way, has led to the invention of the "ironing-out" method. Any source of heat may be used with the pressure, but electricity is said to be most satisfactory and efficient, altho at the same time the most costly. Says the paper named above:

"Steel which has been subjected to repeated shocks will break easily, and the fractures show a crystalline appearance, due to repeated stresses which occur therein. . . . What happens is that as the steel is repeatedly stressed, either by bending, pulling, or twisting, it becomes fatigued. This fatigue is probably merely the first stages of an infinite number of small cracks or tears in the body of the steel, and these tears naturally tend to occur along the faces of the crystals of the material, at first of microscopic dimensions that do not materially weaken the metal. As they spread they greatly weaken the metal, which eventually parts along the crystal faces, and the characteristic fracture, which is referred to as crystallization, occurs.

"Before this state of fatigue continues sufficiently to weaken the metal materially, or, in other words, if it is taken in time, it can be partly arrested by heating the material to a welding heat. But the mere heating, while it tends to stop the cracks from spreading the while it may rearrange the crystals so that some of the cracks are partly closed, is of little value unless it is done early, and, in fact, before much of this tearing away of the metal occurs. A badly fatigued pipe can not be restored to its original strength by merely heating it.

"The Bardeen process not only heats the pipe, but also involves the application of longitudinal pressure. In the first place, during heating the pipe has heavy spring pressure on its ends, so that there is a constant pressure of about 3,000 pounds on it in the direction of its length. As the pipe is heated to a carefully regulated temperature this pressure tends to squeeze the pipe together and to repair any small cracks.

"In the process electricity is used as the heating medium and, while somewhat expensive, is necessary for reasons which will be later pointed out. The first great advantage of the electric method is that each joint can be heated separately and the heat carefully controlled. In practise it requires something over fifteen minutes in which to heat a six-inch pipe twenty feet long, and during the heating the operator is able at all times to observe the pipe, which rests on a flat surface and is covered with a light asbestos hood. By heating it electrically and slowly the joint is very evenly heated throughout its length and has a chance to expand slowly. As soon as the pipe reaches a desired temperature the heating operating is shut off instantly. As during the heating operation the current actually flows through the pipe and the heat is generated in the body of the pipe, this heat is evenly generated throughout the body of the metal, and as all the losses are on the outer and inner surfaces, it follows that these surfaces are the cooler. Considering the pipe as a plate, it will be seen that the surfaces of the plate are cooler than the interior. It is highly probable that this unequal heating through the thickness of the material causes a working which helps to weld the cracks and arrest the fatigue. It is not this feature which makes the process a success, however, but the electromagnetic action which is taking place simultaneously. . . . It is easy to calculate that the steel of the pipe is saturated with magnetism. It is, further, easy to calculate that the force exerted, which is in effect a squeezing of the pipe together, is in excess of three hundred pounds per square inch. In other words, the magnetic pull in the body of the material is at least three hundred pounds per square inch. Under this enormous pressure any cracks are 'ironed out,' and the material of the pipe rewelded over the cracks. Moreover, as the pipe is treated on alternating current, this magnetic pull is applied and released from eighty to one hundred times a second. As the pipe is under this pressure, which is working constantly for from fifteen to twenty minutes, it is not surprising that after being cooled it fails to show any evidence of fatigue."

EDUCATION - IN - AMERICANISM

Lessons in Patriotism prepared especially for THE LITERARY DIGEST by
the UNITED STATES BUREAU OF EDUCATION

FRANCE'S STORIED FIELDS

WHERE THE AMERICAN TROOPS TO-DAY, side by side with their allies, are driving back the Teutons and loosening their grip on France and Belgium, many armies in the past have fought, and many poets and novelists have spread over these cities and provinces a rich haze of romance. Here where the Hun reels under the hammer-blows of Foch, his ancestors nearly twenty centuries ago fell before the blows of Caesar, who defeated the Nervii at the Sambre, the Treviri in the Forest of Ardennes, and throughout France and Belgium made the barbarian give way in the face of the Roman legions. Nor have battles been few in this very region since the beginning of the Christian era. Conflicts innumerable have taken place in the north and west of France. Here, too, have been meetings for peace and treaties drawn, and in the years of peace novelists and poets have made their journeys here and gathered matter for their tales and poems. In this rich and golden land of France great writers and artists have been born, men whose work is still our priceless heritage. Each day, as the names of towns and villages appear in the daily *communiqués*, they recall famous events of history, poetry, and fiction. Just a few of these may be mentioned.

METZ—No name is watched in the war-bulletins more closely than that of Metz. It was but recently that Marshal Foch wrote to the American armies: "*We shall one day see your victorious banner floating in Metz.*" Since the great battle that wiped out the St. Mihiel salient in the beginning of September, the citadels and spires of Metz have lain plain before the eyes of the American Army and within range of the American guns. As it happens, it is with a peculiar appropriateness that Metz is made the objective of the American armies. Thereby hangs a tale.

Toward the close of the year 1776, the Duke of Cumberland, who was the brother of King George III. of England, was traveling in France, and one day he arrived at the town of Metz, then a French possession. A certain Count de Broglie, a veteran of many battles, was in command of the garrison, and, to do honor to his distinguished visitor, he invited some of his officers to meet him at dinner. Now it happened that the Duke of Cumberland was in disfavor with his royal brother—he was, in fact, in banishment. He had lately received news that certain of his Majesty's colonies in America had rebelled and declared themselves free, declining to be subject any longer to a tyrannical king. It would seem that the Duke of Cumberland told the story with some gusto, as if he were not altogether sorry that his brother was in trouble. One officer listened with particular attention. He was a youth of nineteen, tall and thin, with a long nose and reddish hair. His solemn expression and his somewhat awkward manner contrasted strongly with the frivolous ease and grace of the other young officers present. He was a marquis of long descent, connected by marriage with one of the greatest families in France, and he had at his own disposition a very large income. He listened intently, he asked many eager questions, and when he rose from the table he had made a momentous and historic resolution. He had resolved to abandon the pleasures and luxuries of the gayest court in the world, even to leave his young wife and child, and to cast in his lot with these strange rebels in America. In his own words, "*When first I heard of American independence, my heart was enlisted!*" That young man was Lafayette; and when the American Army went to the front in France, it merely paid a small part of the debt of gratitude we owe that splendid young officer—that true nobleman.

CHÂTEAU-THIERRY—When the American forces stopt the final offensive of the Germans on July 17 at Château-Thierry, they earned the supreme glory of battle at a spot already famous in history. At this little town on the right bank of the Marne in 1814 Napoleon defeated the Prussians and the Russians.

Not the least of the honors of Château-Thierry is the fact that it gave birth to the great French poet and fabulist, Jean de la Fontaine, whose house—as still preserved in good condition until the German invasion. La Fontaine's fables have given delight to young and old; their freshness and ease have

pleased the former, their wisdom the latter. American soldiers writing from Château-Thierry have spoken of visiting the ruins of La Fontaine's house and of his statue at the bridge—all that the Hun hordes had left.

REIMS—If citations of Metz have especially interested American readers, references to Reims have appealed most to the French themselves. For Reims is very dear to them—for historic, for patriotic, for religious, and for literary reasons. Nothing, perhaps, has rejoiced our French allies more than the fact that the Germans have never been able to take Reims, however close they may have come to it.

It is the damage that has been done to the glorious cathedral of Reims that constitutes one of the greatest artistic tragedies of the war. Here, in this magnificent cathedral, the kings of Imperial France were crowned. Here Joan of Arc led Charles VII. to his coronation—the sainted Joan who freed Reims from its enemies.

One of the great pieces of news from the Western Front recently was to the effect that Reims had been finally and definitely cleared from the menace of the German guns.

Three towns of northern France have given their names to articles of every-day commerce—Cambrai, from which "*cambrie*" is derived; Arras, a term applied to a certain kind of tapestry, and Valenciennes, noted for its lace in olden times. Cambrai, too, is associated with the name of the great French ecclesiastic and moralist, François Fénelon, a statue of whom stood in the cathedral before the Germans captured the town—now retaken by the British. Fénelon wrote one of the most famous novels of the eighteenth century—"The Adventures of Telemachus," an account of the son of Ulysses. At Cambrai was concluded a very curious treaty, the so-called "*Ladies' Peace*," between Louise of Savoy and Margaret of Austria, representing France and Austria, respectively, in 1529. At Arras was born the celebrated leader of the French Revolution, Maximilian Robespierre, who organized the Reign of Terror by which he himself was finally to fall. Valenciennes no longer made the beautiful lace which its name suggests, but was a center for the manufacture of hosiery, trimmings, and handkerchiefs. It was the birthplace of two famous men—Watteau, whose paintings are regarded as perhaps the most characteristic products of French art in the eighteenth century, and Froissart, whose chronicles of the wars of the Middle Ages are full of movement and color. Near by is another famous town—Douai—whose name is joined with a version in English of the Bible prepared for the special use of the Catholic Church.

QUESTIONS

1. Locate on a good map of France the towns mentioned in this article.
2. If you are reading Caesar, discover whether the important towns and places mentioned by him have any modern equivalents, and what cities to-day are on sites that Caesar describes as existing in his day.
3. Give an account of the services of Lafayette to the American cause. Invent a little drama in which the Duke of Cumberland, Lafayette, and others figure, basing it on the facts given under the heading of Metz.
4. Find an English version of La Fontaine's "*Fables*" and bring to class a report upon them. Be prepared to read the most interesting of the tales.
5. Describe vividly the life of Joan of Arc. Read, if you can, one of the following books and bring to class a report upon it: Mark Twain's "*Personal Recollections of Joan of Arc*," Andrew Lang's "*The Monk of Fife*," or Justin H. McCarthy's "*The Flower of France*."
6. Read a few chapters from Fénelon's "*Adventures of Telemachus*," and state what you think are the differences between this and an average romance of to-day.
7. Bring to class, if you can, a few select passages from Froissart's "*Chronicles*."
8. Make a report on the life of Watteau, with illustrations if you can secure them.

LETTERS - AND - ART

HOW MUSEUMS HELP WIN THE WAR

FEARS HAVE BEEN EXPRESSED by the director of the Metropolitan Museum of Art, Dr. Edward Robinson, that forthcoming economies and restrictions under the spur of war-necessities may hit that institution. So far the Board of Estimate have not declared a retrenchment, but

but arm- and leg-guards. The use of these guards was suggested by a study of the British and French casualties, from which it appeared that more than 40 per cent. of the casualties suffered were leg wounds and about 33 per cent. were arm wounds.

"For months past a committee, composed of leading American metallurgists, has been investigating the question of the best metal or combination of metals for armor-making, and a particularly fine helmet-metal has been produced. The armor is made from models designed by a Frenchman who went to New York ten years ago as assistant to the curator of the Metropolitan Art Museum in that city, and was given charge of its collection of armor, which includes the famous Riggs collection, and is one of the best in the world. This Frenchman, Daniel Tachaux by name, is one of half a dozen men who alone in the world know much about armor, and he is the descendant of a French family of armorers going back without a break to the Middle Ages.

"Strangely enough, his models are almost identical with those of that period, for it has been found that there is scarcely a technical idea brought forward to-day from experience on the front that was not worked out in elaborate detail by the old-time armor-makers, whose lore he has at his fingers' ends."

The Museum's latest bulletin deals with the educational activities of the institution in preparing American industry to compete with manufacturers abroad, not only in the quality of their goods, but also in design and artistic value. "If we were here simply to amuse the public," says Dr. Robinson, "a reduction in the city's aid would be justifiable at this time, but we desire to show the city authorities that we are carrying on a really vital work of education of great scope." The *New York Times* expresses its belief that "never before in its history have these activities been so important to the nation, or carried on with so impassioned a zeal by a staff fully aware of their national importance." Going further:

"We are winning the war. The British, the French, and the Americans sweep forward. Not since the autumn of 1914 have we had so much to encourage thoughts of what may happen after the war is ended. It is necessary, therefore, to use all possible energy in strengthening our resources and making ourselves nationally independent in the industrial field. For this we need the museums, and especially the museums of art. Nowhere else can we get that education of the eye and

hand which is necessary to produce superior fabrics, dyes, and designs, and unless we do produce superior things we shall not hold our own with European nations after the war.

"Every one knows the value to France of her art instinct, but not every one has guessed that with our varied population and our opportunities for study we can make all those things into which art enters as interesting and as valuable as they are in any country in the world. All that is necessary now is the cooperation of the merchants. As soon as they understand that art is as important to business as business is to art they will see the propriety of educating their buyers and salespeople in art as in other branches of a business career. A number of the more intelligent and progressive merchants already are aware of the situation, and with admirable business sense have arranged to have their employees take the Museum course in their special problems during business hours. Quite recently Richard F. Bach, Curator of the School of Architecture in Columbia University, has been admitted to the staff of the Metropolitan

Copyrighted by Publishers' Photo Service

THE METROPOLITAN MUSEUM'S CHIEF ARMORER,

Mr. Tachaux, who designed the protective armor worn by our boys in the trenches. He is using the old armor hammers and anvils after their centuries of rest. Our Museum's collection of ancient arms and armor is perhaps the completest in the world.

Dr. Robinson is ahead with a public appeal against what may happen. The Museum is not slacking in practical help in winning the war and preparing for our after-life in the new economic world. Such an argument may touch those who would remain unmoved by the assertion that the mere esthetic beguilement it affords in such troublous times has its practical values. That the Museum is at work evolving armor for our troops in France has been already made known so widely that the novelty and interest of the report reach as far as the *Manchester Guardian*, where we read:

"Armor for the American soldiers in France and Flanders is now being made in large quantities in various factories in the United States, and soon will be in use at the front. No fewer than twenty-five different types of armor defenses have been experimented on, including not only helmets and breastplates,

Museum for the express purpose of meeting the needs of manufacturers, dealers, designers, artisans, and manual craftsmen in objects of industrial art, and rendering accessible to them the resources of the collections in terms of their own particular problems and requirements.

"We shall need, of course, a wider education for designers and craftsmen than the museums can supply. We shall need schools and more schools. They will be forthcoming. In the meantime we have the museums and must use them if we are to be in time with the great business of making industrial art 'pay' in every sense and from all points of view. The Metropolitan Museum is putting forth its whole strength intelligently and helpfully to do its part in strengthening our industries and making them permanently important to a civilization that has denounced barbarism and all its works. The public needs only to know of its activities to appreciate the spirit in which they are conducted. It would be the part of wisdom for the staff of the Museum to circulate as widely as possible this month's bulletin, which has its stimulating message for every citizen of the United States."

The Bulletin also expresses the firm conviction of the Museum's directors that in the varied forms of educational work "the Museum is performing a war-time service, the worth of which will be realized more fully when peace comes and brings with it a readjustment of values."

LITERARY PROPHETS WHO FORESAW OUR DAY

LITERARY ANTIQUARIANS are finding all kinds of prophecies covering events of to-day, and some of them are enough to awaken the spirit of marvel in view of the remote contingency as to the day of fulfilment. For example, what could have put it into the head of George Sand seventy-two years ago that American forces would ever occupy French soil? Mr. J. S. N. Davis sends to the *New York Times* this literary find:

"George Sand, in her novel '*Mauprat*,' written in 1846, puts into the mouth of *Bernard Mauprat*, in about the middle of the fifteenth chapter, the following words:

"In his (*Marcasse's*) dreams he used to see an army of victorious Americans disembarking from numberless ships, and bringing the olive-branch of peace and the horn of plenty to the French nation," etc.

"*Mauprat* in his old age is telling the story of his life and was here giving an account of himself and friends, their doings and thinkings, while in America with Lafayette fighting for American freedom.

"It would be hard to find a more literal fulfilment of any written expression."

Tennyson's "*Locksley Hall*" places its author as a safer guesser in view of the declared determination of science to conquer the physical universe; but *The Catholic Citizen* (Milwaukee) thinks his vision of seventy years ago an "almost uncanny forecast" not only of "the present world-upheaval, but even the instruments of warfare developed in its course, and the result to follow Armageddon." It quotes this passage:

For I dipt into the future, far as human eye could see,
Saw the vision of the world, and all the wonder that would be;
Saw the heavens fill with commerce, argosies of magic sails,
Pilot of the purple twilight, dropping down with costly bales;
Heard the heavens fill with shouting, and there rain'd a ghastly dew
From the nation's airy navies grappling in the central blue;
Far along the world-wide whisper of the south wind rushing warm,
With the standards of the peoples plunging through the thunder-storm;
Till the war-drum throb'd no longer, and the battle-flags were fur'd
In the parliament of man, the Federation of the World.

The cue being given, another delver, a writer to the *New York Sun*, finds that in 1849 Victor Hugo, addressing the Peace Congress in Paris, foreshadowed the "United States of Europe." Mr. Isaac Markens comments before quoting the French poet that "Germany's subsequent rôle in the history of nations, more especially the theft of Alsace-Lorraine in 1871 and her Draconian policy of the past four years, leave no doubt of Hugo's attitude with respect to Germany's representation in the

proposed confederation, were he living to-day." Hugo then said:

"A day will come when you, France, you, Russia, you, Italy, you, England, you, Germany, all you nations of the Continent, shall, without losing your distinctive qualities and your glorious individuality, blend in a higher unity, and form a European

MODELS FOR ARMOR FOR OUR FIGHTERS.

They do not go quite so far in encasing our boys, but something in the way of breastplates have been devised from the ancient specimens in the Metropolitan Museum. This suit, dating from about 1550, is known as the Maximilian, and is said to suggest the family resemblance best typified to-day by the Crown Prince.

fraternity, even as Normandy, Brittany, Burgundy, Lorraine, Alsace, all the French provinces, blended into France.

"A day will come when war will seem as impossible between Paris and London, between Petersburg and Berlin, as between Rouen and Amiens, between Boston and Philadelphia.

"A day will come when bullets and bombs shall be replaced by ballots, by the universal suffrages of the people, by the sacred arbitrament of a great Sovereign Senate, which shall be to Europe what the Parliament is to England, what the Diet is to Germany, what the Legislative Assembly is to France.

"A day will come when a cannon shall be exhibited in our museums as an instrument of torture is now, and men shall marvel that such things could be.

"A day will come when we shall see those immense groups, the United States of America and the United States of Europe, in face of each other, extending hand to hand over the ocean, exchanging their products, their commerce, their industry, their art; their genius clearing the colonizing deserts, and ameliorating creation under the eye of the Creator.

"And to you I appeal, French, English, Germans, Russians, Slavs, Europeans, Americans, what have we to do to hasten the coming of that great day? Love one another. To love one another, in this immense work of pacification, is the best way of aiding God. For God wills that this sublime will should be accomplished."

ARE YOUR DISKS SLACKING?

SLACKER IS THE TERM that makes everybody shudder, so everybody who owns phonograph records will hasten to place them outside the pale of such imputation. A Phonograph Records Recruiting Corps—name it a "P. R. R. C.," if you wish to add to the war's confusions—has been organized

been the subject of so much admiring comment, is in no small measure due to the musical stimulus they have had.

"If music is not available in one form, it must be made so in some other. That is one reason why, almost as soon as I landed in this country, I accepted the invitation extended to me by Mr. Burnett to join the P. R. R. C., which has undertaken the task of coordinating the efforts of other organizations and individuals to equip local camps, transports, and overseas forces with an ample supply of phonographs and records. The demands coming in from men in the trenches, on shipboard, in aviation-camps, and in hospitals abroad are sufficient to absorb a round million records, with machines and needles—and yet leave some requests unfilled."

In a corner of the red-triangle hut, says Dr. John R. Mott, in *The American Magazine*, a phonograph grinds endlessly, day and night. "If only you could see one of those over-worked phonographs, you would go down in your pockets for the price of a hundred of them and ransack your records for every one you could spare." Jerome Swineford, in the columns of the *New York Times*, offsets some possible misconceptions:

"Down in the 'Y' buildings at Norfolk and Portsmouth, at the big naval hospital and the St. Helena

Training Station, it is absolutely pitiable to see the worn-out records that are still being used—because there aren't any new ones. Don't think for a minute that the records are treated carelessly. Oh, no, they are far too precious for that. They are simply used over and over until they are completely worn out.

"My work brings me in touch every day with hundreds, sometimes thousands, of enlisted men of the Navy. I wish the folks back home could realize the great part that music plays in the lives of these men and their absolute hunger for it. If they did realize it there wouldn't be any need to ask for records—they would come in by thousands."

A LINE ON THE GERMAN LINES—What sort of irony the Germans were putting over when they named their lines behind the Hindenburg puzzles the *Boston Globe*. "Their choices are anything but happy," it thinks, and names "the queer headline: 'a 'Wotan' line, an 'Alberich' line, a 'Siegfried' line, a 'Brunhilda,' even a 'Hunding' line.'" Do all things German look alike to Huns?

"The question instantly arises whether the German Staff ever perused the four librettos of Wagner's Nibelung Cycle. *Hunding* was a shocking cur, and so intended to be played by the post-composer. *Alberich* was a sneak and a villain. *Siegfried* came to a violent and untimely end. *Brunhilda* mounted his funeral-pyre and was consumed in the flames.

"*Wotan* is the most unlucky choice of all. In the 'Ring' operas he figures as the captain of those heathen gods who had so snarled up his own laws and violated his own codes that there was no escape for him from the ruin of his own creation.

"But the joke has still a keener edge. If any German genius of the last century was anti-Hohenzollern, it was Richard Wagner—he who, with the Socialist, August Roedel, and the Russian anarchist, Bakunin, mounted the revolutionary barricades of Dresden in 1849; he, who had to flee from a Prussian vengeance and dwell in exile for twelve years."

Photo by the Press Illustrating Service.

HOW THE PHONOGRAPHS AND DISKS ARE APPRECIATED IN THE CAMPS.

The boys enjoy the entertainments best which they provide for themselves; and here we see an act in rehearsal that is sure to go over the top. The singer is accompanied by the machine.

to call on you to stand and deliver, and this will be done between October 26 and November 2, when every convenience will be afforded you to extricate yourself from the slacker class. The *New York Times* tells us that "the new movement has associated with it nearly two hundred persons of distinction in musical, social, and public life." There are opera-singers, artists, and major-generals, to say nothing of ordinary men in the street. Mr. Vivian Burnett heads the movement. *Musical America* shows how the country-wide canvass for machines and disks will be made:

"The system involves the formation of local committees, which will cooperate with the committee, with local dealers, and with workers for the various welfare agencies. By posters, circulars, and other display matter, public interest will be aroused so that the week chosen for the special 'Draft Your Slacker Records' campaign—October 26 to November 2—will be an unqualified success. Approximately five hundred such local committees have formed and are at work. The central committee at 21 East Fortieth Street, New York City, will be assisted in working out the problems of assorting and distribution by an advisory council composed of members from the Y. M. C. A., Y. W. C. A., K. of C., Jewish Welfare Board, Salvation Army, and War Camp Community Service."

Mr. Walter Damrosch, recently returned from a tour in France with first-hand information about the Army's needs in the music line, corroborates in *The Outlook* (New York) the fundamental principle of the movement, that "music makes morale":

"Any man or woman who helps now in the immense task of providing musical entertainment for our fighting men is contributing directly to that driving force which is sweeping our armies 'over the top' to ultimate victory. Our men have been, and increasingly will be, provided with the inspiration which music gives, and the morale of the American forces, which has

A FRENCH LEADER FOR THE BOSTON SYMPHONY

INTEREST HAS BEEN ACUTE in the musical world to know who would guide the coming seasons of the Boston Symphony Orchestra. Karl Muck being safely disposed of, it was out of the question to choose any one who could possibly plunge this great musical organization into another such plight. To go abroad seemed safer, though musicians of sufficient caliber were doubtless already on this side of the ocean. For a time it was thought that Sir Henry Wood might be the one, and London papers had even sounded a note of mournful farewell, when their fears were set at rest by the conductor's reversal of his decision. Now it is definitely announced that France is to furnish the man, and "one of the most eminent of French conductors and composers," Mr. Henri Rabaud, is he. The French Ministry of Fine Arts expresses its appreciation of the appointment, and cities like Philadelphia, New York, and others which the orchestra visits feel no doubt that while he wields the baton the Boston Symphony concerts will renew their old popularity. The *Philadelphia Press* declares that the Symphony trustees "have not only secured a musician of first rank, but they have done much to wipe out whatever unpleasant associations the public mind may still have attributed to the orchestra since its former conductor's pro-German activities were alleged." To the *Boston Transcript* we turn for further introduction to the expected visitor:

"Americans who have frequented the Opéra, the Opéra-Comique, and symphony concerts in Paris will readily recall Mr. Rabaud—an unusual and pictorial figure, whether he was conductor or only intent listener, tall, gaunt, bearded, olive-skinned, grave of glance and quick of gesture, oriental rather than Parisian in impression to the eye. None the less, he was born in Paris in 1873, the son of a professor at the Conservatoire. In that school he was educated as a musician and in the nineties began the practise of his calling in Paris. As conductor he served with increasing skill and reputation at the Opéra, at the Opéra-Comique, and in occasional orchestral concerts. As composer, he wrote symphonies, tone-poems, operas, and a single oratorio, 'Joh.' The second of his two symphonies has been heard relatively often in America—at the hands of the Boston Orchestral Club under Mr. Longy, of the New York Symphony Orchestra under Mr. Damrosch, of the Philadelphia Orchestra under Mr. Stokowski, and at the Worcester Festival last autumn. His symphonic poem, 'La Procession Nocturne,' has been less frequently played in the United States, but Mr. Longy ventured it several years ago in Boston, and it is announced for performance next month at the Symphony concerts. Of his three operas, only one, 'Marouf, Savetier du Caire,' produced at the Metropolitan last December, is known by actual representation in America. The other two, 'La Fille de Roland' and 'Par le Glaive'—heroic pieces drawn from the like-named plays of de Bornier and Richepin—have been heard only in Paris and, possibly, Brussels. In contrast, 'Marouf' recounts with no little humor and fantasy a fable from 'The Arabian Nights.'

"As composer, Mr. Rabaud is neither academic nor ultra-modern. Rather, as his music for both the theater and the concert-hall suggests, he is eclectic, following no formula, but seeking such forms and procedures as best suit the substance, mood, and progress of his music. . . .

"'Marouf,' in the performance at the Metropolitan Opera-house, with Mr. Monteux as conductor and with a serviceable cast, made like impression of an eclectic mind and spirit in the composer. Again the reviewer for *The Transcript* wrote:

"If from time to time the hearer finds himself in doubt whether to take the piece as burlesque, or romantic comedy, or romantic tragedy, the fault lies with the music, which, when it remains one thing for any single extended passage, is usually capital. In the narrower, technical matters of modulation and orchestration, Rabaud seems impeccable. But in the problems of taste, of style, and manner, and in general of musical creation, he is strangely at sea. One can enumerate half a dozen distinct strains of which the music is composed—a process never quite cricket and sometimes misleading, but in the present case unescapable. Massenet, Puccini, and the Russians, Lalo, Franck, and Charpentier, are all there, and in nearly equal proportions. The music is now suave with 'Thaïs'-like melody, now sparkling with the intricate harmonies of Dukas, now

throbbing with the breathlike accompaniment which we associate with 'Pelléas.' And except in a few passages, it never remains the same for more than a few successive seconds.

"In the problem of style, no less than this problem of manner, Rabaud seems to be at a loss to come to a clear realization of what he wishes to do. There are moments when the music seems to sparkle as in the old opera-bouffe of Lecoq and Audran. Yet even the early Wagner could not be more thunderously

LEADER OF THE BOSTON SYMPHONY.

Clear skies await the great orchestra under its new conductor, Henri Rabaud, the French composer and leader of the Paris Opéra orchestra.

expressive than is the composer in the passages, such as that of the threat to the vizier, which he chooses to take as dramatic. Again, *Thaïs* and *Louise* never told their loves more ardently than does the *Princesse* in her air in the fourth act. Whether the piece is to be dramatic, or pictorial, or humorous, or exotic, or frankly romantic, the composer never seems able to decide. Now he seeks florid expression, now the literalness of realistic comment in voice and orchestra, and again an accompaniment of symphonic breadth and proportions. It is in this latter style that he seems most happy, especially in the really brilliant passage describing the approach of the caravan in the last act."

But if Mr. Parker finds Rabaud myriad-minded as a composer, he has no fears for him as a conductor:

"Mr. Rabaud, like many of his predecessors, will come to the Symphony Orchestra from the opera-house rather than the concert-hall. Deservedly his Parisian reputation as orchestral leader is high, if not signal; while here in Boston he will have forces, freedom, and opportunity such as he has never enjoyed before and such as are sure to stimulate him. He is a practised master of orchestral routine; he is diligent in rehearsal; he wins the respect and the good-will of his men, as he does, indeed, of all who come into close contact with him. By the warrant of his eclectic music his programs through twenty pairs of concerts with the Symphony Orchestra should be catholic enough to please the most exacting. Clearly, in all that pertains to music, he is open-minded. As plainly, by the token of his symphonic pieces and his opera of 'Marouf,' he lacks neither sense of rhythm nor sense of color—both essential qualities in a conductor. Above all, by many a sign on the pages of his music, Mr. Rabaud has a true Gallic lucidity of mind. He sets down unmistakably what he would say in tones and indicates as precisely the manner in which it should be said. A like sense of design, procedure, result, presumably distinguishes him as conductor. In the familiar phrase that orchestras apply to leaders whom they serve willingly, 'he will know what he wants and get it.'"

RELIGION-AND-SOCIAL-SERVICE

PRINCE MAX'S APPLIED CHRISTIANITY

THE DEVIL AS AN ADEPT at quoting Scripture probably foresaw a long line of legitimate succession, but few of his following can perhaps match Prince Max of Baden in the swiftness with which insincerity has been unmasked. As an interpreter of the Sermon on the Mount before the Baden Chamber of Deputies on December 14, 1917,

DER TAG.

"O good Saint Peter, that man killed us."

—Poulbot in *The Dystander* (London).

he may have made an impression even outside the confines of Germany. Ex-Ambassador Gerard has referred to him as one of the *gemüthlich* Germans, but the Prince's own disclaimers respecting his speech show him, as the *New York Times* observes, as "genuine German." What he was supposed to be doing before the assembly of his little principedom was "the task of making clear to a world horrified by German deeds the true goodness that lay behind them." Words like these were employed in his speech:

"If the world is to be reconciled to the greatness of Germany's power, it must be taught to feel that behind our power stands not merely a national but a world conscience. True, the whole history of spiritual Germany's feelings of responsibility to humanity shines like a beacon. This is the sign we must inscribe on our standard. In this sign we shall conquer."

He pleads that "not hatred of our foes, but rather love of Germany," should be the soldiers' true motive in fighting; and he won a regard outside his own land by declaring that "the sword alone" could not win for them. A letter comes into the possession of the Bern correspondent of the *London Daily Mail*, which, if genuine, furnishes the speaker's own commentary on his words, and the fact that his intellectual trickery pleased even the Kaiser himself. Taken in connection with his letters

to President Wilson, this one, says the *New York Tribune*, "strips bare the real intent of this canting sycophant." The letter cabled to the *New York Times* was written on January 12 to his cousin Prince Alexander of Hohenlohe to interpret the real meaning of his Sermon on the Mount speech. It read thus:

"I am astonished at the various interpretations put on my speech in various quarters. The Swiss newspapers read into it a sort of opposition between the Hohenzollerns and the Zähringers (the Baden royal family). How nonsensical this is is shown by the fact that the Kaiser—this is *entre nous*—sent me a telegram congratulating me and calling my speech 'a high feat.'

"On the one hand, the Pan-Germans fall upon me, utterly failing to perceive in their wrath that with my interpretation of Christianity I am really endowing their German swords with a German spirit by means of which they can conquer the world to their hearts' content. On the other hand, that hateful paper, the *Frankfurter Zeitung*, besmears me with its laudations, altho I clearly enough held up to scorn in my speech the popular outcry for 'democracy' and all current party watchwords, especially 'parliamentarism.'

"The world is out of joint and people's minds are unbalanced. Everybody is so hypnotized by these crazy ideas that I can not get them to take in earnest my words of practical common sense about applied Christianity and the desentimentalizing of the conscience of humanity as a whole."

The Prince had for many a long day, he confesses, been longing "to have a good dig at our enemies and to hold up to ridicule this affected judicial attitude of theirs in the matter of responsibility for the war as well as their care about 'democracy.'" For many a day also, he declares—

"I longed to confront them and their pagan tricks with the Sermon on the Mount, and together with this doctrine of love to set in clearer light the duty of the strong to guard the rights of mankind.

"Our enemies falsify the most sacred principles with their lies and libels, and we allow ourselves to be influenced by their base machinations. The beginning and end of my speech were, therefore, concerned in rebutting the lies and false suggestions of the enemy's moral offense. As my object was also to laugh to scorn the democratic war-cry of the Western Powers, I had to come to a sort of compromise with my audience about our own internal affairs. As I quite decline to accept any such thing as Western democracy for Germany and Baden, I had perforce to tell my hearers that I perfectly understood their needs, but at the same time I could not but warn them that I had arrived at a sort of political platform which gives me liberty to follow paths I have marked out for myself.

"With regard to the peace question, I take up the same standpoint in contrast to the rulers of the Western Powers. My object was only to suggest the general mood in which such questions should be approached. The 'how' is of the greatest value because the 'what' is so difficult to define; for I, too, naturally wish for the greatest possible exploitation of our successes in contrast to the so-called peace resolution of July, 1917, which was a disgusting child born of fear and the Berlin dog-days.

"I wish to have the greatest possible indemnities, no matter in what form, so that after the war we may not be too poor. My view in these matters is not quite yours, for I am not yet in favor of anything more being said about Belgium than what already has been said. Our enemies know enough, and in dealing with such a cunning and astute opponent as England, Belgium is the only object of compensation which we possess.

"There you have, then, my own interpretations of my speech. 100,000 copies of which have been distributed as a leaflet for propaganda purposes. My speech is to be read as a whole if it is not to be misunderstood. I have a very poor opinion of the moral disposition of the rulers of our enemies as well as of the terrible lack of judgment among the people whom they rule. The baseness of their ideas is too shameful for words. We

Germans, on the other hand, sin by our stupidity, for both the Pan-Germans and peace resolutions are alike stupid things."

The Tribune recommends "any unpacified pacifist still dreaming of a regenerate and remoralized *Deutschtum*, proposing peace and reparation for the sins of its criminal caste," to consider well "this vivid self-portrait of the Kaiser's latest tool." *The Times* goes further lest one miss the irony of Max's charge of stupidity:

"The homiletic Max had actually been good enough to lift up Christianity, dethroned by Nietzsche as a form of 'slave morality,' to a creed worthy of Germany. Applied Christianity means that the victims of the German 'will to power' shall be consoled for their slavery by the thought that the conscience, not only of spiritual Germany, but of the world conquered by it, inspires the German sword."

"The unenlightened and inferior reader, deluded by theoretical, and not yet equal to applied, Christianity on the Prinz Max model might say that nothing more delightfully fatuous and characteristically German than the Prinz's discourse ever came from mortal lips. The commentary, assuming it to be genuine, as it sounds, is worthy of the text. Now, especially, when this fashionable aristocrat and cavalry officer is posing as the humble shepherd of a democratic flock, his kind words of nine months ago about democracy are sweet to hear. It irks him that that 'hateful paper, the *Frankfurter Zeitung*, besmeared me with its laudations, altho I clearly denounced, held up to scorn in my speech, the popular outcry for 'democracy,' and all current party watchwords, especially 'parliamentarism.'"

Certification of the genuineness of the "Max" letter seems to be given by a dispatch from Basel, saying:

"The *National Zeitung*, of Berlin, says that the letter written last January to Prince Alexander of Hohenlohe, which has just been published in Switzerland, should make Prince Maximilian's position intolerable and oblige him to resign. In this letter Prince Maximilian appears to be a man of doubtful sincerity who publicly defends democratic ideas which he laughs at in his private correspondence."

"It appears from other Berlin papers that the Chancellor's letter to Prince Alexander of Hohenlohe, his cousin, seems to have caused a debate on Saturday at the meeting of the Reichstag parties' delegates and that the question was to be further examined on Wednesday."

"*Vorwärts* alludes to this incident, remarking that the German Government called upon to bring about peace must be one about whose sincerity no doubt may arise."

ENGLAND'S STRAFER—How Germany visualizes the power she has so often invoked to punish England may be seen in one of her own posters. It has become common for us to figure her Gott, but we are dependent upon the exhibitions of Wotan formerly put forth in German opera. The *Chicago Sunday Tribune* prints a reproduction of a photograph taken in Germany of a red plate window glass. It was shown at the exhibition of war-curiosities which took place at The Hague on July 17 to 30 of this year. *The Tribune* explains:

"The Von Gott strafing picture stood at the back of the 'Gott Strafe England' table at the exhibition. This table was devoted entirely to various articles, such as desk accessories, glass and chinaware, and women's handbags and pocketbooks. All of these bore the inscription of hatred for the Briton, 'Gott Strafe England.' A picture of a clock also bore the message of hate, in the center of which a serpent, with its fangs protruding, helped along the gentle thought."

"The reader will notice in the reproduction that Gott is protected by the Prussian shield and waves the good German sword. A minute study of the photograph reveals that Gott's toes are spread apart, as if they, too, were itching to claw at the sons of Britain."

"Another feature of the exhibition was the photograph of a German poster showing the Kaiser seated in front of a table surrounded by his high military advisers, including von Hindenburg and von Tirpitz, father of the submarine warfare. The caption below this picture reads: 'Aus grosser Zeit,' which liberally translated means 'Great times.'"

"Still another exhibit in the collection shows a picture of the Kaiser modestly designated as 'a man with God.'"

ARE WE GROWING PROFANE?

THE "LOST BATTALION" furnishes us one of the famous stories of the war, and its leader, Major Whittlesey, one of its striking *mots*. When the Germans called on him to surrender, tho his force was lost in the depths of the Argonne forest and entirely surrounded, tho his men were

MADE IN GERMANY.

The German's idea of the Almighty, who punishes countries like England, which keep Germany from the sun.

famished and many of them wounded, with no prospect that relief could reach them, he shouted, "Go to hell!" And his men, despite their weariness and hunger, cheered so loudly that the Germans heard them from their observation-post. "The bit of profanity in the story," says the *New York Times*, "not even the most pious American would have deleted." Major Whittlesey's landlady maintains to an interviewer from the *New York Globe* that the officer "never was a swearing man." "Not a single oath have I heard from him in the seven years he lived here," she declares, "and I've seen him looking for a collar-button at that. But you wouldn't call his remark to the Germans swearing exactly—would you, now? It was just what I would call very good advice." The gentle forbearance of the Irish landlady is not shared by all observers of our Army's habit, tho much that is reported as profanity may belong in the category of what *The Globe* calls "the young major's classic reply," which, it avers, "will go down into history as one of the most picturesque incidents of the war." Mildly by the lay press, but alarmed by the religious, the question is asked if we are "to be forced into a state of mind that will make profanity popular." Mr. Charles M. Schwab is reported to have used the word "damn" three times within twenty-four hours in addresses and interviews in Philadelphia, and "used it quite frankly for the tang and meaning it gave his sentence," says that city's *Evening Public Ledger*. It turns the matter over:

"The word has an appeal of its own. It has music and

force. One can hardly talk of the Kaiser without seizing on it. *Vide Briggs*. There are in legitimate English terms adequate for any shade of meaning, for any degree of force. But they aren't profane. And it is for the suggestion of profanity that the average speaker aches when he has to discuss the Hun. Nothing less will do."

The Ohio State Journal (Columbus) notes also the plentifulness of the words "hell" and "damn," during these days of war, and hopes "they will not grow in size and terror." For—

"In fact, anything worse actually weakens the impressiveness of the language. It is going to be hard to get rid of the 'hell' and 'damn,' even when the war is over, but it is hoped a less provocation will do away with these expletives. . . . These words are war-expletives, and so when peace returns the avoidance of them will come with it, for the purity of language is one of the conditions of peace. He who swears, even mildly, is at war with humanity. Any first-class psychology will tell you this."

The practise does not even find justification in good war-psychology, says *The Universalist Leader* (Boston), tho it confesses to the "pretty generally accepted notion that the soldier has a special commission to swear." "In Shakespeare's day he 'swore a prayer or two' on waking, and since then he has the reputation of swearing about all the time." But—

"This war is a revelation of an evolution; it has been discovered that a man physically and morally healthy makes a much better soldier, and the leader of our armies in France, General Pershing, insists that one of the biggest factors in warfare is the spiritual development of the men. General Pershing does not swear; he used to in moderation, but he quit it, as he said, 'because it is useless and it shows lack of self-control, and the perfect soldier must have perfect control of himself.' We are wondering if the soldier has not defined this habit for those outside as well as those inside the ranks! Swearing reveals the lack of self-control, and self-control is essential to success anywhere."

The Watchman Examiner (Boston) seems to move in a whole world of blue smoke, for it feels that "if the overthrow of Germany and the Kaiser could be brought about by the volume of vociferousness, of verbal damning, the war would have been at an end long before this and the boys at home again," for—

"Such a flood of profanity, such exuberance of imagination in the devising of new forms of cursing, such abandon even on the part of good people to the delicious thrill of being able to say naughty words without censure or rebuke the world has never before seen. And the Kaiser is at the center of the maelstrom, the target of the universal execration. Newspapers carry cartoons showing various disagreeable conditions resulting from the war, ending with a picture in which the victim of these conditions is represented as shouting vehemently, 'Damn the Kaiser!' Automobiles go about the streets with red labels on their windshields bearing the startling words, 'To hell with the Kaiser!' The movies feature shows with the same lurid title. In ordinary conversation mild-tempered men and gracious women startle you with expressions concerning the war that barely, if at all, escape the profane. It would almost seem that as a people we are coming to regard profanity and patriotism as practically synonymous, and to gauge the depth and sincerity of a man's love of country by the fluency and force with which he swears at Germany and the Kaiser."

"Perhaps the most singular—certainly from a religious and Christian point of view the most deplorable—feature of the situation is the way in which and the degree to which this delirium of thought and speech is entering into and taking control of the Church. The war seems for some of us to have jostled old ideas and demolished established standards, and to justify some things that we formerly considered wrong, and that in our innermost souls we still know to be wrong, terribly wrong. Hatred seems to be glorified when its object is the Hun. . . ."

"The Church and the ministry have to-day an unparalleled opportunity to demonstrate the fact that there is a difference between the spirit of Christ and the spirit of the world, but they can do it only by exhibiting the one in contrast to the other, not by bringing it down in conformity thereto. Let the speech of Christians in these terrible times be Christian. Let the message of the pulpit be pitched in higher key than the shoutings of the street. Nowhere should the note of patriotism, the love

of the flag, the passion of sacrificial service of country and right and honor, be more strongly struck and persistently emphasized than in Church and pulpit. But we need to remember that the supreme urge is the setting forth in clear vision of vital principle, and not the clamor of hot and angry words. Swearing at the Kaiser is not the ultimate exemplification of loyalty, and profanity is not a synonym for patriotism. The wide prevalence of this vicious habit may reveal commendable intensity of conviction, but it also reveals a reprehensible forgetfulness of fundamental religious principles. Let us do more and swear less."

TO-DAY'S FATALISM CHALLENGED

A RENEWED CHALLENGE to fatalism is one of the spiritual by-products of this war. Boys in khaki are said to be going to the war with a belief something like this: "I was born in the year which makes me a draftee in this war. I must go because I am of proper age. I will be in certain battles; bullets and shrapnel will fly all about me, and I will be in constant danger of wounds and death. I can not help the danger. No use. I am fated either to escape the death or to be killed. Cause and effect determine all things." This formulation of doctrine is made by the Rev. Vernon Wade Wagar in *The Western Christian Advocate* (Cincinnati), who wonders if Christianity has no other belief for the brave people of this hour. He asks:

"Is every event so predetermined that it must happen inevitably? Are we to be resigned to an Omnipotence without a character? The Chaldeans believed the stars were a book of destiny. Born in a certain relation of certain stars, your life must turn out in a certain determined way. The Stoics also took faith in this absolute necessity which controls every life. Mohammedanism is a fatalistic religion—no accidents are possible; any defense or provision against possible danger is futile. Against Mohammedanism, our heaviest competitor, and the war-fatalism Christianity is having a struggle to the last ditch."

"God pity the soldier lad or the parent of such a lad who resigns himself to such a deadly thought. This is the hour of living hope. Imagine the psalmist becoming a fatalist in peace or war. We would never have heard of his song of despair. But because of his hope in God he still sings to us of his needy day. Hear him: 'Bless the Lord, O my soul; and all that is within me. Bless the Lord, O my soul, and forget not all his benefits; who forgiveth all thine iniquities; who healeth all thy diseases; who redeemeth thy life from destruction. . . ."

"He that dwelleth in the secret place of the Most High shall abide under the shadow of the Almighty.' . . ."

"Present-day experiences demand a surety other than the ordinary thinking will bring—the surety of Christian hope."

"The soldier or parent who constantly trusts God and lives the life of prayer to God and believes in God's personal care can do more for this hour of the world's Gethsemane than he who loses hope and says, 'Things must go as they go, and no one can help.' Hope helps with God, and there is a wonderful safety in this great expectation that is rooted in the promises of God."

The same theme treated from the lay angle by Mr. William Archer in *The Westminster Gazette* (London), puts the common-sense view with vigorous frankness:

"Fatalism is not specially the creed of the trenches; it is the creed, or rather the theory, of most thinking men. But to suppose that fatalism implies, inculcates, or in any way encourages foolhardiness is to show a total misconception of its meaning. If I step off the pavement on the left-hand side of the street without looking to see whether a motor-bus is coming up behind me, I am not acting as a fatalist, but as a fool. If I run useless and purposeless risks of catching, and probably spreading, an infectious disease, I am not a fatalist, but little better than a criminal. It is, in fact, a sort of negation of fatalism to let fatalism influence our actions. In a vague, illogical way, we imply that it lies within our choice whether to be fatalists or not, forgetting that the very fatalism which impels us to do this or that is as much a part of the web of our fate as any other factor in the complex of forces which determines our action at any given moment. It is the part of the wise man to act wisely in whatever conjuncture he may find himself, knowing that it is quite as futile for him to contrive how to fulfil his fate as to contrive how to evade it."

"With vigor and vim in body and limb—
Campbell's Tomato just keeps me in trim!"

cup, i. e., one-half pint or a large soup plate-
ful of milk soup flavored with vegetables
yields a little more energy to the body than
the same amount of milk. A thick meat
soup with pieces of meat and vegetables in
it, a fish chowder, or a rich vegetable soup,
such as cream of tomato, yields half again as
much energy as the milk.

So says the U. S. Dept. of Agriculture

The above extract is a *photographic reproduction* from the *Weekly News Letter* issued by the United States Department of Agriculture. Notice that it says a Cream of Tomato Soup yields 50 per cent. more energy than the same amount of milk. This fact—proven by the dietary specialists of the Department—is one evidence of the exceptional food value you get from

Campbell's Tomato Soup

It is not only a wholesome stimulus and appetizer but it has a special value in strengthening digestion and aiding the body processes which create energy and vigor.

By means of the improved Campbell method we retain completely the remarkable tonic properties of the fresh vine-ripened tomato in this tempting soup. And we heighten these qualities by skilful blending with other choice ingredients.

The contents of each can just as you receive it produces two cans of rich soup,

perfectly cooked and seasoned—ready to serve on your table in three minutes.

Simply by adding milk instead of water, you have a Cream of Tomato that is full of pure nourishment, delicious and economical. It involves no cooking cost for you, no labor, no waste.

You can make it even heartier by adding croutons, grated cheese, boiled rice or noodles. Served in any of these ways it becomes in itself a substantial part of the meal.

The practical way is to order *Campbell's Tomato Soup* by the dozen. In this way you save extra deliveries, and have it right at hand when you want it. How is your supply today?

CURRENT POETRY

HAPPY love has so long been a rare theme with the poets that one must search among preponderating numbers of darker subjects for any trace of it. Love-songs tinged with loss and death and war are in sad plenty, but the gaiety and joy of love have withdrawn to await a happier day. Yet here and there in the isolation that love still creates for itself, "where time has no place, in the realm of pure art," some pleasant diversions are to be found, such as this serenade from Arthur Guiterman's "The Mirthful Lyre" (Harper & Brothers)

SERENADE TO VIDA

BY ARTHUR GUITERMAN

When the slow
Afterglow
Leaves the hills of Ramapo
When above the river's flow
The owl is winging;
Pure as myrrh,
Breezes stir
Through the waving plumes of
Wafting balm of sleep to her
That knows my singing

Tender bright
Starry light
Softly touch her pillow white
Little voices of the night.
Uplifted clearly—
Cricket trill,
Whippoorwill,
Sigh of wind across the hill,
Echo through her slumber still.
"He loves you dearly!"

The Century Company has brought out in a little volume the "Songs to A. H. R." of Cale Young Rice, love-songs of dignity as well as beauty, from which we quote:

WHEN THE WIND IS LOW

BY CALE YOUNG RICE

When the wind is low, and the sea is soft,
And the far heat-lightning plays
On the rim of the West where dark clouds nest
On a darker bank of haze;
When I lean at the rail with you that I love
And gaze to my heart's content;
I know the heavens are there above—
But you are my firmament.

When the phosphor-stars are thrown from the bow
And the watch climbs up the shroud;
When the dim mast dips as the vessel slips
Through the foam that seethes aloud;
I know that the years of our life are few,
And fain as a bird to flee,
That time is as brief as a drop of dew—
But you are eternity.

From "Motley, and Other Poems"
(Henry Holt, New York) by Walter de la Mare, we take this song of magic:

INVOCATION

BY WALTER DE LA MARE

The burning fire shakes in the night,
On high her silver candles gleam,
With far-flung arms enflamed with light,
The trees are lost in dream.

Come in thy beauty! 'tis my love,
Lost in far-wandering desire,
Hath in the darkling deep above
Set stars and kindled fire.

The subdued gentleness that characterizes much of the poetry of Theodore Maynard, when he is not playing in his inimitable humorous fashion, may be felt in these lines from "Folly, and Other

Poems" (Erskine Macdonald, Limited, London):

NOCTURNE

BY THEODORE MAYNARD

When evening hangs her lamp above the hill
And calls her children to her waiting hearth,
Where pain is shed away and love and wrath,
And every tired head lies white and still—

Dear heart, will you not light a lamp for me,
And gather up the meaning of the lands,
Silent and luminous within your hands,
Where peace abides and mirth and mystery?

That I may sit with you beside the fire,
And ponder on the thing no man can guess,
Your soul's great majesty and gentleness,
Until the last sad tongue of flame expire.

In a small volume of preciousness both
in make-up and content, "Bohemian
Glass" (Blackwell, Oxford), appears this
poem of the inevitability of love in woman's
life:

QUI EMBRASSE S'EMBARRASSE

BY ESTHER LILIAN DUFF

Dreams or kisses—which to choose?
There is so much to lose.

Leave me my dreams. At least in Fancy's
treasury
My choice is free.
The silver moon depends so low that I
Tiptoe may pluck her from a sapphire sky
And hold her as a jewel: she is mine,
But all that made her beautiful is thine.

Leave me my dreams. Surely my castle by the
sea
Shall comfort me.
My songs, my roses, and my fantasies—
At least you will not beggar me of these.
Yet who should see my roses, tell me who
Should rule my castle, hear my songs—but you?

Leave me my dreams. For you—you have so
much
Life can not touch.
Let me forget—ah, for a little while—
That I have loved you, that I know your smile.
Surely some tender fancy of the night
May conjure up again an old delight,
But that all beauty dreams can fashion me
Does but reflect the loveliness of thee.

Dreams or kisses—which to lose?
In truth—I can not choose.

The same strain, in far different set-
ting, sounds in this poem from Margaret
Widdemer's "The Old Road to Paradise"
(Henry Holt, New York), and the writer
has cleverly added to the poignancy of the
poem by casting it in Celtic mold:

"MARY, HELPER OF HEARTBREAK"

BY MARGARET WIDDEMER

Well, if the thing is over, better it is for me,
The lad was ever a rover, loving and laughing
free,
Far too clever a lover not to be having still
A lass in the town and a lass by the road and a
lass by the farther hill—
Love on the field and love on the path and love in
the woody glen—
(Lad, will I never see you, never your face again?)

Ay, if the thing is ending now I'll be getting rest,
Saying my prayers and bending down to be stilled
and blest,
Never the days are sending hope till my heart is
sore
For a laugh on the path and a voice by the gate
and a step on the shieling floor—
Grief on my ways and grief on my work and grief
till the evening's dim—
(Lord, will I never hear it, never a sound of him?)

Sure, if it's done forever, better for me that's wise,
Never the hurt, and never the tears in my aching
eyes,
No more the trouble ever to hide from my asking
folk

STYLE HEADQUARTERS
Where Society Brand Clothes are sold

THIS sign identifies the "Style Headquarters" in your town. It's the store to go to for the smart things in men's wear.

Society Brand Clothes

WE don't ask you to expect less of Society Brand Clothes than you did before the war. Whatever sacrifices have had to be made to uphold their dominant quality, we have made.

So today you can go to "Style Headquarters" and slip on a Society Brand overcoat—or suit—knowing that you are getting clothes that are just as good, and styles that are really *more* attractive than any you have had.

We offer you the highest degree of hand tailoring that your money can buy—and style that stays in because it is built in. The store that sells Society Brand has the courage to pay our prices knowing that cheaper clothes would cost you more per year and never make you look so well dressed.

Always look for the label—Society Brand—when you buy a suit or overcoat. It's our pledge to you of unqualified satisfaction.

Take a moment to write us for the Winter Style Book.

United States Tires are Good Tires

Two Ways of Doing Business

One is to make a product along the lines you lay down and ask the public to accept it for their own use.

The other is to study the needs of the public and then to design and build a product exactly suited to those requirements.

Years ago, we adopted the *second* policy. We believe it best for our customers and best for ourselves.

The line of United States Tires for passenger car and light delivery use consists not of one tread or two treads—but five separate and distinct treads, covering every known condition of motoring.

'Royal Cord', 'Nobby', 'Chain', 'Usco', and 'Plain'. Also two for trucks—'Nobby Cord', the premier heavy-duty pneumatic, and the Solid Truck Tire.

Each is the development of years spent in studying the specific conditions which must be met in all sections of the country. Each has the super-strength and dependability which our 76 years in the rubber business have taught us to build into tires.

No matter what car you drive or what roads you travel there is a type of United States Tire to give you supreme service.

*United States Tubes and Tire Accessories Have All the
Sterling Worth and Wear that Make United States Tires Supreme*

Beat of my heart at click o' the latch, and throbs
 If his name is spoke;
 Never the need to hide the sighs and the flushing
 thoughts and the fret,
 And after awhile my heart will hush and my
 hungering hands forget. . . .
 Peace on my ways, and peace in my step, and
 maybe my heart grown light—
 (Mary, helper of heartbreak, send him to me to-
 night!)

And here it is again in the distinctly
 lyrical muse of Ruth Pitter, in *The New*
Age (London):

SONG

BY RUTH PITTER

The end of true love is to sit and mourn—
 Heigh-ho, the end of love!
 Under the shadow of the naked thorn,
 With his thin boughs above,

The end of true love is to lie and weep—
 Heigh-ho, to weep alone!
 On the cold bosom of the mountain steep,
 By a gray boulder stone,

The end of true love is to fare forth far—
 Heigh-ho, the empty ways!
 To the bare places where the great winds are,
 And there to spend his days,

The end of true love is a sorry end,
 Heigh-ho, the weary death!
 Marvel it is that every man should tend
 Poor love, that vanisheth.

Love's is a life not any leech may save;
 So, since he's fair,
 And thou must full soon lay him in his grave,
 Be love thy care.

Curiously enough, we find this more
 philosophical statement from the man's
 point of view in *The Anglo-Italian Review*
 (London):

TO—

BY GERALD CHOW

Can't we be brave about it? You can't measure
 Love by mere days.
 It has an end, and years or days of pleasure
 Are all one then. Just having loved is treasure
 For us always.

The little time we had was time enough.
 Yea, if we keep
 Strong hold on this intense possession of love,
 They can not hurt our happiness thereof
 Nor make us weep.

It is enough. Let us be comforted
 Considering this.
 They can not silence one word we have said,
 Or take away from us alive or dead
 Even one kiss.

In his collection "City Tides" (Doran
 & Co.), Archie Austin Coates views the end
 of love otherwise:

THANKS

BY ARCHIE AUSTIN COATES

For all the murmured words you did not say,
 And all the hours beneath the star-shot blue
 Unspent by us; and for the gold and gay
 Midsummer noons we never shared . . . my
 thanks to you.

Ay, and for all the messages of cheer
 And tenderness unsent, and for the true
 Deep gaze of understanding, that the drear
 And gray beclouded days found not . . . my
 thanks to you.

For all that might have made our few days rare,
 But which you did not give, my thanks are due:
 For you have made an ending I could bear,
 Which otherwise had rent me, so . . . my thanks
 to you.

Love lost and saved by death is the more
 timely and beautiful subject for poems

of regret. *The Enterprise*, of Beaumont,
 Texas, publishes such a one:

WHILE SUMMERS PASS

BY ALINE MICHAELIS

Summer comes and summer goes,
 Buds the primrose, fades the rose;
 But his footfall on the grass,
 Coming swiftly to my door,
 I shall hear again no more.
 Tho a thousand summers pass.

Once he loved the clovers well,
 Loved the larkspur and blue-bell,
 And the scent the plum-blossoms yield,
 But strange flowers his soul beguiled,
 Pallid lilies, laurels wild,
 Blooming in a crimson field.

So he plucked the laurels there,
 And he found them sweet and fair
 In that field of blood-red hue;
 And, when on a summer night
 Moonlight drenched my clovers white,
 Lo! He plucked Death's lilies, too.

It may be that e'en to-night,
 In the Gardens of Delight,
 Where his shining soul must dwell,
 He has found some flowers more sweet
 Than the clovers at my feet,
 Some celestial asphodel.

But while summer comes and goes,
 With the primrose and the rose
 Comes his footfall on the grass—
 Gladly, lightly to my door—
 I shall hear it echo o'er,
 Tho a thousand summers pass.

The story is told very delicately in this
 poem from *The Century*:

SONG

BY EDWARD J. O'BRIEN

She goes all so softly,
 Like a shadow on the hill,
 A faint wind at twilight
 That stirs, and is still.

She weaves her thoughts whiteily,
 Like doves in the air,
 Tho a gray mound in Flanders
 Clouds all that was fair.

Poet Lore has this message from the
 soldier-lover:

L'ENVOI

BY ALISON HASTINGS

The thousand things I could not say
 Before I crossed the sea,
 Dear love, the words I could not speak,
 And all you are to me;

The thousand dreams I could not dream
 When Life for gold did dance,
 Are Life to me, dear love, since Death
 Became a dream, in France.

The thousand things I can not write,
 The things that I would do,
 Shall all be yours, dear love, when God
 Shall send me home, to you.

Love at its highest and purest is here:

LOVE'S LANTERN

BY JOYCE KILMER

Because the road was steep and long
 And through a dark and lonely land,
 God set upon my lips a song
 And put a lantern in my hand.

Through miles on weary miles of night
 That stretch relentless on my way
 My lantern burns serene and white,
 An unexhausted cup of day.

O golden lights and lights like wine,
 How dim your boasted splendors are.
 Behold this little lamp of mine:
 It is more starlike than a star!

What More Can Soles Do?

The wear you get
 from Neolin-soled
 shoes is surprising.
 And they're so flex-
 ible they make walk-
 ing very easy. Water-
 proof, too.

Neolin Soles

Trade Mark Reg. U. S. Pat. Off.

Created by Science—to be
 what soles ought to be. They
 come on new shoes of all styles
 for men, women and children,
 and are available everywhere for
 re-soling and half-soling.
 Always marked: Neolin

PERSONAL GLIMPSES

LEARNING TO RUN A RAILROAD IN THE DARK

PICTURE a pitch black night with the wind roaring and dashing sheets of rain into your eyes, to the accompaniment of thunder and lightning; and you on a tiny train where every car is full of high explosives; the track may have been shattered since the last train passed, and you may drop into a yawning crater-hole, you and your dangerous freight. To that add the fact that there must not be a glimmer of a light and you will begin to understand why they train men, especially for the battle-line railroads.

Where? In Camp Sherman, where the "R. N. & T." serves the camp and trains men for a service which saves many precious lives and helps along the good work of "licking the Huns." Seen in some park, it might be taken for a children's road; but it isn't; it's a real man's road.

In its early days, some nine months ago, it used to break down and carefully avoid running on schedule time, so the boys christened it "R. N. & T.," which, being translated, means, "Runs Now and Then." *The Railroad Man's Magazine* tells us it is now quite a model road used to train men for work at the battle-front. We quote:

Officially the road is a narrow-gage "dummy system," used to haul camp-supplies. Obviously so, but its most important function is to train men of the Eighty-third Division to do this sort of work in France.

It required a master mind to conceive this invaluable practise for Uncle Sam's men before being sent to France. Lieut. Bond S. Neff, in charge of camp transportation, is the creator and general manager of the R. N. & T.

With all the pride of craft of a general manager of a transcontinental line, he leads the way to the little round-house, and shows you his varied types of cars. Yes, they're little, but the life of your boy and my boy may be saved through training with these toys. And Lieutenant Neff is seeing that the training is thorough.

The R. N. & T., Lieutenant Neff explained, has ten miles of track of two-foot gage, this being the type used in Europe for transportation to the front-line trenches.

The road circles the camp, with spurs to essential points, such as the rear of the great storehouses.

Work on its construction was begun last July, when they began building; and it proved very useful in hauling lumber and other supplies for the camp.

Now that Lieut. Bond Neff has the work well in hand and has turned from sending big Moguls over mountains, at a seventy-mile-an-hour clip, to operating trench-dummy railways, he claims he could put such a system into place anywhere in half a day, and would require only twenty-five men to help him do it, for he uses track that is portable and which can be laid over any type of country.

This track comes in sections fifteen feet long; steel ties are employed, and almost as soon as they are dropt at the point where wanted, the track is ready to lay.

Here at Camp Sherman, the dummy rail-

KAPOCK
—draperies for economy

Considering the long life of their silk-like beauty and velvety touch, their soft colorings and individual character, you can find no better material for your Fall draperies than "KAPOCK" Drapery Fabrics.

Leviathan-Anaconda Belting

FOR POWER TRANSMISSION, CONVEYING AND ELEVATING

Keep the Home Wheels Turning

THE great army of labor is out to win the war for America. It asks for tools and for efficient power with which to run them.

The intelligent worker knows that his eight hours of steady labor may become equal to only seven hours or even less just because of a slipping, or an inefficient belt.

For his own protection he has learned to know the good belt by name.

War-workers everywhere know Main Belting Company's Leviathan-Anaconda as the belting that is helping them increase their daily average output.

Because of toughness, freedom from stretch and slip, resistance to heat, steam and chemical fumes, Leviathan-Anaconda might be called "Liberty Belting," particularly adapted to winning the war.

However, no *scientific* belt can be an every-purpose belt. For this reason we are listing the uses for which Leviathan-Anaconda belts are made and for which no belts of any material are their equal.

Industry	Uses	Specific Advantages	War Work
Brick Yards	Throughout	Toughness in resisting abrasion	All fire brick
Stone Plants	Throughout	Toughness in resisting abrasion	
Sand Plants	All uses except conveying wet sand	Toughness in resisting abrasion	
Mining	All uses except elevators and conveyors handling wet abrasive materials	Toughness in resisting abrasion	Wholly on war work
Fertilizer	All uses except direct contact with acids	Ability to resist fumes and drying dust	Wholly on war work
Cotton Oil	Throughout except serpentine later drive	Does not dry out	Wholly on war work
Lumber Mills Saw Mills	All uses except small pulleys and belts running over 6000 feet per minute, or drives frequently shifted	Stands exposure to weather. Stands up under sudden shifting loads	Shipbuilding Aeroplane parts Cantonments
Woodworking Mills	Throughout with exceptions as above	Even running at high speeds	Shipbuilding Munitions Aeroplane parts Cantonments
Textile	Throughout except small pulleys and frequently shifting drives	Lack of stretch. Even running. Resistance to moisture in dye houses	Uniforms
Powder Chemicals	Throughout except small pulleys and direct acid contact	Load pulling ability. Resistance to acid fumes and moisture	Wholly on war work
Shoes	Throughout except brush shaft drives	Keeps production up to standard through elimination of slip	Army shoes
Machine Shops	Everything except small pulleys or too frequent shifting	Increased production through lack of stretch and slip. Especially efficient on drop hammers. Resistance to sudden shocks, heat, dust. Resistance to abrasion and taking up load, especially on tumblers	Ordnance Munitions
Forge Shops			
Foundries			Transport and Supplies
Steel	Everything except hot saws	Eliminates shutting down rolling mill and other important drives to take up stretch	Wholly on war work
Pulp and Paper	Throughout except small pulleys	Resistance to moisture and steam	Export Packing
Tanneries	Throughout except small pulleys	Resistance to chemical fumes, heat—hard, slow pulls	Army equipment
Canners	Transmission throughout	Resistance to heat, moisture, weather conditions	Wholly Army supply
Flour and Grain	Throughout except small pulleys	Retains pull and pliability under drying dust	Foodstuffs for Army and Allies

LINCOLN

The Motors That Run Under Water

This Lincoln Motor operating under water is more than a "stunt" to catch your eye—it is a practical demonstration of reliability.

Every day in hundreds of plants throughout this country Lincoln Motors are doing their work under conditions just as bad as this. In acids and fumes of chemical works, in the slop and steam of the packing house, in the dust and dirt of the foundry, in every place where motors are severely tried, Lincoln Motors have made good.

Many a skeptic has been converted to the use of electric motor drive in his factory by this simple, striking exhibition of what a really good motor will stand.

It is true that few plants require a motor to operate under such difficulties. Any wise plant manager gives a motor the best care circumstances allow, but there is a feeling of added security in a motor that such abuse cannot harm.

The LIBERTY JUNIOR Moistener and TIEDY Tape

Something New—worth while

WORTH while because the Liberty Junior Moistener and Tiedy Tape have countless time, labor and money saving uses in home, store and office.

Tiedy Tape is tough, pliable gummed tape that sticks tight and binds securely. A few of its uses are listed below. Many more will suggest themselves to you.

The Liberty Junior Moistener, besides moistening Tiedy Tape evenly and efficiently, also moistens envelope flaps, stamps, labels—gummed surfaces of all kinds. Made of white porcelain and brass, heavily nickel plated, it is sanitary and simple—a worth while labor, time and money saver for every home, office and store. (Price, without tape, \$1.50).

Tiedy Tape is furnished in rolls of various colors 250 feet in length, $\frac{3}{4}$ inch to 2 inches in width. Cost, per roll, 12 cents up.

If you cannot conveniently obtain Liberty Products in your locality, send \$1.80 and we will ship, prepaid, a Liberty Junior and two rolls of Tiedy Tape.

inches in width. Sent prepaid on receipt of

LIBERTY PAPER COMPANY

Mills: Bellows Falls, Vt. 52 Vanderbilt Ave., New York, N. Y.

way is equipped with ten gasoline locomotives, of three- and six-ton size respectively.

The trains of the baby railway can easily make thirty miles an hour if required, and no doubt will do so near the firing-lines. Here at Camp Sherman the usual speed is eight to ten miles an hour.

They use an electric search-light at night, with a beam much like that of an auto-light. But recently, when General Glenn came back from "over there," he insisted on having conditions as they are at the front, so now they are railroading at Camp Sherman in the dark, as they will do later in the war-zone. The men are forbidden to carry lanterns. Only a small pocket-flash is permitted, to use in coupling the cars, which must be done by hand.

The platforms and bodies of the cars are built by the soldiers themselves. As many as fifteen or sixteen cars are run in each train. The engines are able to haul sixty tons if necessary. Some power for their size!

These trains, small as they are, will be a mighty factor in success in the war. Given the order, Lieutenant Neff can have a ten- or fifteen-car train out on the line with five hundred men aboard, ready to move almost before you could say Jack Robinson.

The article points out that it is wonderful the amount of work that this baby road can do; the locomotives are of the gasoline type, the three-ton one using five gallons of "gas" for twelve running hours. To proceed:

"Operating a military train," Lieutenant Neff says, "differs from operating a civil train in that, in the case of the military, we go on the assumption that everything is unsafe, where, with the other, the case is exactly opposite. Here we assume that we must be supercautious in everything."

"We have one hundred and twenty men in our outfit, which is known officially as the Transportation Department, Narrow-Gage Detachment."

"The most interesting phase, on this side the sea, is, of course, the making ready for the work in Europe."

"For weeks, for example, we have been hauling all supplies at night, that is, well after actual dark, with no lights, to accustom the men to the conditions they will face over there. Overseas, you see," he explained, "all movements, if possible, are reserved till night."

"We will not take these trains along, as all equipment is furnished over there, even the personal equipment of the men."

"The drill in this night work is unique in all American railroading. The least possible noise—the greatest possible speed—the biggest effort to get there, is the rule."

"Once in Europe, we will camouflage the cars; or, better still, where possible, we will run the cars through the communicating trenches, probably even covering those over."

"The men are worked in day and night shifts, so that they may never lose alertness through exhaustion. We load in the afternoons, starting at 1 p.m., and then hold in the yards till dark. Usually this means about eight at night. Then the signal is given, and off we ride. Here at Sherman the camp is divided into four sectors and there is a regular train for each. Each man aboard knows where he is to run and where to drop the cars in his section."

"That, as soon as possible, will be the rule in France—utter familiarity with the route, night and day."

"We use a hand-switch, with ground-throw, when we must, otherwise the trains run on and on and on!"

Lieutenant Neff does not like to emphasize the big service the road he has built

is already doing the Government, saving it hundreds of dollars daily in moving supplies about the camp, for he is modest concerning his share in the achievement.

Instead, he likes to dwell on the value of the drill given, night after night, in rail-roading in the dark.

If you can manage, somehow, to get aboard one of these trains, you'll find enough lure and thrill to it to satisfy you. Riding into the black pall of darkness, hearing the sentries challenge, seeing gleaming bayonets pointed your way, where a pale moon for an instant reveals a sentry, then you are through the lines—and glad of it.

The men are working, as they say, on a road whose terminal is Berlin; they've got through tickets, and no Hun can stop them. To conclude:

The actual fighting man isn't the only soldier who is helping to lick the Hun. The merchant-sailor who mans the new ships of the United States Shipping Board, his Navy brother who serves the guns that protect him from the ever-present menace of the submarine, the soldier-stevedore who unloads the cargoes of munitions and supplies at a port "somewhere in France," the army railroader who hauls them to the zone of operations, and last, but by no means least, the boys in olive-drab who, on motor-trucks and narrow-gage railroad lines, take up food and ammunition to the men in the trenches—all are doing their bit, and doing it well.

The Service of Supply has its heroes as well as the actual fighting branches of the Army. It is for this most necessary work that Lieutenant Neff is training his men at Camp Sherman. And when they get "over there" they'll keep the wheels a-turning.

"COOTIES" ORGANIZED AS GERMAN SPIES

SCIENTIFIC investigation of the "cootie," that terrible plague of the Allied soldiers, reveals the fact that the beastie not only can talk, but that he is a trained German spy. By the use of powerful microphones the very chatter of the "cooties" has been recorded, and it shows to what depths of savagery and depravity the Huns can descend. At any rate, this is the report of Maj. D. Poan, in France, to Pierson W. Banning, secretary of the Sons of the Revolution in Los Angeles, as published in *The Herald* of that city. He says:

Our department has been cooperating with the medical department in investigating the "cootie." Strange as it may seem, we have come to the conclusion that the "cooties" are of German extraction and *Kultur*, and have been bred to a high state of development far beyond that which they assume in their natural wild state.

Not only has the medical department discovered that they carry trench-fever germs and many other cultures, but experimenting has shown them to have certain traits that, until recently, have been entirely overlooked, because unexpected. Not only do they have instincts that go with their species, but apparently by careful breeding by the Germans they have awakened new and unexpected possibilities.

We have finally confirmed what at first was considered mere coincident. Talk

This Column may mean loss of Production

It may be so placed that through inability to properly locate machinery there is a waste of floor space and attendant loss of factory efficiency.

STEELE'S IDEA

of industrial construction is to carefully study in advance of building all requirements of the business, then to make the plant exactly meet those requirements. Steele designs and erects the buildings, plans and installs the mechanical equipment, and guarantees the whole as *an efficient operating unit*.

Costing
12c to 13c
Contains 2490
Calories

It Looks Big When You Figure Its Food Value

Meat Costs 8 Times as Much per Calory

The small package of Quaker Oats contains 2490 calories of food. It costs 12 to 13 cents.

The calory is the energy unit used to measure food.

Quaker Oats equals in food value—approximately—the following amounts of other staple foods:

Measured by Calories	
One 13c Package Quaker Oats Equals	
3 lbs. Round Steak	3½ qts. Milk
3 lbs. Leg of Lamb	2 lbs. White Bread
5 lbs. Young Chicken	7 lbs. Potatoes

Figure what you pay for these foods. You will find that meat foods—for the same calories—cost 8 to 14 times as much as Quaker Oats. Then compare them.

Calories Per Pound			
Round Steak	890	Eggs	720
Young Chicken	505	Quaker Oats	1810

Thus Quaker Oats—the food of foods—has from 2 to 3 times the calory value. Yet all are good foods, and some are indispensable.

Use Quaker Oats to bring down the food-cost average. Make it your breakfast. Serve it fried. Mix it with your flour foods to add flavor and save wheat. Each dollar's worth used to displace meat saves you about \$8, measured by the calories supplied.

Quaker Oats

The Extra-Flavory Flakes

The reason for Quaker Oats is super flavor. They are flaked from queen grains only—just the rich, plump oats. We get but ten pounds from a bushel.

When such a grade sells at no extra price, it is due to yourself that you get it.

12 to 13c and 30 to 32c Per Package
Except in Far West and South

about the "cootie" being fond of humans; why, they are so fond of them they have, by close association with their scientific breeders, taken on many of the traits and characteristics of their masters. Not only this, but they are susceptible to training in a remarkable way.

In one enclosure where we have corralled some hundreds of thousands of the beasties, we have divided these insects into groups, according to characteristics, size, strength, mental endowment, and some other classifications.

Our department has been studying them with the greatest care ever since certain suspicions were aroused by things they did, which, until recently, have passed notice.

Among the most noticeable traits of these vermin is that of clannishness and loyalty to one another. It is surprising how they travel in groups, and defend one another in every possible way. We have discovered that they have their own form of organization and certain community interests, and leaders that direct and manage their collective interests in so far as is possible when scattered about as generally they are.

Certain old-time notions about the cootie's tricks and customs have been corrected by the investigators and timely light is thrown upon their modern activities. The Major states:

Contrary to the usual belief, the "cootie" is not necessarily a permanent institution once established in some choice, warm-blooded soldier. It is true that the newer generations constantly coming on are apt to remain until they begin to increase in too large numbers. But all this time they manage to keep in contact with one another, that is, one group or colony with the colonies near by and around them. Often the "cooties" delegated to act as runners and carry messages to other colonies are killed or injured or for some other cause never reach their destination. However, they are wonderfully successful even then.

Let me go somewhat into detail to show how they keep their lines of communication alive. Here is a detail of cooties that have been living on Private Bill. Bill is in the front lines, and, according to the laws or nature of the cootie, these messengers every so often, which is apt to be several times a day, if that be possible, pass from one location to another, either by attaching themselves to another person, to a rat or some other animal that may be convenient.

When the sun rises in the morning or when it warms up they usually begin to circulate and reach their destination. They do not like the cold.

They have wonderful powers of direction and ability to know where others are located, even at many, many yards away. It may be that there is an odor that attracts them to their leaders, but whatever it is, they make every effort to get to them as fast as possible. We have discovered that "cooties" will cross a space of one hundred feet in a very short time, once they have favorable conditions. Bright, warm weather is best for quick action.

Then, too, we have noticed something stranger still about the various groupings of "cooties." We have determined that they have a language of their own which powerful microphones intensify to a point that makes audible their chatter, so to speak. And then, to make it even more surprising, we one day ran across a German

Grandfather's Clock

That is what generation after generation named this beautiful timepiece, this beloved heirloom, this love-wrought furniture held as a priceless family relic for over two hundred years. Its worth beyond money. Its associations the very life of the immortal dead who created its beauty and service for us to treasure and to keep.

Have you a Grandfather's Clock? What is there more lovely as a work of art, or more useful as a gift to enshrine the family pride, to be a perpetual memorial of home and name for your children and their children's children.

Waltham has kept alive upon this continent the enduring, simple beauty of these Old World and Colonial masterpieces.

A Waltham Grandfather's Clock is made with the same care, given the same distinction as a work of art, enshrines the same grace of architecture, and is even a more perfect clock, in accuracy and workmanship, than these

glorious old examples which illustrate our page.

It is because the Waltham horological standards are so high, so inventively creative, so embracing of all that is best in clock and watch making in the past and in the present that the fame of Waltham Clocks and Watches has gone to the uttermost ends of the earth.

Your dealer can tell you about the Waltham Grandfather's Clock. From him you can purchase it or a Waltham Watch that will give you that distinction in beauty and accuracy of time-keeping associated with the name of Waltham all over the world.

WALTHAM

THE WORLD'S WATCH OVER TIME

In Steel

Austin Standards

The Austin Type of Timber Truss—The Timber Truss carries the usual advantages of wood construction. It has large openings and few members.

In buildings where large openings are required for heating and ventilating ducts the Timber Truss is recommended.

The Austin Standards in Wood Construction—The Austin Company is prepared to duplicate its Standard Buildings in either the Lattice or Timber Truss Construction. Austin Engineers are immediately available for the preparation of special designs in wood or steel.

The Government says; "conserve steel."

In order that essential industries may continue to obtain Austin Standard Factory-Buildings, a complete series of designs has been perfected—with the buildings practically as before—but constructed of wood instead of steel. Therefore Austin Standard Buildings are available for all essential industries.

Austin No. 3 standard is shown above in both steel and wood construction. This building has attained unqualified success in the manufacturing field and the many owners of Austin Standards will be interested to know that extensions to present buildings may be made whether steel is available or not.

All the facilities of the No. 3 Steel Standard have been retained in the Lattice Truss and the Timber Truss. Both have the same

AUSTIN STANDARD FACTORY-BUILDINGS

In Wood

in Wood or Steel

broad unobstructed working spaces, the same overhead clearance, ventilation and practically the same lighting through monitor and side walls.

The wood type of construction places no limitations in the matter of exterior construction which may conform to existing buildings.

Whether you have urgent need for more factory space of *steel* or *wood* construction wire Austin for an immediate conference. Austin Engineers are always ready for urgent calls.

The Austin Type of Lattice Truss—Engineering details of this sturdy type of wood construction will be found on the cross sections shown. It is an exact duplicate of the steel truss in point of strength. It will carry the same shafting or monorail loads as the steel truss. Shafting can be placed at any desirable point. No steel is required in its construction other than small bolts and nails and no large timbers are required. The usual Austin speed can be applied to wood construction.

AUSTIN

STANDARD FACTORY- BUILDINGS

PRACTICAL and patriotic considerations today dictate that in the purchase of an automobile, you select the car which provides all the needed qualities with the least use of valuable materials. Scientific, light-weight construction makes the Oakland Sensible Six Sedan from 800 to 500 pounds lighter than other cars of similar wheel-base and completeness. This considerable saving of steel and other materials not only serves the national purpose, but gives to Oakland owners important economies in fuel, oil and tires, and in general upkeep expense. Along with this high utility, this Sensible Sedan possesses features of real comfort and convenience. Unusual roominess, permanent pillars, large doors, an efficient heater, and the substantial character of all fittings and finish, make this Sedan especially appropriate to purchase and use at the present time.

The high-speed overhead-valve Oakland Sensible Six engine delivers 44 full horsepower at 2600 r. p. m., or one horsepower to every 56 pounds of car weight in this Sedan model. Oakland owners regularly report gasoline returns of from 18 to 25 miles per gallon and records of from 8,000 to 12,000 miles on tires.

in one of the internment camps who volunteered certain information that has proved wonderfully valuable to our work.

The censors' rules will not permit my going into details or explaining what we learned, other than to generally state that this German prisoner informed us how Germans, before the war, had been breeding the "cooties" for years and had developed vast armies of them, all trained to act against their enemies. Not only this, but the Germans have selected from the more intelligent and capable "cooties" a vast army who are directing the actions of the herds that have spread all over the battle-fronts. They have them so trained that they attack the Allies exactly as the German troops do. Not only that, but they have developed among them a remarkable intelligence force, that not only penetrates the lines and ranks of the Allies and carries on its pestering work, but which also reports information back to the Germans.

We learned how the Germans taught the "cooties" to do all this, and know their means of communication with the "cooties." Of course, the "cootie," being of low mental order, only the low mental order of the Germans enables them to reach their level, and make them feel at home and as comrades in arms. They have so worked themselves into the confidence of the "cooties" that they are considered to be one of their strongest and most valuable allies.

LETTERS FROM THE FRONT TO THE FOLKS AT HOME

A letter written by a graduate nurse with the Red Cross at the front, and published in this department on October 5, mentioned a Captain Moseley as one of the patients in the writer's care. Captain Moseley has since been reported dead, and his relatives are anxious to secure the name and address of the nurse who cared for him. If the person who forwarded this nurse's letter will communicate, *THE LITERARY DIGEST* will be glad to act as intermediary.

NOTHING seems to chill the ardor of our boys in France. Any little reminder of home quickens their pulses and renews their vigor. As they march through the rain and mud, or fire till the barrels of the big guns turn water to steam they show delight in being in the "big show." As Lieut. Harry B. Henderson, formerly a lawyer in Cheyenne, puts it in a letter to the *Wyoming State Tribune*, "you forget the days and nights without sleep, the marching in the rain, the mired ammunition-trucks, the plain food, the shells, the gas, the incessant roar and explosions, when you meet some lad on the road and look at a paper he has picked up back of the lines. We look at the map and see the course of the advance, and run back with the gospel to the cannonners, who always want to push on farther."

Describing his part in the "big American push," the lieutenant says:

Every night we would advance in the direction of huge fires that glowed ahead of us—the burning munition-dumps and quarters the Germans had erected in the

"On the Blue Paper—*That's It!*"

YOU'RE in a hurry. The man at the other end of the wire is in a bigger hurry. Perhaps he's your general manager, perhaps a customer. Anyway you want to tell him, quick, what you heard from the Chicago office regarding an important shipment.

If your stenographer has to search through a pile of letters to find the one you want, you're in for a bad five minutes. The Chicago letter will probably elude the stenographer's frantic search, if it looks like any other letter.

There's not an instant's delay, however, if your house is one of the many which have proved the wisdom of using Hammermill Bond for all their printing needs. In this event, the Chicago letter, written on paper of a distinctive color, is instantly picked out.

As a matter of war economy and in co-operation with the Government, we have

cut six colors from our line and Hammermill Bond is now made in Blue, Pink, Green, Canary, Goldenrod, Buff and White, in three finishes—producing a bond, a ripple, and a linen effect.

There is a Hammermill Portfolio, called, "The Signal System," which deals particularly with the value of color identification in office forms and stationery. Write us for it. There are other Hammermill Portfolios of printed forms, a different portfolio for practically every business. We want to send you the one that will help you most, in establishing system and preventing delays and mistakes. Your letterhead will tell us which one you need.

The portfolios show both the Hammermill color variety and the three finishes of Hammermill Bond, producing a bond, a ripple and a linen effect. We'll send the full set of portfolios to printers.

various river valleys, in contemplation of another drive to Paris. We passed several batteries the Germans couldn't get out in time and turned them around. With a little work they were loaded up with some of the ammunition we found in great quantities, and we took pleasure in re-delivering a large part of it.

The cartridge-cases that hold the powder and fit in behind the shell made splendid brass wash basins, so you may imagine the size of the guns. There is one little piece of the mechanism that is easily removed and which holds the entire breech-block together when the gun is fired, and the Huns were retreating too fast to even take that part out. Some of the infantry frequently entered dugouts in which candles still burned and warm food was laid on the table. Frequently we would fire our guns on towns one day and be there ourselves the next.

Trophies and souvenirs of all sorts were strewn on the ground in the dugouts and trenches. We don't make a practise of picking things up, for the most alluring are sometimes attached to hand-grenades and explosive charges. Every one could get all he wished of the heavy belts the Germans wear. They have "Gott mit uns" and a coat of arms on the buckle-plate. There are also quite a few helmets, buttons, lapel insignia, etc., but when you're all tired out it takes a pretty attractive find to even get your attention, for you have to carry enough equipment as it is. We found two emplacements which were installed for the long-range guns, and some idea of their magnitude may be obtained by the size of their ball-bearings, which were eight inches in diameter.

In German knapsacks we found their concentrated ration, which looks like a cake of soap, but is really quite good—something like a gruel when boiled in water—and will feed quite a group of men without much trouble. We had lots of their hand-grenades, which are called "potato-mashers," because they look like the good old kitchen utensil we used around the house for everything from fixing the screen door to hanging pictures and opening cans. To make them explode, you pull a string in the end of the stick and throw the whole thing. The most cheerful fact about them is that the stick comes back when the grenade goes off and often gets the Hun that threw it.

Lieutenant Henderson noticed also that the copper rotating-bands on shell-fragments were merely plated instead of being solid like ours, which is evidently necessary to conserve metal. In a German dugout which he occupied one night he could not sleep because of the presence of a "very hungry flock of the biggest fleas I ever saw. About three of them could run away with a steel helmet." Speaking of equipment, he finds:

The steel helmet or "tin dip" is quite a comfort when splinters fly around, and the respirator which weighs about three pounds is mighty efficient, but those two articles get lots of hard usage unless a shelling is in progress, for their usefulness is of short duration, and then we have to carry them until the next time. It's just like a man with a cheap suit having to carry an umbrella all the time, for a rain would be a regular tragedy.

Somewhere the Bible refers to "the pest that walketh in darkness," and I'm just wondering if any of those good old

—as the Needs of Transportation Continue to Increase

Republic meets the demand

More trucks are required today than ever before and more service is demanded from every truck.

Republic factories are consistently increasing production to meet this demand without sacrificing quality at any point.

Republic builds nothing but trucks. Republic engineers specialize on trucks and trucking problems. They know the demands of every kind of hauling and build each truck to give the maximum service required.

All materials are tested and re-tested, physically and chemically, in our own fully equipped laboratories. Skilled workmen concentrate on specialized tasks. Final testing is rigid and complete.

More than 1300 Republic Service Stations, distributed all over the United States, keep Republics constantly working at highest efficiency.

Republic quality and Republic service have built up the most remarkable demand known to the motor truck industry. Last year Republic built and sold more than twice as many trucks as the next largest manufacturer—not small delivery cars but trucks of all sizes.

Seven Models— $\frac{3}{4}$ -ton to 5-ton capacity. The Republic dealer will help you select the one best fitted to your business.

warriors of Israel had the cooties. Anyway, we have all guessed why Napoleon's portraits have one hand under his coat. It's a rather common pose over here. There is a parody on a song I heard over in the States, "They run wild, simply wild over me," and the boys sing it with much feeling.

Our battery has acquired a *Boche* wagon and we've mounted a German water-cooled machine gun on it which we use against bombing-planes. It works very well except we didn't get a few parts that go into the tripod. Some new men just over from the States looked at it with much interest and gave us an earful of news from home.

One of the finest sights I've seen was the return of the French to their farms and homes. Altho everything was ruined as far as possible, they came back with smiles and overjoyed to have the opportunity to rebuild. Through ruined villages I would meet curious processions of cows, kittens, children, old men, and women, all taking part in the great restoration. Rude scythes were made and the fertile lands bristled with activity, for the harvest was rich. The Huns saved us lots of trouble by reaping lots of the grain just before the drive and we just breezed in and threshed it.

Lady Nicotine is a prime favorite among our fighting men. Her fumes carry the soldier's mind above the smoke of war and impart a serenity of mind which the roar of cannon and the clash of steel fail to disturb. "Verily, war hath its compensations," wrote Lieut. Joseph Rodman, of the 18th Engineers (Railway), to his friends in Los Angeles just before being wounded and invalided home. This is his eulogy of the fragrant weed in the form of cigarettes:

Besides myself your box was enjoyed by a bunch of tobaccoless, moneyless poor devils just down from the front. One eighteen-year-old American boy with both hands shot off at the wrists (the most irrepressibly cheerful man in the ward) used to stick his grinning face over my bed so that I could put a lighted "tailor-made" in his cigarette-holder. When his ash reached a precarious length he would cause it to fall by champing his teeth on the holder and grinning meanwhile as if he had discovered like Newton's pet idea.

One of your cigarettes was smoked by a dying man. His passing was vastly different from the soldier's death of fiction. There was no calling for mother, wife, or sweetheart. He praised your cigarette, cursed feebly because his fresh milk tasted sour to him, and quietly "went west."

I may as well make this a cigarette letter. There is a very small percentage of soldiers who do not smoke cigarettes. In the quarter-hour intervals of rest, so frequent in the military apportionment of time, a cigarette just fits in. A cigar or pipe would only be well started in the short interludes between the soldier's duties. A cigar tends to reflection, and the good soldier is supposed to obey without thought; even the Indians know that a pipe is for peace; but the very psychology of a cigarette fits patly into the general scheme of a soldier.

Uniforms are tight-fitting and shy of pocket space; pipes and cigars are bulky and the latter easily broken. Ay, the cigarettes have it. Naturally, soldiering is a nervous business. While one is discussing a cosmic theory or the latest doings of the Dorcas Society with a bunkie either debater

runs a chance of a black eye from the severed head of his opponent. After such a consummation a cigarette is devoutly to be wished.

I am not familiar with Barrie's biography, but I can guess at his biology; evidently he was a *soldat* before he wrote "My Lady Nicotine." Buckets of water did not damp the ardor of Sir Walter Raleigh. Soldiers are fully as thorough enthusiasts as the above gents. Cigarettes are the only qualifying medium to the statement—perhaps you have heard it—of the late General Sherman concerning war.

French "tobacco" is scarce and hard to buy and is used only as a last resort. It is made of macerated rubber, asafetida, and flea powder stirred together with a mordant of glue and asbestine. The chaplains do all they can to discourage its use and they are rather successful on the whole. English tobacco is pure, but it is scarce, high in price, and it "ain't got the kick to it."

Send tobacco, papers, and cigarettes, everybody. Nearly everything else can be procured over here. Send them preferably to the front-line hospitals. Not to the Y, but to the Red Cross, who will distribute them to wounded men who are broke. In the hospitals cigarettes rank next after letters and photographs from home.

Smoking is not prohibited nor even restricted in the army hospitals. Surgeons and nurses know how the soothing influence of tobacco calms shattered nerves, eases pain, quiets the fretful, and breaks the white-walled monotony of months of convalescence. Somehow a dying man goes out with a better heart after a "pill," somehow a man whose condition prohibits the administering of anesthetics is steadier under the knife or the hands of the orthopedist if he is smoking; verily, I am a convert to the preachings of the American Tobacco Company.

Of course, I do not believe in mixing cigarettes with the prunes and prisms of the young ladies' seminary or substituting them for the rubber nipples of the incubator babies, but we have ranged the red *llano* and must have our occasional bite of loco weed. If you must send tracts and testaments, why, indulge your whim, but if you want to soothe pain, camouflage the works of Satan, promote brotherly love and the broader observance of the Golden Rule, send cigarettes first—and last—and all the time.

During this last period I have been four months in the hospital. I'm afraid I'm good for keeps. My back and legs have gone on a strike and I have become steadily worse. However, I may be able to wiggle around yet. *!Queen sala!*

Life in the air "gets the call" over there, according to Private Vincent Murray, who writes urging a friend in New York City to join some flying unit. Private Murray is a New-Yorker who was attending Columbia University when we entered the war, and as a member of the old 7th Regiment he was taken over into the 107th U. S. Infantry, A. E. F. Since the following letter was written he has suffered severely in a gas-attack and is now at a base hospital.

Your letter was delivered to me at dawn on one of my mornings in the trenches and I shall try to give you an idea of what happened on my initial trip to the line. It is rather a hackneyed subject and does not afford a single original crack, for the

"FOR HUSKY THROATS"

Not a single penny for repair has been spent on this 36x5 Goodyear S-V dual which has run 50,000 miles on the 3 1/2-ton Old Reliable motor truck operated by the World Motor Service, Chicago

Copyright 1918, by The Goodyear Tire & Rubber Co.

GOODYEAR
AKRON

Digitized by Google

Fifty Thousand Miles In Hard Service

THE tremendous ability of Goodyear S-V Solid Truck Tires to assimilate severe punishment is constantly reaffirmed in owners' stirring narratives of their performance.

On the 3½-ton Old Reliable truck operated by the World Motor Service of Chicago in combined city, suburban and country service, the Goodyear S-V dual Solid Truck Tire shown at the left delivered 50,000 miles and is still in service.

The S-V Tires on this truck traverse a territory ranging 40 miles out of Chicago and cover routes which test to the utmost all their staying powers.

Grinding along under heavy cargoes of groceries, these tires are driven over wide systems of railroad tracks and they cross considerable stretches of bumpy brick pavements and others composed largely of broken stone with sharp edges.

In the section of the city from which the truck starts its delivery trip, the littered spaces in front of loading platforms present varied kinds of tire hazard such as broken glass, sections of crates with projecting nails and metal barrel hoops.

*"Our work is very strenuous but Goodyear S-V Solid Truck Tires give us remarkable service. They resist conditions that literally tear other tires to pieces. One dual seems made of iron because it has given us 50,000 miles and is still running."
— Mr. William Winkler,
President of World Motor Service, Chicago.*

The facts related here are typical of many found in an enormous accumulation of nationwide evidence dealing with the tenacity of the S-V.

It remains to set down that whereas their most sensational long-distance scores have been made over good city pavements, they have also run up unprecedented mileage figures in cases where trucks travel outside of cities and encounter very indifferent roads and particularly bad unpaved areas.

Such evidence furnishes the all-important reason why Goodyear S-V Truck Tires are so broadly adopted in those classes of service for which the solid tire is best fitted.

Cars

HASSLER
PATENTED
Shock Absorber

For
FORD
Cars

Hasslers enable you to save gas in two ways:

First, they make your Ford ride so smoothly it requires less power to run it.

Second, they enable you to take the roughest roads without shifting into low or changing speed. Hasslers achieve economy by making your Ford comfortable. They stop all jolts and jars, decrease vibration, prevent sideways and rebound, and make your Ford easier to steer and safer to drive. By doing this, they cut your expenses for gas, tires, oil, and repairs, and increase the resale value of your car.

10-DAY FREE TRIAL OFFER

Write today for **FREE TRIAL BLANK** and we will have a set of Hasslers put on your Ford without a cent of expense to you. Try them 10 days. Then, if you are willing to do without them, they will be taken off without charge. Don't ride without Hasslers simply because someone discourages you from trying them. Accept this offer and see for yourself. Nearly a million of the Patented Hasslers now in use.

ROBERT H. HASSLER, Inc., 1834 Spruce St., Indianapolis, Indiana

ground has been well covered—so well, that I was fully prepared for nearly everything that happened, like a person reading the book and then seeing the play. But I have made enough excuses—you want to hear about it, so here it is:

We had hiked the greater part of a very warm day and continued until some hour near midnight. We were told that we were nearing the line. Barring an occasional report of a heavy gun, all was quiet. Suddenly, as we passed a little knoll somebody in Corse Peyton tones said that we had passed the reserve line and would be in the front line in a few minutes. Mind you, but for the occasional rattle of a machine gun and a few Verey lights, the setting could have passed for Beach 129th St. Belle Harbor at 12 p.m.

Finally a voice (probably Corse Peyton's understudy) said, "You're in the front line—take your post and shut up." At that moment you could not have teased a wheeze from me if the subtreasury stood in the balance. Silence was being served in large chunks, but I could not figure what the — it was all about. I used every argument I had ever heard in an effort to justify my stupid four-hour watch over some remote French back alley. Democracy, liberty, equality, fraternity, votes for women, and the three-cent fare to Coney all had an inning. Suddenly the German artillery cut loose, ours answered, and everybody burrowed. The strife lasted for an hour; it stopt at dawn and everybody went to sleep. There you are. They tell me Germany has been preparing since 1870. I believe they began making shells on Noah's Ark and saved them all for my first night in the trenches.

Newspaper cables gave a brief account of the heroic death of Sergeant W. D. Purdy, of Marshfield, on the battle-line of France. His brother, Corporal Chester A. Purdy, gives details in the following letter to his mother:

I will explain the accident that caused Willard's death to you. He had been out with a scouting party and had just come in from No Man's Land. All the boys carried bombs in their shirt fronts. When Willard reached in to get his out, the pin that holds the igniter fell out from one—he had three in his shirt. He pulled out two, but did not get the right one. There were too many men around him to pull out his shirt and let the ignited bomb drop in the trench, so he cried to the men to run and he hung on to all three bombs, bending over and holding them close to his body. He could probably have saved his own life if he had pulled out his shirt and let the bombs drop, but if he had done that it surely would have killed five or six of his comrades. He chose death rather than let his men get the fragments from the bursting bombs. All three bombs exploded. He did not suffer much, which was merciful. It was a mighty heroic action, a thing I never would have the nerve to do.

I attended the funeral and was never more proud of my brother. The French and soldiers of all nations who were present saluted as a marked honor to a man who was willing to, and did die, to save the lives of his comrades. We are all mighty proud of him, but it would have been easier for us had he lived. All the officers are very kind and have done more than their share to make things easier for me.

Well, mother, do not worry about me, and when you think of Willard, think of the glory of his death—dying to save the lives of his comrades.

Pains, Callouses or Cramps There?

Are your feet tired and painful at night? The finger points to the Anterior Transverse Arch. When this Arch weakens, it causes uneven pressure, callouses, tender spots and cramps which affect the whole limb and produce bodily fatigue and nervousness. Dr. Scholl's Anterior Metatarsal Arch Supports are designed to give immediate relief, and by supporting the weakened parts, they remove the abnormal pressure and effect a permanent correction.

There is a specially designed Dr. Scholl Corrective or Remedy for every foot ailment, such as weak, turning ankles, fallen or broken arches, callouses, bunions, corns, crooked toes, tired, aching feet, etc.

Showing how Dr. Scholl's Arch Support will correct the abnormal condition of the foot.

Dr. Scholl's
Foot Comfort Appliances

and remedies are sold and expertly fitted by shoe dealers and department stores everywhere. They have been trained in Podiatry—the science of giving foot comfort and have installed Dr. Scholl's Foot Comfort Service. These dealers are rendering their community a valuable service and deserve your patronage.

What the Inspector Sees

As the inspector looks at the assembly of the axle, he sees taking shape before him the car for which the axle is being built. He sees *himself* at the steering wheel, he hears the unuttered but emphatic warning: "*Would you consider this good enough for your own car? Good enough for you to entrust to it the safety of your wife and children?*"

He has, indeed, every mechanical means possible to prevent the least flaw in quality from escaping his instant condemnation.

Each part, piece or finished axle must measure up to rigid standards of quality fixed by the Timken-Detroit organization or he will affix to it the red tag that routes it to the scrap heap.

And every inspector is supplied with the unerring accuracy of gauges, micrometers and every necessary device for testing and making sure.

But in every factory, without exception, some things must be decided by human

beings. Automatic devices may detect a flaw, but they can not establish principles, create standards, or compel rejection of that which falls below the standard.

Therefore, one of the greatest reasons for your confidence in Timken-Detroit reliability is this invisible standard. "Do it as though it were for your own car." This standard has been strengthened by years of successful achievement until it has become the working principle of the Timken-Detroit organization.

Needless to say, you should have the protection of such standards in every part of your motor-car.

And none are more important than the axles to which you entrust your safety.

The value of axle safety in the minds of the ablest motor car builders and designers is demonstrated by the list of Timken-Detroit Axle customers given in the booklet D-11, "117 Users of Timken-Detroit Axles." Write for your copy.

THE SPICE OF LIFE

It Certainly Was.—Strange how things come about. The Germans' March offensive was followed by the Allies' offensive march.—*Syracuse Herald*.

Always a Patriot.—Yankee Doodle came to town riding on a pony.

"Of course I observe gasless Sundays," he explained.—*New York Sun*.

End of the Dream.—"It looks as if Jones is better satisfied with his wife."

"Yes, he is. You see, he went back home on a visit and saw the girl he has been dreaming of for the past twenty years."—*Life*.

Compliment to Conscience.—"Here comes that Miss Gabbins. I think I'll have Nora say I'm out."

"Won't the still, small voice reproach you?"

"Yes; but I'd rather listen to the still, small voice than to hers."—*Boston Transcript*.

Suitcase That Suits Each Case.—POLICEMAN (rounding up draft suspects)—"Have you got a card?"

THE SUSPECTED ONE (with suitcase)—"A whole case of 'em! Which do you want to see—draft, registration, meat, sugar, calling, milk, playing, or postal-card?"—*Judge*.

Unmasked at Last.—"Don't talk to me about Methuselah," exclaimed the army man.

"I never heard anything against him."

"Well, I have my suspicions that he reported his age as high as possible to make sure of being beyond the draft limit."—*Washington Star*.

Everybody Accommodated.—TOMMY (just off train, with considerable luggage)—"Cabby, how much is it for me to Latchford?"

CABBY—"Two shillings, sir."

TOMMY—"How much for my luggage?"

CABBY—"Free, sir."

TOMMY—"Take the luggage, I'll walk."—*Boston Transcript*.

As Man to Man.—"Your wife says you have her terrorized."

"Honest, Judge—"

"I do not ask you this in my official capacity, but as man to man. Do you understand?"

"Yes, your Honor."

"What's your secret?"—*Kansas City Journal*.

Cure for Sleepiness.—SERVANT GIRL—"I'm so awfully sleepy in the morning, doctor."

DOCTOR—"Ah! Have you a sweet-heart, may I ask?"

SERVANT GIRL (blushing)—"Yes."

"Who is he, may I ask?"

"He's the night policeman."

"Ah, then, give him up, and fall in love with the milkman."—*Tit-Bits*.

You Know Who.—The new version: "When the devil was sick he turned to a parliamentary form of government."—*St. Joseph News*.

Music and Mars.—"They say singing men make great fighters."

"I have known it for many years," murmured the grand-opera manager, wearily.—*Washington Star*.

Creditors Must Eat, Too.—MR. THURSDAY—"Our friend, Dodge, tells me that he is doing settlement work lately."

MR. FRIDAY—"Yes, his creditors finally cornered him."—*People's Home Journal*.

Went to the Head.—"Madam, you had better not wear that hat much in this dry town. We've not the location here."

"What has that to do with my hat?"

"I notice it is full of cocktails."—*Baltimore American*.

A Rejected Meal.—TRAMP—"Kind lady would yer please give a pore man a bite to eat?"

THE LADY—"What! You here again? I will call my husband immediately."

TRAMP—"Excuse me, lady, but I ain't no cannibal. I bid yer good-day."—*Boston Transcript*.

Real Balt.—OFFICER—"So you captured a thousand Germans by just calling across No Man's Land. What did you do—promise them a square deal if they surrendered?"

YANKEE PRIVATE—"No; I promised them a square meal."—*Life*.

The Real Article.—"I'm a very busy man, sir. What is your proposition?"

"I want to make you rich."

"Just so. Leave your recipe with me and I'll look it over later. Just now I'm engaged in closing up a little deal by which I expect to make \$3.50 in real money."—*Brooklyn Citizen*.

Getting Wise at Last.—"We played fool," declared the Crown Prince. "I see it now."

"Huh?"

"We had the whole world to pick a fight with."

"Well?"

"And look at the crowd we picked out."—*Louisville Courier-Journal*.

Try to Avoid this Error.—"We had to stop our little girl answering the front-door calls."

"Why?"

"The other day when Ensign Jones came to call on our eldest daughter he was dressed in his white uniform, and when the little one opened the door and saw him she immediately called up-stairs: 'Ma, how much bread do you want to-day?'"—*Detroit Free Press*.

General Gets in Wrong.—When General O'Neill, of Allentown, first went to Spartanburg, S. C., his train was three hours late. The negro escort appointed to receive him at the station had been dismissed. The general walked. Presently he was accosted by a sentry.

"Who is you?"

"General O'Neill."

"Well, you cut the buck and go up there to headquarters to beat de debbil and see my captain and explain yossell. We's been waitin' three hours fer you."—*Los Angeles Times*.

CURRENT EVENTS

THE WAR

THE WESTERN FRONT

October 9.—General Haig reports the whole Hindenburg system cleared on a thirty-five mile front between the Scarpe and the Oise, south of St. Quentin, and that the remnants of thirty enemy divisions are in a wild flight, closely pursued by cavalry. The Allied advance is now nine miles and gaining in speed. Fifteen thousand prisoners were taken October 7, and to-day's captures promise to be greater.

The American First Army made a victorious attack on the whole twenty-five mile front from the center of the Argonne Forest to several miles east of the Meuse. Two thousand prisoners were captured. East of the Meuse Pershing's men advanced two miles, taking Sivry and penetrating Chaume Wood. West of the Meuse the Brunhilde line was penetrated between Cunel and Romagne.

The First British Army capture Ramillies and Cambrai and cross the Scheldt Canal. The enemy is burning and looting the towns and villages that he is evacuating. The German official statement admits "occupying positions to the rear and thereby giving up Cambrai."

In the Champagne the Franco-American troops are punishing the enemy severely on a steady advance.

October 10.—General Haig announces the capture of Le Cateau, a great railway center fifteen miles southeast of Cambrai. At some points the British advance fifteen miles.

A dispatch from Paris states that the battle-ground is aflame from Lens to Verdun, and Allied superiority growing every minute. American, British, and French divisions are pounding on all the thirty-five-mile front of the main German retreat between the Scarpe and the Oise. The enemy's retirement spreads to the south and north; in fact, he is withdrawing on all the 150-mile front from Lens to Reims.

Other dispatches record the capture of the plateau of Croix-sans-Tête by the Allies, and the capture of the Aisne.

TOLSTOY'S ESSAYS AND LETTERS. Containing new translations by AVLENE MATHE. 12mo, cloth, 372 pages, \$1.00. Funk & Wagnalls Company, Publ., New York.

October 11.—Reports from PARIS and LONDON show the enemy's retreat still growing. The American First Army has advanced five miles, clearing the Argonne Forest and taking 1,000 more prisoners, making the total captured since October 8 about 7,000. The Germans abandon their positions north of the Suippe and the Arnes on a forty-mile front, the French advancing six miles. Grandpré is occupied, bringing the Allies about two miles from the railroad center of Vouziers.

Additional reports show the Chemin des Dames being evacuated under blows from Italian and French units; Craonne and La Fère, on the Oise, are half surrounded; Servais, south of La Fère, is captured by the French, and Guise is threatened.

The FIRST TRUCK WE BUILT

8th year-100,000 Miles-Working Every Day

The acid test of a truck is its length of life. Look into the years ahead when buying a truck today. How many years will it work? What is the per cent of depreciation each year? The truck of longest life is lowest priced.

NO Indiana truck has ever worn out, so far as we know, for our first truck, in its eighth year of service, is still working hard every day. And so far as anyone can tell, it is good for another eight years of hard work. This is astonishing truck performance. But hundreds of similar instances come to us regularly.

Two other Indianas have substituted for a railroad for six years between Columbia and Campbellville, Ky., over mountains and almost impassible roads: something every other truck had failed to do. They haul mail, express and passengers. Indiana trucks with five, six and eight-year old records of 100,000 miles and upwards have become common today.

Great fleets of Indianas are being purchased today on evidence like the above. The secret back of this wonderful performance is a basic construction policy since we started business, of giving every truck

112% Reserve Strength

This tremendous reserve strength is built into every part of the Indiana, to wit:

100,000 mile rear axle.	High powered, heavy-duty motor, oversize, heavy-duty bearings.	Disc-type clutch, 4-speed transmission.
Gasoline saving carburetor.	Magneto of 100% dependability.	Heavy rolled special analysis channel steel frame.
70% of weight at rear.	Extra large brakes, straight line propeller shaft for maximum power.	Extra water-capacity radiator.

Book Shows Your Hauling Costs. Write For It

Our hauling cost book is yours for the asking. It will make money for you. Send for a copy today.

Models: 1 ton; 1½ ton; 2 tons; 3½ and 5 tons

INDIANA TRUCK CORPORATION, Dept. 43, Marion, Indiana

O. Gordon

Homes Furnished Complete
445 CITY, INDIANA

Indiana Truck Corporation, Marion, Ind.

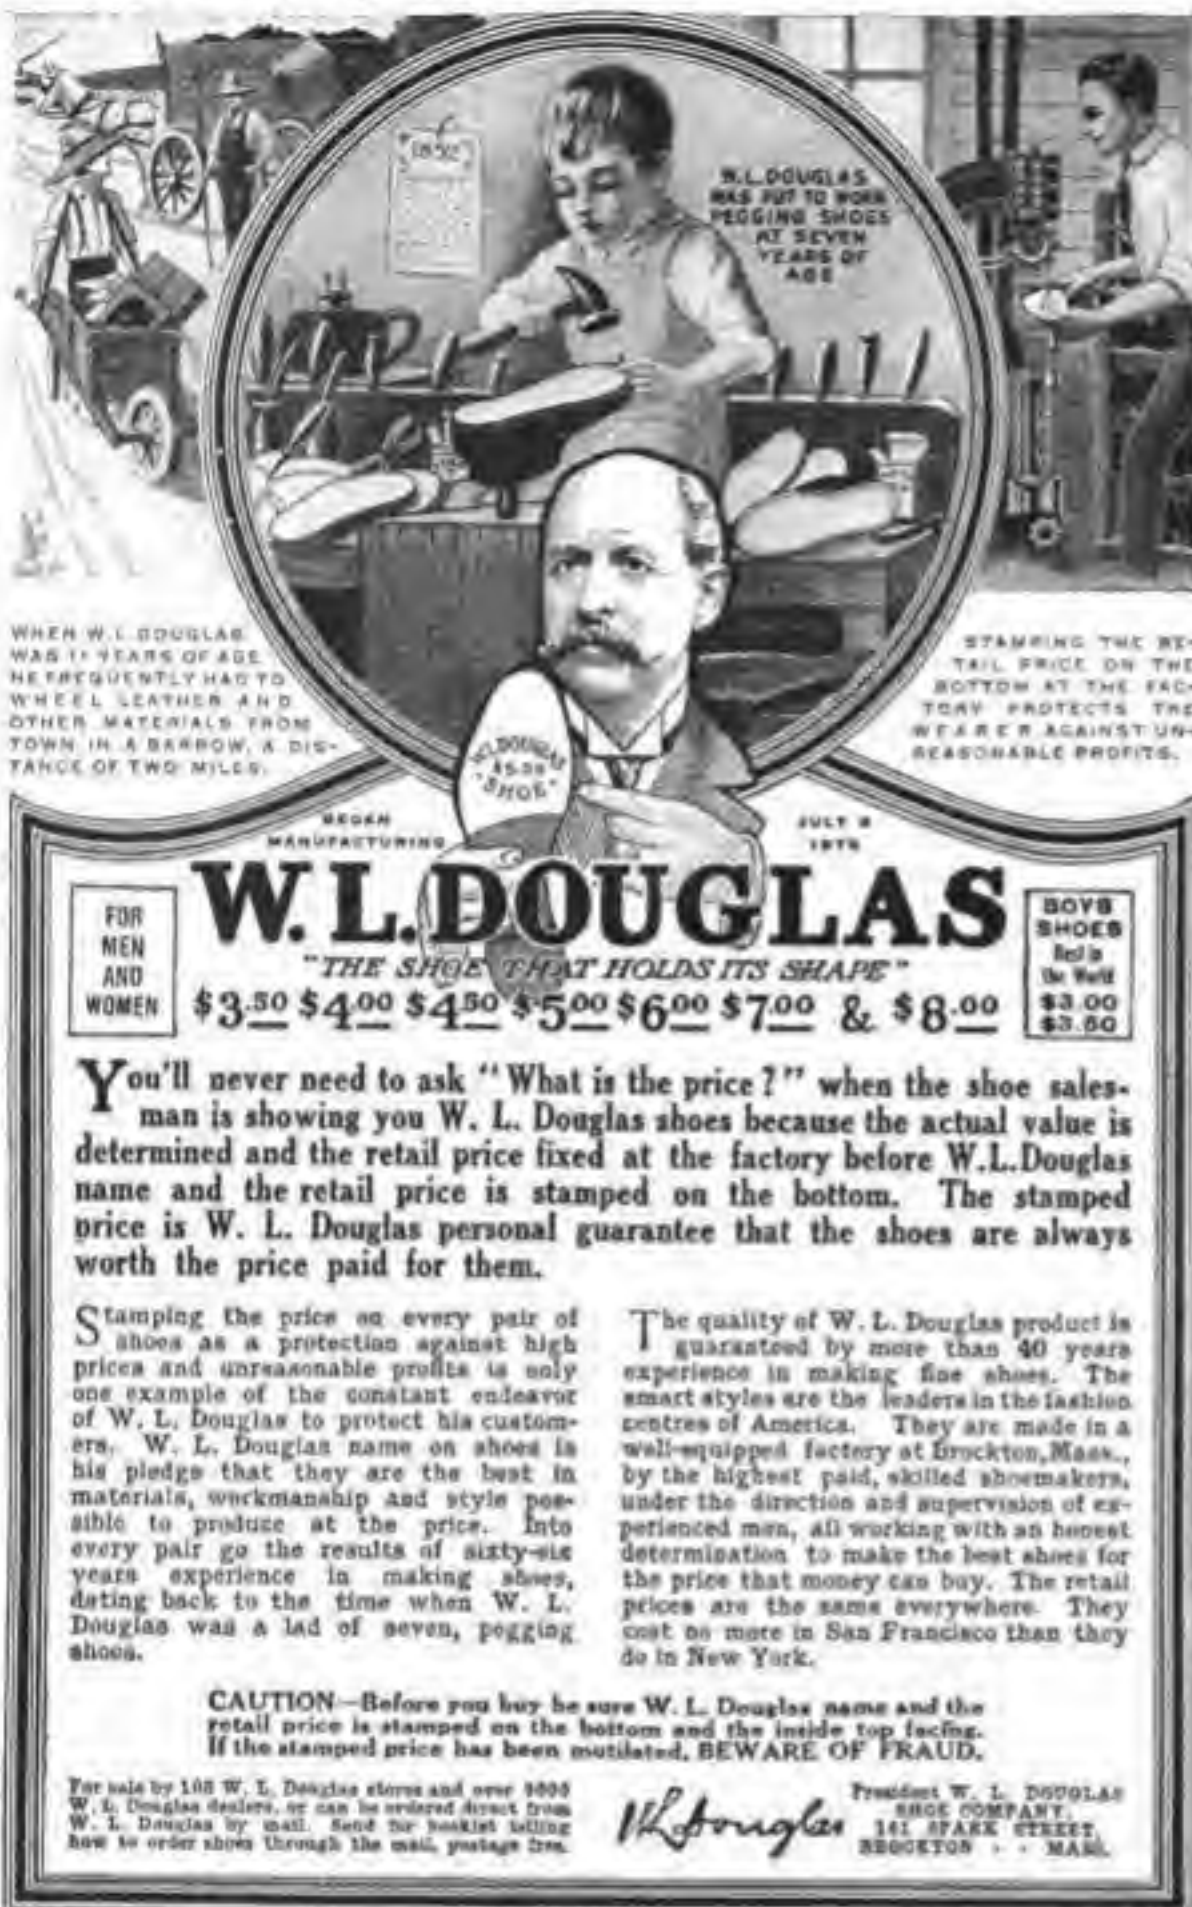

Gentlemen: We purchased the first truck which you turned out. This truck is now in its eighth year of service--sixth year for us--and was used as a demonstrator for two years before. It has been in use continually during this period except when being overhauled as a precautionary measure, and is good for more years of service. It works on heavy hauling and always gets there and back. It is economical in the use of gasoline and oil, although it is operated over all kinds of roads. I judge that this truck has been run between 75,000 and 100,000 miles. Yours truly,

(Signed) *O. Gordon*

WHEN W. L. DOUGLAS WAS 17 YEARS OF AGE HE FREQUENTLY HAD TO WHEEL LEATHER AND OTHER MATERIALS FROM TOWN IN A BARROW, A DISTANCE OF TWO MILES.

N. L. DOUGLAS WAS PUT TO WORK PEGGING SHOES AT SEVEN YEARS OF AGE.

STAMPING THE RETAIL PRICE ON THE BOTTOM AT THE FACTORY PROTECTS THE WEARER AGAINST UNREASONABLE PROFITS.

FOR MEN AND WOMEN

W. L. DOUGLAS

"THE SHOE THAT HOLDS ITS SHAPE"

\$3.50 \$4.00 \$4.50 \$5.00 \$6.00 \$7.00 & \$8.00

BOYS SHOES \$2.50 \$3.00 \$3.50

You'll never need to ask "What is the price?" when the shoe salesman is showing you W. L. Douglas shoes because the actual value is determined and the retail price fixed at the factory before W. L. Douglas name and the retail price is stamped on the bottom. The stamped price is W. L. Douglas personal guarantee that the shoes are always worth the price paid for them.

Stamping the price on every pair of shoes as a protection against high prices and unreasonable profits is only one example of the constant endeavor of W. L. Douglas to protect his customers. W. L. Douglas name on shoes is his pledge that they are the best in materials, workmanship and style possible to produce at the price. Into every pair go the results of sixty-six years experience in making shoes, dating back to the time when W. L. Douglas was a lad of seven, pegging shoes.

The quality of W. L. Douglas product is guaranteed by more than 40 years experience in making fine shoes. The smart styles are the leaders in the fashion centres of America. They are made in a well-equipped factory at Brockton, Mass., by the highest paid, skilled shoemakers, under the direction and supervision of experienced men, all working with an honest determination to make the best shoes for the price that money can buy. The retail prices are the same everywhere. They cost no more in San Francisco than they do in New York.

CAUTION—Before you buy be sure W. L. Douglas name and the retail price is stamped on the bottom and the inside top facing. If the stamped price has been mutilated, BEWARE OF FRAUD.

For sale by 108 W. L. Douglas stores and over 3000 W. L. Douglas dealers, or can be ordered direct from W. L. Douglas by mail. Send for booklet telling how to order shoes through the mail, postage free.

SHOE COMPANY,
141 SPARK STREET,
BROCKTON - MASS.

miles toward Douai, which is being evacuated, and Iwuy and Fressies, north of Cambrai, are taken. The British also take St. Aubert, southeast of Cambrai, and are now seven miles from the Valenciennes-Mézières railroad. They have also crossed the Selle, north of Le Cateau.

A Paris dispatch states that the American "Wildcat" division, which is on the front of Haig's offensive, has captured Vaux-Andigny and St. Souplet. Ten thousand French, men, women, and children, have been liberated by the Allied advance.

October 12.—By the capture of Quinay the British are within one mile of Douai. The Germans are also driven from the railway center of Brébières, Hamel is captured, and the enemy seeks safety behind the Sensée Canal.

The drive of British and American forces east and southeast of Cambrai results in hurried efforts of the Germans to evacuate Valenciennes, which is now in a pocket. French and Italians are dislodging Germans in the Chemin des Dames, and the evacuation of Laon is in sight. Gouraud's French and American troops advance from three to four miles on the Champagne front and capture Vouziers, Guise, Vouziers, and all the villages south of Laon are burning, and the enemy is setting fire to other French towns behind his lines.

October 13.—Paris reports that Foch's forces have wrested Laon, La Fère, and the major part of the St. Gobain massif from the enemy. The Germans fired La Fère before retiring. Italian and French troops force the enemy back to Amifontaine, fifteen miles north of Reims. Farther east Franco-Americans under Gouraud press forward on the sixty-mile front in the Champagne and reach the bend of the Aisne, south of Rethel. Farther west the troops take Asfeld. Official reports show 21,567 prisoners, including 499 officers, 600 guns, and large stores of war-material taken in the Champagne battle.

General Haig's forces occupy the prison and outlying boulevards of Douai. Montreucourt, seven miles south of Valenciennes, is captured and the hold on the Scheldt Canal strengthened.

October 14.—Paris reports the enemy driven back five miles on a twenty-mile front east of Ypres by a new terrific Allied blow in Flanders. French and Italian troops capture and pass beyond Sissonne, now occupying the village of Monceau-les-Leups, south of the Serre.

French, British, and Belgian troops drive their wedge deeper in the enemy's positions, covering the naval bases of Zeebrugge and Ostend.

The armies sweep forward to within four miles of Courtrai, chief railway center between Ypres and Ghent, and Roulers is captured. More than 6,000 prisoners and six complete batteries of guns are taken.

In the Champagne the enemy continues his flight to the north and east. Gouraud's army crosses the Aisne along a wide front and is within twenty-five miles of Mézières, on the Franco-Belgian frontier.

Furious counter-strokes against the British in Picardy and the Americans in the Argonne fail to check the Allied advance. General Haig repels vigorous attacks around Douai.

October 15.—The Allied forces drive six miles deeper into the enemy's Flanders line, capturing Thourout, eighteen miles northeast of Ypres. New British troops thrown across the Lys take Menin, another great railway center. British war-ships are reported entering

Schenectady, N.Y.

Ostend. Over 10,000 men and 100 guns have been taken in this drive.

Despite resistance and counter-thrusts, the Allies sweep forward on the whole two hundred-mile line to the south. The British are within three miles of Lille and have captured four more villages. On the Picardy-Champagne line more than a dozen villages and additional thousands of prisoners are taken by Pétain's men. Italian forces aided the French in the capture of Sissonne.

The Americans redouble their attacks and widen the breach in the Brunhilde-line, capturing four villages and destroying the enemy's carefully prepared defenses.

Northwest of the Argonne Forest Gouraud resumes his attacks, crossing the Aisne and taking Olizy and Fismes, west of Grandpré.

THE WAR AT SEA

October 10.—A delayed dispatch from a British port states that the Japanese steamship *Hirano Maru*, of 7,935 gross tons, has been torpedoed and sunk about 300 miles south of Ireland. It is feared that 300 lives were lost.

Seventeen ill and wounded men from the sunken American steamship *Ticonderoga* bring to an Atlantic port a story of German atrocity not equaled since the sinking of the *Lusitania*.

The Dublin mail-boat *Leinster* is torpedoed while making a trip to Holyhead. An unconfirmed report says that 400 persons perished.

October 11.—News comes from a British port of the sinking of the transport *Otranto* in the North Channel in a collision with the steamer *Kashmir*. Three hundred and seventy-two American soldiers are reported lost.

On arriving at an American port officers of a Brazilian steamship report an encounter with a German submarine, seventy miles off the North Atlantic coast. The steamer fired at and, they believe, sank the submersible.

The latest estimate is that 480 persons perished when the *Leinster* was sunk by a submarine. The mail-boat carried 687 passengers and had a crew of about 70 men.

October 12.—In a speech at London Vice-Admiral Sims says the average number of enemy submarines operating against merchant ships and transports across the Atlantic is about eighty-nine, but sometimes it runs up to a considerably higher number.

Arriving at an Atlantic port a big British freight-steamer reports being chased early in the day by a U-boat not far from the port.

Three hundred American soldiers, 30 French sailors, and 266 members of the crew of the *Otranto* land at a port in northern Ireland. The number of American soldiers lost is now placed at 366.

London newspapers are filled with indignant condemnation of the cold-blooded murder and massacre in the sinking of the *Leinster*. Sir Edward Carson, head of the British War-Aims Committee, asks that the Government insist that, before further notes are received from German sources, the authors of "this diabolical crime be delivered up and brought to justice."

October 14.—Boston receives news of the sinking of the Brazilian steamship *Guaratuba*, two days out from a French port. A British war-ship sank the attacking submarine.

THE WAR IN THE AIR

October 9.—An American bombing expedition, consisting of more than 350 machines, drops thirty-two tons of

War-Time Production

INDUSTRY, in its terrific endeavor to supply sufficient material for those who fight and for the non-combatants, too, must depend on a depleted manpower augmented by women workers. That contented labor produces more and better work is conceded. To this end wise industrial heads improve sanitary conditions with better plumbing and cleaner surroundings in the wash rooms. This is a necessity, and especially so now that women constitute so large a percentage of factory labor.

"Factory Sanitation"

is a book full of suggestions in the line of sanitary needs. It is sent free on request to executives and managers. "Standard" Plumbing Fixtures—for Bath, Kitchen and Laundry—are described in a separate catalog.

The completeness of

"Standard" service is a reliance to any manufacturer. It is valuable, not only regarding factory needs, but in the great housing problem with which so many industrial heads are confronted.

If you intend to build, remodel or install new fixtures, write for these books.

"Standard" Wholesale Houses

In the cities marked thus (*) at the bottom of this page there are "Standard" Wholesale Houses carrying in stock complete lines of

explosives on German cantonments in the area between Waville and Damvillers, twelve miles north of Verdun. Twelve enemy machines were destroyed. Only one American plane was lost.

October 11.—Since the beginning of the St. Mihiel offensive, states a dispatch from France, thirty-two enemy balloons and airplanes have been brought down by American aircraft cannon and machine guns.

Another dispatch records the one hundredth successive victory of the American aviation pursuit squadron on the night of October 10. Six enemy machines were destroyed.

October 12.—During the last seven days British airmen destroyed eighty-nine German machines and drove twenty-seven down out of control. Fifty-three British machines were reported missing.

October 15.—London reports that the independent air force bombed the Freseaty airdrome and blew up a Zeppelin shed.

THE BALKAN SITUATION

October 9.—Unofficial advices reach London that the Turkish Cabinet had decided to take military measures against Bulgaria, but abandoned the project when it found that the opinion of the country was against them.

During a dinner to the Bulgarian Cabinet, says a dispatch from Sofia, King Boris declared that the will of the people shall be his guide, and that he and his advisers will work together for the good of the people and of Bulgaria.

London reports that 65,000 Bulgarian soldiers have surrendered to the Allies west of Uskup in accordance with the provisions of the armistice.

October 10.—An Amsterdam dispatch states that the Porte has been advised that Bulgaria is expected to send troops against Turkey in an expedition planned by the Entente Allies.

A London dispatch states that Serbian troops are within six miles of Nish, that a Franco-Serbian column is moving around the city from the southeast and another Allied force encircling it from the southwest.

October 13.—The Berlin War Office admits that Allied troops have entered Nish.

Saloniki reports that news of Bulgarian atrocities against the Hellenic population of eastern Macedonia has aroused a strong feeling of indignation in Allied and Greek circles.

October 14.—After capturing Nish, states a London dispatch, the Serbian forces pushed ahead to enemy positions north of the town, while to the west they held the line of Mramor-Prokuplie. French cavalry has occupied the Bela Palanka.

October 15.—Rome reports that Durazzo, the Austrian naval base in Albania, has been taken by Italian forces pushing north through the Balkans. Advancing on a wide front in the Morava Valley, the Servians take more prisoners.

IN PALESTINE

October 10.—Mesopotamian dispatches received in London record the arrival inside the British lines of 47,000 Assyrian, Armenian, and Russian refugees who made their escape through the Turkish front. Ten thousand more refugees are distributed in Kurdistan towns or are wandering in the hills. Two hundred persons, mostly old men, were massacred by the Turks at Urmia.

The British War Office states that French and British war-ships entered

Columbia Batteries

Dry Batteries

Boys and their elders—both use Columbia Dry Batteries. For these fiery little bundles of electric energy will run a toy—or a mammoth truck or tractor. They put "go" into autos and motorboats, and stationary engines. They light up lanterns; ring bells; make telephones speak up—both toy and regular kinds.

The biggest battery factory makes Columbias—has made them, in fact, for a quarter century and more. Into every cell is packed all the power that expert knowledge can put there.

Columbias are used for every battery need—and everywhere.

Though they cost no more, Columbias last longer. Fahnestock Spring Clip Binding Posts, no extra charge.

Storage Batteries

First, we build Columbia Storage Batteries right.

Second, we appoint Columbia Service Dealers everywhere to inspect, water, or charge your battery. If it must be taken apart, the Columbia Service Dealer will forward it to a nearby Columbia Service Station, where only skilled specialists are authorized to make repairs.

Third, we guarantee Columbia Storage Batteries to do definite work for a definite period—and we furnish another battery without extra cost if the first battery fails within the guarantee period. This straightforward guarantee is made possible not only because of the 18 distinctive features embodied in the Columbia, but also because of this definite service plan. Any Columbia Service Dealer or Service Station will gladly tell you why you will profit with this unique Columbia Storage Battery Service for your car.

NATIONAL CARBON COMPANY, Inc.

Magnetos Are in the Thick of It

WAR provides the supreme test alike for man and machine. Efficiency only counts.

War has proved Magnetos to be the supreme ignition system. Tanks, airplanes, motor transports, etc., all are magneto-equipped. Daily, their efficiency, their stamina, is proving conclusively the superiority of the Magneto, the self-contained ignition system, independent of batteries, coils or other contraptions.

For Home Work, Too, Now and When Victory Comes

The great Bosch Works at Springfield, Mass., expanded to meet the demands of our Army and Navy, can serve also those other war-workers, the motor truck and the tractor.

Now that Bosch Magnetos again can be had for home use, more and more makers of motor vehicles will use them. For more power and long service, specify "Bosch Magneto Ignition" on the order for a new truck or tractor. Vehicles now in service can now be fitted with Bosch, too.

Correspondence Invited. Be Satisfied. Specify Bosch. 134 Service Stations, with more being established, serve owners throughout the country.

Beirut, the chief seaport of Syria, October 7, and found the town evacuated by the enemy. Exclusive of those taken by the Arabs, the prisoners captured by the Egyptian expeditionary force has risen to more than 75,000. It is estimated that of the Turkish 4th, 7th, and 8th armies not more than 17,000 escaped.

AFFAIRS IN RUSSIA

October 9.—In spite of the assurance of Lenin, says a dispatch from Stockholm, the Red terrorism continues in Petrograd. The Soviet has rejected the proposal to release political prisoners.

The British War Office reports that in the Shenkursk region, which lies between Archangel, the Vologda Railway, and the Dvina, the enemy is still retiring, followed by a mixed force of Americans and Russians.

October 11.—A dispatch from Vaga, northern Russia, states that a company of former Russian officers who escaped through the Bolshevik lines walked 200 miles through swamps and forests to enlist in the Allied lines.

Tokyo reports that Bolshevik forces abandoned the gold-mining district of Morasofsky when Japanese and other Allied troops approached.

A Petrograd dispatch received at Amsterdam reports that 250 hostages have been shot at Penza, 130 miles northwest of Saratof, in reprisal for the assassination of a member of the Extraordinary Commission and an attack on the prison wardens.

October 12.—A dispatch from Stockholm states that infant mortality in Petrograd has increased to 50 per cent. From 57 to 87 per cent. of enrolled school-children are absent on account of sickness and the situation is growing worse daily.

Washington reports the arrival of an American Red Cross relief ship at Archangel with 4,600 tons of food, drugs, and other supplies for Allied soldiers and destitute civilians.

Reports from Pskof say that German soldiers who were transferred there from the French front to recuperate mutinied and unfurled the red flag and were arrested and disarmed. German soldiers at Lopol are threatening to march to Berlin and demand that the war be ended.

October 13.—A delayed dispatch from Vladivostok announces a coalition between the Omsk and Horvath governments. Several Siberian leaders are given places in the Cabinet.

October 15.—London receives a telegram from Moscow stating that the Bolshevik Government has agreed to release the remaining British officials detained in Russia.

THE CENTRAL POWERS

October 10.—The financial panic in Germany is spreading to small holders of war-bonds and the Government is striving to allay the fears of this class of investors.

It is rumored that General Ludendorff has suffered a physical collapse and relinquished command of the German Army.

London learns from Vienna that the Austro-Hungarian Ministerial Council has decided to introduce national autonomy "in order to make President Wilson's stipulation an accomplished fact."

The semi-official North German Gazette states that the German Minister of Foreign Affairs will soon appoint a committee of officials, parliamentarians, and jurists to frame a German plan for a league of nations.

October 11.—Zurich is informed from

What 15¢ will bring You from the Nation's Capital

Washington, the home of the Pathfinder, is the nerve-center of civilization; history is being made at this world capital. The Pathfinder's Illustrated weekly review gives you a clear, impartial and correct diagnosis of public affairs during these strenuous, epoch-making days.

Wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. Send 15¢ now that you might like such a paper, and we will send the Pathfinder on postage-free trial for 13 weeks. The 15¢ does not repay us, but we are glad to invest in new friends.

The little matter of 15¢ in stamps or coin will bring you the Pathfinder 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center for the Nation; a paper that points all the news of the world and tells the truth and only the truth; now in its 25th year. This paper fills the bill without emptying the purse; it costs but \$1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining—write for it. Send 15¢ now. The Pathfinder, Box 56, Washington, D.C.

Fifteen Thousand Miles of Dynamite

THE length of the average stick of dynamite is eight inches. Small as they are, these eight-inch sticks of concentrated force play an important part in the industrial work of the Nation. Every year the Hercules Powder Co. is called upon to furnish enough of them to form a dynamite chain fifteen thousand miles long.

Such a chain, the sticks laid end to end, would extend two-thirds of the way around the globe. It could be laid along the ocean routes from New York to Pernambuco; from the latter to Cape Town; then to London via Madeira with a few hundred miles to spare.

This yearly chain of Hercules Dynamite is of more importance to you personally than perhaps you realize. It is linked with a majority of your daily activities, both work and play.

Suppose metals were today mined laboriously by hand. Unless you are a millionaire you would have in your home no electric light or gas, no telephone, no kitchen range. Steam or hot water heat would probably be out of the question. You would not own an automobile. Why, one hundred years ago even a brass door-knob was a sign of wealth.

It is largely to the power of dynamite that we owe the abundance of most of our modern conveniences. So the next time you see one of these eight-inch sticks in its yellow wrapper look upon it with respect—not only on account of its power but also because of the service it renders you.

HERCULES POWDER CO.

Explosives and Chemicals

Notice where our branch offices are located

Every one of the twenty ATLAS branch offices was located where it is for the purpose of making it easy for users of ATLAS Explosives throughout the country to receive shipments quickly and to enable our service men to be in a position to get into instant touch with users of explosives whose problems seem especially difficult of solution.

These branches are not mere "forwarders" to the home office. Each one is a complete unit. Each one is competent to handle any inquiry or order that comes to it.

This means elimination of all delay. When you communicate with an ATLAS branch you get just what you want quickly and surely.

The ATLAS line of explosives and chemicals includes high and permissible explosives, dynamites, farm powders, blasting and sporting powders, blasting supplies of all kinds, nitric and sulphuric acids, mixed acids, sodium nitrite and ammonium nitrate, nitre-cake, lacquers, etc. Producer of leather cloth.

Write for further information

General users of explosives and chemicals should write for further information. Farmers, owners of estates, lumbermen, should get our special book, "Better Farming." Mailed free.

Vienna that Emperor Charles has issued a manifesto of his decision to unite Croatia, Slavonia, Bosnia, Herzegovina, and Dalmatia in one state.

October 12.—Italian infantry break into the Austro-Hungarian trenches on Cima Trepezzi, inflicting heavy losses and taking a number of prisoners.

October 13.—Stockholm reports that the Finnish Government has asked Germany to withdraw her troops from Finland.

October 15.—An Amsterdam dispatch states that the German Government asks France to refrain from bombarding the large towns of northern France and to enter into an agreement to permit a portion, at least, of the population of Valenciennes to pass into the French lines.

Another Amsterdam dispatch reports that, according to a Bremen paper, the Luxembourg Chamber of Deputies has unanimously adopted an order begging President Wilson to protect Luxembourg's rights.

PEACE NEGOTIATIONS

October 9.—In the *Vossische Zeitung*, of Berlin, Georg Bernhard declares that Prince Maximilian's announcement of the request for an armistice was received in the Reichstag in "stony silence."

October 10.—In a speech at Auburn, N. Y., Secretary Lansing said strict justice should be done to Germany, but the Allies should distinguish between the "master and the serf," and not let their hatred be their only guide.

October 11.—According to a Central News dispatch from Amsterdam, Austria-Hungary and Turkey have informed Germany that they will accept President Wilson's peace terms. Reuter's learns that Turkey has approached the United States with a view to peace.

Amsterdam transmits a Cologne dispatch stating that the Kaiser has summoned the sovereigns of all the German federal states for a consultation before answering President Wilson's note.

October 12.—Germany's reply to President Wilson, offering to accept his peace terms, is published in Berlin and other European centers before the official dispatch is received in Washington. Rumors of the Kaiser's abdication are also generally published.

The Anglican Diocese of Australia passes a resolution that, in view of the "inhuman treatment accorded to the natives of German colonies, it would be incompatible with the principles of Christianity to allow the natives to be placed again under the yoke of their oppressors."

A dispatch from Washington cautions the people of the United States and Allied countries against taking the German peace note as a complete acceptance of President Wilson's demands.

October 13.—Dwight T. Stone, president of the Unconditional Surrender Club of the United States, telegraphs all branches to call mass-meetings to "take emphatic action urging the American and Allied governments to insist upon complete capitulations of the Huns or a finish fight."

October 14.—Germany's peace note is delivered at the State Department in Washington. In a prompt reply President Wilson leaves all questions of armistice to the military advisers of the Powers arrayed against Germany, insists upon absolute safeguards and guaranties providing for the maintenance of the present military supremacy of the Allied armies; and adds that

Fine for Enamel

It seems a pity to cover up the beauty of "Beautiful birch" with enamel, and yet, so wonderfully adapted is birch to the reception of fine enamels that it is one of the most widely used woods for that purpose.

The reason for this is that "Beautiful birch" contains nothing which can produce the faintest discoloration of the coating and is so hard and durable that it withstands the severest use wonderfully. Its reasonable price probably has something to do with it, too.

We have a handsome book on birch and six finished samples that belong to you. Please tell us where to send them.

Northern Hemlock & Hardwood Manufacturers' Association

The Russel Drive

Master of Road and Load

Ever Eastward to the Sea

Perhaps you yourself have seen them, on some lonely country road, at twilight or early dawn—the Motor Trucks—moving ever eastward to the Sea. First, a cloud of dust; then a Truck, grim and huge. Then another Truck; then a score of Trucks. If you have seen them, you have felt the Might, the Invincibility of them. You have felt that the Trucks were taking the answer of Democracy and Freedom straight to Berlin. And They are!

Do you know that soon in France we shall have a Motor Transport Corps of five thousand officers and a hundred thousand men, twice the size of the entire U. S. Army when we declared war?

Such has been the achievement, such is the Destiny of the Motor Truck—to Win the War. And the Russel Internal Gear Drive Axle, vital to the Efficiency of the Truck, and therefore vital to the Inevitable Victory, is our contribution.

Russel Motor Axle Company, Detroit, Michigan, U. S. A.

Internal Gear Drive Axles for Motor Trucks

With Comfy Slippers on Your Feet, the Evening Rest is Doubly Sweet

You men who are doing the nation's work—you need to conserve yourselves—your energy—your health.

When you go home at night, put off your shoes. Thrust your tired, aching feet into warm Comfy Slippers. They rest your feet—and resting the feet rests the whole body.

Thus you renew your energy—and you save shoes. Leather shoes were never meant to be worn in the house.

Comfy Slippers are made for every member of the family—from Grandad to Tiny Tad. Styles to suit every fancy. Look for the Comfy trade mark when you buy. It identifies the genuine.

an armistice can not be considered so long as Germany continues her wanton sinking of passenger-ships at sea and committing acts of inhumanity, spoliation, and desolation on land. As a condition precedent to peace, if "peace is to come by the action of the German people themselves," he demands the elimination of the autocratic power "which has hitherto controlled Germany, or its reduction to virtual impotency."

Washington receives Turkey's official request that President Wilson take peace steps.

The United States Senate breaks all precedents by vigorously applauding President Wilson's reply to Germany's peace note. The Senators regard the reply as the forerunner of unconditional surrender by the Central Powers.

Reuter's learns from authoritative quarters in London that there is no prospect of an early armistice as the result of Germany's overtures.

Secretary of War Baker tells newspaper correspondents that the enlarged military program, which calls for the shipment of 250,000 American troops monthly, will not be influenced by any turn which diplomatic negotiations may take.

October 15.—Reports reaching Washington state that von Hindenburg himself was responsible for the German Government accepting the President's peace terms and seeking an immediate armistice. He told the Reichstag that necessary munitions were lacking to continue the war.

In an address at Toronto, the President of the Privy Council of Canada declares that unconditional surrender is the only condition on which the Dominion is willing to end the war.

Winston Churchill, British Minister of Munitions, in a speech at Manchester says President Wilson's stern and formidable answer to Germany is indorsed by all the Allied countries.

FOREIGN

October 9.—The British Foreign Office receives indirect news of the fall of the Turkish Cabinet.

An announcement in the Berlin newspapers states that, in view of unsafe traffic conditions, the Balkan express will probably only run to Nish, but that it will probably be possible to transport passengers to Sofia and Constantinople in local trains.

October 10.—Stockholm reports that the Finnish Landtag has elected Prince Frederick Charles of Hesse, brother-in-law of the Kaiser, King of Finland. The Republican members of the Chamber did not vote.

October 11.—A cable from Porto Rico reports a terrific earthquake and tidal wave at San Juan at 11 o'clock this morning.

Geneva sends word of a grave movement of unrest in Constantinople which is regarded as the beginning of a revolution against the Young Turks.

The Sheffield Daily Telegraph states that Belgian authorities have delivered orders to Belgians living in England to return to their native land.

Melbourne reports that a bill making subscriptions to Australian war-loans compulsory has passed its first reading in the Commonwealth's House of Representatives. The measure exempts citizens whose taxable income falls below \$250 and soldiers and sailors serving abroad.

October 12.—The French Cabinet decides, as a necessary national defense measure, to urge the passage of a bill providing for the taking over of all French railways during hostilities and one year after peace has been declared.

1848

Colt's Firearms

1898

have been supplied to the
United States Govern-

ment for many years. Troops were equipped with Colt made arms in the Mexican War, 1848, during the great struggle from 1861 to 1865, and in the war with Spain, 1898. Through all the years of this Company's existence we have been developing arms which have been adopted by the United States Government and which have made many thousands of friends for the Colt Company.

This great experience now seems to have been but preparation to enable us to serve the United States Government during the present world war. The Colt Company manufactures the Colt, Browning and Vickers Machine Guns in addition to the Colt Automatic Pistol and Colt Revolver, Caliber .45. To the maximum extent of our capacity we are making these essentially military weapons for the Government, and at their request are daily enlarging our facilities. In doing this, which is our duty to the Government, we are each day having to disappoint many friends who wish to procure some particular model of Colt revolver or automatic pistol for their own use. We are sure, however, that all those who have the best interests of the country at heart prefer that at this time our whole effort be expended in making our part of the equipment for the boys who are going to use it "over there."

Miller "Handy Andy" Mends Any Size Hole in a Tube

Yes, anything from a pin-hole puncture to a long, ugly cut can be quickly and permanently repaired by anyone without gasoline or a vulcanizer.

So ask your dealer for Miller Handy Andy and then just reach in your tool kit when trouble comes and take out this lightning outfit. Snip off any sized patch required from the generous roll of Handy Andy Para, apply the cement and press the Handy Andy Patch on hole or cut. That's all! Your tube is ready at once to be inflated.

The longer Handy Andy stays the tighter it gets—for mind you, this Miller Patching is self-curing. Handy Andy is better than ready-cut patches because it is easier applied and always provides the right size patch.

Any man, woman or 10-year old boy can do efficient tire repairing with Miller Tire Accessories. They're the life savers of old tubes and tires and the first aids to injured ones. And now that so many service stations are closed on Sundays and evenings, you ought never venture out in a car without Miller Accessories in your kit.

Repair Guide Free

We have just issued a valuable 36-page book called "Guide to More Tire Mileage." It shows both by sketches and directions how you can easily renew your casings and tubes. Send your address for free copy while they last.

The Miller Rubber Company
Dept. A65, Akron, Ohio

When having Tires or Tubes repaired by others request the use of Miller Repair Materials and you are sure of a longer-lasting job. (193)

A San Juan dispatch states that when the island of Porto Rico was shaken by an earthquake, which was followed by a tidal wave, fourteen persons were killed and over forty injured at Aguadilla. The city hall at Ponce was wrecked and several persons killed.

Calgary reports the entire force at the Ogden shops of the Canadian Pacific Railway, numbering 1,200 men, walking out in sympathy with the striking freight-handlers.

October 13.—Paris reports that the total amount of National Defense bonds subscribed for during September was \$311,800,000.

The Spanish Government decides to put into immediate service sixty-two German ships in Spanish ports as the equivalent of ships torpedoed.

Governor Yager estimates that 150 lives were lost in yesterday's earthquake in Porto Rico. Almost every town on the island reports damaged property and scattering fatalities.

Nearly one hundred lives are lost by an explosion in a munition-plant at Trenton, Ont.

A dispatch from Paris states that two French scientists have succeeded in isolating the infectious agent which causes Spanish influenza.

October 15.—More earthquake shocks are reported in Porto Rico. The Red Cross estimates that over 600 families are homeless.

Washington learns that 250,000 Belgian refugees are making their way from Lille, Croubaix, and other towns near the front lines in an endeavor to escape into Holland.

The British Bureau of Information announces that the approximate British casualties from the beginning of this year to the end of September were more than 700,000. The lowest figures for one week were 4,126 and the highest over 40,000.

DOMESTIC

October 9.—Washington reports that the Government has agreed to pay all interest on outstanding bonds of the Western Union Telegraph Company, all dividends and interest payments due on stocks and bonds of subsidiary companies, all taxes and operating charges on the property, and, in addition, the sum of \$8,000,000 annually to insure the present rate of dividend on the company's stock.

More than 2,500 Home Defense Service nurses available for the Red Cross are being mobilized and sent to camps, hospitals, and ship-building plants to fight Spanish influenza.

The United States Senate ratifies the convention between this country and Japan, extending the general arbitration treaty for five years. The commercial travelers' treaty between the United States and Uruguay was also ratified.

October 10.—The Alien Enemy Property Custodian announces the seizure of all but 100 of the 20,000 shares of the capital stock of the Bridgeport Projectile Company, of Bridgeport, Conn., owned by the German Imperial Government.

A bill introduced in the Senate at Washington provides that all political campaign contributions exceeding \$500 shall be taxed 10 per cent. and lesser amounts subjected to lower rates.

General Pershing cables the Government asking for 900,000 tons of coal per month.

October 11.—General March announces in Washington that American troops sent overseas have passed the 1,900,000 mark.

Since April over 3,000,000 aerial bombs

Salt Mackerel CODFISH, FRESH LOBSTER

RIGHT FROM THE FISHING BOATS TO YOU

FAMILIES who are fond of FISH can be supplied DIRECT from GLOUCESTER, MASS., by the FRANK E. DAVIS COMPANY, with newly caught, KEEPABLE OCEAN FISH, choicer than any inland dealer could possibly furnish.

We sell ONLY TO THE CONSUMER DIRECT, sending by EXPRESS RIGHT TO YOUR HOME. We PREPAY express on all orders east of Kansas. Our fish are pure, appetizing and economical and we want YOU to try some, payment subject to your approval.

SALT MACKEREL, fat, meaty, juicy fish, are delicious for breakfast. They are freshly packed in brine and will not spoil on your hands.

CODFISH, as we salt it, is white, boneless and ready for instant use. It makes a substantial meal, a fine change from meat, at a much lower cost.

FRESH LOBSTER is the best thing known for salads. Right fresh from the water, our lobsters simply are boiled and packed in PARCHMENT-LINED CANS. They come to you as the purest and safest lobsters you can buy and the meat is as crisp and natural as if you took it from the shell yourself.

FRIED CLAMS is a relishable, hearty dish, that your whole family will enjoy. No other flavor is just like that of clams, whether fried or in a chowder.

FRESH MACKEREL, perfect for frying, **SHRIMP** to cream on toast, **CRABMEAT** for Newburg or deviled, **SALMON** ready to serve, **SARDINES** of all kinds, **TUNNY** for salad, **SANDWICH FILLINGS** and every good thing packed here or abroad you can get direct from us and keep right on your pantry shelf for regular or emergency use.

With every order we send **BOOK OF RECIPES** for preparing all our products. Write for it. Our list tells how much kind of fish is put up, with the delivered price, so you can choose just what you will enjoy most. Send the coupon for it now.

A WASTE basket is either a nuisance or it is the most serviceable friend an office man can have. The Victor is the serviceable kind. It is made of metal, finished in Olive Green, Oak or Mahogany. It is heavy enough to remain exactly where you want it. It is so well balanced that it will not tip over even if tipped at a 45 degree angle. It is fire proof and eliminates all danger if a lighted match, cigar or cigarette is thrown into the basket. It is indestructible and because of its long service it is the most economical basket to buy.

Ask Your Dealer for a Victor

When you need a waste basket for your home, office or store, insist upon getting the Victor. It is serviceable, attractive and practical. It is the best basket you can buy.

Write for the Catalog

Our booklet "Furniture of Steel for the Bank and Office" shows our complete line of metal baskets, desks, safes, bond boxes, tables, etc. Every office should have this booklet on file. It will be mailed free to any one who writes for it.

METAL OFFICE FURNITURE COMPANY
GRAND RAPIDS, MICHIGAN

Save the cost of a new roof —use FIBROTEX at our risk

Every year hundreds of thousands of dollars are wasted through neglect to repair leaky roofs. Material and labor badly needed for other work is used in re-building roofs that could easily be made serviceable and weathertight by stopping the small leaks in time.

Why not help reduce this big expenditure and conserve the much needed labor and material? Save your roof at slight cost by repairing the leaks *now* with FIBROTEX.

War-time Conservation

FIBROTEX is a product especially formulated for such war-time conservation. Through its use building owners can conserve thousands of dollars in material and labor. Accept our offer, as explained, and let us send you a quantity to *try at our risk*. Every building owner should keep FIBROTEX on hand for such repair work.

Applied to Any Surface, Wet or Dry

FIBROTEX repairs leaks in roofs of all kinds. Whether it is used to fill cracks in concrete roofs—repair damage done to rusted tin or metal—close apertures in composition or leaks in shingle roofs, it performs its functions efficiently and economically. It may be applied even to wet surfaces where it will bond firmly and tenaciously.

FIBROTEX, a plastic compound of putty-like consistency, manufactured from weather-resisting gums, oils and asbestos fibre—repairs leaky roofs permanently and economically. It is easily applied with an ordinary trowel by unskilled labor.

FIBROTEX retains its elasticity and pliability under all extremes of temperature—it will not crack or check from coldest weather, nor will it soften and run when exposed to the hottest sun.

Make This Trial

Let us send you a trial barrel weighing about 600 lbs., at 7c per pound. If a barrel is more than you need, send \$5.00 for a 50-pound can, money to be refunded if product does not prove absolutely satisfactory to you. Write today, using coupon if convenient.

THE TRUSCON LABORATORIES DETROIT MICHIGAN

Free Consulting Service for Manufacturers

Manufacturers who are faced with any unusual paint requirements are invited to consult our corps of expert chemists and chemical engineers. They can be of great service in helping to solve your problems on a strictly war-time basis of true conservation. Whatever your problem you can secure our cooperation without obligating yourself in any way.

Special Trial Offer

- ☐ Please ship one barrel of FIBROTEX (approximately 600 lbs.) at 7c per pound. Guaranteed to be satisfactory to us.
- ☐ Enclosed find \$5.00 for which send 50-pound can of FIBROTEX, money to be refunded if not found satisfactory.

TRUSCON FIBROTEX for repairing leaks of all kinds

Truscon Agatex (Concentrated)

Truscon Agatex is a well-known product for hardening cement floors. We can now furnish Agatex in concentrated form which gives still greater economy.

Agatex chemically transforms crumbling, dusting cement floors into hard, dustproof, wear-resisting surfaces. Agatex may be applied at night and floors used next day. Low in cost and easily applied with a long handled brush. Widely used in factories, warehouses, garages, etc.

Other Truscon Products

Include Truscon Waterproofing Paste for waterproofing concrete foundations, tanks, reservoirs, etc. Truscon Sealer-Tex for waterproofing concrete, brick, stucco and masonry surfaces of all kinds. Truscon Floor Enamel, a porcelain-like white enamel finish for factory interiors. Also many other similar technical products. See list in accompanying coupon.

You Can Rely on Remy In Difficult Driving

Remy high standards of workmanship and advanced engineering have their greatest meaning for you when you encounter difficult driving conditions that test the mettle of your car and the Starting, Lighting, and Ignition System.

It is then that you should realize the full value of Remy's Constant Performance. Remy products are built to work in the tight places as well as on the open road. With an added pride in your car, you appreciate the wisdom of the automobile maker who determined upon Remy because he kept your satisfaction in mind rather than lower manufacturing costs for himself.

have been delivered to the Government by the manufacturers. Ordnance experts think this almost a sufficient number to meet the demands of any contemplated aviation program.

Influenza and pneumonia increase in Greater New York, 4,293 cases of the former and 394 of the latter being reported to-day. Washington reports that the total number of influenza cases at camps since the beginning of the epidemic has reached 223,000, pneumonia cases, 27,907, and deaths, 8,335.

October 12.—Because of the continued spread of influenza the Supreme Court of the United States decides upon another week's recess.

The War Risk Insurance Bureau asks Congress for \$134,000,000 additional to pay family allotments and allowances of soldiers during the present fiscal year. Previous appropriations have aggregated \$141,000,000.

The Central Federated Union passes resolutions calling a general Pan-American conference of organized labor in New York City on November 29, to help cement cooperation between the Latin-American republics and the United States.

October 13.—A dispatch from Duluth, Minn., reports whole sections of northern Wisconsin and Minnesota timberland on fire and a number of towns in ruins. Over 500 persons are killed and thousands are homeless. In Duluth alone there are 12,000 penniless refugees quartered in hospitals, churches, schools, and private homes.

October 14.—Adjutant-General Rhinow, who has taken charge in the burnt-timber districts in Minnesota and northern Wisconsin, estimates that the dead will be close upon 1,000. Fully fifty square miles, it is reported, have been stripped clean of timber, crops, live stock, and human habitation.

The Federal Public Health Service announces that it is mobilized for a national campaign against the epidemic of Spanish influenza.

October 15.—It is reported in Washington that an inquiry into the whole range of German propaganda in this country is likely to develop from the Senate's investigation of the purchase of the Washington Times by Arthur Brisbane with money contributed by the brewers.

Forest fires break out afresh in the Duluth district and several towns are threatened with destruction. Thus far the bodies of 725 victims have been recovered in the devastated sections.

Influenza continues increasing in Greater New York. Cases reported to-day, 5,113, as compared with 4,925 yesterday. Since September 18 the total number of cases reported were 48,024, with 2,296 deaths.

Washington reports that the disease has reached epidemic proportions in practically every State in the country. In only three States is it reported as stationary. In army-camps the epidemic is subsiding. The total of cases reported was 6,498, a decrease of 773 from yesterday. Pneumonia cases were 1,916, against 2,523 the day before, but the number of deaths increased, being 889, against 716 yesterday.

No Help.—A man was rebuked in court for endeavoring to confirm a palpably absurd story told by his wife.

"You should be more careful," the judge said. "I tell you candidly I don't believe one word of your wife's story."

The man looked at the judge and sighed mournfully.

"That's all very well," he said. "You may do as you like, but I've got to."—*Pittsburg Chronicle-Telegraph.*

Public service corporations use Art Metal

IT is possible in this space to name only a few of the many great public service corporations who are users of ART METAL steel office furniture, safes and files:

INVESTMENTS-AND-FINANCE

AS TO PRESENT INFLATION IN THIS COUNTRY

WHETHER or not there has been real inflation in this country as a consequence of war-demands was discussed recently in a National City Bank bulletin. The writer began with saying that in wages and commodities the effects of inflation "have been visible for some time," but not "in the prices of securities and real estate." Much inquiry and comment have been heard on this subject. Since inflation affects the purchasing power of money, many have asked why it does not show itself in the prices of stocks, bonds, and real estate. The writer undertakes to explain:

"Some persons apply the term inflation only to an undue expansion of paper currency, but an expansion of bank loans and deposits has the same effect, since checks are now the common medium of payments. Others in referring to inflation have in mind a general state of abnormally high prices incidental to great industrial activity, whatever the primary cause may have been. Many people argue that the inflation of credits at this time is wholly the result of the war-demands, but they take no account of the part played by an increased supply of credit or money in facilitating the demands. In time of peace a country's industries are occupied in supplying its consumptive wants and in construction work to enlarge its powers of production. If, when a country goes to war, it would curtail these accustomed demands enough to offset the new war-demands, there would be no rise of prices. But people do not curtail their accustomed demands to any such extent. They go on trying to buy and consume as usual, and since there is not labor enough to do everything, employers raise wages to get labor away from one another, and all prices and costs rise. More credit is required to handle all business under these conditions, but whatever amount of credit is supplied is quickly absorbed, because the bidding for labor and materials continues. In short, each new supply of credit finances a further rise of prices, because costs and prices follow each other around a circle.

"The primary cause of this great rise of wages and prices of course is the war. It has taken millions of men from the industries and set up an enormous demand for the war-supplies. It has given an abnormal value to everything that can be made serviceable for war-purposes or that supplies immediate needs. There is a strenuous effort to expand the production of these necessary supplies. All energies are directed into this channel. In the endeavor to accomplish this expansion along certain lines an expansion of credit occurs, but the use and influence of this credit are closely confined to these lines. Indeed, the expansion of credit in part results from efforts to transfer capital from other lines. Owners mortgage or sell out fix investments in other kinds of property at a sacrifice for the purpose of converting their capital into war-uses. They sell municipal bonds, railway bonds, stocks, real estate, etc., in order to buy government offerings or to supply capital to the war-industries.

"A few stocks have gained in market value because the financial condition of the companies has improved, but, as a rule, market gains do not equal the gains in assets. One reason for this probably is that uncertainty hangs over the prospects for business after the war, but another is that the investing power of the country is being directed into other channels. Formal notice has been given to the New York Stock Exchange that credit expansion for the purpose of stock purchases will not be

permitted; but even before this notice was given borrowing upon stocks had been voluntarily reduced to a point much below normal.

"Real estate does not feel the expansion of credit because almost none of the credit is being used for the purchase of real estate. Nobody wants vacant, unproductive real estate at a time when the cost of improvements is double that of normal times. Real estate feels the stimulus only if within the field of war-activities; otherwise it is depressed by the lack of demand and the efforts to convert such property into cash for investment in other fields.

"How long will this condition exist? When may a tendency to equalize the effects of inflation be expected to develop? The answer is that there is no certainty that the effects of inflation will reach stocks. That is to say, general deflation may come before the effects of inflation reach stocks. It depends upon conditions after the war. When the war comes to an end and offerings of government bonds cease, undoubtedly the situation will change; but so many changes will occur that it is not safe to predict what the result will be. If industrial activity and earnings continue as at present after the Treasury drops out of the market as borrower, it is safe to predict that capital will flow into the general investment market, and stocks, bonds, securities, and real estate will receive their normal share of attention, and benefit accordingly, but this is assuming the very conditions about which there is uncertainty.

"Stocks represent proprietary interest in companies whose assets consist of land, buildings, machinery, materials, goods, etc. If labor costs were established on the present level to stay, it would be impossible to duplicate these properties except with a much higher capitalization than they have, and this fact would naturally raise their capital value and thus bring about higher prices for the certificates of ownership. This is the method by which logically the effects of inflation would spread to stocks. But labor costs probably will decline after the war, and it is also to be considered that in many lines a large increase of capacity has been developed during the war and costs written off out of war-profits. It is not probable, therefore, that the high costs of duplicating existing plants will be a present influence after the war.

"To sum up the status of stocks, securities, real estate, and such other forms of property as have not shown the influence of credit inflation, the explanation is that credit inflation acts upon prices only as it increases demand, and in the instance named the demand has not been increased. On the contrary, the expansion of credit is itself a symptom of a general effort to convert, pledge, or subordinate other forms of property to the forms which are more immediately serviceable in the war emergency. The war-influence dominates depressing some values and enhancing others.

"After the war is over there will be a change of all conditions. When the government orders are finished and paid for, unless a similar volume of equally urgent demands springs up from new sources, the inflation of credits will subside. Bank loans and deposits will decline and the percentage of bank-reserves will rise. This would mean a readjustment of values toward the prewar basis. Evidently the course of this readjustment will be governed by the industrial situation and prospects at that time. If the transition from war-conditions to peace condition is fortunately accomplished; if industry is well sustained and free from disorganizing controversies, so that both the

There Are Only 100,000 Player Piano Owners Left

It is estimated that there are 850,000 player piano owners in America.

750,000 of them already know QRS Player Rolls produce music that is musical because it is human.

That means there are only 100,000 left that don't know QRS Player Rolls. Are you one of these? If so—there is one pleasure in life you have missed—a pleasure that can be had for the asking.

While QRS rolls cost you no more than ordinary kinds they are not cheap rolls—a high grade article seldom is. They cost the dealer more, but he cheerfully sells and recommends them because he is "pound wise" and knows that the better music your player piano gives, the more likely your neighbor is to buy one.

Some of the largest selling compositions in recent years have produced exclusively in QRS Rolls. Take for example our No. 511, "A Little Birch Canoe." Eight out of every ten player owners that hear this will purchase it.

See War History in the Making!

"AMERICA'S ANSWER"

Second U. S. Official War Feature

Reading history may be dull, dry business, but *seeing* history actually *being made before your eyes*, is fascinating, thrilling, blood-stirring.

Uncle Sam wants you to *see* the war—as clearly as if you were there yourself—to *see* how your fellow countrymen are helping to shatter the power of "the unspeakable Hun." He wants you to *feel* the storm and stress of the great days in which we are living.

The U. S. Government's own film, "America's Answer," takes you right into the thick of the titanic struggle, and shows you real flesh-and-blood Americans doing constructive work behind the lines—the kind of work you rarely associate with War.

It shows you other Americans actually going into battle at the brilliant action of Cantigny, supported by French tanks and flame-throwers.

YOU women with men folks in France will specially welcome this opportunity to see "America's Answer." A Washington woman spoke for all the women of America when she said, "If they only would stop long enough for one to scan the faces, I feel sure that I would see my boy."

So, even if you don't see another motion picture the rest of the year, be sure you see "America's Answer." The items in your newspaper will take on new meaning for you, after you have seen this marvelous picture, the scenes for which were filmed on the spot by the U. S. Signal Corps.

Presented by COMMITTEE ON PUBLIC INFORMATION, George Creel, Chairman

Through the Division of Films, Charles S. Hart, Director, Washington, D. C.

vesting and consuming power of the country is large, the establishment of a feeling of full confidence is likely to be followed by one of the greatest periods of construction and expansion the country has ever known. The future of wages, prices, and values in general will depend upon harmonious, highly organized, efficient, well-balanced industry, creating new wealth at a rate sufficient to satisfy the growing wants of the people.

"A tight rein is being held upon every tendency to use credit outside of essential purposes, and there is little temptation or opportunity to use it along venturesome lines. As a result there is less uncertainty about the credits of the country."

WAYS IN WHICH THE BRITISH WAR-DEBT MAY BE CARED FOR

It is declared by a writer in the *London Statist* that "a great many writers and speakers are hugging themselves with the hope that because we have lent a very large sum to our Allies and our Dominions, the debt will not be as crushing as it is often represented." Such people are described as "of the happy, irresponsible kind, who always manage to see sunshine even while the heaviest rain is falling," and who forget that "a very large part of what we have lent to our Allies has been lent to Russia; and Russia has repudiated her liabilities." Granted that the Bolshevik rule will be thrown aside, that a decent Government will come into office, and that Russia will keep faith with her creditors in the end, "how long," the writer asks, "will it be before we get to the end? How long will it be, for example, before all the revolutionary sediment which has been stirred up settles down again and something like decent Government is established? Even when there is a decent Government, the best-intentioned can not make something out of nothing. There will have to be a period of clearing the Germans out, of absolutely restoring order, of giving everybody, men and women alike, confidence that life and property are both safe; and then there will have to be a time of hard work before Russia can turn round and tell her creditors that she is in a position to show that Russians are as honest as other people." What is true of Russia the writer believes to be equally true of Belgium, Servia, and Roumania. Hence it "will be a long time before we shall be able to get the interest upon the debt in full which we have lent to our Allies and to our Dominions." Some method should be devised of lessening the debt. As to methods for doing this, the writer says:

"Some time ago we suggested one plan, namely, that the rich should volunteer to pay off, let us say, a thousand million; and we showed that if that was done quickly and wisely it would make it possible to reduce the rate of interest on the debt by at least $\frac{1}{2}$ per cent. almost immediately. That is one plan. But we are afraid the rich are not willing to volunteer. And we are not prepared to propose compulsion. Another plan is, since the rich will not volunteer, to impose a special tax upon every member of the community who has, let us say, an unencumbered income of £5,000 a year; and that that special tax should be in addition to all existing and future proposed taxes, and should be allocated rigorously to the repayment of debt.

"A third plan would be to disendow the Churches of England and Scotland, and to employ the whole of the funds so set free in the payment of the debt. There ought to be, if that plan were adopted, no waste of the funds, such as was committed when Mr. Gladstone disendowed the Irish Church. Everything that contributes in every way

STEEGER

Music is an essential of life today

THE STEGER is the universal phonograph. All of the world's greatest artists sing best for the Steger. Not only is it a most beautiful addition to the furnishing of your home, but with it, without a part to change, you can play any disc record. The patented Steger tone-arm and Steger tone-chamber give you every tone and shade of sound with absolute fidelity.

The Steger is justly called the finest reproducing phonograph. Naturally its production is limited. Hear it at your Steger dealer's.

"Say it with flowers"

Chrysanthemums

suggest the way to convey the expression of sentiment over which you've been hesitating. These great, glorious flowers are fairly alive with generous good cheer. Their freshness and beauty will keep for many days.

Chrysanthemums should be known to every home once at least during their season. They should be sent broadcast as stately messengers of cheer and good will. They should be used as decorations for weddings and all social occasions.

The dainty miniature Chrysanthemums lend themselves charmingly to inexpensive basket arrangements, while Chrysanthemum plants in profuse bloom are ideal gifts this month and next.

See the Chrysanthemum display at your Florist's shop. You may safely order them by telephone if more convenient.

Do you know that by the use of the Florists' Telegraph Delivery Service you can have flowers delivered in any city anywhere in the United States or Canada in a few hours?

to the maintenance of the two Churches should be reckoned in, and should be most rigorously employed to redeem debt. There are a large number of pious people who object. For the life of us we can not understand the principle of their objection. It seems to us that the endowment of a Church is of very much less importance than the lives, the health, and even the reasonable comfort of the very poor.

"Sir H. Campbell-Bannerman once excited great hostility by making what was an almost commonplace among the well-informed, that one-third of the population of this supposed-to-be-rich country lives habitually on the brink of starvation. We have no desire, and still less inclination, to fight the battle over again. All we care to say is that the comfort, the health, and the reasonable safety of the very poor, the very old men and women who have worked hard in their time, very young children, who are pining in this glorious weather in the slums and alleys of London and other great towns, and men who for some fault, probably, or some misfortune, are unable to secure permanent employment—all these people, not to mention the criminal classes and the immoral classes, are living in deep poverty. Sometimes they make a swag, and the criminal and the immoral among them have a good time for a night or two. Sometimes they do not know where they will find a breakfast or a dinner. And we are asked to believe that God more highly approves of relieving the rich from the necessity of providing clergymen with homes and incomes than of saving the very poor, and especially the old worn-out men and women and the young children just toddling, from all the horrors of the slums.

"When the war ends, and all our manhood returns, we shall have as serious a time to face as a nation ever has been confronted with. Our Government has done everything that it was possible for it, even by chance, to hit upon to go wrong. And it has spent money so lavishly that all Europe is in a state of poverty which has not been equaled probably since the Thirty Years' War. We venture to doubt whether even the war against Revolutionary France did so much to sink the whole population of Europe as has this present war. And, as if sinking the population was not enough, we have piled up debt at such a rate that if it were not for the United States and Japan there would be widespread doubts whether many governments, with the best will in the world, would be able to face what they are called upon to do. Whatever plan may ultimately be adopted, it is extremely desirable that the public should give its best thought to the subject. It is one that will try us sorely by and by. It is one that can be solved. We do not think so lightly of the resources of the United Kingdom that a means can not be found of lightening that burden of debt, even within a very few years after peace returns. But it is in the highest degree desirable that whatever plan is adopted shall be the plan of the whole community.

"The new Parliament will carry no weight with it. We shall have to wait for the return of the soldiers and sailors for legislation that every man will respect as representing the votes of the real population of the United Kingdom; and until then it is desirable that no definite plan for dealing with the debt shall be undertaken; unless, indeed, either the rich volunteer to pay off a thousand millions, or the rich volunteer to bear a special taxation for the early reduction of debt."

Another Excuse Shattered.—"I don't see why you find fault with him so much?"

"He's a blundering fool."

"That may be, but he's a young man, and he's very ambitious."

"Oh, shucks. The Kaiser was ambitious."—*Detroit Free Press.*

TOPICS - OF - THE - DAY

UNSCRAMBLING "MITTELEUROPA"

GERMANY'S DOOM WAS FINALLY SEALED when her last two allies, Turkey and Austria, realized the uselessness of further fighting and surrendered to the Entente. Instead of Germany consolidating an empire in Central Europe, interested observers now see the Allies encouraging the development of a group of small independent nations between the Alps and the Karpathians, between the Adriatic and the Danube, and in Western Asia. When Europe was reconstituted after the overthrow of Napoleon, Austria took the leading part. The Austrian Metterich, worshipping political reaction as something holy, for a generation pulled from Vienna the diplomatic strings that kept princes on their thrones and peoples in subjection. It is, therefore, singularly fitting that the triumph of democracy a century or so should be built upon the ruins of the Austrian Empire, that the first nations to experience the birth of freedom through the sweep of the armies of the free

should be the races so long shackled by the Hapsburg. The political task of building the new from the ruins of the old is never a simple one. It may be fairly easy in what was once Turkey, for we now have an independent Arabia, Palestine and Mesopotamia already enjoy the blessings of British rule, while Smyrna has for some time had a practically independent ruler, and Turkish rule in many spots has been but nominal. But the task ahead of us in Central Europe can only, editors declare, be compared to "unscrambling eggs." With famine, revolution, and economic collapse at home, the appearance of Allied troops on the Danube and the advance of the Italians across the Piave were the signal for a quick exchange from offering to begging for peace on the part of Austria. But, as some one asked in Paris, is there any longer any Austria to make peace? The ax is laid at the foot of the Hapsburg tree, observes the *Buffalo Evening News*, the other dailies prefer a different figure for the crashing of the ramshackle Austrian Empire. The *Boston Christian Science Monitor* likens it to the breaking up of a wrecked ship. Others call it "dismembering," and the *New York Globe* sees Austria "dissolved, blown up from its own internal picric acid," and the Danubian basin "littered with the fragments of a broken régime." Vienna has acknowledged the independence of Hungary, of the Czecho-Slovaks, of the Jugoslavs, the Austrian Germans talk of their own separate nation,

and minor nationalities have raised the standard of revolt in various parts of the Hapsburg patrimony. The sudden crumbling of this great and ancient empire is envisaged by our editors as one of the great facts of this war. "One of the Great Powers, the most evil, looking back over all the centuries, the headquarters of tyranny and reaction, of persecution, political and religious, seems about to disappear," says Mr. Simonds in the *New York Tribune*; "thirty millions of slaves are to become free men; the progress of the French Revolution, arrested at the Congress of Vienna, has been extended." This, we are told, is the "great human fact," but editors also point out that the break-up of Austria means much to us from the political and military aspects. For one thing, notes the *New York Journal of Commerce*, "the moment the Brenner Pass is open for the troops of the Allies to invade Bavaria, or they can advance uninterrupted across the Hungarian plain to occupy Dresden and

Berlin, Germany will have to acknowledge her irretrievable defeat." Furthermore, a permanent result of the liberation of the subject peoples of Austria-Hungary would be:

"(1) Instead of fifty-one million of Austro-Hungarian subjects, Germany could exploit the resources of only twenty-two millions of Austro-Germans and Magyars; (2) these liberated nationalities would form a barrier between Germany and the Balkans owing to their racial tradition of anti-Germanism and their geographical position. Or, to borrow the concise formula of Mr. Dubose: 'If we are of those who speak of demolishing Austria and do not speak of demolishing Germany, it is because (1) the demolition of the one appears to us definitive, while that of the second appears ephemeral; (2) because the demolition of Germany appears to us superfluous on the day when Prussia will be cast down; (3) because the demolition of Austria will be the ruin of the bloc of Central Europe, which was hostile to us, and in particular of the mutual aid of German and Hungarian, assured by the Austro-Hungarian compromise of 1867.'"

It is but in accord with the ordinary and expected workings of human nature, the *Chattanooga News* observes, "that the Entente and ourselves encourage the breaking up of the Central monarchies into smaller units"—

"Germany pursued a similar course toward the Ukraine, Russian Poland, Lithuania, Esthonia, Livonia, and Finland. For centuries the chief fear of Germany had been of a Muscovite invasion. Now it practises to the east the policy of 'Divide

TWO REASONS WHY VIENNA QUIT.

The Italians struck at A, at B the Allies conquered Albania and Serbia and established a foothold on the Danube.

and rule.' So France and England are not yet willing to face a future restored Germany, with powerful allies in Austria and the Balkans. So anything we can do to promote the separatist spirit in enemy countries is fair in war. We hope to create a front in the interior of enemy lands. It was just in this way that the Federal Government encouraged in the '60's the formation of West Virginia out of the flank of the Old Dominion and received it into the Union."

But, the Tennessee daily continues:

"It must be frankly said that there is a danger in paying too much attention to racial aspirations. Problems will arise for

world in turmoil. The Balkans have displayed in our time, even as Italy did in the Middle Ages, the dangers of having a new nation every few leagues.

"America is heartily for the emancipation of the Czechs, the Hungarians, the South Slavs, the Poles, the Roumanians, the Italians, and the Ruthenians, on whom has been laid the heavy hand of Teutonism; but will the emancipation make for a durable peace? If from the Baltic to the Adriatic, from the Alps to the Dardanelles, come into being nearly a score of small nations, each one jealous of its place in the sun, it is not certain pacifism will result. Call the roll of the proposed commination: Livonia, Courland, Lithuania, the Ukraine, Poland, Bohemia,

Hungary, German Austria, Jugo-Slavia, Roumania, Serbia, Montenegro, Bulgaria, Albania, and Greece.

"The influence of the big nations should go to making the aggregates as large as possible. The world has an interest in the reconstitution of Russia, a large Poland, a greater Roumania, a Jugo-Slavia that will bring together not merely Croats, Dalmatians, Styrians, and the Serbians of political Hungary and of Bosnia, but Serbia and Montenegro. The big nations have grave faults, but the little ones, except they accumulate a tradition like that of seasoned Switzerland, Holland, Denmark, etc., have even graver ones. Think of a dozen new tariff frontiers!

"Something approximating to the Big Brother relation which this country would like to sustain to the nations of the western hemisphere seems a necessity of the world-situation. It is doubtful if any league of peace will be successful which is strictly logical in its adherence to the principle of equality of national right."

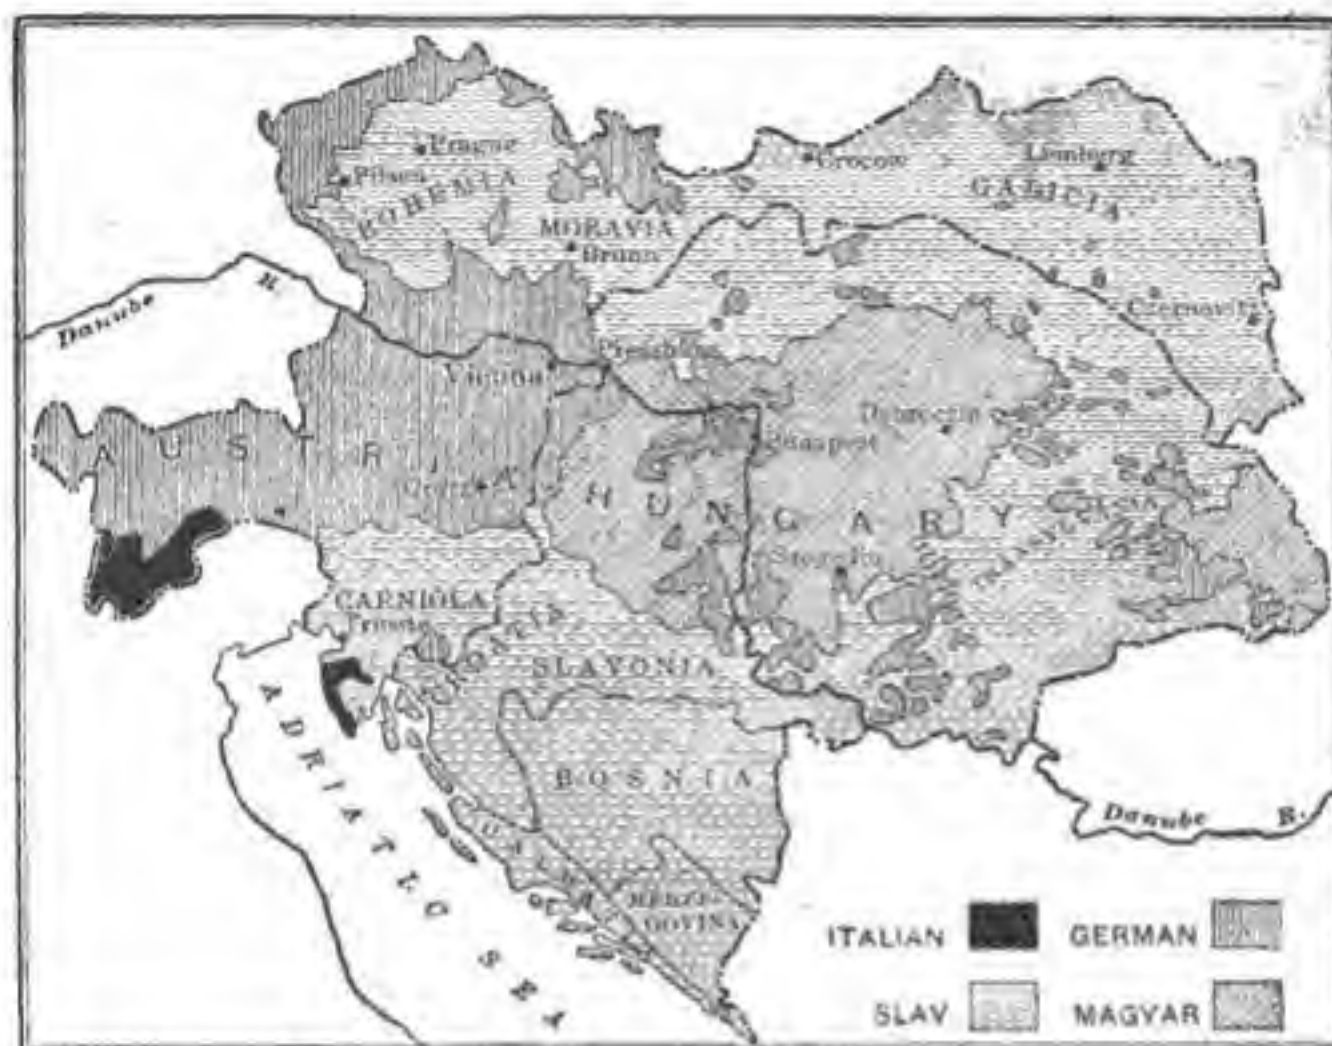

The *Memphis Commercial Appeal* fears Austria will go "through the convulsions that marked the disintegration in Russia." Only—

"The struggle in Austria will be greater, because there will be racial as well as class hatreds, and there

is nothing more bitter than a racial hatred. So the very disintegration of Austria is fraught with danger to the Allies."

Since the visit of Kossuth, Americans have sympathized with Hungarian dreams of independence. To-day the Emperor of Austria-Hungary has given the Magyar state a complete independent cabinet, and Count Michael Karolyi, president of the Hungarian Independence party, promises the formation of an independent antidynastic state with a democratic constitution. But that Hungary is speaking too late to save herself is an opinion which has been formed by several of our editors. Hungary, the *New York Evening Post* observes, "wants to give the impression that she has broken loose from the Dual Monarchy, and hence has been relieved of all blood-guilt in the war, and should be allowed to go her way undisturbed; but the peace conference will not be deceived." Then there are the subject peoples of Hungary whose view-point, as the *New York Sun* notes, was strikingly revealed to the ruling Magyars "when the Croatian regiments at Fiume, Hungary's only seaport, revolted and took possession of the town in the name of the new Czecho-Slovak state." The *Boston Transcript* points out that "the principle of the self-determination of nationalities will inevitably deprive Hungary, as she is now constituted, of all her Moravian counties in the north, of all Transylvania, of the Roumanian Banat in the southeast, and of Croatia and Slavonia in the southwest. Hungary will be reduced to her purely Magyar element." The *Transcript* concludes that:

"The truly great nation which will emerge from the Austro-

AUSTRIA-HUNGARY'S RACIAL PROBLEM, WHICH THE ALLIES ARE HELPING TO SOLVE.

The Slavs of Bohemia and Moravia make up the new Czecho-Slovak state. The Poles of Galicia may join their brothers to the north to form an independent Poland. The people of Transylvania are largely akin to the Roumanians to the south. A group of Slav states in the lower center of the map may join with Montenegro and Serbia to make up a great Jugo-Slav nation.

settlement which are insoluble. Take, for instance, the Balkans: races and religions are mixed there to an extent which can be described by no other term so well as 'scrambled eggs.'

"There is no more certain cause for a future war than the dismemberment of a country. The President has kept this idea before us. It was the wrong done France in 1871 which, as the President has said, kept Europe disturbed for fifty years, and in the case of Italy, the provinces for which she is fighting were given Austria in the time of Napoleon. That same ruler reduced Prussian territory by half, and in 1813, after his flight from Moscow, the Prussians fell on him.

"It will probably be found on investigation that not all these people, nor those of Transylvania, wish to desert their old allegiance. In Bohemia and in the Tyrol there is a large Teutonic population."

It is largely because it has been such "a singular and paradoxical dominion" that the breaking up of Austria presents such difficulties, the *New York Globe* thinks. It recalls certain facts:

"A steady war-maker, she has steadily been defeated, yet after each overthrow she has emerged substantially intact and often with gains of territory. France, Germany, and Italy have beaten her. Russia saved her when Hungary had brought the Hapsburgs to their knees. She has been the ward of Europe, whose efforts to commit suicide have been frustrated. The Hapsburg power was the reason Gladstone glanced at when he remarked, great liberal and friend of small nations tho he was, that if Austria-Hungary did not exist it would be necessary to invent her. Europe has felt, were the conglomerate populations of the upper Danubian Valley not artificially held together, that the bickerings of a multitude of petty states would keep the

Hungarian wreck will be Czecho-Slovakia, which will stand in middle-Europe as Mount Zion stood in Judea, beautiful for situation, and crowned with her ancient and cultured capital, Prague. Czecho-Slovakia, leading by the hand Jugo-Slavia, farther south, will possess a moral and intellectual hegemony among the Slavic races, and will by this means quite overshadow Hungary, which has made its choice for ill instead of for good."

Austria's announced willingness to deal directly with the Czecho-Slovak National Council, the raising of the red and white flag in Prague, and the tearing down of the symbols of Hapsburg rule in the old Bohemian city, are first steps in the recovery of national independence by this state, whose armies have fought so valiantly thousands of miles from their homeland.

Somewhat less attention has been paid to the Jugo-Slavs. Slovenes, Croats, and Servians recently declared upon certain fundamental principles through the executive committee of their national council. These were:

"First, to bring about a reunion of all the Slovenes, Croats, and Servians on a racial basis, without reference to their present political frontiers.

"Secondly, to create a sovereign state on a democratic basis.

"Thirdly, to see that the nationalities represented by the council have a delegate at the peace conference."

Who will lead in the new Slavonic state, the Servian, the Croatian, or the Slovene? This question is answered thus by such a distinguished Servian as Professor Michael Pupin:

"The ablest of them will be the leaders, and the others will follow. But the foundation on which the South Slavonic state is to be raised must be Servia, as was defined in the declaration of Corfu by representatives of the Government of Servia and the South Slav committee of London, the leaders of the South Slavs in Austria-Hungary. The real reason why Servia must be the foundation of the South Slavonic state is because Servia is a democracy and has been so for more than a century, and the Servian is well trained in a democratic form of government. The Slovene and the Croatian are not, but they will undoubtedly take to it rapidly, because, being Slavs, they have a natural inclination toward democracy, an inclination which has, how-

of Servia. It should also be remembered that Servia has had the leadership of the South Slavonic movement for more than fifty years. It was because this movement seemed to the Germans such a threatening one that Servia was attacked in 1914.

"If a South Slav state is to be formed in the Balkans, and if the Servians are to be the pillars of this state, as they really will

"PLEASE PASS THE PIE!"

—Tuthill in the St. Louis Star.

be, then it is unthinkable to form it under any other basis than a constitutional monarchy, with the dynasty of Karageorgevitch at its head. Under the Karageorgevitch we can have a truly democratic Jugo-Slavia, in which the Servian, the Croatian, and the Slovene will enjoy absolutely equal rights and privileges."

The Poles, whose cause has been so ably led in this country by Mr. Paderewski, expect to form a united state from Russian, Prussian, and Austrian Poland, with access to the Baltic Sea, presumably by way of Danzig. A Polish army, which was brought to life by a decree of President Poincaré of France, was given the sanction of the United States and other Allied governments. Mr. Paderewski has recruited in this country a considerable force which is being trained in this country and Canada and being transported constantly by contingents to join the Polish army in France, writers in the press remind us. A free Poland with the boundaries now marked out for it would be a nation of twenty million inhabitants.

Italy, of course, will now receive her "Irredenta." There remains the great German population of the old Austrian duchies. German writers have suggested that these ten million Germans will join the German Empire as a new federal state. German-Austrian deputies in the Austrian Reichsrath have met to announce the creation of a "German state of Austria," which will represent Austria which will seek access to the Adriatic Sea, and will conduct its own separate peace negotiations. The *Chicago Daily News* thinks that the acquisition of the German provinces of Austria would far more than compensate Germany in territory and population if she loses Posen and Danzig to Poland, Alsace-Lorraine to France, and Schleswig to Denmark. But the *New York Times* points out that in the first place if German Austria should enter the German Empire, "it is quite conceivable that she might be a center of anti-Prussian feeling around which other South German states could rally." Moreover,

"If the newly freed Slav peoples succeed in establishing the federation for which they hope, it is quite possible that the new center of gravity in Central Europe may be at Prague or Warsaw. The future holds difficulties, but it is far less promising for Germany than the old system by which Vienna and Budapest could force millions of Slavs and Latins to support Pan-German plans."

ever, been dwarfed by the long subjection to the autocracy of Austria and of Hungary.

"The Servian of Servia has also made more sacrifices in blood, in treasure, and in suffering of every kind to win the independence of the Jugo-Slavs. The Allies know that the Servian of Servia is a brave and loyal ally and that they can trust him. There is no doubt in my mind that before many years have passed the Allies will have found out that the Croats, the Slovenes, and the Servians of Austria are just as brave and loyal as the Servians

OUR "POST OF HONOR" IN THE BATTLE

"WITHOUT THE PRESSURE EXERTED upon the enemy by your incessant attacks between the Argonne and the Meuse," said a French army chief to an American general, as reported in a dispatch from the Main Headquarters of the First American Army to the *New York World*, "Ostend, Bruges, and Lille might still be in German hands." While American forces, fighting against the strongest concentration of German power on any front, grind

their way into the Verdun "hinge" of the whole German line northward to the Holland border, evidences increase that to our two new armies has been confided the "post of honor" on the Western Front. Testimony regarding our importance in the military scheme of things comes, as is fitting, largely from our Allies and from German sources. If Foch turns the present German retreat through Belgium and northern France into a rout, most critics are agreed that the cutting of the German communications north of Verdun by American soldiers will furnish the decisive blow.

Two recent events, so small in themselves as to be pretty well buried in the news of peace proposals and politics, take on vital significance when viewed together in the light of the deadlines to Germany of even a comparatively slight American advance. The first of these events, the shelling of the main line of the railroad in the region of Conflans by 16-inch American naval guns, marks the beginning of the rupture of German communications, which the second event, the capture of the little village of Aincreville on

LIEUT.-GEN. HUNTER LIGGETT.
Commanding the First American
Field Army in France.

the following day, seems to make certain. As a correspondent points out in *The World*, the distinguished German General von Marwitz, called in the day before to stop the Americans, had ordered that the line of hills running westward from Dun-sur-Meuse to Buzancy were to be held "whatever the cost of holding them may be," since possession of them would give the American artillery a free sweep of the all-important trunk-line railroad from Metz to Lille. Another writer in this paper points out that "Aincreville is only three miles southwest of Dun and the hills taken are only eight miles south of the vital crossing of the Meuse at Stenay. The advance made by the Americans is about two miles."

Fighting on this front, where Germany has sent in "three times as many reinforcements to each division in the line as at Cambrai," resembles the old terrific pounding tactics of trench

warfare rather than the warfare of movement which has begun further north. A single town has been taken and lost fourteen times before becoming definitely American. Counter-attacks are frequent. Says a correspondent, writing after the last American advance:

"This form of resistance is accompanied by a concentric artillery-fire whose violence recalls the first battle before Verdun, and it is the most painful ordeal which the American troops have yet had to undergo. But where our infantry cede feet, under a Niagara of high explosives in Belleau Wood on the right, they gain yards in the center.

"Everywhere the fighting is incessant. Mostly it is dull, drab, and dirty; always it is bloody and heroic on the part of the enemy as well as by our own boys. The coming of the dove of peace is inaudible out here."

Another correspondent, writing to the *New York Times*, explains that the success of the American operations north of Verdun is not to be measured in kilometers gained, but in its effect on the whole situation:

"Since General Pershing's men launched their first attack, in the mist of the morning of September 26, they have fought and put out some twenty German divisions, among which are some of the best in the German Army, such as three of the five Guard divisions and the 28th, known as the Kaiser's Own. In front of us now there are some eighteen more divisions, and others are being brought up day by day to confront us.

"On the front of the First American Army the last four weeks have seen some of the fiercest fighting of the whole war, where the best soldiers the Kaiser has are fighting youthful Americans under orders to hold at all costs the line which protects the Luxembourg gateway, the most important artery of the German Army. Captured German officers explain: 'We have just got to hold north of Verdun.' A captured order of a German general says the fate of the Fatherland may hang on the fight north of Verdun. If the Mézières-Luxembourg railroad system is reached or put under easy gun-fire, all communication for the German front from in front of Laon to the Meuse falls."

In four weeks, announces a Headquarters statement covering operations between October 1 and October 28, the American forces on this front have passed through the Hindenburg line, the Volker line, the Kriemhilde line, and now face the Freya line, while the Germans are busy on further fortifications in the rear. In this time the Americans have captured more than 20,000 prisoners and 127 guns of all calibers. In addition, a large number of machine guns and antitank guns and much ammunition have been taken. American gunners have fired

LIEUT.-GEN. H. L. BULLARD.
Commanding the Second American
Field Army in France.

more than 2,500,000 rounds of artillery ammunition, at times running as high as 150,000 a day. They have used more than 1,000 cannon of all calibers, not including captured guns, which, using their own ammunition, have been turned against the Germans. Since September 26, 230 airplanes have been brought down and 23 enemy observation-balloons have been shot down in flames. This record is regarded as remarkably good, in view of the fact that the weather has been adverse, with but three really good flying days. The American air-bombing service has made many successful sallies behind the enemy lines by day and night, dropping more than 80,000 pounds of high explosive bombs. On one of these expeditions more than 200 airplanes were used, making the largest airplane concentration on a single mission ever known. American engineers have done yeoman work in remaking roads ruined by four years of shelling and German mines. Over a five-kilometer zone ahead of the army's starting-off point no roads existed, and the Americans faced a formidable task to keep supplies, food, and ammunition moving steadily, as has to be done to run a great army. Forty thousand engineers, working day and night, rebuilt the needed roads, using stone from destroyed villages for a great part, and incidentally wiping off the map villages which for four years had existed only in dismal and scattered piles of moss-blanketed stones.

Nor will the coming bad weather bring any respite to "the makers of the war," who do not "love it well enough to wish for its continuance throughout the coming winter," declares the *Boston Transcript*. "Our most convincing answer to the German requests for an armistice," in the opinion of the editor of this paper, is our preparation for a winter campaign:

"Before our men, whose task is the conquest of Alsace, lies that historic valley which runs between the Vosges and the Rhine from Altkirch to Frankenthal. May it not be haunted by the souls of some of its brave sons who fought for France? It is easy to believe that our soldiers may be led by the martial spirit of Kléber and the Kellermanns—one of the latter the savior of France at Valmy, and the other, his son, the leader whose impetuous charge turned Marengo into a victory. There, betwixt mountain range and river bank, with fortresses in front, there will be fierce fighting for possession of Alsace. And for Lorraine the fighting may be even fiercer a little way to the west in the sector where our aviators drop their compliments on Metz.

"The men who have already broken up thirty of his divisions there will keep him busy. They will see to it that he shall have no rest. And that is the all-inclusive purpose of the winter's work. The German armies must get no chance of recuperation and reconstruction, no time to manufacture fresh stores of guns and ammunition, no opportunity to fortify any new line of defense. These are just the things for which they wish to obtain an armistice, and we should be fools indeed if we let them have their wish. We are not prolonging the war by the determination to carry it right on through the winter without a pause. On the contrary, we are shortening it, by preventing the Germans from getting their breath for its prolongation."

PEACE TO MAKE FOOD SCARCER

BY A SELECTIVE DRAFT OF CONSCIENCE, each family in the country is a separate unit in "the invincible American food army," we are told by the Food Administration, which urges earnestly that "every table should be spread and every meal should be eaten with the wants of the world in mind, eaten with war-conscience to guide." Feeding the armies and civilians of the belligerent Powers is a pressing problem of the moment, but it is foolish to think, as the *New York*

Globe and other journals point out, that the end of the war will mean an end of food shortage. Note is taken of the utterance of Mr. Pack, of the National War Garden Commission, that with every mile of land in France and Belgium recaptured from the Germans there will be so many more thousands of people dependent upon the United States and Canada for their food. And *The Globe* goes on to say that if peace comes within the year there will be enormous markets for food in Germany and Austria, and it thinks it will be the United States and Canada that will have to meet the needs of those starving populations, altho others may object to obeying the scriptural injunction that "If thine enemy hunger, feed him." We are told also that Russia is facing one of the worst famines in the history of the world, which will become acute in the spring of 1919. *The Wall Street Journal* admonishes us that if any one is disposed to think of himself first, "let him remember that the amount of wheat he usually consumes here at home will keep three children alive for the same length of time in the

refugee camps," and under the severely strict rationing systems that now prevail almost everywhere in Europe "it would sustain two women in Allied countries." We are assured by the Federal Food Board, which outlines the program of the Food Administration, that altho details of this program change every day, almost every hour, the main outline has not been altered since the Inter-Allied Food Council agreed that America should provide this year 17,550,000 tons of food, an increase of fifty per cent. over last year's prodigious achievement. From the statement of the board as given to the press we quote the following informing and impressive observations:

"The largest item in the program of food exports is 10,400,000 tons of bread-making flour and grains—more than 400,000,000 bushels. Part of that is the surplus of one of the largest wheat crops ever harvested in this country—reduced again by a shortage of corn. A substantial part of this saving will come from the conscious, deliberate saving of 100,000,000 American citizens, male and female, big and little.

"Suppose that of the 400,000,000 bushels and over that we ship, 100,000,000 is to be accomplished by saving. So far as this account is concerned, the actual amount to be saved is not essential; an imaginary figure will do. For the total shipment will include bread grains all lumped together, wheat, rye, barley, and to some extent corn, and the proportions will vary as

the program works out. Say for the present we are to find 100,000,000 bushels by saving. Put that in the terms of the individual. It is the same as tho each one allowed himself four bushels of grain in his bread for the year in place of five bushels, which was the ordinary calculation in the bygone, wasteful days."

From Washington Mr. Judson C. Welliver, staff correspondent of the *New York Globe*, writes that it is startling to be assured by the Food Administration that this country has produced less foodstuffs this year than last, because most people believe the contrary, and that is "one of the bad features of the situation." He tells us further that—

"The wheat crop of 1918 is not a record-breaker, but it is far ahead of last year's. The public has had that sole fact dinned into its ears till it has attached too much importance to it. While there is indeed an increase in wheat, there are deficits in many other crops, and in the aggregate a big and real shortage. Here is a balance-sheet of the essential crops made up for me by the Food Administration experts which I am assured gives an accurate impression of the real situation.

"Increases in production of the following crops for 1918, as against 1917, are:

	Increase in Bushels
Wheat	267,000,000
Barley	26,000,000
Rye	16,000,000
Buckwheat	2,000,000
Rice	5,000,000
Beans	3,000,000
Total	319,000,000

"But this is offset by decreases, as against 1917, as follows:

	Decrease in Bushels
Corn	441,000,000
Oats	52,000,000
Potatoes	51,000,000
Sweet potatoes	2,000,000
Total	546,000,000

"Thus, there is a net decrease of 227,000,000 bushels, which, taking thirty-three bushels to the ton, means well over 7,000,000 tons."

Mr. Welliver points out, however, that the deficit is not so serious as the bushelage figures make it appear, because of the immense importance of wheat, and he proceeds:

"The Food Administration's answer is—first, that with the world in its present scrape, food is food and bushels are bushels. People in Europe, and people here, are going to be compelled to eat whatever food can be given them. Europe must, for instance, take more corn than ever before, and learn how to use it. The alternative will be to go hungry.

"The second part of the answer is that there is no such immense concealed surplus of food in the country now as there was last winter."

A HEALTHIER, WEALTHIER, WISER LAND

THE "EARLY TO BED and early to rise" theory was amply vindicated by the results of the seven months of "daylight-saving," observe the sagacious writers for the press as they note how much healthier, wealthier, and wiser we all are than we would have been if the clocks had not all been set ahead during the past spring and summer. Of course, the *Providence Journal* rises to remark, there were a few minor drawbacks connected with this national attempt "to rise with the lark and with the lark to bed." "Parents of small children will testify that there has been more trouble than usual about the going-to-bed hour, and it may be said that we have had less benefit than usual from summer moonlight evenings because Luna does not make her appearance as early as she used to do." But against all such trivial troubles are opposed the overwhelming advantages that have come to a hundred million people.

Are we healthier? "Outdoor life has been everywhere stimulated," replies this *Providence* daily; "we have lived nearer to nature, come closer to obeying her laws; we have abandoned in some measure our foolish habit of lying abed long after the sun got up." The *New York Sun* answers the same question by relating that "factory work of all kinds, which requires strong light and accurate eyesight, has been benefited to an extent which no one has been able to estimate in terms of money, and the health of working men and women in every line of employment has been improved through working in daylight," and by reporting the assertions of humanitarians "that the number of accidents in factories, on transportation-lines, and on the highways has been reduced greatly."

Of course we are wiser. We have learned, as the *New York Globe* notes, how to make "life more enjoyable for everybody." We have learned something of the beauties of that morning hour, others observe. We have not been deceiving ourselves, as some opponents of the plan used to say, but, like truly wise people, have, in the words of the *Boston Transcript*, "simply demonstrated our moral superiority to our mechanical arrangements."

But perhaps most people will judge of the success of the daylight-saving plan by the dollars and cents standard, and will ask, Has it made us wealthier, as well as healthier and wiser? Most editors agree that it has, and special authorities are both emphatic and specific on this point. President Marks, of the National Daylight Saving Association, has not yet compiled definite figures on the saving in gas and electricity, but cites his

own personal experience to show how the amount can be estimated. For instance, he says,

"At my camp in the Adirondacks this summer we burned denatured alcohol for lighting purposes as in the past. Usually we have had to burn forty gallons, but this year we needed but thirteen. The saving elsewhere must have been fairly proportionate."

Some practical results of America's first season of daylight saving were stated by Senator Calder, the sponsor of the daylight-saving measure in Congress, just before the close of the period affected, March 31 to October 27. The Senator from New York reports a saving of a million and a quarter tons of coal, and an estimated cut of \$2,000,000 in the gas-bills of the nation. As he says:

"This additional hour of daylight has been most helpful to the men, women, and children of the nation who have taken advantage of it to plant war-gardens, thereby not only relieving the strain upon the farm but to a very considerable degree tending toward economy in family expenditure. It has also saved, too, in gas and electric bills not less than ten per cent. of the money formerly spent for this purpose. In addition, it will, during the seven months of operation this year, save at least one million tons of coal. It has afforded in the construction of cantonments for our Army, in the manufacture of munitions and war-supplies of every character, and in the building of ships one more hour of daylight for the men engaged in those industries. Without question this bill has been more helpful in the great war-work in which this nation is engaged than any other one thing."

"One and a quarter millions of tons of coal saved by turning the clock ahead an hour for seven months is the estimate of the United States Fuel Administration of the economy effected by lessening the load on lighting plants through the daylight-saving scheme."

President Charles Lathrop Pack, of the National War Garden Commission, credits the daylight-saving law with being largely responsible for the production of the record \$500,000,000 crop of the war-gardens, which is fifty-one per cent. greater than the crop last year, when the gardeners did not have the extra hour for working. Mr. Pack also calls attention to the indirect effect of the garden-work during the extra hour, in giving the workers more "pep" for the next day's regular tasks. Thousands, he says, "went into their gardens after work in the big plants and there produced food in the plots started for them by the management, who found a war-gardener to be a very good worker."

The daylight-saving measure has met with such wide approval, altho "the unscientific proposal for its continuance through the winter months" was rejected, that the Springfield *Republican* thinks "it may surprise a good many city folk to realize how it is viewed by some of the farmers," and says:

"A prominent farmer from over the line in Connecticut explained recently that in practical effect it meant a lost hour of work in the fields, for the reason that fruits, vegetables, and tobacco could not be safely handled until the dew had dried off them, a process consuming just about the additional early morning hour obtained through the summer by the daylight-saving plan. It was his opinion that another year the plan should not be revived, and that if the manufacturers wanted to obtain its advantages all they had to do was to induce their employees to begin work an hour earlier. . . . Each of us is inclined to

think that the other fellow can readjust his daily program with less difficulty than we ourselves."

We are reminded by the New York *Evening Post* that the daylight-saving law is continuous in its operation. That is to say, "it does not end with this year, but will necessitate the advance of the clock again on the last Sunday of next March, which will fall on the 30th." It is the editorial consensus that daylight-saving is now a permanent feature of our national life, and the Pittsburgh *Leader* concludes that next year and in the following years "we shall turn the clock forward and backward without giving the matter any special consideration."

GERMAN TOYS NOT WANTED

A STORM OF SCORN AND INDIGNATION strong enough to remind many editors of our long-past Boston Tea Party has been roused by that Dutch ship which landed a cargo of German toys in New York. Toys "Made in Germany" for American children—"such a delicate idea!" cries the New York *Globe*. Among the toys properly to be

found in the cargo, suggests the New York *Herald*, would be one "designed to educate as well as please, called Little Bertha, consisting of a cannon together with wooden figures of hospital nurses, hostages, and babies to serve as targets. Several children may play at this game, each shooting in turn and scoring one for hitting a hostage, two for a nurse, and one for an infant. A great deal of innocent fun is provided by a toy chopper with a real blade which lops off the hands of wax figures resembling Belgian children." A writer in the New York *Times* recalls the *Lusitania* and the *Zeppelin* raids over London and Paris, with their tolls of child victims, and the Norfolk *Virginian-Pilot* passionately declares:

"To imagine the Hun in the rôle of maker of playthings which delight the hearts of children is as incongruous as it would be to think of a rattlesnake spitting attar of roses from its fangs."

Several authorities suspect, in the appearance of this cargo "under a gracious guaranty of safety by the German Government," a German "test case" to sound American feeling about merchandise bearing the "Made in Germany" stamp. The 4,000 cases of toys, valued at \$250,000, were purchased and paid for by seven American wholesale dealers, most of them "with Old-World names," as one commentator points out, in 1914, and have been held in Rotterdam ever since, pending the consent of the United States State Department for their importation, and the guaranty of the German Government that the Dutch ship which brought them wouldn't be torpedoed. If it was in the German reckoning to release this cargo as the opening wedge of an "economic invasion," not only have they failed utterly of their purpose, as the Baltimore *Sun* points out, but their attempt has furnished another spectacle of typical Teutonic brutality and stupidity in dealing with other nations. "The news demonstrates anew the fact," comments the Hartford *Courant*, "that the mental processes of the Teutons are wholly beyond the comprehension of other people. . . . They may be surprised at the military successes of the Allies, but a greater

Copyright by the New York Herald Company

THE SAME OLD CRY,

"Kamerad!"

—Rogers in the New York *Herald*.

surprise is coming when they once more attempt to resume trade relations with the world."

One of the seven consignees of the cargo promptly refused to accept delivery. "Long ago," announced the head of this firm, "we eliminated these goods from our catalog, charged them off our books, accepted our loss, and forgot all about them. We feel that American children should have American-made toys, and we are therefore willing to accept any loss which may be occasioned by the refusal of this shipment." The *Boston Globe* and *The Manufacturers' Record* (Baltimore) offer congratulations on this stand. Declares *The Record*:

"It is none too soon to begin the campaign against the importation of German-made goods. Imagine for one moment any American mother giving to her baby toys made by Germany while she thinks of tens of thousands of babies murdered by Germany in this war. Every toy made in Germany and every other piece of goods of every kind will for generations bear a bloody stain which all the waters of all the oceans can never wash out."

Among patriotic organizations which approve this general view of the matter, either through the passage of resolutions or through statements by executive officers, are the Baltimore War Mothers, the New York City Federation of Women's Clubs, and the American Defense Society. The Boycott Committee of this last organization, after taking steps to have the cargo refused by all its consignees, issued an appeal that "all customers examine both toys and other merchandise carefully for the stamp 'Made in Germany,' in order to 'show Germany that goods made by her bloody-handed baby-killers will not be tolerated in America.'" The Association of American Toy Manufacturers, which happened to be in session in New York when the *Nieuw Amsterdam* brought its unlucky cargo into the harbor, passed a resolution calling on Congress to enact laws barring all German goods from this country until the Central Powers have submitted to an Allied peace. Says the *New York Tribune*, reviewing these various movements of protest:

"Private patriotism has now made impossible what Government laxity threatened. We trust the lesson has been learned and the danger will not be repeated."

TOPICS IN BRIEF

GERMAN efficiency has had a sufficiency.—*Columbia Record*.

NEXT thing we know Germany will go dry.—*Seattle Post-Intelligencer*.

DOLLARS to doughnuts is no longer the big odds it used to be.—*Danvers Globe*.

THE only thing more destructive than an invading Hun is a retreating one.—*Chicago Tribune*.

IT may be hard to tell who is leading the German armies, but we all know who is running them.—*St. Louis Star*.

THE only difficulty about reprisals is that the Allies are too civilized to inflict them in kind.—*Richmond Virginian*.

WELL, the prospect for thrones for all those six sons as the outcome of the war begins to look pretty bad.—*Columbus Dispatch*.

GERMANY'S system seems to be to offer as a peace inducement something that Forch has made her do already.—*New York Tribune*.

BILL KAISER said to Ambassador Gerard: "I shall stand no nonsense from America." Well, you're not getting it, Bill.—*Columbia Record*.

LOOK out for sudden affectionate demonstrations from neutrals who have been waiting to see which way the cat would jump.—*Washington Post*.

BIG Bill Hohenzollern now realizes more clearly than ever what a mistake he made when he picked on quiet, peaceable Wood Wilson.—*Anaconda Standard*.

IF a league of nations is to include barbarians who fire shrapnel at boats laden with women and children, there won't be any waiting list of applicants.—*Indianapolis News*.

AND again we wonder how much time the average returned soldier will have for the kind of religion preached by the minister who claimed exemption from military service because he was a theological student.—*Chicago Gazette*.

SEEMS as if the Government ought to take over the entire supply of one or two of these patent medicines. If they are up to their advertising, an army properly primed with them ought to be able to clean up the enemy in half a day.—*Los Angeles Times*.

American feeling as to German merchandise had previously been aroused and tested to some extent by *The Hardware Age* (New York). A recent editorial in this organ directed against American use of German products resulted in the paper's receipt of over 4,000 letters on the subject, and in the distribution of 250,700 reprints of the editorial, all on direct request. Part of this polemic, which might be considered prophetic of the present situation, points out:

"America has fed starving Belgium. We fed and clothed and cared for her suffering people long before we became her proud ally on the battle-fields. Thousands of orphaned Belgian and French children have been adopted into American homes. In the days to come are we going to force these children to play with German-made toys? God forbid! American toy-manufacturers have stripped us of the last vestige of an excuse for the purchase of toys from the Huns. Our factories are making more toys than we ever imported, and they are not the flimsy jim-cracks we formerly bought from abroad. They are largely exercise toys which develop a child's body, or mechanical or structural toys which train the mind. Before the war we imported eight million dollars' worth of toys from the Central Powers. Who will make our kiddies' toys in the days to come? Once more, Mr. Buyer, it's up to you."

The *Brooklyn Eagle*, considering the matter in a vein which might be termed more "hard-headed" than most of its contemporaries, concludes that, even tho the old trade-mark, "Made in Germany," has gone forever—

"The real test will come in those products of which Germany is still able to maintain a monopoly or in which she is able to undersell our own manufacturers or those of our Allies. In those cases the temptation to pass off German-made goods under other names will be strong and it will probably prevail. . . . Goods bearing the names of other countries, because they originated there, but actually made in Germany, have been sold in this country for years because Germany was the best, if not the only, source of supply. If Germany continues to be the only source of supply of certain wares they will still be sold here, but the development of American manufactures stimulated by the war promises to reduce German monopoly to negligible limits. Where competition with American goods is involved the reception of the German toys indicates that other German goods will have a hard row to hoe."

RETREAT is the order of *der Tag*.—*Wall Street Journal*.

LOOKS as tho the Kaiser must fight or work.—*Baltimore American*.

THE Huns will never entirely appreciate Kaiser Bill until they begin to foot his war-bill.—*Columbia Record*.

RETRIBUTION for Germany presents the biggest problem in penology that the world ever studied.—*Venango Herald*.

PRINCE MAX will find that the easiest way to deal with the Allies is to take the helm from Wilhelm.—*New Orleans Item*.

WE are also expecting to hear that John Barleycorn would be willing to negotiate an "honorable peace."—*Anaconda Standard*.

GERMANY professes to have had a change of heart. Be that as it may, we demand also a change of head.—*Baltimore American*.

GERMANY has found a substitute for everything else. It shouldn't be hard to find a substitute for the Kaiser.—*St. Louis Star*.

LOOKS as tho the Prussian officers might as well begin practising stepping off the sidewalks now to let civilians pass.—*Columbus Dispatch*.

WE have just been enjoying the latest photograph of the Clown Prince. His is, indeed, the face that launched a thousand quips.—*St. Louis Star*.

THE Germans are now using armor that protects chest and abdomen. Unless it is reversible it will doubtless prove of little worth.—*Ashville Times*.

PRINCE MAX was, back in '90, confined in an insane asylum, which fact perhaps especially fitted him for handling his country's present emergency.—*Nashville Banner*.

IF it's true that Wilhelm has abdicated, we hope Mr. Wilson will have a heart and not turn his job over to Mr. McAdoo. No use in riding a free horse to death.—*Macon Telegraph*.

THE report that the *Leriatan*, formerly the *Vaterland*, has moved more soldiers across the Atlantic than any other ship is a mistake. The *Lusitania* has moved most of them.—*Houston Post*.

IT is going to be pretty hard on the poor, patient German people, with all the other things they have to bear, not to have any more atrocities to look forward to.—*Columbus Ohio State Journal*.

MOTHERS AND FATHERS OF AMERICA GIVE TO YOUR OWN SONS!

IT WAS AT A LITTLE HOSPITAL IN FRANCE. One of the workers—Young Men's Christian Association, Knights of Columbus—what does it matter, they are all the same—was one day passing by and suddenly thought of a Scotch boy with whom he had been talking before that same afternoon. He entered the tent expecting to find the boy marked that night for transfer home. But when he approached he saw that something had happened, something had intervened between all hopes and plans. The wounded lad's eyes were bright with fever and he beckoned to the man of mercy. "Come here, mummy," he said; "put your arm under my head and I think I will sleep to-night."

"And then," says the worker, "I saw that he had become a child again. 'Hear me say my prayers now, mummy,' he said, and beginning 'Our Father which art in Heaven,' he felt his way through it like a blind man in a narrow alley, till he got tangled in forgetfulness and stumbled for a moment into silence. Then, looking up at me, he said, 'Kiss me, mummy,' and I kissed him and tucked him in as his mother used to do when he was a boy at home, and by way of sleep that night he found a dawn beyond our daybreak."

Your son, perhaps, is there—that boy you love so well. He may be wounded. God forbid! But if he is, an arm will pillow his head to-night and fatherly hands will be on his and kindly lips will speak those words that you would speak if you were by his side. It will be the hands and lips of one of that band of consecrated men, one of those big-hearted brothers, who welcomed your boy that home-sick day he came to camp, who sailed with him on the transport, who went, perhaps, through the hell-fire of shot and bursting shell to save him when he was wounded, who brought food and comfort and friendliness and home to him on the very fire-step of the front-line trench.

These big brothers are calling to you from France for help. Nay, they are calling to you from every cantonment, from every camp, here and abroad, where our soldier lads are gathered together. "Fathers and Mothers of America!" they say, "your boys are in our hands. We want to send them back to you clean, strong, brave, victorious. God willing, these shall not be wasted months or years. We are working and praying so that even while he fights your son will grow in stature—body, mind, and soul. Money is needed—a veritable tide of gold—to make this possible. Fathers and Mothers of America, give to your own sons!"

Shall we add our poor word to the passionate appeal for \$170,000,000 that is being made by these seven societies, these great brotherhoods that stand behind our armies—the Young Men's Christian Association, the Young Women's Christian Association, the National Catholic War Council, the Jewish Welfare Board, the Salvation Army, the American Library Association, the War Camp Community Service? No, there is no need for us to tell you why you should give. Your own heart is crying out to you *now* to give. Give money? Why, you would give your right hand, you would give your beating heart itself, if it would bring your boy comfort and happiness in his life or peace in his death.

Little enough do we know what these lads of ours are enduring without complaint; little enough do we know how they die without bitterness, thinking never of self, but of suffering ebans and loved ones at home, humble in their self-sacrifice. Little can we hope to imagine what "Y" or "K. of C." men and huts mean to them, we who are safe and warm and with friends.

"Sometimes," says a "Y" worker, "I sit all day beside a

man, feeling my heart just break listening to him as he speaks words of love and messages of deepest tenderness in his dying fever to those far off across the seas whom he thinks to be right up near his stretcher-bed. And then a man who has been blinded wants me to hold one of his hands; another poor lad sobbs out his life, his head in my arms, crying for his mother as you and I cried for ours when we were lonely; and I guide the hands of another—a big boy, torn and shattered by a shell, as he writes good-by to his sweetheart and tells her God will bring them together again."

What do we know of such things as these—we in America? What do we know of the horror of the rain-soaked trench at night, with the shells flying overhead like bats out of hell? What do we know of the gnawing cramp of hunger or the hideous wrench of agonizing wounds? Our eyes have not seen the human wreckage of the battle-field, our ears have not heard its awful cries. Our lips have not yet touched the cup. Our meatless days, our wheatless meals, our good ladies knitting—would we dare look on one poor crumpled form in Flanders field and call these things "giving"? Not if we are men. If our fields had been plowed by murderous guns, if our cities had been looted, razed, and ruined, if our men had been crucified and shot, if our mothers, wives, and daughters had been dragged like the women of Lille by gray-clad demons to slavery, then we would be able to speak a language of sacrifice we do not yet know or even dimly understand. Then would we have learned something of the courage of Christ when he refused the stupefying drink upon the cross, and faced suffering—yes, welcomed and greeted it, as a very end and aim of life.

It is a splendid thing to give billions to war that war may cease. It is thrice blessed to give to these magnificent and merciful organizations that have been formed not to take life, but to save it, not to give wounds, but to bind them up, not to spread disaster and blasting death, but to dispense good cheer and kindness and knowledge and comfort and brotherly love among our own boys.

It is a privilege to give to this great cause when for the first time in history Jew, Protestant, and Catholic are sinking the bitter differences of centuries, when prejudices are sweeping out like ash in furnace-winds, and creeds are commingling in the final gold of truth. This cause is, indeed, His cause, and each dollar we give is given into the very treasury of Heaven.

We regard the work of these humane fraternities of such supreme importance, we feel that their appeal is so urgent, that, altho, like others, we have given, and given generously, we hope, to every worthy war-time cause, we have determined to contribute our check for ten thousand dollars on the very first day of the drive.

If for a moment, far from the peril and sudden death of the trenches, we are tempted to shrink from new sacrifices, we have but to look around about us to remember our duty, for already in our streets the crutch tells its simple story and carries its mute appeal to the heart; already our consciences are challenged by the eloquence of the empty sleeve; already we are faced by the outward evidences of these our boys who have laid not merely money, but life and body themselves, upon the altar.

Fathers and Mothers of America! Your sons need warm hearts to father them and ministering hands to sustain them; they need every comfort, every care, every protection that money can buy and love provide. Were peace declared tomorrow they would need them even more, if possible, during the trying months when they are waiting to return to you. It is your own flesh and blood that is calling you. As you cherish American manhood, and in the name of God who gives victory to the right, answer the call.

FOREIGN - COMMENT

British official photograph. As prepared by Dickinson & Dickinson, New York.

ALL THE HUNS LEFT OF THE FRENCH PITTSBURG: LENS TO-DAY.

This is a general view of what was once the great mining and industrial city of Lens. It was taken by the British immediately after the Germans left. Some papers are now asking: "Should not Essen receive the same treatment?"

GERMAN COLONIES AS "U"-BOAT BASES

THE REASON IS NOW CLEAR for the stubborn determination shown by the Huns that, come what may, Germany's one indispensable peace condition is the return of her colonies. How fixt is this idea can be seen from a speech made by Dr. Solf, Germany's Foreign Minister, in the midst of the political crisis following President Wilson's notes. At a meeting in Munich, in the presence of the King of Bavaria, Dr. Solf remarked:

"The fate of the world will in future no longer be exclusively decided in Europe. Enemy propaganda works among the credulous with the threadbare argument that our rule was one of the 'mailed fist.' Unaffected by the changing fortunes of war, we must, even in a moment of depression, not abandon our active colonial policy.

"The Imperial Government adheres firmly to its demand for the return of our African and South-Sea possessions, as well as a fresh partition of Africa, such as to consolidate our scattered possessions. Belgium, Portugal, and France possess excessively large stretches of territory. We do not want the lion's share. The broadest classes of the nation must be brought to perceive that the war must not end without the Empire receiving what it needs."

The British Colonial Minister, Mr. Walter Long, immediately replied, pointing out what really lies behind this demand. In a speech to the British Colonial press delegates he is reported by the *London Daily Chronicle* as saying:

"I am here to-night to say this—that if these territories are returned to Germany the sacrifice of our heroes will have been made in vain, and I say that the spirits of those men will come from their graves and rebuke you if, after the sword has done its splendid work, the pen is so cowardly as to give back what the sword has won. . . .

"In the Pacific there are islands taken from Germany, valuable in themselves, valuable for what they possess, for their mineral properties, but ten times more valuable for something else. It will not be merely as valuable possessions that the Germans will regard them. They will regard them as bases for wireless, for aeroplanes, for submarines."

The *London Morning Post* develops the theme editorially:

"There are many reasons why Germany must be deprived of these lands; all of them are sufficient, and one is absolutely conclusive. It is that civilization can not possibly afford to give Germany the opportunity of establishing submarine bases

overseas. A survey of Mercator's projection will show that, given a sea endurance of from 17,000 to 30,000 miles, a range which they already possess, German submarines based on the ex-German colonial coasts, would command the trade-routes of the world. No maritime Power, or group of Powers, could effectually control so vast a sphere of influence. The possession of naval bases in the Cameroons, in German East Africa, and in German New Guinea would enable Germany to hold up the trade of the world at any moment without warning, and thus to impose her will upon any other nation or group of nations. It is for this reason that Germany, in July, 1914, offered to respect the integrity of France, excepting the French colonies, if England would remain neutral. It is for this reason that Germany would now barter almost anything in exchange for her lost colonies. It is for this reason that Captain von Weise, addressing a mass-meeting in Berlin on behalf of the German Government, said: 'We need colonies in the Pacific for military and strategic reasons; we need naval bases.' And it is for the same reason that the rulers of Germany have suggested the 'internationalization' of British naval bases. Once Germany regained her overseas possessions, no power on earth could prevent her from dominating all seas."

Dr. Solf argues that without her colonies Germany would be in a state of helpless economic dependence upon a hostile world. As he sees it:

"The regaining of our colonies is a task of national importance which is not eclipsed by any other. The tropical and sub-tropical lands supplied 50 per cent. of all the raw materials for which we and our industries are dependent on foreign countries. The present substitute materials can not suffice for peace. For the wool alone Germany would have to keep fifty million sheep, which is practically impossible. The supply of raw materials, which will be much more difficult in the future, is the weakest point of our world economy. Without colonies of our own we must remain dependent on the arbitrariness of foreign countries."

The *Morning Post* makes short work of this argument and of the plea that the German colonies are indispensable as a refuge for Germany's surplus population by saying:

"The German colonies have never served, and never would have served, as homes for the superfluous population of Germany. German emigrants preferred to settle anywhere else, and no wonder. Nor have the German colonies provided raw material for Germany. The total exports of the German colonies did not exceed five millions' worth. Germany, as we are now beginning to learn—as even the Liberal party is beginning to admit—controlled in great measure the product and sale of raw

material in every other country. In the second place, the German colonies were never intended to serve any purpose other than a military purpose. The design of Germany in attacking France (an enterprise in whose preparation she assumed the neutrality of Great Britain) was first to vanquish France, and then to take Martinique, French Guinea, Dakar, Madagascar, Cochin China, and New Caledonia. Possessing these naval bases, and already owning the Cameroons, the East-African littoral, and German New Guinea, Germany could have challenged the world."

Meanwhile, it appears that Mr. Gompers, during his European trip, has been interpreting the "No indemnity, no annexation" formula to mean that the German colonies must be restored. This excites the wrath of the *London Saturday Review*, which has a word to say:

"Mr. Samuel Gompers, who has broken his 'birth's invidious bar' and climbed to a position of power in the United States only second to that of President Wilson, must be a man of extraordinary ability. The Inter-Allied Labor and Socialist Conference has proved to be as divided and tumultuous as most democratic assemblies. But if Mr. Gompers really represents the opinion of organized labor in America, it is as well to note that he excludes from the peace terms (1) the economic boycott, (2) all annexations and indemnities. The first exclusion puts the lid on Mr. Hughes and the tariffists. The second means the restoration of the colonies to Germany and of Mesopotamia to the Turks, and prohibits compensation to Belgium. We do not know whether it bars the recovery of Alsace and Lorraine to France. But as Great Britain and the Dominions will never agree to give the colonies back to Germany or Mesopotamia to the Turks, it would be as well if the British and American Governments came to some clear understanding about the speeches of Mr. Samuel Gompers."

DISPOSING OF THE "SWAG"—It is from the *Christiania Morgenbladet* that we learn how the Huns dispose of what they have stolen. A correspondent writes:

"Furniture from belligerent countries.' But it is not hidden in the somber shop of a receiver of stolen goods. It is posted in our most fashionable street, on the sign of the shop and in all the houses and in the advertising columns of the papers. It is purchased by our *nouveaux riches*. The most beautiful pieces were already sold, said the man whom I found in the shop.

"The furniture comes from numerous Belgian and French homes which have been disbanded," he said.

"Which come here from Germany," I said.

"No. Directly from France; I am selling them for a Norwegian who is traveling." (He was not willing to tell me his name.) "They have been declared here at the French consulate; they are, therefore, certified as legitimate French exports."

"But he could not furnish any certificate of provenience—I represented myself as a scrupulous amateur—and, in answer to my superfluous question, said that the legation and the consulate denied having put their stamp on such commerce."

"If our sofas and armchairs could speak, they would have much to tell. They would speak of families whose daily life they graced, perhaps for generations, and of which the Gobelin upholstery still preserves the atmosphere."

Editorially the *Morgenbladet* says:

"The importation of furniture is one of the activities promoted by the war—all the more unexpected because it overthrows the ancient foundations of the philosophy of law and the rights of people. 'It is permitted to exact war-contributions from the conquered—that is, the state; but it is not permitted to appropriate private property; that would be robbery,' says Kant, one of the thinkers oftenest cited by the exporters of the furniture in question.

"Indeed, as Kant would say, this furniture is stolen from French and Belgian homes. The traffic is so flourishing because the cost price defies competition and the supply exceeds the amount which the furniture makers could furnish—at any rate, in Norway.

"The 'Speditionen und Lagerhaus Akt Ges.,' Aix-la-Chapelle, and a great many other old and new firms, as announced in the *Kölnische Zeitung*, furnish information and estimates in regard to the transportation of furniture from the Belgian cities to Germany and Austria-Hungary."

MR. WILSON'S "COWBOY BRUTALITY"

FOR SOME UNACCOUNTABLE REASON the President does not seem to be just at the moment as widely popular as he was in the Central Empires when the press of Vienna and Berlin showered roses upon him for his "peace without victory" speech. In those days he was "the enlightened leader of the world's democracy." To-day the *Kölnische Zeitung* informs us that he is dealing with the Central Powers "with the coarse brutality of a cowboy." The *Vienna Neue Freie*

WHY GERMANY'S COLONIES CANNOT BE RETURNED.

This map, adapted from one issued by the British Admiralty, shows the trade areas in which German submarines could operate if Germany had naval bases in the Cameroons, German East Africa, and German New Guinea. The outlines (see key on left) represent a radius of 4,000 miles; the cross-shaded areas are doubly dangerous to sea traffic because they would be exposed to U-boat piracy from two bases.

Presse thinks that the President is suffering from exaggerated ambition:

"There are wars in which nation arrays itself against nation with the instinctive conviction that one of them must be brought low in order that the other may stride across its prostrate form and win the place predestined for itself. But there can never be a war like this between the Central Powers and America, and the idiotic talk that demands the sacrifice of some millions of young soldiers in order that the Junkers may cease to rule in Prussia is about the stupidest possible pretext for President Wilson's demoniacal wrath.

"No; the intoxication of power, the desire to arrogate to himself the hegemony of the world, that is the motive. Washington is to become the center where the destinies of Europe are to be decided and New York is to become the money-market of the world where ruined and beggared nations are to seek the capital for their rehabilitation.

"Peace will come when England has struggled through to a realization of the fact that she has far more to fear from the United States than from Germany."

The government-controlled Berlin *Lokal Anzeiger* is hurt at the lack of deference the President shows in his notes, and insinuates that more politeness would be shown were it not for the fact that the Commander-in-Chief of the American Army is just a little swelled-headed at the success of our boys in France. As the *Lokal Anzeiger* so sweetly puts it:

"The initial successes of his troops in France seem to have deprived the man entirely of his reason and of every remaining vestige of insight and good will."

The *Hamburger Echo* gravely discusses "the régime of terror exercised by Wilson, possess in the United States of a despotic power greater than that ever held by a Czar of Russia."

1916.

1917.

1918.

Belgian U. S. A. official photograph from Underwood & Underwood, New York.

These aeroplane views of a strongly fortified enemy position near Langemarck, in Flanders, were made from the same spot at three annual intervals. From them some idea can be obtained of the devastating nature of modern warfare. It will be noted in the last picture that everything except the great high-road has been obliterated by artillery-fire.

INDIAN LEADERS DUBIOUS ON HOME RULE

THE MUCH-HERALDED PLAN for Home Rule for India, which owes its inception to Lord Chelmsford, the Viceroy, and Mr. E. S. Montagu, the Secretary of State for India, has certainly not been "damned with faint praise." The Anglo-Indians have unsparingly condemned it, so too have the extreme element in Bengal. Perhaps it might be said that leaders of Indian thought have "praised it with faint damn."

Briefly, the Montagu-Chelmsford scheme provides for the gradual introduction of Home Rule for India, first by admitting Indians to a larger extent than at present into local and municipal bodies, then into the provincial councils, and finally into the supreme legislative body in India, the Viceroy's council. For the present, the Anglo-Indian majority is carefully safeguarded, but with time and education Indians are to receive more power. Three facts stand out clearly from the discussions of the scheme. First, there is little disposition on the part of any one to withhold from the authors credit for making an honest attempt to solve a difficult problem. Secondly, even the most advanced Nationalist leaders are not anxious entirely to reject the scheme, tho some of them at first took that view. Thirdly, moderate as well as advanced leaders feel that the proposals do not go far enough, and insist upon greater or less modification. A scrutiny of the views expressed by leaders belonging to various parties at once makes these three points clear.

Mr. Surendranath Bannerjee, who at one time was known as a "red radical," and who for many years has been a caustic critic of British administration of India, has welcomed the Montagu-Chelmsford *Report on Indian Constitutional Reforms* as "a momentous historical document." Speaking at the Indian Association meeting in Calcutta, he declared, as reported in his newspaper, the *Calcutta Bengali*:

"We may think that in some important respects it (the Montagu-Chelmsford scheme) needs modification, but speaking for myself, I have no hesitation in saying, and I trust I may be

allowed to speak for you, that it marks a definite stage, it may be the first stage, toward the progressive realization of responsible government."

That is precisely the attitude adopted by Sir Dinshaw Edulji Wacha, the Indian industrialist, economist, and political leader; Sir Narayan Chandavarkar, ex-Judge of the Bombay High Court, and, like Sir Dinshaw, an ex-President of the Indian National Congress, Mr. Chimanlal Setalvad, Vice-Chancellor of the Bombay University, and other equally eminent Indian leaders. In a manifesto issued by them and condensed in the *Madras Indian Review* they declare:

"The proposed scheme forms a complicated structure capable of improvement in some particulars, especially at the top, but is nevertheless a progressive measure. The reforms are calculated to make the provinces of British India reach the goal of complete responsible government. . . . On the whole, the proposals are evolved with great forethought and conceived in a spirit of genuine sympathy with Indian political aspirations, for which the distinguished authors are entitled to the country's gratitude."

On the contrary, Mr. Bal Gangadhar Tilak, the great Indian Nationalist leader, professes to be greatly disappointed with the Montagu-Chelmsford reform scheme, and urges in his paper, the *Poona Mahratta*—

"The necessity of standing fast by the Indian National Congress ideal and to make efforts for its realization by making every endeavor to place the question before the British public who are the ultimate judges in this case and whose decisions the Cabinet and the bureaucracy are bound to obey."

Mr. Tilak has been able to carry the main body of the Indian National Congress with him, with the result that Mr. Bannerjee and others of like mind have felt constrained to secede from that organization. He and his friends not only demand much more than do Indian leaders of the opposite school, but they also ask that a time-limit of fifteen years be definitely prescribed by parliamentary statute, at the end of which period India should automatically be given full control over her domestic affairs. On the other hand, Mr. Bannerjee and his colleagues are contented

to achieve responsible government by a series of stages to be determined, from time to time, by the actual progress of Indians toward that goal. But, as already stated, they are not contented to leave the scheme as it stands. The Hon. V. S. Srinavasa Sastri writes for them in *The Servant of India* (Poona):

"There are great defects in the scheme which must be remedied before we can accord enthusiastic approval. We can not consent to leave the government of India absolutely untouched by Mr. Montagu and Lord Chelmsford. . . . The country attaches the greatest possible importance to fiscal autonomy, on which no definite recommendation is made in the report on constitutional reforms."

It is important to note that the cleavage in Indian opinion is political, not racial nor religious. Among those who are siding with Mr. Tilak are Indians of all races and creeds, and the same is essentially true of the other school. That the advanced Moslem view is the same as the advanced Hindu view will be apparent from a comparison of the following quotation from a statement made in *The Indian Review* (Madras) by the Hon. Muhammad Ali Jinnah, an ex-President of the All-India Moslem League, with the extract from Mr. Tilak's paper:

"We should treat the report and the scheme contained in it with due respect and serious consideration and concentrate all our forces and energies with a view to focus the public opinion of the country in the direction of securing these vital changes; then, if we are all agreed, I feel confident that the scheme will have to be modified. Criticism and discussion are expressly invited on the subject, and the Cabinet and Parliament will give effect to the changes that we may seek."

Anglo-Indian opinion, expressed in the *London Round Table*, holds that 95 per cent. in India oppose Home Rule:

"The masses care not one whit for politics; Home Rule they do not understand. They prefer the English district magistrate. They only ask to remain in eternal and bovine quiescence. They feel confidence in the Englishman because he has always shown himself the 'Protector of the Poor,' and because he is neither Hindu nor Mussulman, and has a reputation for honesty."

PLAIN WORDS FOR WILLIAM

THE POOR KAISER is being very badly treated these days by his own people. In a recent speech at Essen he made a desperate bid for popularity by coming out with an unequivocal declaration in favor of promoting free and equal manhood suffrage in Prussia. This was too much for his democratic Chancellor, Prince Maximilian, and according to the *Berlin Vorwärts*, he saw to it that the All-Highest was carefully censored and all allusion to the suffrage question removed. The German censorship seems to be slightly anomalous, for nowadays the Socialist papers seem to be saying just what they think, as, for example, the gentle description of the Kaiser given by the *Münchener Post*, which runs:

"William II. has now ruled over Germany for over thirty years, but the soul of the German people, in good and evil, is closed to him, who is connected abroad with a thousand ties, family and social, and even related by blood to England, and the German soul remains to him a book with seven seals."

"In the nations of the Entente he sees only enemies yellow with envy. He is convinced that the enemy is determined to crush and destroy us, altho Germany's greatest enemy—Lloyd George—has spoken quite otherwise. All his senses appear to be blind and dumb, even to the stirring and critical conditions surrounding him in Germany."

In the Reichstag the words are even plainer. Here is part of a debate recently cabled over:

"The question can not longer be evaded," said Dr. Cohn. "War with the Hohenzollerns or peace without the Hohenzollerns. World-revolution will follow on world-imperialism and world-militarism, and we will overcome them. We extend our hand to our friends beyond the frontier in this struggle."

"The speech was received with such commotion, cries of 'Shame!' and applause, that the Vice-President threatened to have the Chamber cleared."

"Another Socialist, Otto Rühle, was called to order for declaring that the Emperor must abdicate. He retorted: 'A call to order won't save him from the Criminal Court.'"

CAIN.

More than 14,000 British non-combatants—men, women, and children—have been murdered by the Kaiser's command.

INVISIBLY WOUNDED: PATIENTS AT THE MILITARY HOSPITAL AT LAKEWOOD, N. J., REGAINING HEALTH.

INVISIBLE WOUNDS

THE LOSS OF AN ARM or a leg naturally arouses sympathy. There is even a sort of romance about a blinded soldier. Yet some of war's worst wrecks bear no outward signs of injury, and are, so far as one can see, hale and hearty men. It is of these that Capt. Arthur H. Samuels, of the United States Sanitary Corps, writes in *Carry On* (New York, September), under the heading that we use for this article. "There is always a disposition on the part of the public," he says, "to recognize the obvious." The man who has been outwardly injured will have little trouble, Captain Samuels thinks, in taking his place once more among our useful citizens. It is understood pretty clearly that the man who has suffered loss of limb can, with or without appliances, be employed in business, industry, and agriculture with profit to himself and to his employer:

"But what of the soldier who comes back broken within by the ravages of modern warfare? What of the man whose lungs have been seared by the poisonous gases of the enemy? What of our nerve-racked, shell-shocked fighters—the victims of liquid fire and tuberculosis? These men bear wounds quite as honorable as their brothers who are obviously handicapped; but the wounds they carry are invisible.

"Intrepidity and brilliant physical action resulting in loss of limb are picturesque manifestations of courage, and the fruits of glory are commensurate. We read of a British captain who has been decorated with the Victoria Cross because of extraordinary service, the nature of which might not be revealed until after the war. Here, indeed, was a reward for hidden valor. This man was not allowed to tell what feats of daring had brought him such high honor. Scoffers there were, who whispered of influence at court—until finally the Government announced that the V. C. was conferred as a result of several handsome submarine bombings, a material reduction of the enemy's seapower. Not even a correspondent was present.

"There can be no doubt that the public is being reconstructed in its former attitude toward the disabled soldier. But it is true as well that the present tendency is to spend most of its sym-

pathy and encouragement on the man with visible wounds, and there is danger that a disproportionate amount of attention will be applied at the expense of the equally deserving fighter whose injuries are hidden from the public eye.

"It is not the picturesque side of reconstruction that will afford the most troublesome problems for this country. The heart must be stirred not entirely through the eye, for it is a fact, based on the casualties of the past four years, that the greater percentage of soldiers passing through reconstruction-centers are suffering from internal rather than outward surgical injuries. Many men who have been temporarily weakened by the rigors of service will appear to be strong and well.

"At one of the reconstruction-hospitals there arrived recently a hulk of a man whose physique belied his condition. Before he entered the service more than a year ago he had been a fireman. He was returned from France as a disabled soldier, but except for a slight pallor, he looked capable of doing very strenuous work.

"'I feel pretty good,' he said, 'but my nerve is gone—I can't stand the gaff like I used to.'

"Here is a man apparently intact but suffering from a nervous condition brought on by the hardships of long fighting. He is receiving the best medical care, and when he is discharged from the hospital and the Army he will have received, as part of his treatment, training and education to fit him for a gainful occupation; and, if necessary, will be out in a place free from the noise and strain of his previous livelihood.

"The invisibly wounded of this type are entitled to full consideration at the hands of their families, their friends and employers. It will be difficult in many instances for the business man eager to open his doors to the returned fighter to understand why men who look hale and hearty enough will be unable to go into certain jobs involving heavy indoor work. Employers, especially, will have to understand this aspect of the problem and exercise discretion, always, of course, on the assumption that the ex-soldier or ex-sailor bases his claim legitimately.

"The public will be completely reconstructed only when it has effected a true balance between consideration and opportunity. The possible dangers of hero-worship and pampering can be overstated, but at the same time neither can the need of intelligent consideration for these men. These bearers of invisible

wounds will receive the same attention from the Medical Department of the Army as the outwardly handicapped. This treatment will fit them for the future as it will the others.

"They must not be passed by because their sacrifices are not obvious; they must be given full opportunity to regain their positions in the scheme of American life, sharing the same privileges and the same chances for lucrative employment as their comrades otherwise handicapped.

"The adjustment of society and industry after the war will hang very much on the crystallization of the public mind in this matter. It is going to require nice rather than snap judgment. Broad rules on which the general plan may be based must be altered to meet the condition of the individual. And it should never be lost sight of that the returned soldier and sailor are human beings, not machine cogs, and that no two human beings are alike."

COTTON GOWNS FOR POWDER CHARGES—How is the charge of powder put into a big gun? It is not shoveled in, as coal is put into a furnace, tho the inexperienced layman might so suppose. The powder is put up in bags, and it is these that are handled by the gunners. At present the bags are of silk, for reasons that are explained in the subjoined extract from *Chemical and Metallurgical Engineering* (New York, September 25), but there are prospects that a substitute of cotton fabric may shortly be available. Says the paper just named:

"At present millions of yards of silk are required in making the bags which contain the large powder charges used in the firing of heavy artillery. These bags are inserted in the gun immediately behind the projectile, and the firing of them gives the propelling force that hurls the projectile at the target. This propelling charge is, of course, entirely distinct from the charge within the projectile that explodes the missile after it reaches the target. Heretofore silk has been depended upon for these bags for the reason that no other cloth material has been found that would meet the peculiar conditions required. It is essential that not a particle of the bag-container shall remain after the gun is fired. Otherwise a smoldering piece of the fabric might cause a premature explosion when a new charge was inserted. Chemically treated cotton cloth, as a substitute for silk, is being tested out by the Ordnance Department. If found practicable for ordnance uses, the discovery will effect the double result of meeting a serious shortage in silk and of bringing about a money-saving in the ordnance program estimated at between \$25,000,000 and \$35,000,000. Preliminary tests already made at the Aberdeen Proving Grounds have encouraged the department to proceed further with its experiments."

DAMASCUS STEEL

IN TAKING DAMASCUS, the Allies have captured what was once the world's most important munition-center. Before the use of gunpowder, weapons of steel, such as sword and spear, were the soldier's chief reliance; and in making and distributing the finer grades of steel Damascus led the world. The knight who owned a "Damascus blade" had the very best thing of its kind, still unsurpassed, tho the sword has gone out of fashion. According to a writer in *The Journal of the Royal Society of Arts*, quoted in *The English Mechanic* (London, August 9), this high-grade steel came originally from India and was the result of a process devised and developed by Hindu artificers. He writes:

"One of the many articles which contributed to the world-importance of Indian trade was the famous Indian steel. It appeared in Western Europe during the Middle Ages, under the name of damascene, or Damascus steel. By another trade route through Persia and the Caucasus it found its way to Russia.

"The iron and steel industry was highly developed in ancient India. A witness to this exists not only in the famous wrought-iron pillar of Delhi, but in many other specimens, some of them at least being undoubtedly high carbon crucible steels.

"To this last category belonged the wootz, or small cakes of carbon steel, from which the damascene blades were manufactured. Some of such cakes were investigated by Réaumur, but he found nobody in Paris who could forge them. Some others were presented to the Royal Society by Dr. Scott, of Bomlay, and brought to this country by Dr. Pearson. Faraday took a keen interest in them, and his investigation of alloy steel, conducted in conjunction with Stodart, was the result.

"Subsequent researches of General Anosoff, Professor Tchernoff, and the author led to show that damascene steel was a very pure high carbon crucible steel with excellent mechanical qualities and a splendid watering.

"In his recent paper on this subject to the Iron and Steel Institute, the author explained that the splendid watering of the oriental blades showed the amount of mechanical treatment the original cake was subjected to. . . . In order not to spoil this watering, the oriental maker never dared to exceed the temperature of about 700 degrees. . . .

"The author wishes to draw the attention of all interested in the production of high carbon and alloy steels to the many possibilities, especially from the point of view of after-war trade, which the damascene steel, or, we may better say, the 'damascene process,' offers to the steel-maker in this country and in the Indian Empire."

IN A BRITISH HOSPITAL.

IN A GERMAN HOSPITAL.

YOU WOULD HARDLY THINK THEY WERE WOUNDED.

TOO ENORMOUS TO BE SHIPPED FULLY ASSEMBLED: LEVIATHANS OF THE RAILS.

These locomotives are, therefore, transported in parts, and the detached parts occupy one flat car, one gondola, and one box car.

IS THIS THE LIMIT IN LOCOMOTIVES?

THE MOST POWERFUL LOCOMOTIVES in the world, just built for the Virginian Railway, would seem to be pretty nearly at the upper limit of what is possible under present railway conditions. The boilers are nearly as high as the top of the smoke-stacks, the cylinders are as large as whole locomotive-boilers of fifty years ago, and it took two weeks to get them from Schenectady, N. Y., where they were built, to Princeton, W. Va. They had to be shipped in parts, as the railways between these points could not handle them fully assembled. These monsters, with their tenders, are 105 feet long and have a tractive power of over 88 tons. The horse-power developed is as great as that of four of the new cargo-ships now being built for the United States Shipping Board. To quote and condense an article in *The Scientific American* (New York, October 12) describing these giant tractors:

"Certainly the boiler, 9 feet 4½ inches in diameter, can go no higher. It is already level with the top of the cab; the smoke-stack has shrunk to a mere ring; and the sand-boxes have been crowded from their immemorial position of dignity astride the boiler and forced to cling snugly against its side.

"If the future 'mammoth' can go no higher, it certainly cannot spread out to the sides, as a glance at the castings containing the two 48-inch cylinders will show; and as for length, an engine with its tender that measures 105 feet over all has surely reached the limit.

"This Mallet locomotive, with a tractive power of 147,200 pounds, working compound, and 176,600 pounds, working simple, is one of ten which are now being delivered to the Virginian Railway by the American Locomotive Company. They are being built to the order of the authorities of the Virginian Railway, who have the problem of handling a constantly increasing volume of traffic on an exceptionally difficult part of the system.

"The portion of the line between Elmore and Clark's Gap on the Deepwater division, a distance of about fourteen miles, has a grade for the last eleven and one-half miles of 2.07 per cent. This is the crucial part of the entire system, as all the tonnage of the Virginian Railway passes over it. During the last eleven years Mallet locomotives have been employed in handling this traffic. The size and power of these locomotives have progressively advanced to keep pace with the growth in volume of traffic.

"The traffic volume is still

growing, and as the track is single, and as it is not desired to increase the number of engines on any train above three, it has been found necessary to put still larger locomotives into service. The enormous locomotives under discussion were developed in order to accomplish this result.

"The boiler pressure is 215 pounds to the square inch. The tender carries 12 tons of coal and 13,000 gallons of water. The consumption of coal is 6½ tons per hour, and it is fed to the furnace by a mechanical stoker.

"The horse-power, when the engine is exerting its maximum effort, is 5,040, which is approximately equal to the combined horse-power of four of the 3,500 fabricated cargo-ships which are being built for the United States Shipping Board.

"The design as a whole follows the builder's ordinary practice, differing from previous designs only in modifications made necessary by the increased power. The shipping arrangement required considerable planning before the railroad carriers could be convinced that they could safely accept and move via their lines locomotives of such size and weight.

"In preparing for shipment of large locomotives, it is first necessary to submit diagrams showing the estimated height and width clearance dimensions and the distribution of weights on each axle to the operating or engineering department of each carrier over whose line it is intended to route the shipment, this in order to secure their agreement to handle the shipment when offered to their line. If some projection exceeds the carrier's clearance limitations, an effort is made to meet the objection by removing that part, if possible, and reapplying it on arrival at destination. Or, if the weights are too heavy for some trestle or bridge via a natural route, an effort is made to find a way to ship via a detour route.

"These large locomotives presented an unusual problem. It was impossible to ship them completely assembled and moving dead on their own wheels. After the consideration of many plans, it was finally decided to leave the boiler on the frames but trimmed of all outside parts and projections. The cab, low-pressure cylinders, and other certain parts were removed and the remaining skeleton with tender was shipped on their own wheels. Each locomotive required one flat car, one gondola and one box car to carry the loose and detached parts.

"Authority was eventually secured for shipping in this manner although under special operating instructions and via detour routes.

"The engines could only be handled one at a time from Cape Charles to Norfolk, as there was only one float—the latest one built—capable of handling the bulky shipment under special instructions.

"Each locomotive was accompanied by a messenger, who had

LOW-PRESSURE CYLINDERS ABOUT TO BE SHIPPED.

sleeping quarters fitted up in the cab, which was loaded on a fat car. Approximately two weeks was the actual running time from Schenectady, N. Y., to Princeton, W. Va."

VACUUM-PICKED COTTON

COTTON IS NOW GATHERED in the Imperial Valley of California by a device that works on the principle of the vacuum-cleaner. It is asserted that cotton picked by it is cleaner than that picked by hand and that by its aid an inexperienced laborer can work three or four times as fast as experts in the old methods. The machine weighs but 1,000 pounds, and is easily moved. Around its light skeleton are a 300-pound, 16-horse-power engine, a suction-pump for the nozles, and a centrifugal separator for parting the cotton from leaves, sticks, and other débris taken in by the picking nozles. These nozles are five in number, at the end of light, 18-foot rubber pipes connected with an 8-foot tube running transversely over the machine. To quote from an article in *The Scientific American* (New York, October 19):

"The powerful suction-pump on the machine endeavors constantly to keep the picking pipes in a state of vacuum, wherefore, when the nozzle is passed over a row of bolls, the suction picks up the cotton and carries it through the pipe and to the centrifugal separator. Here a powerful fan with hollow vanes, a departure in fan construction, separates the cotton from the leaves, the sticks, and the 'motes,' which are not desirable, and finally drives the separated mass through a curved pipe at the rear. The leaves and motes are driven out through perforations in the top of the pipe, the cotton is driven through to the sack or basket at the end.

"Each one of the five picking nozles and rubber pipes is handled by a man, and the speed of action depends on the skill he acquires. A single sweep of the patent nozzle across a row of the white blossoms is alleged to pick them clean, the time being about that required to pick one boll.

"The rate of picking cotton by hand seems to vary from 100 to 200 pounds per day—the record being made by a colored person who picked 900 pounds in a day, but did it on the run, and without attempting to do more than to get the easiest reached. Also cotton-pickers are wasteful, the waste running as high as 50 per cent. of the crop, and the amount, according to the government reports, running into hundreds of millions. It is human nature to pick the bolls on the top, and to let those lying in the back-breaking strata at the bottom of the bush remain to sleep in the Southern sunshine.

"The persons running the California machine, described and illustrated, claim that five men with the machine can pick 1,000 pounds per man per day of ten hours, or 5,000 pounds per day, and that it does a clean job instead of a wasteful one, because the nozles do not mind being required to get down into the bottom of the plant.

"There remain plenty of woodpiles for the Ethiopian to hide in, and it may be that the machine without brains, even tho directed by human hands at the very nozles, will still not pick with the proper discrimination, but the fact remains that this is the first one on record to reach even the present stage of hopefulness.

"As cotton authorities allege that last year not far from a million persons were engaged in the harvesting of cotton, the machine able to do the work of five times the number of men needed to operate it, and to do it with little labor on the part of the crew, might well be an invention of serious national need."

INFECTION FROM SHAVING-BRUSHES

NEW SHAVING-BRUSHES should be thoroughly and carefully washed in hot, soapy water before use. The bristles of such brushes may come from infected animals, and anthrax spores have been known to be transmitted thus to human users. The popular myth that infection of this kind is of German origin is not only improbable, but unnecessary, but the war is doubtless one of the remote causes, as it is responsible for a lack of care in importing animal products and in treating them thoroughly with antiseptics. The remedy lies in separate disinfection by the user, and this would appear to apply not only to shaving-brushes, but to all other implements made of bristles or hair. Leather is presumably cleansed by the various processes to which it is subjected in tanning. Says a writer in *American Medicine* (New York):

"Anthrax in its industrial forms primarily results from the handling of hides, hair, and carcasses of infected animals. According to *Public Health Reports*, the Surgeon-General of the Army has reported the occurrence of several cases of anthrax due to infected shaving-brushes. The experience of England indicates that a number of victims of malignant pustule have originated

through the use of new shaving-brushes, the bristles of which have been found to contain the highly resistant anthrax spores. Some of the infected brushes, according to all accounts, were made from hair which had presumably been disinfected in accordance with all requirements.

"Anthrax, generally a disease of animals, such as horses, cattle, and sheep, does not possess a high degree of virulence for human beings, but nevertheless the occurrence of any disease of this character is sufficient warrant for drawing attention to the importance of the effective sterilization of hides and hair previous to manipulation and use by human beings. Hog bristles apparently are comparatively free from anthrax, even when emanating from countries where infected horsehair is common. The great demand for brush material and the difficulties in securing an adequate quantity from the usual trade-channels possibly have led to a letting down of the preventive measures in old establishments and the exhibition of carelessness on the part of new manufacturers less familiar with the inherent dangers arising from imperfectly disinfected horsehair. The anthrax spores are highly resistant to sunlight and dryness and require boiling for at least two hours in order to destroy them, or an hour in the autoclave at 220° F.

"The horsehair which appears to be the source of greatest danger has come from China and Siberia and is of a gray or yellowish color, and the imitation badger hair.

"As a practical measure of protection, thorough and repeated washings in hot, soapy water appear to secure the mechanical removal of the dangerous infective material, and, in consequence, new shaving-brushes should not be used without this preliminary operation of cleansing. Even with this precaution the danger of infection is not entirely removed, as anthrax bacilli or spores may be found on the ends of the hair imbedded in the handle. The only certain measure of protection for the shaver is the elimination of the infection previous to the manufacture of shaving-brushes.

"The seriousness and high mortality-rate of anthrax are sufficient reasons for protecting not merely those whose occupations require the handling of potentially infective material, but also those who unwittingly make use of shaving-brushes as part of their routine of cleanliness. There is virtually no sound excuse for the transference of malignant pustule to civilians or soldiers through shaving-brushes."

IT PICKS 5,000 POUNDS OF COTTON A DAY

SOUNDING NIAGARA'S RAPIDS

TO TAKE ACCURATE SOUNDINGS on the brink of a cataract when the water is rushing forward at the speed of a railway-train would appear to be almost an impossibility. It has been successfully accomplished at Niagara by Leon R. Brown, office and field engineer of New York State railways, who describes his feat in *Engineering News-Record* (New York, October 3). The work was done just above the Horseshoe Falls and required the services of twelve men, none of whom was on or in the water when the soundings were made, the apparatus being operated entirely from the shore. The special float and weighted sounding-pole devised, controlled by cables on windlasses, required a month of experimenting before they would work satisfactorily, but all the soundings were then taken in a few days. Says Mr. Brown:

"Over a large part of the area of the Niagara River, just above the Horseshoe Falls, between Goat Island and the Canadian shore, the river varies in depth from 10 to 20 feet and has a velocity of about 30 feet per second. The bottom is worn very uneven by the action of the water on the limestone and is strewn with many large boulders. The purpose of the soundings was not only to obtain the depth of the water, but also to obtain elevations of the bottom of the river so contours could be shown.

"For a person to venture out with a boat or raft, even when secured to the shore with strong cables, was out of the question, for the craft would have been quickly overturned by striking a rock, or drawn entirely under by the swift current. It was impossible, because of the width of the river, to get soundings from a car carried on an overhead cable, and no diver, however heavily weighted, could keep his feet in the river.

The conclusion was reached, after some experimenting, that in order not to risk human life some way must be devised to obtain these soundings from the shore.

"The plan chosen was to operate a float or raft with cables from the shore. The float contained a sounding-pole graduated in feet and weighted at one end, so arranged that it would always remain upright in the water. The pole moved up and down vertically and was operated by a trip rope from the shore. Its position was located by triangulation from the shore, and the elevation of the river bottom was obtained by level readings on the pole.

"The float was constructed of three 12 by 12-inch pine timbers 16 feet long, arranged in the form of a triangle, with the ends mitered and securely bolted. This was much more rigid than a square frame would have been, and did not require lateral bracing. The triangular shape also lent itself especially well to the action of the current and the scheme of navigation that was used to move the float from one point to another."

One of the most difficult problems was to get the float into a position to take soundings. This was finally solved by using cables controlled by windlasses on shore, which, together with the action of the current, held the float steady in any desired position. To quote further:

"The sounding-pole was 30 feet long, about 5 inches in

diameter, and octagonal in shape. The advantage of this shape was that the paint wore off only at the corners. It was found that a round pole sliding up and down in its pipe soon wore off all the graduations.

"The bottom of the pole, for about 10 feet where it received the most wear, was wrapt in sheet zinc, and around this at the extreme end was cast a lead weight of 200 pounds. This was done by pouring melted lead into the space between the pole and a short piece of 8-inch cast-iron pipe. . . .

"The operation of the sounding apparatus was now found to be nearly perfect. The first soundings were taken upstream, and as near to the windlasses as was possible.

"Starting at the shore, a row of soundings was taken out at right angles to the shore. The raft was then let downstream 20 feet and another row taken back toward the shore. When it was in the best working order a sounding could be taken and the raft moved to another position in about a minute. It required . . . a month of experimenting to get the float in good working order. . . .

"The writer believes that however swift the current or uneven the bottom, however wide the river or turbulent the water, or however dangerous the location, accurate soundings may be taken in water up to 20 or 30 feet deep cheaply, quickly, and safely with an apparatus of this general description."

PROBING A SECRET OF NIAGARA.

CONCRETE CRACKED BY ELECTRICITY

Concrete may be cracked and ruined by the action of electric currents on iron bars embedded therein for reinforcement. The United States Bureau of Standards reported this action some time ago, and it is now being seriously studied by experts, we are told by an editorial writer in *Chemical and Metallurgical Engineering* (New York, October 15). The current promotes chemical action and forms lay-

ers of iron oxid, with an accompanying expansion of 220 per cent., cracking the concrete. At the same time the alkaline constituents of the cement are concentrated, softening the mass and making it easily crushed or broken. What creates the current is not accurately known; but it may be partially due to differences in concentration caused by surface evaporation. Says the editor of the paper named above:

"Exhaustive studies of this corrosion are being made. It is fundamental to modern engineering practise that means for overcoming it should be found at once. The domains of the chemical and civil engineers overlap here, and it is incumbent on the former to use his most efficient research methods and find the solution of the problem.

"Ordinary rust-proofing methods are not available, except for a limited use of paint, which has certain serious defects. . . . However, while chemists and engineers seek a means of checking the corrosion, why not change the design of reinforcements so that this internal pressure will not have to be counteracted by the low tensile strength of concrete? A trial might be made on heavy rolled metal fabricated with a pipe machine but not welded at the lap. Lateral strains produced by the increment in volume of the reinforcements due to rust would be absorbed by deflecting the tubular bars."

LETTERS - AND - ART

AN "AMBASSADOR OF THE DEAD"

A WREATH placed on the bier at the mass held for Joyce Kilmer was inscribed as a tribute from the poets of England, and was, perhaps, the first public sign that one of them was among us as ambassador. Robert Nichols is his name, one of the young Oxford "Elizabethans"

who forsook their books at the first call and went to France, many of them to die. Nichols was fortunate to escape with his life, but with the mental maiming that is termed "shell-shock." Under this affliction, however, he is buoyant and protests that he's going to be all right. "I don't want to be a bloomin' martyr" are his words, and to put away martyrdom he still works for the British Government. He will accompany a collection of war-pictures to various cities here, beginning with Washington. They are the work of Sir William Orpen, Augustus John, Muirhead Bone, Paul Nash, James McBeigh, Wyndham Lewis, and William Roberts. Later he promises some lectures on English poets, particularly those who, like himself, answered the call. It pleases him in a somewhat somber mood to speak of himself as "Ambassador of the Dead." The *New York Evening Post* writes:

"Mr. Nichols, who, along with Robert Graves and Siegfried Sassoon, is already known here as one of the 'Three Musketeers' who have wrenched striking poetry out of the trenches, is something of a surprise. Of course, there should be now nothing surprising about having a shell-shocked boy-poet come from England to talk about the other English boys who are dead or maimed and to tell their share in the fighting and the art of the war. But it seems so short a time ago that one first began to think of how that generation of English college lads would go. Now one of them has come over to us—a strangely aged boy, walking slowly and with a cane, referring to notes lest his memory go back on him, and with that peculiar shell-shock look on his face with which most of us are not yet acquainted.

"Mr. Nichols had been 'up' (which means in Oxford) only a part of one year when the war came, and he went at once. He was in the war a little over a year before he was disabled, and at the front only a month and a half. Then he spent five months in a hospital, and since that time has been working for the Government in the Ministry of Labor, and even going back to France again as a correspondent, getting detailed information for the Government, as so many English writers are doing these days.

"It was the only way I could get back," he said.

"He is writing now a brief history of 'The Sappers,' the result of his visit to the Ypres salient. Now he is here, as a kind of link between the young artists of his country and of this country, to tell exactly what his friends are, or were, like; what they did in the war; and to make better known here their poems and pictures and music. . . .

"In the poets he is, perhaps, more personally interested than in any of the others, since he himself is one of them. Among those who have died he mentions Rupert Brooke, of course, Alan McIntosh, Julian Grenfell, and Charles Sorley, author of 'Marlboro' and Other Poems.'

"Masefield said to me that Sorley was the greatest loss sustained by English literature during the war," he said.

"But Mr. Nichols refuses to believe that it is the war which made these men poets, or that the war helped the revival of writing poetry in England. 'That had begun before,' he remarked, 'and the war only made a larger audience. People turned to it. These young poets would have written anyway, but they would have written differently.'

"Of the generation just older than his own, the men who have not been taken by the war, he has the warm enthusiasm of the undergraduate who hardly realizes yet that he himself is beginning to be classed along with them.

"There are at least a dozen of them," he said. "Masefield is the greatest poet in England. And after him there are W. H. Davies and Wilfrid Wilson Gibson, Walter de la Mare, Ralph Hodgson, James Stephens, Lascelles Abercrombie, D. H. Lawrence, W. J. Squier, John Freeman."

"Mr. Nichols is not in sympathy with the Imagistes, and is filled with a keen curiosity to find out the workings of the poetic mind in this country—both Imagiste and otherwise. Frost, Masters, and Vachel

Lindsay are, of course, the three American poets which he now knows best and most admires. . .

"It seems to me," said this tall, lame boy with the old face, "that my generation has lost everything which there is to lose—except its honor and the memory of the personalities of the ones who died."

A "peculiar tenderness," so the *New York Sun* is convinced, will be manifested in the welcome extended to Mr. Nichols, especially in his capacity of lecturer on his colleagues killed in battle.

"It has been one of the spiritual phenomena of this war that in the midst of such universal sorrow, such colossal tragedy and tremendous loss, the world's heart and mind have been recurrently sensible of a very special sense of sorrow, tragedy, and loss as one after one these young poets of England have fallen on the field of honor. Mr. Nichols comes to tell American audiences more of these men, whose names are already something of a beautiful legend in the thought of the world. The designation given him as he left England on his mission is poetry itself. He comes as 'the Ambassador of the Dead.'

"It is not necessary to borrow glory from the splendid circumstance of their death in order to claim a special significance for the names that Mr. Nichols will speak. They had already—before the storm broke in Europe—begun to assume, as a group, a definite place in the history of English poetry, and as individuals to acquire something more than a colloquial fame. The expression 'the young Elizabethans' had begun to be heard wherever

LIEUTENANT ROBERT NICHOLS.

He will lecture in this country on the "Young Elizabethans," whose early singing was stifled by the war.

English poetry was disesteemed. The names of Morley and Brooke and the others were known on both sides of the Atlantic some time before the war came to give them that peculiar and shining immortality that attaches to the combination of poetry, youth, and death in battle. . . .

"These men of whom Mr. Nichols will speak fall at that end of the arc where our preference has been accustomed to lie. The name which, as a group, they were beginning to acquire is neither inapt nor extravagant. Young Elizabethans they were

it is much more than that. Indeed, it is not so much their dying—which is just an accident befalling one and not another—as their living so greatly, on such a height, that gives them their authority. It is not dying, but despising death that is the great thing. It is only an act of will and imagination that when translated into the language of art can make those who are utter strangers to its experience catch its fire, if but for a moment, forget self, despise cares, defy death, and embrace the faith that the things that matter are things of which no stroke of man or of fortune can rob us.

"That is what the last of these wonderful boys, Mr. Robert Nichols, can and does do for us. He is unquestionably one of the poets directly given us by the war. . . . There is a great gulf between what he wrote before and what he has written since he began the great experience. Before it he was a writer of verses. The war has made him a poet, one of the three or four in whom it has found that rare matter on which alone it can set the seal of this kind of greatness. The earlier poems (he generally gives the dates of composition) are, on the whole, admirable exercises, but nothing that would have very much concerned us here.

"But all these flutings count as nothing as soon as the trumpet has sounded. . . . Nothing can prevent poetry like this from taking its place among those permanent possessions of the race which will remain to tell the great-grandchildren of our soldiers to what pure heights of the spirit Englishmen rose out of the great war's horror of waste and ugliness, noise and pain and death!

"And it is a happiness to think that in this case the promise of such poetry is not one that must, alas! remain unfulfilled. The war has robbed English poetry of more than one Marcellus, of some of whom we knew nothing till we knew our loss. But . . . all who care for our poetry will expect that what the war gave to Mr. Nichols peace will not take away, and that age will complete what youth has so finely begun."

This poem, from the pen of Mr. J. I. C. Clarke, is taken from the *New York Times* and commemorates the episode "at the solemn memorial mass for Joyce Kilmer, St. Patrick's, New York, October 14, 1918":

LAURELS

Before the vast cathedral's altar dim
Six flambeaux lit the flag-draped coffin-board.
Not yet had floated forth the pleading hymn:
"From out the deeps I've cried to thee, O Lord!"

Few mourners yet had gathered for the rites,
Symbols that man must die to live again;
Not yet the black-robed priests and acolytes
Were there intoning: "Rest in peace. Amen".

When up the long, paved aisle a single tread
Reechoed faintly through the vaulted nave,
A soldier with a green wreath for the dead—
Our warrior-poet in his far, red grave.

Pale was the soldier, halting his footfall,
One who himself had faced the fires of hell,
And fearless heard the shrieking death-bolts call,
And knew the pang when flesh is plowed by shell.

He stood, and raised the wreath of green on high—
Green laurel sacred to the true and bold—
As if to Joyce in Heaven, ere 'twould lie
Beside the star-flag's glowing fold on fold.

Then knelt this messenger of love to pray,
His lifted face all wet with holy tears.
My soul saw angels bear each drop away
To shine Love's chancel lights through endless years.

Nor pomp of ritual, nor altar glow,
Nor wise sweet words the preacher said,
Nor guard in arms, nor censers to and fro
Seemed meet as these fresh laurels for our dead.

He did not sing, he did not serve in vain,
Whose laurels crimsoned in the freedom strife,
The brave man's sacrament, therein to gain
Transcending memory, eternal life.

KILMER'S GRAVE IN FRANCE.

Alongside a fellow soldier, whose cross appears at the reader's left.

—in directness and simplicity of speech, in the singing quality of their verse, in their objective concepts, in their response to sensation, and—this, in the circumstances, the most tragic of all—their love of English field and sky and sea. In all these things they were more reminiscent of the roistering and talented singers of the Mermaid Inn than have been any of the intermediate schools; like them, too, in the fine youthfulness that runs everywhere barefoot through their poetry. And like them again in that they burst suddenly and generously into song at a period nearly sterile and silent. Very much the same as in the sixteenth century, it were as tho a warm wind had blown over England and the countryside awoke with a thousand choirs.

"Their love of English town and field and sky can not have failed to strike the attention of any who have read these poets of the last decade. Another book of 'Place Names in English Poetry' could be derived from their volumes. Their use of English towns and streets and countrysides threatened at first to make their poetry colloquial; it ended by making England universal. It was not the exalting of England the nation; it was a lover's praise of England, the country of blue skies, of sunny downs, and 'the fallow on the hill not yet brought in.'

"In the midst of all this—the youth of it, the beauty of it, the exultation and the music—came the blast of war, the blight and the wreckage and silence. 'They had been music for the world'—and now they are still. We shall never know the measure of the loss. Most of them were yet young when the England that they loved called for a sterner thing than song. Some of them remain—Mr. Nichols, several times wounded; Wilfrid Gibson, now in service; John Drinkwater, and others. Out of the wreckage something may be saved. But when it comes to casting up the cost of the war to England and the world the names that Mr. Nichols will recall will go far toward reminding us that the total is beyond possibility of estimate."

The fact remains, says the *London Times*, that we "yield a special authority to the poet who has been under fire":

"The words of Rupert Brooke or Julian Grenfell do gain a peculiar authority from being the words of men who have ventured not a part, but the whole of their share in this world's interests. 'Truth sits upon the lips of dying men.' Yes—but

EMANCIPATION OF STONEHENGE

READERS OF THOMAS HARDY'S "Tess of the D'Urbervilles" who have never traveled to Stonehenge have an unforgettable image of it gained through the novelist's imaginative picture. It was here that *Tess* awaited the minions of the law who were to come and take her to satisfy its demands for killing her worthless husband. It will strike many readers as odd that this famous monument of a forgotten past should only now be coming into the possession of the British Crown. Its former owner, Mr. C. H. E. Chubb, of Bemerton Lodge, Salisbury, has offered it to the nation, and its acceptance has been guaranteed through Sir Alfred Mond. "As the remains of a long by-gone civilization," says Sir Alfred, "it has a value and an interest equaled by no other monument in the United Kingdom." A paragraphist in the *Manchester Guardian* observes that "the fact that Stonehenge passes back to the state during the greatest war that Britain has known invites symbolic interpretation, and will surely produce a new legend. Mr. Chesterton for one might see to that." In proffering the gift Mr. Chubb writes this letter to Sir Alfred Mond, which *The Guardian* reproduces:

"BEMERTON LODGE, SALISBURY,

"September 15, 1918.

"DEAR SIR: Stonehenge is perhaps the best-known and most interesting of our national monuments, and has always appealed strongly to British imagination. To me, who was born close to it and during my boyhood and youth visited it at all hours of day and night, under every conceivable condition of weather, in driving tempests of hail, rain, and snow, in fierce thunder-storms, glorious moonlight, and beautiful sunshine, it always has had an inexpressible charm.

"I became owner of it with a deep sense of pleasure, and had contemplated that it might remain a cherished possession of my family for long years to come. It has, however, been pressed upon me that the nation would like to have it for its own, and would prize it most highly. Therefore, I have decided to give up this unique possession, and offer it to you, his Majesty's First Commissioner of Works, as a gift, to be held for the nation. It brings in a revenue, and its possession would be far from an expense. If my wife and I may express a wish, tho' far from making it a condition of the gift, we should be glad if, during the continuance of the war, the income should be handed to the Red Cross Society, whose work at the present time is of such great national value. This point, however, must be entirely within your discretion.

"I have the honor to be yours faithfully,

"C. H. E. CHUBB."

Before Mr. Chubb's ownership the place was in the hands of Sir Edmund Antrobus, of Amesbury Abbey, Salisbury, who put a wire fence around it and charged admission, facts that lead the above-mentioned paragrapher to say that the news that Stonehenge's "vicissitudes in private ownership are over will be heard with deep satisfaction." He adds a historical note:

"Its origin has been attributed to the Phenicians, the Belgæ, the Druids, the Saxons, and the Danes. Learned men through the ages have founded many theories on it. Some call it a temple of the sun, others the temple of serpent worship, a shrine of Buddha, a planetarium, a monumental gallows on which defeated British leaders were solemnly hanged in honor of Woden, a Gûlga where the national army met and leaders were buried, and a calendar in stone for measuring the solar year."

Its history in modern times is reviewed in another column of *The Guardian*:

"Gratitude to the owner of Stonehenge for handing over to the nation the greatest and oldest of its memorials may without

offense be tempered with wonder that it has so long remained in private possession. Mr. Chubb has regarded as a trust and an honor the care of this priceless possession, and it is in this spirit that he parts with it. But to many of its owners Stonehenge has been either a white elephant or a mere source of gain, and few things are more discreditable to our national spirit than the way in which it has been wrangled over in the courts, robbed of its trilithons to make bridges and mill-dams, and allowed to

FROM BEFORE THE DAWN OF HISTORY.

Stonehenge, England's Druidic monument, now passes to the state, and may be converted into a "national memorial of the immortal dead."

suffer needless damage from storm and the relic-hunter. The duty of its care will now fall to the Ancient Monuments Commission, and it is safe from wanton neglect. But even national care is not likely to draw from it the answer to its mysteries, and to enable an accurate account to be given of its age or purpose. Even if the sun-worship theory be thoroughly established, and scientific calculation of the date when the sun on midsummer day must have risen in line with the 'avenue' be held to prove the great circle over 3,500 years old, it is still impossible to know how the great blocks were got to their positions. And that, one thinks, is well, for in an age that finds out so many things it is good to have something left to wonder at."

Now that a war-memorial for Hyde Park has been proposed, Canon H. D. R. Rawnsley writes to the *London Times* to point out that Stonehenge is the almost inevitable site for such a permanent commemoration. He says:

"We can none of us be too grateful to Mr. Chubb for his public-spirited gift of Stonehenge to the nation. It may not be feasible, but the thought constantly recurs, why not make the great meeting-place of an ancient British race who worshiped the sun a national memorial of the immortal dead who have laid down their lives that the Sun of Righteousness might arise with healing in his wings for the whole civilized world?"

"Salisbury Plain as a military training-ground has done much toward winning the war. What could be more fitting

than that here, in the midst of Salisbury Plain, there should be at this old meeting-place of prehistoric tribesmen and warriors an assemblage on midsummer day of each year, or at stated intervals; and that a solemn service should be held in memory not only of Wiltshire men, but of all the men of the British Empire who have died for right against might—for justice, freedom, and peace?

"The gates of the great stone pylons stand open wide to all the quarters of the heavens, and seem to invite the going forth of light and liberty to all the world. Nothing would be needed but a huge stone Celtic cross in the neighborhood of the circle, with a simple dedication thereon to the imperishable memory of the gallant dead.

"I feel that such a monument in the solemn propinquity of this great British shrine would be preferable to a Priapic monument of cones and Eastern welis on a huge bare platform in Hyde Park."

"CLEANING UP" THE ORCHESTRAS

MOST OF THE EXCITEMENT in the musical history of the past four years has been furnished by conductors instead of prima donnas. It is not suggested that jealousy of the long monopoly enjoyed by the sisterhood led the former to seize the international situation and make it their own. Certainly no prima donna from whatever impulse will find her acts so filling the historical page as those of Dr. Muek and Dr. Kunwald. They are now interned. Toscanini went back to Italy to lend his assistance to his native country, but the editor of *The Musical Courier* (New York) is responsible for the statement that "he stopt conducting a concert in Rome because the audience objected to the German numbers on his program." Mr. Josef Stransky, of the Philharmonic, has been the target for attack, but, as the same writer says, "he pointed to the fact that he has taken out American naturalization papers, and emphasized his Czecho-Slovak origin." Besides Mr. Stransky, Alfred Hertz, of the San Francisco Orchestra, and Arthur Bodansky, of the Metropolitan Opera, also "asked Uncle Sam for first papers of citizenship." Frederick Stock, of Chicago, finds himself in so anomalous a position that we give this extract from the *Chicago Tribune*, citing it in more detail:

"In a letter which expresses a very fine-spirited sense of responsibility and unselfish devotion to the Chicago Orchestra, its conductor, Mr. Frederick A. Stock, has tendered his resignation to the Orchestral Association.

"The tender has been accepted by the trustees for reasons which in no way reflect upon Mr. Stock, but are founded on the same careful regard for the welfare of the great institution they serve as has moved Mr. Stock's action.

"Mr. Stock feels, and the trustees accept his point of view, that his failure to perfect the legal formalities of citizenship by taking out his second papers lays him open, and possibly the orchestra likewise, to some public criticism. Technically Mr. Stock is an 'alien enemy,' and Mr. Stock, with very rare consideration, has felt that his continuance as conductor might be misconstrued and erected, however unjustly, into an offense against the institution. To avoid any possible shadow of affront to its patronage or the introduction of any sentiment which might deprive the concerts of their proper atmosphere, Mr. Stock and the trustees, on the former's generous initiative, have adopted the course taken.

"At the same time the trustees take occasion to make it clear that Mr. Stock's essential loyalty to the nation is fully recognized by them, as well as his years of faithful service to the orchestra. The resignation, therefore, will interrupt Mr. Stock's official connection with the orchestra, not finally sever it, for it is desired and expected that he will take up the baton again when the present legal objection has been removed. The feeling shown by the trustees has been earned by a devotion not often found in service, and it will be shared by the great majority, if not indeed all, of the orchestra patrons. It is proper for the public to know of the confidence felt by the trustees in Mr. Stock and to recognize the honorable motives which moved him. He retires with great credit and will be welcomed back with friendliness unabated, if not indeed increased."

The Boston Symphony situation, solved by the engagement of Henri Rabaud, was treated in this department October 26.

The Musical Courier's editor points out that the interim before he begins his duties will be filled by Pierre Monteux, who "when he first landed here refused to conduct a Richard Strauss work," but "he has just announced that during the month of his temporary conductorship of the Boston Symphony he will program Bach, Beethoven, Mozart, Schubert, Liszt, and other Austro-German classics." Nothing is said, tho, about Mr. Monteux's frequently stated discrimination between living and dead German composers. The editor's final observation is:

"After the Boston and Cincinnati sensations, a 'cleaning-up' process took place in all the American orchestras, and to-day it is fairly certain that if any pro-Germans exist in those bodies they are more silent than the well-known untalkative Sphinx."

TURGENEF'S FAILURE

WARS MAKE LIGHT of the passing of great writers, to say nothing of the observance of their centenaries.

With the world at peace, October 28, the day one hundred years ago on which Ivan Turgenev was born, would not have passed with little notice. But his fame, according to the *New York Evening Post*, has suffered more than temporary eclipse. The expectations of his contemporaries that Turgenev would found a school, it thinks, have been largely disappointed. Even in Russia he has not been followed:

"The younger generation of Russian novelists, as Gorky, Andreyev, and Artzibashev, are not Turgenev's sons; in France, Bourget has written admiringly of him, but the French novelists have gone other roads; and while the young English writers show much Russian influence, it is influence almost a pole asunder from that of Turgenev.

"In the sense that his genius was too universal in sympathy, balanced in poise, and symmetrical in development to make him the founder of any clearly marked school, it is only the natural that has happened. His art is not doctrinaire and easily labeled. His inclination during his French residence was toward those figures who succeeded the great romantic school of Hugo and Gautier and fell before the extreme realistic school of Zola and the De Goncourts; and far more than Flaubert, he showed a compromise between old and new, a union of their best qualities without their extremes. He has many of the virtues of the romanticist—abiding youthfulness, a sense of the beauties of wild nature and human qualities, sympathy with passion, delicacy and charm of style, and a touch of innate poetry and even mysticism. We must go to Shakespeare or to Gottfried Keller's novel on the *Romeo and Juliet* theme to find anything so throbbingly aglow with the spirit of young love, and yet so tenderly tragic in its handling, as 'Spring Freshets'; we must go far to find anything so rainblingly, sunnily of the birch woods, open plains, and hardy country population as the 'Sportsman's Sketches.'

"Turgenev is also a realist in the sense that implies reality without overloaded detail and steadiness of gaze without commonplaceness or harshness. His pages abound in passages of the most careful rendering of natural scenes and of interiors, and his portraits of his most intricate and difficult characters in particular are done with a verisimilitude that overlooks not the pettiest revealing incident. His art is too near the objective to make it possible for us to call him a psychologist; and yet it has not that rough objectivity of some French novelists, that Olympian cruelty which argues against the author's sympathy with his characters. He draws the dreamy, windy idealist, *Rudin*, with sympathy for his ideals as well as sense of their failure; he draws the ferocious peasant *Jermolai*, who bites a wounded bird to kill it, with sympathy underlying the unflinching brushwork; understanding them, he feels a certain compassion for the most worthless bureaucrats of 'Smoke.' He is as far from being satirical as from being sentimental. . . . In such a writer there is little to attract the novelists who insist on being of the naturalistic school, the melioristic school, or what not."

But the writer here surmises that we shall come to pay Turgenev the compliment of saying that "where his influence is greatest it will be least traceable"—that his long gallery of novels and stories "will remain most attractive, artistic, and withal enlightening."

RELIGION-AND-SOCIAL-SERVICE

EVIL EFFECTS OF COMPETITIVE MISSIONS

SHALL DENOMINATIONS be nationalized or nations be denominationalized? Such a question puts in somewhat cryptic form the impending transformation in missionary fields. Either the old order must be perpetuated and strengthened or each nation be encouraged to express its Christian faith in ways most congenial to itself. Mr. William T. Ellis poses the question in its simplest form by reference to China and America. "Shall all the various American denominations now conducting missions in China continue to propagate their own forms and faith among the Chinese, so that the converts to Christianity in China may soon have almost as many creeds as the United States; or shall the Chinese Christians amalgamate into one national Chinese Church, irrespective of their original relationship to various denominational missions?" If in asking this question about China the same thing be considered in relation to all the lands of Asia, Africa, and Europe, especially Russia, the problem, according to Mr. Ellis, becomes "the now familiar one of Bolshevik internationalism," wherein class or organization takes precedence of national lines and loyalties versus the American doctrine of national rights and national identities." The first steps of a solution are to be noted in China, says Mr. Ellis in *The Christian Century* (Chicago), and the ball there started rolling may "demolish many hoary traditions and precedents and organizations." For—

"Chinese Christians are getting together in a Chinese church and the missionaries are abetting them in it. Already something like ten separate Presbyterian denominations from the United States, Canada, and Great Britain have organized themselves into one ecclesiastical body without the word Presbyterian in its name, and both the British and American Congregationalists are asking to be taken in also. Property and pride and prestige are all deemed insufficient to prevent this great merger, which is avowedly only the forerunner of still greater consolidations. Indian and Japanese Christians had already effected notable unions.

"As a matter of common sense, the Chinese Christian does not care a copper cash for the distinctive names and forms of the American denominations. Why should he? His sense of humor long ago pointed out the absurdity of perpetuating in China Northern and Southern Presbyterian denominations, Northern and Southern Methodist denominations, and Northern and Southern Baptist denominations, the only difference being a war in America half a century ago between Northern and Southern States!

"It would take a rare Chinese scholar indeed to find an ideograph to express 'Old-Two-Seed-in-the-Spirit Baptist Church'—for there really is such a denomination listed by the United States census, tho, I believe, it has no missions in China. The 'Holy Rollers' have missions in China, as have others of the newest and most eccentric type of American denominations. Shall we, therefore, have Chinese Dowieites and 'Holy Rollers'?

"There are in China at the present time seventy-eight denominational missionary societies at work, and, as Dr. James L. Barton points out, 'under their leadership seventy-eight different kinds of Protestant churches have been created and are being perpetuated. To many of the Chinese this array represents seventy-eight different kinds of Christians. Few, indeed, of the Chinese Christians have any conception of the real reason why they bear a name which to them has no significance, and which none of them can accurately pronounce.'"

Presbyterians and Methodists through their spokesmen have come out in favor of the national church as against the international denomination. Rev. Dr. James L. Barton, secretary of the American Board, writes in *The Missionary Review of the World* (New York):

"The vital question is, are we justified in perpetuating a

custom that is manifestly divisive, often destructively competitive, and for which there is no warrant in Scripture? I do not believe the rank and file of our churches and the intelligent supporters of our foreign missionary enterprises, if they understood the facts, would favor our continuing to propagate divisions abroad in order that they may have the satisfaction of knowing that their gifts are aiding in making Christians who bear the same denominational label as that borne by the contributor.

"The conduct of the war in France, for the first three years and more, when each one of the Allies acted separately under its own leaders, in cooperation, but as independent units, shows the wastefulness and inefficiency of that line of action. This mistaken method of conducting a great military campaign has now been corrected by the most revolutionary military readjustment history records. If governments can bring about this unprecedented and even revolutionary change in order to overcome a common enemy, can not the Church do as much in order to create a single agency for the spiritual conquest of the world?"

From the same general set of facts Bishop Bashford, of the Methodist Church, also quoted by Mr. Ellis, argues for the international churches:

"The universality of Christianity is not best displayed by the manifestations of national and race characteristics.

"As a matter of fact, with the existing organization of the churches in the home lands, the churches on mission fields will keep in closer touch with, and will secure more aid from, the home bases by maintaining ecclesiastical connections with their mother church than by a separate independent organization on the mission field.

"With the strong trend toward nationalism which characterized the political history of the nineteenth century, and which was one cause of the present war, the churches will contribute more to world harmony if each denomination belts the globe with its work and workers, rather than by the separate organization of the Christian forces of each nation into a national church with the emphasis upon race characteristics and the consequent loss of the vision of the universal church.

"No one will contend that forty or fifty national churches—one for each nation, maintained over against each other for all time—is the goal of Christian unity. The vital question is, therefore, does the path to the higher, final unity lie through the organization of national units maintaining race characteristics, supported from the national treasury and devoted to all international conflicts to national ideals, or does it lie through a Presbyterianism and a Methodism and a Congregationalism, each universalized and belting the globe with its members, each accustomed to various races and sympathizing with the aspirations of them all? The prospects of the higher unity certainly lie along the latter rather than the former path.

"In the New Testament we find no trace of a national church and no enunciation of principles which would lead to a national church.

"It is this note of universality which differentiates the Church from the nation and the family. Hence the very phrase, 'A National Church,' is a contradiction in terms.

"Finally, for the Christian Church to accept any form of nationalism as its goal when the whole world is moving toward internationalism seems to us a fatal blunder. It requires no prophet to foretell that if nationalism was the key to the political history of the nineteenth century, internationalism will be the key to the political history of the twentieth century. At the very time when commerce and industry and politics are becoming international, when the world is unconsciously accepting universal love manifested by universal service as the only solution of human problems—for the Christian Church to revert at such a time to nationalism as her goal seems like a fatal case of atavism."

The issue is not new to missionaries, but is made acute by the war, points out Mr. Ellis, who adds:

"Episcopalians have taken the ground that they will not proselytize in Roman Catholic lands where they have missions.

and Congregationalists now seek only to inspire and vitalize the old Armenian Church, instead of making converts from it, and the Presbyterians follow the same policy with the Nestorian Christians, or Assyrians. There is a vigorous sentiment abroad that this same policy should be followed in any religious enterprises undertaken among the Christians of Russia.

"That will leave for later development the larger projects of a reunion of all the major divisions of Christendom—the Roman Catholic Church, the Greek Catholic Church, the Protestant churches, the Gregorians, Nestorians, Copts, and Abyssinians."

THE RELIGIOUS "COMMUNICATION TRENCH"

WHEN YOU HEAR IT SAID that the Church has "fallen down" and failed to meet new conditions and new opportunities furnished by the war, just point to the Y. M. C. A. How many of the "Y" officials were pastors of churches it would be hard to compute, and each one has gone out there with the support of his people behind him. "The work of the Y. M. C. A. at home and abroad would not have been possible," says a writer in *The Presbyterian and Westminster* (Toronto), "without the ministers and Christian workers trained in our churches, and any success achieved by the Red Triangle during this war has been accomplished because Christian men—church members—have organized and carried it out." Canadian conditions are so near our own that the same diagnosis holds for either:

"It can be said most truly that the Church has been the leaven in the meal that has leavened the whole. From its teaching, training, and influence has come the army of workers in the manifold agencies of service and healing that have come into being during the past four and a half years.

"At the outset the work of the new Y. M. C. A. development in country districts will probably call for the enlistment of a number of young ministers. The work will appeal irresistibly to a certain desirable type of man because of its opportunities for aggressive Christian social service among men and boys, and, on the face of it, this further depletion of the already attenuated ministerial ranks would appear to be a disaster. There are, however, a number of circumstances to be borne in mind.

"Gypsy Smith was asked by a London journalist, 'What is the attitude of the Y. M. C. A. and the Churches?' He replied, 'A communication trench.' The truth of this statement has been demonstrated in a most striking way. After Captain (Rev.) W. A. Cameron's evangelistic campaign in Witley Camp, England, two hundred young Canadian soldiers indicated their desire and intention to become ministers of the gospel in their homeland. Of this number some have had a university training. Those who have not are receiving preparatory and elementary training at the Khaki University, a branch of which the Y. M. C. A., in cooperation with the military authorities and the Chaplains' Service, maintains at every Canadian camp overseas.

"In the United States, where a Y. M. C. A. Town and County Department has been operating for many years, it has been found that the work of the Department has produced a steady and copious flow of candidates for religious service, and particularly for the ministry. This is not surprising when it is remembered

that the inculcation of the principles of Christian citizenship is the chief plank of the department's program. Each secretary is trained and instructed to search for leaders and to develop their powers. Each county is expected to provide its own leadership and its own redemptive forces. This has resulted in the discovery and training in Christian service of many men who otherwise would have been lost to the church, and, in a very important sense, to the community also."

The same thing is looked for in Canada. The operations of the Town and County Department will be directed solely "as a movement in the community to supplement and cooperate with the church, home, and school, meetings being held under the auspices of these institutions whenever possible." We read further:

"Boy Scouts Corps and Agricultural Clubs for boys and girls will be organized, but the main effort will be the furtherance of the Canadian Standard Efficiency Training for boys in their teens. The C. S. E. T. had been adopted by all the National Denominational S. S. Boards, Provincial S. S. Associations and Federations, and the work of the Town and County Department at the outset will consist very largely of getting this particular part of its program into the remotest rural community.

"When a boy leaves home it will be the duty of the 'Y' secretary in his county to keep in touch with him, introduce him to the Y. M. C. A., and see that he gets into touch with the church of his own denomination in his new home. . . .

"Out of such a tremendous organization covering Canada from coast to coast, and putting personality in service first with equipment a long way behind, there is bound to issue a strong, virile type of young manhood upon which the Church can draw to an almost unlimited degree. That has been the experience of this particular development of Y. M. C. A. work in the United States, and it would be a reflection upon our own Canadian leadership, and the splendid material it has to work upon, to doubt that the result will be the same here."

"THE SWEETHEART OF THE ALLIES."

—Paul Fung in the Seattle Post-Intelligencer.

A CHINESE VIEW OF THE SALVATION ARMY—It was a Chinese artist, Paul Fung, of the *Seattle Post-Intelligencer*, who met the tastes of the Salvation Army in the matter of posters, and his "Sweetheart of the Allies," appearing in the Seattle paper on September 9, is pronounced by authorities at National Salvation Army headquarters in Chicago as "the cleverest and at the same time most sympathetic cartoon published in the United States during the recent campaign for funds." As the reproduction on this page shows, remarks the Seattle paper:

"The cartoon depicts the Salvation Army lassie at the battle-front, helmeted and officially garbed, with her plate of doughnuts and jug of steaming coffee, surrounded by the shadowy shapes of the boys in the trenches.

"The Salvation Army, as one of the seven organizations which will participate in the united drive to begin November 11, has as its particular poster, 'Oh, Boy!' The army authorities, however, have sent to the Seattle headquarters for a large number of reproductions of the Fung pictures which they intend to use during the drive. It has been said no drawing yet submitted has approached this one in depicting the spirit of the work the Salvation Army is doing in the trenches."

The Modern Atlas

"Talk about muscle and vigor and hustle—
Old Atlas had nothing on me.
On Campbell's foundation
I'll hold up the Nation,
And keep the world healthy and free."

Let him help you carry your burden

The big world-burden today is the food problem. America asks "How shall we feed our fighters, our Allies, and also maintain the full strength and vitality of our people at home?"

It is a question of wise economy. And the heaviest part of the burden falls on *you*—the conscientious American housewife. Why not let us help you with it by means of this nourishing, ready-prepared, economical food—

Campbell's Tomato Soup

You will find it doubly helpful. It is not only a wholesome food in itself, but it strengthens the digestive powers and regulates the body processes through which all food becomes more healthful and invigorating.

It supplies natural tonic elements which are positively necessary to the properly balanced diet.

Served as a Cream of Tomato it has 50 per cent more energy-value than milk. And there are many easy and tempting ways to prepare it. You can make it as hearty as you like.

It is just the healthful stimulus for tired workers—all must be workers, now. Just the thing to keep the children in good condition—active and bright. It saves you time, labor, fuel. It is all nourishment—no waste. And it is ready for your table any time at three minutes' notice. Order it by the dozen and have it handy.

and especially designed for High School Use

THE FAIR PRICE LIST

HOUSEWIVES should learn to read the Fair Price List as faithfully as men read the baseball score."

Perhaps you read some such slogan last summer, and appreciated its spirit. But the trouble with it is that it does not say enough. True, some men read the baseball score (or did during the baseball season), and a few read it faithfully, but every housewife must read the Fair Price List in her town or city.

A better slogan would run like this: *Everybody who buys food of any retailer should read the Fair Price List as eagerly as he does the war-news.*

FOOD PROFITEERING—For, strange as it may seem at first thought, the Fair Price List is in itself a sort of war-news, concerned with the economic stability which must be preserved at home if warfare is to be successfully prosecuted. During every war upon which history gives data concerning food-problems, retail food-prices have shown a tendency to go up.

And when the retail price of any commodity goes up in war-time because of the increased cost of its production, or through any other cause beyond the retailer's control, no personal blame can be attached to any retail dealer who charges more for it because he himself has had to pay more for it. But when any retail dealer for other reasons raises his prices on articles which the public must have, or wants to buy, that is what is known as profiteering.

And any dealer guilty of such action is a profiteer.

This applies to retail dealers in foodstuffs just as much as to dealers in any other necessity of life.

WHAT THE FAIR PRICE LIST IS—It is to check such practices that the Fair Price List has been devised. This is nothing more nor less than a bulletin which at regular intervals informs the public of the prices that the retailer has had to pay for certain foods and at what price he ought to sell them to the consumer. Such a bulletin at one stroke does away with all the obscurity which too often veils the price increase which takes place at the hands of the retailer.

To give an example, it shows at just what price a retailer is able to buy oatmeal and at just what price he is entitled to sell it. If any retailer decides to set upon the food he has for sale a higher price than that which brings him a fair profit, he is labeling himself "Profiteer." And thereafter it depends upon the public's own choice whether they shall trade with him or not.

In accordance with the plans of the Food Administration such a system of Fair Price Lists is now in operation throughout the country. Every week new price lists are prepared so as to cover new fluctuations of cost to the retailer. And these up-to-the-minute Fair Price Lists are given to the newspapers to print so that the consumer may be steadily informed and advised as to what he ought to pay the retailers in his city or town.

HOW FAIR PRICE LISTS ARE MADE UP—In theory the plan is the simplest imaginable. But it is complicated by the size of this country and by the variety of local food-conditions which are bound to affect the price at which the retailer can buy and sell his foodstuffs. It would be utterly impossible to set forth one Fair Price List which would be fair for every spot in this country at any one time. A grocer in Calais, Maine, may be able to buy potatoes at a lower rate than a grocer in Snohomish, Washington. And the grocers of Red Oak, Iowa, may have to pay a different price from either. Obviously, each locality must determine its own Fair Price List.

This is done by establishing in every community or county where Fair Price Lists are to be put out a Price Interpreting Board, consisting of representatives of wholesale grocers, retailers, and consumers. The County Food Administrator or

his representative should act as chairman of this board. Such boards include representatives of both "Cash and Carry" stores and "Credit and Delivery" stores. These boards secure from wholesale representatives the prices charged to the retailer for various staple foods. With this as a basis, plus their knowledge of local conditions, and guided by a schedule of maximum margins submitted to them by the Food Administration at Washington, they determine what is a reasonable profit at which the retailer may sell to the consumer. Thus the retailer does not have a scale of selling prices arbitrarily thrust upon him; he helps determine them himself.

Of course prices to the consumer vary in the case of Cash and Carry stores and Credit and Delivery establishments where running expenses are necessarily heavier. It is this that makes advisable the publication of maximum and minimum prices to the consumer, the difference being due to the extra service which is rendered him.

It should be borne in mind that it is not possible to set an exact price at which the retailer is to sell; it is practical only to indicate to the public the top limit which the retailer can not exceed without laying himself open to the charge of profiteering.

WHAT THE GROCER GAINS—This whole system of Fair Price Lists has as one of its greatest merits the protection of the patriotic retailer whose whole-souled patriotism has too often put him in the position of making less money than some other unscrupulous retailer who has charged higher prices merely because the public could be induced to pay them. With the Fair Price List system working smoothly, informing the public just what to pay from week to week for staple food-commodities, the retailer who charges more than fair prices will be putting himself on record as profiteering. And nowadays profiteering is one form of unpatriotism.

The right-minded retailer welcomes the Fair Price List; it is opposed only by those who are either ignorant or desirous of getting more of the consumer's money than prevalent conditions entitle them to.

HOW THE PUBLIC CAN COOPERATE—And yet, no matter how carefully and justly Fair Price Lists are prepared, no matter how widely they are printed and circulated, they will be an utter failure without the cooperation of the public.

All the public has to do is to study the current Fair Price List of its community and then withhold its trade from any retailer who charges more than the prices indicated. This list constitutes a gauge of what the consumer should pay; and the housewife or other purchaser who neglects it is no more entitled to sympathy when overcharged than the engineer who gets into trouble because he didn't bother to look at his steam-pressure gauge. To keep track of the Fair Price List, to insist upon its observance by the retailer—that is the absolute duty of every woman and every man.

If any person finds that a food-retailer is trying to charge him more than the Fair Price List indicates, he has two resources: to report the case to his local Food Administrator, and to trade somewhere else. He should do both.

QUESTIONS FOR DISCUSSION

1. Do the newspapers in your community print the Fair Price Lists? If so, how often?
2. Is your family keeping close track of the prices quoted in the Fair Price List?
3. Do you know of any retail grocer trying to charge more for food than the Fair Price List indicates?
4. Do your family trade with that dealer? Have they reported him to the local or county Food Administrator?

Pure Milk

A COMPLETE
MILK SERVICE
—for every purpose

EAGLE BRAND

The standard infant food when Nature's nourishment fails. Pure, uniform, easily digested. Also delicious in coffee.

EVAPORATED

Economical for cooking. In compact form—always ready. Just pure, rich milk—some moisture removed—nothing added.

MALTED

Pure milk and nutritious grains, partially predigested. A delicious drink, nourishing lunch—the ideal food-drink for invalids.

Milk is the one complete, balanced food—combining as it does all the elements of perfect nutrition. Every day more people are appreciating its value in the family diet and realizing the wide range of uses for the various forms. But fluid milk is a perishable food—easily contaminated unless carefully handled.

Borden Service takes the milk problem completely off your hands—looks after the health of the cows—protects the purity of the milk right through—guarantees its quality—converts it into non-perishable forms for your convenience and economy.

Nor does Borden Service furnish you merely with one milk product of restricted use. Borden Service is complete. It comprises pure milk products for all uses—for infant feeding—for table use in coffee and cocoa—for cooking, baking, whipping—for ice creams, custards, salad-dressings—for travelers, invalids and convalescents.

For 62 years the Borden Institution has specialized in pure milk products—developing them—perfecting them—until today its Pure Milk Service is complete in variety, national in scope and of year-round reliability.

Borden's

The Nation's Milk

HEINZ

Mince-Meat

THERE are many ingredients in really good mince meat. And each one of these many ingredients gives Heinz an opportunity to show his resources in procuring the best—choice apples from the wind-swept orchards of Northern New York, Grecian currants—fruity and clean—raisins from Valencia, beef from America's great plains, and fragrant spices from the Orient.

With each ingredient good as it can be, Heinz Mince Meat adds goodness to goodness—blending, seasoning, bringing out the flavor, until the result is a triumph.

Heinz Mince Meat is sold only in one and two pound glass jars and tins—never in bulk.

Heinz Plum Pudding

This fine pudding, sacred to festivities for hundreds of years, is made by Heinz according to the best English traditions, and is a perfect ending for a good dinner.

Some of the Heinz Fig Pudding

57

Here is a pudding that is simple and wholesome, but choice enough for your most particular dinner party, especially if served with the sauce for which the recipe is given on the can.

All Heinz goods sold in Canada are packed in Canada

CURRENT POETRY

IT seldom happens that an American poet causes a stir in English literary circles, but to-day two of our bards are receiving tributes from many brilliant literary luminaries in Great Britain. Both belong to the ultra-modern school and are not "without honor in their own country." The first is Amy Lowell, the high priestess of free verse, and no less a critic than Clement Shorter describes her in the *London Sphere* as "one of the most remarkable figures in recent American literature or in the literature of English-speaking countries." Let us take a few examples of her art. Here are two vivid pictures of rain from the *New York Dial*:

SPRING RAIN

By AMY LOWELL

Tinkling of ankle bracelets,
Dull striking
Of jade and sardonix
From whirling ends of jointed circlets.

SUMMER RAIN

By AMY LOWELL

Clashing of bronze bucklers,
Screaming of horses,
Red plumes of head-trappings
Flashing above spears.

From her new book, "Can Grande's Castle" (Macmillan, New York), which she describes as war-poems—or rather explanations—in "polyphonic prose," we take two scenes from old Japan:

THE LADIES

By AMY LOWELL

The ladies,
Wistaria Blossom, Cloth-of-Silk, and Deep Snow,
With their ten attendants,
Are come to Asakusa
To gaze at peonies.
To admire crimson-carmine peonies,
To stare in admiration at bomb-shaped, white and
sulfur peonies,
To caress with a soft finger
Single, rose-flat peonies,
Tight, incurved, red-edged peonies,
Spin-wheel circle, amaranth peonies.
To smell the acrid pungence of peony blooms,
And dream for months afterward
Of the temple garden at Asakusa,
Where they walked together
Looking at peonies.

A DAIMIO'S PROCESSION

By AMY LOWELL

A Daimio's procession
Winds between two green hills,
A line of thin, sharp, shining, pointed spears
Above red coats
And yellow mushroom hats.
A man leading an ox
Has cast himself upon the ground.
He rubs his forehead in the dust.
While his ox gazes with wide, moon eyes
At the glittering spears
Majestically parading
Between two green hills.

The next of our international figures is Carl Sandburg, of Chicago, who is thus described by the same English writer: "He is clearly one of the most far-sighted critics of life that the world of poetry has revealed." From Sandburg's latest volume "Corn-huskers" (Henry Holt, New York), come these four poems which show his many-sided appeal:

BABY FACE

By CARL SANDBURG

White Moon comes in on a baby face.
The shafts across her bed are flimmering.

THE PEOPLE'S FILMS ABOUT THE PEOPLE'S WAR

PRESIDENT WILSON stated the case correctly when he said, "*This is the People's War!*"

The people have a right to first-hand information about their war—hence The Committee on Public Information.

The Division of Films is a part of the Committee on Public Information.

It is, therefore, a strictly Government institution, organized to manufacture and distribute the Government's own films produced for the people of these United States and their Allies.

Its mission is the presentation, through the medium of motion pictures, of Government activities, especially America's preparation for and participation in the war.

And so it comes about that while the present generation of Americans cannot possibly visualize our Civil War, they can actually see what is going on abroad today, and future generations will be able to visualize, correctly, America's part in the great World War.

Although the Division of Films has been in existence less than a year, it has been markedly successful in realizing its aim—which is to give the

people films of their war. It has already exerted a tremendous influence in bringing the war home to millions of Americans in cities, towns and villages, and in giving them a more intelligent appreciation of what the Government is doing to help win the war.

Never before has a film organization produced films with so universal and so extraordinary an appeal.

No film organization ever enjoyed so exceptional an opportunity for obtaining material in a given field.

No field ever presented such a wealth of diversified matter, appealing to so vast an audience.

The pictures secured by the Division of Films tell stories that are of vital interest to every American.

They always make a better citizen out of a good citizen.

Not alone in this country, but in the countries of our Allies are these Government films shown. For the first time in history, the true aims and aspirations of this nation are being clearly and adequately interpreted to the other nations of the earth through the medium of authentic motion pictures.

Thus, the influence of the Division of Films is not only national, but international in its scope.

OFFICIAL SEAL OF
THE PEOPLE'S FILMS

The Division of Films

Is the people's Division of Films and these are the people's own films:

Productions Up-to-date

SMITH CHECK PROTECTOR
writes full amount in body of check, forcing brilliant indelible ink into and through the fibres of the paper, making erasure or alteration impossible.

**New Article—New Price
Sold in a New Way**

Insure Your Bank Account Against Raised Checks

GUARANTEED to do perfect work and the cost is but a fraction of other machines.

Sold only by mail—direct from the factory to you—only one small profit.

Gives *real check protection* at a price within everyone's means. The first high-grade check protector sold at a popular price—\$5.

Beautifully designed—stands 5¾ inches high—enclosed mechanism—nickel plated with vulcanite controller. Mechanically correct—takes any sized check—operates quickly and smoothly. Makes your desk look businesslike.

CLIP THIS COUPON

C. E. Smith & Co.,
450 Fourth Ave., New York.

Send me a Smith Check Protector today. At the end of 5 days I will return it, if I decide not to keep it. If I do keep it, I will send you \$5 in five days.

Name
Address

Out on the land White Moon shines,
Shines and glimmers against gnarled shadows,
All silver to slow twisted shadows
Falling across the long road that runs from the house.

Keep a little of your beauty
And some of your shimmering silver
For her by the window to-night
Where you come in, White Moon.

VALLEY SONG

BY CARL SANDBURG

Your eyes and the valley are memories—
Your eyes fire and the valley a bowl.
It was here a moonrise crept over the timberline;
It was here we turned the coffee-cups upside down,
And your eyes and the moon swept the valley.

I will see you again in a million years.
I will see you again to-morrow.
I will never know your dark eyes again.
These are three ghosts I keep.
These are three sumach-red dogs I run with.

All of it wraps and knots to a riddle;
I have the moon, the timberline, and you
All three are gone—and I keep all three.

THE YEAR

BY CARL SANDBURG

I

A storm of white petals,
Buds throwing open baby fists
Into hands of broad flowers.

II

Red roses running upward,
Clambering to the clutches of life
Soaked in crimson.

III

Rabbles of tattered leaves
Holding golden filmy hopes
Against the trappings
Into the pits and gullies.

IV

Hoarfrost and silence;
Only the muffling
Of winds dark and lonesome—
Great lullabies to the long sleepers

MOONSET

BY CARL SANDBURG

Leaves of poplars pick Japanese prints against the west.

Moon sand on the canal doubles the changing pictures.

The moon's good-by ends pictures.
The west is empty. All else is empty. No moon-talk at all now.

Only dark listening to dark.

Next we have some "Imagist" poems from John Gould Fletcher's book, "Japanese Prints" (Four Seas Company, Boston). He is extraordinarily successful in his object, for his verses bring before the mental vision the clearest of "images":

MOODS

BY JOHN GOULD FLETCHER

A poet's moods:
Fluttering butterflies in the rain.

THE TRUE CONQUEROR

BY JOHN GOULD FLETCHER

He only can bow to men
Lofty as a god
To those beneath him.
Who has taken sins and sorrows
And whose deathless spirit leaps
Beneath them like a golden carp in the torrent.

THE ENDLESS LAMENT

BY JOHN GOULD FLETCHER

Spring rain falls through the cherry-blossom.
In long blue shafts
On grasses strewn with delicate stars.

The summer rain sifts through the drooping willow
Shatters the courtyard
Leaving gray pools.

The autumn rain drives through the maples
Scarlet threads of sorrow,
Toward the snowy earth.

Would that the rains of all the winters
Might wash away my grief!

The New York *Tribune* gives us an admirable example of "Imagism" in this poem:

A MEMORY

BY LOLA RIDGE

I remember
The crackle of the palm-trees
Over the mooned white roofs of the town . . .
The shining town . . .
And the tender fumbling of the surf
On the sulfur-yellow beaches
As we sat . . . a little apart . . . in the close-
pressing night.

The moon hung above us like a golden mango
And the moist air clung to our faces.
Warm and fragrant as the open mouth of a child.
And we watched the out-flung sea
Rolling to the purple edge of the world.
Yet ever back upon itself . . .
As we . . .

Inadequate night . . .
And mooned white memory
Of a tropic sea . . .
How softly it comes up
Like an ungathered lily.

From *Poetry* (Chicago) we take this exquisite picture of the dawn:

THE EDGE

BY LOLA RIDGE

Dawn
Lay like a waxen hand upon the world,
And folded hills
Broke into a solemn wonder of peaks stemming
clear and cold,
Till the Tall One bloomed like a lily,
Flecked with sun
Fine as a golden pollen.
It seemed a wind might blow it from the snow.

I smelled the raw sweet essences of things,
And heard spiders in the leaves,
And ticking of little feet
As tiny creatures came out of their doors
To see God pouring light into his star.

It seemed life held
No future and no past for me but this.

And I too got up stiffly from the earth
And held my heart up like a cup.

Contemporary Verse (Philadelphia) shows us how even cosmology can be successfully translated into verse:

SAND

BY HORTENSE FLEXNER

The sand which will not hold the print of my shoe.
Remembers, none the less,
Chaos,
The birth of stars,
And the sunken lines of sea-devoured continents.
It is the gray hair of earth,
Bleached and wave-beaten,
That has known the passionate rage of waters,
White heat of sun,
And the slow passing of a thousand thousand years.

The New York *Quill* is the organ of the Greenwich Village revolutionaries in art, and, while it often shocks, none the less it deserves our gratitude for this:

TO VIORICA

BY DAVID ROSENTHAL

Your words
Are little silver pebbles,
Teasing thoughtful pools
Into laughing circles.

OUTLINE SIDE HEAD MATCHER DRIVE

Driving Pulley 20" dia. - 905 R.P.M.
 Driven Pulley 6" dia. - High Crowned & Flanged
 Horsepower - Max. 15
 Belt Speed - 4740 F.P.M.

Specified **GLIDE Belt**

5" 4 ply - 29'

Copyright 1918, by The Goodyear Tire & Rubber Co.

Making \$1.00—and the G.T.M.—Do the Work of \$3.10

All they were after, the Wilson Lumber Company, of Bokhoma, Oklahoma, told the G. T. M.—our Mr. Hechs—was less interruption and more production from their side-head drive. Mr. Bowles, the Superintendent, asked how much his best belt cost per foot. The G. T. M.—Goodyear Technical Man—told them that he didn't know which of his belts was best. He said that if they'd let him study the drive he'd tell them which Goodyear Belt was best *for it*—that with drives as with men, what is meat for one is poison for another.

He studied that drive and prescribed the Goodyear Belt especially constructed to serve its high-speed quarter-turn and *high-crowned, flanged* driven pulley—not the highest priced Goodyear Belt by any means, nor the one with the greatest brute strength. It was in February and the price of that Goodyear Glide Belt was fifty cents a foot, while the special double they had been using cost \$1.55.

If his price had been higher the order he finally got would have come easier. It didn't seem likely to them that a belt costing fifty cents a foot would do better than one costing \$1.55. But they decided to give it a trial—they were sick of the troubles and expense of that side-head drive—and at the price they felt that they couldn't lose much.

That Glide Belt gave six months of service, as much as what they had been getting from the \$1.55 per foot special double. On account of Glide's friction surface it delivered power better—and it required practically no attention. Six months of inferior

service from the discarded type of belting would have cost \$1.55—so that \$1.00 spent for Glide was as good as \$3.10 spent for the special double—and the better service of the Glide was thrown in for good measure.

Over thirty dollars in belt cost alone are saved every six months by that 29 feet of Glide Belt and the analysis service of the G. T. M.—\$121.80 a year. When he pointed that out, he told them of the Goodyear plan of Plant Analysis, of having a G. T. M. analyze *every* drive in the plant for the purpose of prescribing the belt best designed to meet the peculiar conditions of each. They told him to go ahead.

They order by telegram now, direct from the Goodyear Branch near them. Goodyear Belts as prescribed by the G. T. M. are releasing dollars from many other drives, reducing interruption and increasing production. If you have a belt-devouring drive that is both imprisoning and eating too many dollars, ask a G. T. M. to call. He'll do it without charge when he's in your vicinity. There are many of them—all trained in the Goodyear Technical School—all with experience in plants similar to yours—all selling belts to meet conditions and not as a hardware man sells nails. We are able to give the G. T. M.'s services free only because the savings they effect for purchasers are so considerable that a gratifying volume of business from the plants analyzed is sure to result within a year or two.

KOHLER

IS AN IDEA

Forty-five years ago the founder of this business was inspired by an idea—to build on quality alone.

Today that aim is exemplified not only by a great manufactory given to the making of a world-famed product; it finds expression also in a modern town whose interest is centered in developing and enhancing still further the Kohler idea.

Here that idea is a living fact. Through it Kohler has come to mean superiority in enameled plumbing ware. Headed by the famous Viceroy built-in bathtub, Kohler products have long won their way into the world's finest homes and institutions.

True to their ideals the worthy architect and plumber are in full accord with your preference for so excellent a line. They know there can be nothing better.

May we send you a really descriptive booklet with our compliments?

PERSONAL GLIMPSES

LETTERS FROM THE FRONT TO THE FOLKS AT HOME

LACK of water is one of the minor discomforts of trench life. It was emphasized in a letter written to his parents in Philadelphia by Lieut. George W. Sommer, ambulance company 15, A. E. F. He tells of the joys of a real thirst after digging dugouts in the sun. The canteen detail missed them one day, but in the evening a cup of cold coffee was served for each man. That was the finest drink the lieutenant ever took, "beating ice-cream or root-beer in forty ways." Another solace in the trenches was *THE LITERARY DIGEST*, of which Lieutenant Sommer had several copies which he read during one of his days in a deserted German trench. He begins with the discovery of some German dugouts:

Once Walton and I had time to explore them, and, altho it was rather dangerous, we looked them through quickly. Under the dust and leaves thrown by the shells we found the things that the Germans used when they lived there, packs of leather lined with fur (for this was a "crack regiment"), cartridge-belts of leather, helmets, machine-gun supports, machine-gun clips, mess kits, British Y. M. C. A. papers, boxes from home, cards of France and Germany, rags, clothing, etc. I only carried away some things I needed, for when at the front you can't carry but what you need—A German Housewife, some needles, writing paper, and a bottle of ink.

A quart canteen of water had to last me for a day, and this did not allow much for washing and shaving. As a result, we became very, very dirty, altho I found enough water to shave when I needed it badly. The grub was not very excellent—usually a can of French (South-American) beef ("singe"), and a half loaf of bread for two men for a day, sometimes more. The ration detail would go out at night with their guns, and bring back the bread, bunched and strung on a rope; "singe" in a bag, and sometimes a can of coffee. The water and ration detail that night looked for our canteens, and found them in the village. The detail had been shelled and gassed and no one returned. That night the canteens made sweet music as they were brought in—strung on a stick.

The forest was only ten years old, and was slowly being broken down and cut off by the barrages. As evening slowly fell over the woods and the shelling fell off, you could hear the cuckoos and other pretty birds piping their evening song.

Next day I thought I would start some letters. One fellow wrote home that you are either bored or seared to death in the trenches. He was pretty nearly right. That afternoon we got out of the holes and tried to make some coffee, without too much smoke. We succeeded in making the coffee, which was great stuff, but just as we got it down, a direct shell dropt in front of the three of us, and we all dived for our respective "homes." It quickly developed that the other two had been hit, so I hopped out again to dress them. One had just a scratch on his back, but the other had quite a deep wound

GENCO

RAZORS

Reg. U. S. Pat. Off.

GENCO Razors are *the* razors for these times. They save money and steel.

The GENCO professional razor is a razor such as your barber uses.

The GENCO Safege has that same everlasting single blade. It is equipped with a simple guard, making it safe to shave with anywhere—on a lurching train or ship, in a dug-out or trench under fire.

Both require no complement of new blades. Both save millions of dollars and tons of steel. Both save money for you and steel for your Government.

Both are endowed with the famous GENCO blade, good for a lifetime. Both have low first-costs, and no endless up-keep-costs, for new blades. Both enable you to shave yourself with the speed, smoothness and satisfaction of a barber.

The GENCO edge is not only famous, but guaranteed. "GENCO Razors must make good or we will."

Whatever your shaving preference—standard blade or safety—there is a GENCO type of razor that you can shave with for a lifetime, that you will prize high above what you pay for it.

RUBBERSET

TRADE MARK

Shaving Brushes

Every Bristle Gripped
Everlastingly in
Hard Vul-
canized
Rubber

Ordinary brushes are regular huns at heart. No matter in what substance of sham strength their bristles be held for the moment—in glue, pitch, shellac or cement—just let them face the first attacks of use or abuse, flood, drought or old age, and with one accord they wail "kammerad" and shed their bristles as precipitately as a kaiserite casts down his arms.

BUT—there is an army of brushes that are true soldiers of their kind, quick to repel attack in varied forms, eager to serve in any clime, foreordained to fight the good fight until but a worn stub remains of the bristle. Three generations of shavers have known them—used them—trusted them—can name them—

—that
competent
combination

And what we have done these many years gone by for the brush, we are doing now for its care—breaking into the everyday, makeshift order of things with something original, long needed and truly effective.

DRIBRUSH holders are 100% efficient in preventing shaving brush troubles and in enabling you to get the maximum of pleasure, satisfaction and long service from your trusty RUBBERSET at the minimum of cost and inconvenience. No longer need your brush be a nuisance—messy, soggy, sour, mis-shapen, its condition a tax upon your good nature, its proper care an unsolved mystery.

For travelers or stay-at-homes, or for the soldier and sailor "with the colors," DRIBRUSH holders keep the brush straight and clean, fresh and sweet, making its use a constant comfort and adding generously to its period of usefulness.

PUT THEM ON YOUR CHRISTMAS LIST.

Protects
the Brush,
the Bag and
the Baggage
too.

A holder to fit your brush at the price you wish to pay. Three sizes in stout bristled Advertis at 50 cents, 75 cents and \$1.00, and a mighty handy one in Vulcanized Fibre at 25 cents. ASK YOUR DEALER TODAY—or send us his name and 25 cents and receive, post-paid, one of the Fibre holders—just right for the average size brush.

TRADE MARK

Shaving Brush Holders

in the left leg. I put some iodine on from a "first-aid packet," wrote out his diagnosis tag and wired it on him, and we set out together for the battalion aid station, for he could walk slowly. We encountered some shelling on the way, and once had to seek a hole, to rebandage his *blessure*. We arrived O. K., however, and the doctor pronounced his dressing very good and it did not have to be renewed.

When the men go back wounded, their equipment is taken from them and left in the salvage pile near the aid station. When they come out of the hospital, they receive new supplies. So the salvage pile offers a good field for getting things that you need, emergency rations, toilet articles and equipment. I needed a good Turkish towel and got one.

Arriving back at the dugout, it was almost dark, about 9:30, and I could see by the broken trees and leaves that some shelling had taken place in my absence. I had a small covering of dirt over the head of the dugout, but decided to extend it. I had a thin layer of dirt thrown on some crosspieces when they started a bombardment, so I had to discontinue. It seems they had my range pretty well. Some shells seemed to burst right in front of me.

Next morning some chow came in—a few beans, some jam, canned willy, bread and "singe." The water detail had gone while I was out the night before, so I had just a little water that day. Some new lieutenants were around, and we expected relief. I had taken up some Digests, and finished them. We pulled out that night and met some of our company in a near-by town. There I got some water, and almost got intoxicated on it, it tasted so good. For breakfast, we had hot rice and coffee—this was certainly great. Then they shelled that town and we moved on to our company's village.

Now we are resting in a château here—just resting. It seems so good to get back to meals and comfort. The first thing was a bath, then clothes washed, the first time in a couple of weeks.

True to his brutish nature, the Hun leaves various snares and devices to murder the victors when he is forced to retire from the trenches. Experiences of Englishmen are now being duplicated in the country taken by our own advancing soldiers. Some typical German tricks are recounted by Lieut. Maurice Munhall, Company H, 130th Infantry, in a letter to a friend in Chicago: We quote:

When I finished my course at school I found my regiment at the front in the trenches. We moved out of them the next day to a rest-camp in the rear only to be rushed up again the next day when the drive started. We were sent up as counter-attack troops. I took our company in what had been that morning the Hun front line. I took them in that trench at 2 A.M., under a severe shelling, into the most terrible place I've ever seen. There were dead everywhere. I learned later that the resistance to the drive was heaviest there. My boys, of course, were unfortunate enough to have to stay all night with those dead Huns, because I would not let them remove them. Just as I suspected, the cunning Fritz had devised all kinds of snares for us—I found them the next morning at daylight. He had wires attached to his dead, to guns, helmets, in paths, dugouts, everywhere,

with heavy charges of high explosive fixt in such a way that to try to remove anything meant a big explosion. He also had his dugouts filled with that deadly mustard-gas, his latest life-taker. My boys obeyed orders like the good soldiers they have proved themselves to be, and I only had four casualties, due from one man stepping on a stick-grenade in the dark. To show you just what we are up against in that line, I'll tell you of another of his tricks. In a dugout on a table lay a swell pearl necklace. I suspected it, and on investigation found two very small copper wires running from it down through the table into the ground and connected with a big 9.2 shell.

We came through fine at the front line that trip, moving back for a week, when we went up again to another sector. Again we were under a severe shelling from his heavy artillery, lasting two days and nights. Shelling is an awful strain on the men's nerves, especially when they can't fight back. Those big shells just rained around my trench—when they strike the explosion is as near an earthquake as anything I can imagine. Shrapnel fell everywhere, but I did not have a man hurt in all of it. I had a hole burned through my sheepskin coat by a piece of it. I'm going to try to keep the coat for a souvenir if I can. One lucky incident I'll never forget. A big shell (a 9.2) came fair in my trench in a fire-bay where my sergeant and five men were standing. It came square in the trench right among them and never exploded. One of them has enough explosive to blow up a good-sized building.

I was standing with another lieutenant looking over the top one evening when a bullet from a sniper's rifle came right between us. A close shave it was. He put two more right over us as we dropt back in the trench. They have a nasty hiss to them when they're close. This trench we were in at this time was in what the papers call "a quiet sector." I got tired of having them do all the shooting, so I borrowed a rifle from a private and put in an enjoyable hour sniping. Fritz was very bold and would come out on top, walking from one trench to another. I chose those bold ones, and one Prussian Guard that I'm sure of will never murder any more babies or women.

I'm sure the Hun is wise now that the Yanks can use a rifle. They don't sneer at us any more. We have beat them at their own game every place we've connected up with them. I haven't seen a paper to know what the outside world is saying about the war, but I do know what is taking place up here, and it's nothing to make the Kaiser smile over. Our soldiers are taking to the game just like they were the inventors of it. When my platoon was getting the awful shelling I thought I'd take a walk down the trench to see how badly scared they were, and to encourage them a little. With all those shells bursting all around them, the noise was deafening, I found about a dozen of them sitting on the fire-step arguing about blackberry pies. Can you imagine that, Will? And I think it is typical of the Yank that he does act that way when the danger is the worst. Why the poor devils haven't seen a blackberry pie since they left the States.

We have a few absent faces, one goes now and then, but our boys are game, they go a-smiling. The Hun is beat, we all know it, and I don't think it will be long before he knows it and quits. If he don't—well the Rhine won't stop us, that's all.

THE SPICE OF LIFE

Keeping the Secret.—STELLA—"Molly told me you told her that secret I told you not to tell her."

BELLA—"It's beastly of her to have told you that! Why, I told her not to!"

STELLA—"Well, I told her I wouldn't tell you she told me. So don't tell her I did."—*Tit-Bits*.

Wouldn't Take a Chance.—"Why don't you get out and hustle? Hard work never killed anybody," remarked the philosophical gentleman to whom Rastus applied for a little charity.

"You're mistaken dar, boss," replied Rastus; "I've lost four wives dat way."—*People's Home Journal*.

New Name, Old Disease.—Two girls were quarreling.

"Oh," said one, "I'm sick of you! I believe you can't help it, tho. You've got a chauffeur's tongue!"

"What?" cried the other girl, scared. "Is it catching? How does one get it?"

"Oh," said the other pointedly, "through constantly running people down."—*Pittsburg Chronicle-Telegraph*.

One of Uncle Joe's.—Uncle Joe Cannon tells of a conversation overheard in his home town in Illinois.

"Was the wedding a success?"

"Yes, in most particulars; but some of the guests thought the bride's mother did a lot more crying than was necessary. You see, the young couple are to make their home with her, so she really isn't losing her daughter."

"Maybe that was what she was crying about."—*Pittsburg Chronicle-Telegraph*.

Try This.—The captain of the s. s. *Piffle* listened patiently to a passenger's account of his shooting abilities, then he quietly remarked:

"I don't think you could hit this bottle at twenty yards, placed on the taffrail, while the ship is heaving like this."

"It would be only child's play," said the passenger.

"Well, I'll bet you a guinea you don't hit it three times out of six."

"It's a wager. Come along."

The bottle was placed in position. Crack! The passenger hit it, and it disappeared in fragments into the sea.

"Trot out another one," said the marksman.

"Not at all. The conditions were that you hit that one three times out of six. Five shots more."—*Chicago News*.

Ruse That Failed.—The called-up one volubly explained that there was no need in his case for a medical examination.

"I'm fit and I want to fight. I want to go over on the first boat. I want to go right into the front trenches, but I want to have a hospital close, so that if I get hit no time will be wasted in taking me where I can get mended right away, so that I can get back to fighting without losing a minute. Pass me in, doctor. Don't waste any time on me. I want to fight, and keep fighting!"

The doctor, however, insisted, and, when he got through, reported a perfect physical specimen.

"You don't find nothing wrong with me, doctor?"

"Nothing."

"But, doctor, don't you think I'm a bit crazy?"—*Tit-Bits*.

2 Bookkeepers	
@ \$90 per month	\$180.00
Part Time of Cashier	
of company	<u>37.50</u>
Total Monthly Cost	217.50
Total Yearly Cost	\$2610.00

The New Way

Interest (6%) on investment	
in Burroughs Bookkeeping	
Machine	\$48.00
Depreciation (liberal figure)	80.00
1 Bookkeeper @ \$80 per month	<u>960.00</u>
	\$1088.00

Net Yearly Saving: \$1522.00

Net Profit

This statement shows the fifteen hundred dollars a year added to profits by the Burroughs Bookkeeping Machine which the Parker-Gordon Cigar Company installed two years ago, but it doesn't show all the time and trouble saved. The trial balance, for instance, which used to be ready on the 10th or 12th, is now little more than a mere listing and is sure to be ready the day after the books are closed.

And it doesn't show the other Burroughs benefits of better, neater records; of accuracy that doesn't have to be checked; of overtime eliminated and ledger balances always extended. It doesn't even show all the direct money-savings—for there are considerable savings in stationery in the course of a year.

Better Your Own Net Profit

There is no business, large or small, that cannot effect savings in one way or another by Burroughs methods of handling business figures. There are more than a hundred models of Burroughs machines—among them one which will fit into your business as easily as one did into the business of the Parker-Gordon Cigar Company. Consult your banker or telephone book for the address of the nearest Burroughs office—of which there are 201 in the United States and Canada, and others in principal cities abroad.

Esterbrook Pens

If you like a stub pen, use this Esterbrook Probate Pen

Individuality in writing is assisted by the use of Esterbrook Pens. Take this Esterbrook Probate Pen for example. It is adapted to many uses and to many hands. In the hands of an expert writer it is a great relief and easy writer. The beginner—for one who is nervous when writing much, Esterbrook's 313 is an able assistant. It possesses all the Esterbrook uniformity of performance and great durability. Easy smooth writing results from its use.

Send 15c for sample dozen

Esterbrook Pen Manufacturing Co., 4-70 Cooper Street, CAMDEN, N. J.

Catty.—EDITH—"What makes you think Jack loves me so desperately?"

MAUD—"Oh, a thousand things! He always looks so pleased, for instance, when you beg and play."—*Boston Transcript.*

No Time for Pikers.—"John," exclaimed the nervous woman, "I believe there is a burglar in the house."

"I haven't time to fool with small fry," was the sleepy response. "I've spent the entire day fighting regular profiteers."—*Washington Star.*

Equal to the Occasion.—"Say, that lot you sold me is three feet under the water."

"Is it?"

"Yes, it is, and you know it is."

"Well, it's a good thing you told me. I can let you have a bargain in a canoe."—*Kansas City Journal.*

Trench Repartee.—AUSTRALIAN SOLDIER (to American)—"You Yanks think you've done a lot, but you forget we Australians have been at the game for four years."

"Well, what have you done, anyway?"

"Done? We've been at Gallipoli, Mesopotamia, the plains of Bethlehem, and—"

"The plains of Bethlehem?"

"Yes; I slept a week there myself."

"Well, I guess that was a busy week for the shepherds watching their flocks!"—*Tid-Bits.*

Ought to be Genuine.—Sam, the choreman, returned from the city with a scarf-pin that contained a "diamond" of no usual size. It was the pride of his heart and the envy of his village companions. He treated all inquiries from them as to its value and its authenticity with high scorn.

His employer, after a week of basking in its radiance, asked Sam about its history.

"Sam," he said, "is it a real diamond?"

"Wall," said Sam, "if it ain't I've been skun out of a half-dollar."—*Pittsburg Chronicle-Telegraph.*

Shock Was Too Severe.—Once there was a woman who moved into an apartment and found everything swept and scrubbed and as clean as if she had done it herself. The shock left her lying helpless on the floor, but soon she managed to drag herself to the telephone, where, her strength fast ebbing away, she gave central a number. Presently a voice came over the telephone. "I just wanted to tell you," said the suffering woman, "how thankful I am to find the apartment in such lovely condition. You are one in a million, and I shall never forget—"

There was a sudden clatter at the other end of the line. The woman who had just moved out of the apartment fell to the floor with a crash, tearing the telephone connections from their fastenings. She had swooned, for tho she had cleaned apartments annually since her wedding-day, no succeeding tenant had ever admitted it before.

They met in the hospital three weeks later, in a ward marked "Quiet." Both recovered slowly and whiled away the long hours getting acquainted. They became friends—such good friends, indeed, that they have canceled their leases, broken up housekeeping, and have moved their husbands off to a family hotel, in order that they may be together forever and forever.—*Kansas City Star.*

*With
the Bailiff
at the Door*

Beau Brummell

shaved serenely on

BEAU BRUMMELL—who “taught Wales what a coat was like”—inventor of numberless niceties of dress—gambled himself into poverty. Publicly cut by the King, he had his last remaining finery laid out preparatory to seeking a friend who might save him from disgrace. With Weston, his faithful valet, keeping the door against the bailiffs, the great beau shaved serenely on. Prince of the Dandies to the last, he finished the job with the utmost care. Then, carefully wiping dry the precious blade and affectionately placing it in its case, he turned to Weston with the command: “Now let the rogues in.”

The razor that Beau Brummell used was a shaving tool of wonderful balance. Length, temper and correct diagonal stroke were there; all it lacked was the safety and convenience of the double-edged, detachable blades of the

DURHAM-DUPLEX

A Real Razor—made Safe

Heft this wonderfully balanced razor in your hand—feel the comfort of its long, keen blade on your cheek. Automatically it lies on your face at the one-and-only angle for right shaving—because its design is thousands of years old. More than that—it can't cut your face.

It's the longest, strongest, keenest, best tempered blade on earth—with more shaving mileage than any other razor. Seven million shavers have changed from other razors to the Durham-Duplex—a real razor made safe. *Make it your razor today.*

The Singer Building adopts Valspar—

AFTER several years experience with various kinds of varnishes, the maintenance authorities of the Singer Building settled on Valspar Varnish for all metal trim throughout the building—steel partitions, doors, wainscoting, etc.

They could have selected a cheaper varnish, but the experience of years has proven to them that Valspar, while it costs a little more per gallon than ordinary varnishes, is much cheaper in the end.

It stands up under the severe punishment of office-building service as no other varnish does, because it is *made* to resist such abuse.

Valspar is used at the Singer Building on all varnished exterior woodwork and store-fronts, also. It was chosen for this rigorous outdoor service because it is *absolutely waterproof*. Snow, hail, rain—Valspar resists them all, and comes through smiling! Practically *weather-proof* outdoors; well-nigh *wear-proof* indoors—that's Valspar! Think of having *such* a varnish on your floors and furniture and woodwork.

Special Offer

If you wish to test Valspar send 25c in stamps and we will send you enough Valspar to finish a small table or chair.

CURRENT EVENTS

THE WAR

THE WESTERN FRONT

October 16.—So fast is the enemy retreating from northern Belgium, state dispatches from France, that British, French, and Belgian infantry have lost touch with him on part of the line. Only a ten-mile gap remains between the advancing Allies and the Dutch border. The Belgians take Bousbecques, east of Wervicq, by storm and have captured Lichtervelde.

The Americans capture Grandpré, the base of German operations in the Champagne. General Pershing reports continued attacks on both sides of the Meuse. Substantial gains, including Hill 209, are made despite stubborn resistance from a reinforced enemy.

On the Lille-Douai front the British are pushing the Germans back to a straight line between these two key cities. Haig's patrols enter Lille and the fall of Douai is imminent. More than 15,000 prisoners have been taken on this line.

North of Laon the French make good progress in the face of hard fighting. Debeney's army is across the Oise pursuing the flying enemy. General Gouraud takes Ay, on the south bank of the Aisne, northwest of Reims.

October 17.—Dispatches from France and England record further victories from the North Sea to Verdun as the Allied armies drive forward. Ostend is taken by naval and land forces and King Albert and Queen Elizabeth enter the city. Bruges is entered by Belgian patrols and cavalry is advancing on both sides of the city. Zeebrugge also seems to have been abandoned and the Belgian coast is practically cleared of the enemy.

General Haig announces the occupation of Douai by the British, who also capture Lille.

On a three-mile front from Le Cateau to Bohain British and American troops hurl the Germans back two miles and take 3,000 prisoners. At all points the Allied forces are progressing rapidly.

On the Argonne front, General Pershing's men advance another mile in the region of Grandpré, Champigneulle and part of the Bois de la Grande Montagne being captured.

October 18.—Official reports show the Belgian coast cleared of the enemy. Belgian cavalry is pursuing him on the Flanders front to cut off retreat to Ghent. The French capture Thielt, west of Ghent, and advance 2,000 yards east of the town. Zeebrugge and Bruges are occupied by the Allied troops, and the British take Tourecoing and Roubaix, northeast of Lille. Allied forces also occupy Blankenberghe, southwest of Zeebrugge, on the Belgian coast.

The new Anglo-American thrust southeast of Cambrai causes the Germans to retreat rapidly. Over 4,000 prisoners were taken during the British operations on the front of Bohain and Le Cateau. Further north the advance continues on the whole front between the Sensée Canal and the Lys River. The British are now astride the Douai-Denain road, four miles southeast of Douai.

East of St. Quentin the French push forward three miles along the Oise, taking Andigny Wood, sixteen villages, and more than 1,500 prisoners. On the Champagne front the Americans and French strengthen their grip on the west end of the Kriemhilde line at Grandpré.

Pershing's men advance about a mile beyond Romagne and capture Bartheville. In their progress across the Ger-

Templar

The Superfine Small Car

The Touring Roadster

HOSE men of affairs, whose chauffeurs have gone to war or been released for other work, are extravagant in their praise of this superlatively high grade car.

For men and women whose activities require the service of efficient and economical motor transportation, this Templar Sport Roadster is remarkably convenient and adequate.

Complete protection is afforded against weather changes by the entirely demountable top. It is equipped with six cord-tire wire wheels.

It is as serviceable as its originality is distinctive. It gives that complete satisfaction formerly associated with the extravagantly priced, cumbrously built big machines.

And its small size makes it a car of much greater convenience.

There is no previous standard of design or agile, economical performance by which to compare it.

This CRESCENT-FILLER is What Makes the CONKLIN Distinctive - and Dominant

It is easily the foremost filling device. It's *different*. It's stronger, it's simpler, it's more durable, it's easier to get at. It fills the Conklin in 4 seconds, and also prevents the pen from rolling off the desk. The *pioneer* self-filler, it has never been seriously challenged. What's more, the CONKLIN writes as easily as it fills—with never a skip or blot—and *never leaks!*

Ask any leading stationer, jeweler, druggist or department store to prove it to you.

man positions north of the Argonne 1,000 more prisoners were taken.

October 19.—Striking north from Eeloo, in Flanders, British cavalry trap 6,000 Germans against the Dutch frontier in the coastal region. Allied forces capture Chereng, Hasmy, Vred, and Cattelet. In the north the British occupy the Herseaux-Mouscron Railway. Harlebeke is cleared of the enemy and Allied troops are drawing close to the Scheldt River.

The British are advancing rapidly astride the Lille-Tournai Railway, and south of Douai have reached the outskirts of Auberehcourt.

Southeast of Cambrai Americans and British drive forward to the west banks of the Sambre-Oise Canal and the heights before Catillon. In yesterday's struggle Pershing's men took three villages and 2,500 prisoners in a two-mile gain.

Strong German attempts to regain lost positions are beaten by American fire. The enemy loses heavily and the Americans gain at several points.

The French continue their pressure against the enemy lines along the Oise, taking several villages and more than 3,000 prisoners during the two days' fighting in this sector.

American and British troops under General Rawlinson swing northward toward the railway between Valenciennes and Avesnes and are on the fringe of the Mormal Forest. More than 1,200 prisoners and twelve guns were taken.

Amsterdam reports that the German evacuation of Brussels has begun.

October 20.—Reports from the frontier state that 15,000 retreating Germans have been interned in Holland. The British took 1,000 prisoners in the pursuit. Belgian soldiers are now in charge of the Dutch-Belgian border.

In a new attack General Haig crosses the Selle River on a ten-mile front north of Le Cateau. Two thousand prisoners are taken.

American and British troops capture Rejet, southeast of Le Cateau, and reach the Sambre and Oise Canal. Dipping deeper into the Hunding line east of Verneuil, the French reach the crests west of Grandlup. On the upper Aisne they drive beyond Vouziers and reach the outskirts of Terron, taking 20 cannon.

On the front northwest of Verdun, the American Army repulsed a vigorous attack in the Grandpré region, inflicting heavy losses on the enemy. At several places the American line now rests across the Freya defense position.

October 21.—Steady advance is reported from the Dutch border to the Aisne. General Haig drives forward to within two miles of Valenciennes, and Allied gains further east secure control of the Valenciennes-Hirson Railway, the enemy's biggest supply-line in the West.

In Flanders General Plumer's troops push through the wooded country along the Scheldt and reach the river at several points under terrific fire. Severe losses are inflicted on the enemy by American and British troops who cross the Sambre and Oise Canal, and at Le Cateau repeated attacks launched against positions already won are repulsed with heavy losses.

Between the Serre and Oise rivers east of St. Quentin the French advance steadily and capture the villages of Richecourt and Mesbrecourt. Enemy attacks along the French line on the Vouziers Plateau break down under withering fire. North of the Argonne the Americans take Bois de Rappes and Hill 299.

October 22.—French forces drive forward

THE joy we feel in the consciousness that our Army of Force is rapidly becoming the best equipped fighting machine the world has ever known, is warranted by the facts.

We assume that the thousands of motor cars that constitute part of its equipment, will be kept efficient and replaced as may be needed.

That is public business and we have faith in our Government.

But what of the great Army of Supply upon which the Army of Force depends?

It is numerically a vastly greater Army—its operations extend over vastly greater area—its equipment needs are nowhere recorded.

It is privately-owned equipment and its care and replacement is private business.

Over half of our motor cars in service today are operated by farmers.

And every farmer is an individual unit in the United States Army of Supply.

These motor cars that serve the farmers are in essential service—saving untold millions of hours for productive farm labor, necessary to the food supply of the nation and its allies.

Of the rest of the existing motor cars, who shall say how many serve other units in the great Army of Supply?

—the executives, managers and foremen of industries engaged wholly or in part in war work.

—the individual war workers whose activities require rapid transportation.

MY war-time conception of the automobile is that it is simply a given number of miles of rapid transportation.

It goes into service as a unit of our national transportation system.

In placing our restricted output of these units of our national transportation system in the hands of individuals, I want our distributors and dealers to discern the uses to which they will be put and to place each unit where it will best serve in the winning of the war.

J. M. Willys
Toledo, Ohio
Oct. 1st, 1918 President.

—the men of the various professions, doctors, lawyers, engineers, and others who serve the war workers and war industries to keep them efficient.

We do not know how many cars serve these essential workers—but we do know that it must amount to hundreds of thousands.

We do know that the whole motor car industry will be almost wholly engaged in war work by the end of this year.

And we do know that the output of motor cars is fast becoming insufficient to replace cars wearing out in service.

The automobile is simply a given number of miles of rapid transportation.

At the very least calculation much more than half of this transportation, as it is used today, is in the service of our Army of Supply.

And if, as these cars wear out, they cannot be replaced from normal sources where are the cars coming from to serve our Army of Supply?

Will we slow down the production of supplies or shall we slow down our use of these individually-owned units of our national transportation system?

The people have demonstrated that they cheerfully conserve things for which there is need for conservation.

As they have conserved other essentials, such as food and fuel, they will, when they understand the need, conserve motor car transportation.

To the extent that Overland and Willys-Knight Motor Cars are now and may in the near future be produced, we want them to serve the workers in the Army of Supply.

Photograph of 36 x 6 Goodyear Pneumatic Cord Truck Tire used on trailer which carries three-ton loads of logs for M. P. Michler Lumber Co., Thomaston, Georgia

Copyright 1913, by The Goodyear Tire & Rubber Co.

GOODYEAR  **AKRON**

Hauling Logs On Air

WHIRRING along under unwieldy and dead-weight loads of giant logs, Goodyear Pneumatic Cord Truck Tires have decisively proved their worth in lumber hauling in Florida.

Unquestionably there is little else in heavy hauling duty which is more arduous or trying than the grind of transporting huge timbers from the woods to a sawmill over a slippery sand trail.

Such conditions are encountered at Thonotosassa where the Mickler Lumber Company employs two $\frac{3}{4}$ -ton International trucks with trailers, all Goodyear-shod, to carry log loads averaging three tons over a four-mile route, three-quarters of which measures a hard pull through deep sand.

Former attempts to negotiate this particular distance regularly with solid tire equipment were abandoned after many delays caused by the inability of this type of tire to secure traction in the soft ruts.

And these trucks and trailers, with Goodyear Pneumatic Cord Truck Tires bearing the brunt of the work, have permanently replaced two four-mule teams which, pulling loads of two and one-

half tons, made three round trips a day over the route described.

Contrast, then, the immense improvement in hauling speed and volume accomplished by these pneumatic-equipped motor transports which travel at a 15-mile-an-hour rate over the bad trail and make nine round trips each day.

Their record totally eclipses all previous experience on the route, putting any consideration of even partial solid tire equipment out of the question and representing the delivery of 54,000 pounds a day as against 15,000 pounds with the mules.

Despite this immense increase in the work the expense of running each truck and trailer has been only five dollars a day higher than the former

cost for each mule team, so that logs are now delivered for considerably less than half the previous figures.

Thus Goodyear Pneumatic Cord Truck Tires, known as most economical on long hauls, have proved a distinct economy on these very short hauls and further emphasis is given to their tough construction which withstands the bad road conditions and the splinter-littered sawmill yard.

"Goodyear Pneumatic Cord Truck Tires have enormously reduced our hauling costs under conditions that make the use of solid tires practically impossible."
M. P. Mickler Lumber Co., Thonotosassa, Florida.

THE GOODYEAR TIRE & RUBBER COMPANY, AKRON, OHIO

CORD TIRES

ONE WAY to down dandruff

DANDRUFF is perhaps the hair's commonest enemy. Dandruff bides its time. It gives mighty little warning. Some fine day you wake up to the fact that your hair is actually guilty of desertion.

Of course, there's really no excuse for giving aid and comfort to our hair's natural enemy, dandruff, nowadays—with active, vigilant Packer's Tar Soap on guard.

Finger-tip the thick, pine-fragrant lather right down into your scalp. Knead it in with a will.

This approved method, if persisted in, will not only check dandruff, but will also keep your scalp pliant and nourished, giving it an opportunity to sustain healthy, young-looking hair years from now.

Isn't "now" the *best* time to start a systematic drive against that insidious, relentless enemy of scalp health and hair peace—dandruff? Send 10c for sample half-cake.

Our Manual, "The Hair and Scalp—Modern Care and Treatment," contains 36 pages of practical information. A post-card request brings you a copy.

PACKER'S TAR SOAP

"Pure as the Pines."

PACKER'S LIQUID TAR SOAP, delicately perfumed, cleanses delightfully and refreshes the scalp—keeping the hair soft and attractive. Liberal sample bottle 10 cents.

THE PACKER MANUFACTURING CO.
Dept. 84 A, 81 Fulton Street, New York City

on the Lys Canal sector, taking 1,100 prisoners. The British enter the western suburbs of Valenciennes and penetrate deeply into the Forest de Raismes. Northwest of Tournai the village of Froyennes is taken and the enemy is driven out of Oureq.

A vigorous German attack on the Allied positions above Grandpré is checked by the French. American big guns open a terrific fire over the German positions from the Woëvre to far into Lorraine, and it is believed a great blow at the fortress of Metz is imminent.

October 23.—Paris reports the Americans victors in a hard battle northwest of Verdun. They fight their way through Bantheville, which has changed hands several times, and advance to the north. Hill 281 is captured, giving them command of Cléry-le-Grand and the Andon Valley, and after a stubborn defense the Germans give up Briailles on the western bank of the Meuse. Several hundred prisoners are taken.

General Haig's men take 2,000 prisoners in a new attack south of Valenciennes and gain the high ground overlooking the Harpies Valley. The center of Valenciennes is also gained, desperate struggles taking place in the streets. North of Valenciennes the capture of the Raismes Forest is completed, while farther north the advance is well east of St. Amand.

Northeast of Laon the French reach the Serre River, having made an advance of from two to three miles on an eight-mile front.

A dispatch from Amsterdam states that the German evacuation of Ghent is in full swing.

October 24.—General Haig reports the enemy's resistance overcome on the twenty-mile front between the Sambre Canal and the Scheldt. More than 100 guns and 7,000 prisoners have been taken. On the right of this advance the French cross the Sambre-Oise Canal at Verly-le-Grand and Longchamps.

Except for small German outposts, fliers report Valenciennes to be evacuated. The British cross the Ecaillon River at Beaudignies, north of the Mormal Forest, south of which Bishop's Wood has been cleared of the enemy.

Continuing their advance between the Oise and Serre rivers, the French reach the road between La Ferte-Chevresis and Ferrières Farm.

In a slight advance east of the Meuse the Americans complete the capture of Bultry and Belleau Woods and take part of Waville Wood and Playon de Traye.

October 25.—Despite desperate resistance by the Germans, east of the Meuse, states a dispatch from field headquarters, the Americans drive the enemy from the eastern ridge of the Bois d'Ormont. West of the Meuse, in the region of Grandpré, they straighten out their lines and capture several important ridges. The American line is also extended between Rappes Wood and Bantheville Wood.

The British push forward more than two miles south of Valenciennes, capturing Querenaing and Sepmeries, while on the north Odomez is taken. Les Tuilleries, east of Solesmes, is also taken after stiff fighting. Since October 23, 8,400 prisoners and over 100 cannon have been captured in this section.

Attacking on a fifty-mile front, the French drive forward more than a mile on the tip of the enemy's salient stretching toward Laon. On the left of the line three villages are captured, and in the center troops cross the Serre and the Souche and retake several towns. Thirty-two hundred prisoners were taken in the day's fighting.

For Christmas As a Remembrance For Birthdays

The Gift for Every Occasion

AS a parting gift for "him" when he leaves for the cantonment or naval training station—

Or for "him" to give "her"—

For Christmas, for birthdays, for anniversaries, for practically every occasion, a ring affords the ideal gift.

Especially if it is a W-W-W Ring—for it is a lifetime gift.

For Father, Mother, Son, Daughter, Sweetheart, Friend, Lodge Member, Boy or Girl, for every person, there is an appealing W-W-W Ring. The selection in style and price affords the proper ring.

W-W-W Rings are all of solid gold. The jeweled ones bear our famous guarantee: If a stone comes out or becomes cracked, we replace it free of charge—except diamonds.

Master designers create these rings and master craftsmen make them. So in buying a W-W-W Ring your good judgment is evi-

dent—the recipient is doubly appreciative.

The most progressive jeweler in your town handles a line of W-W-W Rings—and you can depend upon it that he is worthy of your utmost confidence.

He will be glad to show you his line and our latest designs. He will simplify your gift-giving.

Or write to us for our story catalog, entitled, "The Romance of the Ring," a fascinating love episode embellished with pictures of our designs. This book is free for the asking.

The Fifth British Army reports the capture of a German ambulance filled with ammunition while bearing the Geneva Red Cross.

October 26.—Paris reports Foch's armies battering their way forward on sections of the line from the Belgian frontier to the Aisne. Continuing his attacks on both sides of Valenciennes, Haig's men take five villages and 1,000 prisoners. On the left, the west bank of the Scheldt is cleared, and south of Valenciennes the enemy's railway supply-line is crossed and he falls back beyond the Rhonelle River. An advance of two miles is reported.

On the sixty-mile front from the Oise to Rethel the French crush desperate counter-attacks and advance more than two miles at some points. Between Sissonne and Château-Porcien 2,300 more prisoners are taken.

On the left the French capture Mortiers and 1,000 prisoners during an advance of a mile on the tip of the Oise salient.

Washington reports that the battle rages fiercely on the Verdun front east of the Meuse. The American troops occupy completely the Bois d'Ormont. At several points violent enemy attacks are repulsed with heavy losses. The southern portion of the Bois de Bourgnone has been entered by our troops.

October 27.—Dispatches from Paris show the enemy continuing his retreat between the Oise and the Serre on a fifteen-mile front. The French advance five miles, occupying Roberies, Proix, and Maequigny, and reaching the outskirts of Guise. Further south good progress is made and numerous prisoners and considerable material are captured.

The British War Office announces that heavy counter-thrusts against the lines below Valenciennes and on the fringe of Mormal Forest were crushed without loss of ground.

October 28.—Advices from the front note that American long-range guns are firing on Longuyon, twenty-three miles northeast of Verdun. Belleau Wood, east of the Meuse, is completely in American hands, but the enemy still retains a foothold in Ormont Wood. West of the river Clery-le-Grand has been cleared of the Germans.

In the bend of the Aisne, north of the Argonne Forest, the Americans advance nearly a mile and take 200 prisoners. Driving attacks by the French between the Oise and the Serre force the Germans to continue their retreat on a wide front.

The British advance their line between the Rhonelle River and the Scheldt in the face of strong opposition and capture 100 men.

October 29.—Paris reports the Fifth Army in a new advance between St. Quentin-Petit and Herpy. Progress is also made west of Banogne, and on the right Hill 156 and 850 prisoners are taken.

The British War Office reports a successful raid northeast of Englefontaine in which heavy enemy casualties occur and seventy-five prisoners are captured.

Dispatches from American headquarters tell of heavy artillery-fire on both sides of the Meuse and the repulse of an enemy attack against the Bois Belleau.

THE ITALIAN FRONT

October 24.—The Italian War Office announces that French and Italian troops penetrate far into the enemy lines on the Sette Comuni Plateau, capture the peak of Mont Sisemol, and take 723 prisoners. In storming Austrian trenches south of Asiago the British capture 214 prisoners, and south of the

Would Madame Have Charm?

Charm is enmeshed in the sheen of hair. It peeps from limpid eyes. It lies in creamy skin—in pink of cheeks and red of lips—in the fragrant softness of hands.

Would Madame possess it?

She will find the secret in San-Tox Toilet Preparations whose beautifying purities are symbolized by this gracious

nurse-face on each San-Tox packet of blue.

In San-Tox Cold Cream—is rose-leaded refinement for her skin.

In San-Tox Enchantment Powder is tender flattery for her complexion.

In San-Tox Enchantment Almond Cream is fragrant softness for her hands.

Would M'sieu Have Comfort?

To M'sieu, the San-Tox Nurse will bring shaving comfort and peace of mind.

Smooth, white San-Tox Shaving Cream will ease his razor's edge and keep his temper serene.

A dash of San-Tox Shaving Lotion will invigorate and refresh.

A whisk of San-Tox After-Shave Tale—he will have that freshly groomed look which marks American men.

Look for the symbolic nurse-face which identifies the many San-Tox Toilet Preparations. In every San-Tox druggist's window you will see it—and on every San-Tox packet of blue.

Only San-Tox Druggists who are specially appointed sell San-Tox Toilet Preparations

Austin No. 10 Standard Steel Construction, for Heavy-Machine Work, Drop Forge Shops, R. R. Car-Repairs and Car-Painting Shops, Assembling, etc.

Austin Standards in Wood or Steel

Brief Specifications

Austin No. 10-L and 10-T Standards

Width—149 ft. 1 1/4 in.
 Length—Any multiple of 20 ft.
 Clearance—Center Aisle 31 ft. Side Aisles 18 ft.
 Excavations and Grading—On normal site. Excavation for standard foundations, and grading within 3 ft. of outside of building.
 Foundations—Concrete, 1 part cement—3 parts sand—5 parts stone or gravel.
 Floor—5-inch concrete base with monolithic finish.
 Side Walls—Common brick, selected for facing, laid in lime mortar gauged with cement.
 Window Sills—Wood.
 Monitor Ends—Asphalt shingles on wood sheathing.
 Columns—Wood.
 Roof Structure—Lattice or Timber Truss 6" x 12" yellow pine purlins, carrying 2" x 6" dressed and matched yellow pine roof sheathing.
 Waterproofing—4-ply built up felt, pitch and gravel roofing.
 Sash and Ventilation—Wood sash, continuous, glazed with factory ribbed glass, and ventilated sections in monitor operated with mechanical operator; side wall sash hand operated.
 Painting—All exterior exposed wood work including both sides of wood doors, sash and window frames, two coats of lead and oil. All other interior wood work and brick walls to have two coats of Mill White.
 Sheet metal gutters and down spouts, plumbing, heating, lighting, sprinklers—furnished on special order.

Essential industries in urgent need of more floor space can now have the advantages of Austin Standard construction without the use of steel. Austin Standards in Wood have made this possible.

Austin Engineers have re-designed the wood truss, built it into the Ten Austin Standard Types and retained Austin advantages in speed, permanency and practical adaptability.

Austin Speed—Steel or Wood

The Austin Company is prepared to accept contracts for 60-working-day completion of any reasonable amount of Austin No. 10 Standard Factory-Buildings like those shown above in *wood* or *steel*. Austin Stocks of steel, however, are available only to those essential industries whose requirements demand steel construction. With the new Austin Wood Lattice Truss, all other industries can be quickly accommodated.

THE AUSTIN COMPANY

Industrial Engineers and Builders
 Cleveland, Ohio

AUSTIN STANDARD FACTORY- BUILDINGS

Austin No. 10-L Standard Wood Construction, showing new type of Austin Wood Lattice Truss. For those industries where heating or ventilating ducts are necessary the Austin Timber Truss is recommended.

Ready for all Essential Industries

In Austin No. 10 Standard wood construction you'll find the same unobstructed, working spaces, and the same overhead clearance ventilation and lighting as possessed by its steel prototype.

Austin No. 10 Wood Trusses, Lattice or Timber, are both exact duplicates of the steel truss in point of strength. They carry the same shafting or monorail loads as the steel truss. Shafting can be placed at any desirable points. Provision is made for the addition of a crane-runway if desired.

Austin No. 10 Standard is approximately 150 ft. wide and may be built any length in multiples of 20 ft. Its width may be increased in multiples of 50 ft. The center aisle is approximately 50 ft. wide with a clearance of 31 ft. to the bottom chords of the roof trusses.

Ample floor-space for machine-shop work and assembling is provided by the two 50-ft. side aisles with 18-ft. clearance.

Where permit for steel buildings is not obtainable, investigate Austin Standard Wood Buildings. Let Austin Engineers give you complete engineering data covering the Austin Method of Wood Construction.

LOCKWOOD, GREENE & CO. ENGINEERS

MANY manufacturers know they are not getting as much heat and power from coal as they should. If you are one of them, what are you going to do about it?

Other manufacturers up against the same proposition have come to us—asked us to find a better way to handle their power supply problems. That's what the Revere Rubber Company, of Chelsea, Mass., did.

And in conjunction with the master mechanic, we worked out the solution—changing the system of traps, rearranging the power lines, making better use of exhaust steam and in other ways "toning up" the plant.

Your problems may be similar. Your government has asked you to save coal. It may be a question of developing a nearby water power or using a substitute for coal. Or buying power from a central plant—or improving present operating methods. Or an entirely different proposition.

We don't pretend to know it all—but we have had a lot of practical experience in this sort of thing. You can get in touch with us by writing our nearest office.

Do this, too—ask for our book, "Steam Power Plants."

AMERICAN SHEET AND TIN PLATE COMPANY, Pittsburgh, Pa.

Assa ridge and north of Mont di Val Bella Italian patrols take 100 prisoners and 4 machine guns.

October 25.—Bitter fighting is reported in the Monte Grappa region, the enemy suffering heavy losses and the Italians establishing themselves on the northern bank of the Ornie torrent in the Alano Basin. A few small islands are occupied at Grave di Panadopoli and the hostile garrisons captured. Enemy advanced outposts are destroyed in the Posina-Altico sector and the Assa Valley. The total prisoners taken are 34 officers and 2,791 men.

October 26.—Rome reports the Italians extending their positions at several points in the Monte Grappa region and capturing Monte Pertica. Two thousand prisoners are taken, making the total for two days 5,000.

October 27.—The Italian Tenth Army launches an offensive on the middle Piave in the Montello region and, in conjunction with the British, is driving across the river. Two thousand prisoners and several villages are captured.

October 28.—London reports that British and Italian forces have advanced four miles beyond the Piave River and taken 7,000 Austro-Hungarians. In four days the Allied armies have taken more than 16,000 prisoners.

October 29.—Under the tremendous pressure of French, British, and Italian troops, announces the London War Office, the enemy's resistance seems to be faltering. The Allies drive forward west of the Piave, taking the heights of Alano in a two-mile gain. Over 21,000 prisoners have been taken in five days' fighting. American troops are held in reserve along the fighting zone.

THE BALKAN SITUATION

October 17.—Advices by way of Bucharest state that the population of northern Roumania has assumed an openly hostile attitude toward the German authorities. In several districts there have been clashes between peasants and Austro-German forces.

October 18.—London reports the evacuation of Serbia, Albania, and Montenegro begun by the forces of the Central Powers. The Serbian War Office announces the capture of Kruchevatz, thirty miles north of Nish.

Greek troops complete the reoccupation of the regions of Greek Macedonia which were held by the Bulgarians and Turks.

October 19.—The French War Office reports that Serbian troops have reached Trostenik, west of Kruchevatz.

October 21.—Dispatches from Vienna tell of a state of revolution in Sofia. More than 3,000 have been killed in street fights between Bolshevik laborers and the troops and police.

Paris wires that French troops have reached the Danube in the region of Vidin.

October 23.—Released British prisoners arriving at Sofia report that 30,000 of the 50,000 Serbians in Bulgarian prisons died through ill-treatment by the Bulgars.

The Italian War Office reports that, harried by Italian cavalry and Albanian detachments, the Austrian rear-guards in Albania have retired to north of the Mati River.

German wireless dispatches picked up in Moscow state that the Roumanian Government has closed all Roumanian ports on the Black Sea and the Danube.

October 24.—German General Headquarters, states a Berlin dispatch, claim that in violent mountain fighting "our rear-guards have safeguarded the occupation of new positions on both

"Turn the Control and Cream
Is Released in the Bristles"

In Camp

This Self-Soaping Brush and Water

The Twice As Quick Way To Lather

This epochal invention—the Warner Fountain Shaving Brush—carries its cream in the handle, as a fountain pen holds ink. When you turn the control the cream is released in the bristles. Then dip the brush in water and it lathers copiously.

To shave this way, a man doesn't have to soap his brush or his face—or to whip up lather in a shaving mug. Nor must he putter with a shaving stick or tube, nor hunt on the floor for a tiny tube-cap.

The Warner Fountain Shaving Brush ends all annoyance and tinkering. It's the team-mate of any razor—and ranks with the safety razor in convenience.

Half the Time Half the Work

This brush is sponsored by Mr. A. P. Warner, known to millions of men, already, through the Warner Speedometer and the Warner-Lenz. Every Warner product has marked real progress. And the Fountain Shaving Brush is the latest—and benefits all who shave.

Every man will want to lather this way—in half the time, with half the work.

Saves Cream and Money

In the handle of every Warner Brush comes a cartridge of far-famed Mennen's Shaving Cream. Fresh cartridges

holding cream for 2 or 3 months' use, cost only 35c at any dealer's.

Just the right measure for a shave is fed to the heart of the brush by the Warner control. Your cream goes farther because there is no waste. And the lather generates inside the bristles, so it's ready-prepared when it reaches your beard.

Between shaves, the cream in the handle can't dry out because of the Warner self-sealing feed. After shaving, simply rinse the bristles as usual. Then slip up the telescope guard, and snap on the cap.

The guard is ventilated so the bristles dry quickly, on the shelf, in the traveling bag or soldier's or sailor's kit.

How to Get It

The brush itself is a celebrated Rubberset—soft, thick bristles vulcanized in a bed of rubber so they can't come out. It is guaranteed by

the Rubberset makers and by us.

If you want to sterilize the brush-end, just unscrew and drop in boiling water.

Hitherto no brush has been so sanitary. And, of course, it's the handiest that the world has known.

Not all dealers have received this brush as yet. And if you can't get it at a nearby store, mail us \$4 with the coupon printed here.

Switch to Girards!

Ever feel this way after a smoke? You'd better switch to Girards. That's the way to take the whirl out of your wits, straighten out your thinker and bring back the mental punch that knocks the kinks out of business problems.

The Girard Cigar *never gets on your nerves*. It never affects heart, mind or digestion. And at the same time it's a full-flavored, soul-satisfying Havana smoke that you'll enjoy right down to the last puff. Doctors recommend it—and smoke it too.

Any cigar man in America can sell you Girards. If he hasn't them in stock he can get them for you from us.

sides of Paracin, on the Morava, forty miles northeast of Nish."

October 25.—The French War Office announces that French patrols have crossed the Danube into Roumania on the northwestern frontier and beaten the enemy in battle.

London reports that the Servians have defeated the Austro-German armies in the Morava Valley and are driving them in disorderly retreat toward the north.

October 26.—A Servian official statement says that Kralievo, sixty miles east-northeast of Nish, has been occupied and that the Servian troops have crossed the Terna River.

October 28.—A Vienna dispatch states that the Austro-Germans have abandoned Kragujevatz, fifty-five miles southeast of Belgrade, to the Allied troops.

The French War Office reports that Servian cavalry have advanced twenty miles up the Morava Valley and occupied Despotovac. On the left of the Balkan line Italian troops cross the Mati River and are pushing toward Alessio.

October 29.—The French War Office reports Allied troops reaching the Hungarian frontier at two points on the Balkan fighting line. Servian troops are in the pass west of Cacak, opposite Herzegovinian territory.

The President of the Czechoslovak National Council receives a cablegram in Washington reporting the organization of a brigade of Roumanian infantry to fight with Entente troops.

THE WAR IN THE AIR

October 17.—More than sixty American day-bombing aviators attack Bayonville, Buzaney, and other towns north of the American line at Grandpré. Escorting planes brought down ten German machines. At various other points German airmen attempt to hinder the Americans and ten of them are downed.

October 22.—German aviators raid the American front northwest of Verdun and drop bombs on the hospital near Rarecourt. An outbuilding is torn down and the glass ends of other buildings shattered, but none of the patients or nurses is injured.

The Americans bring down a *Hanover* biplane at Bayonville, a *Rumpler* at Buzaney, and a balloon near Tilly.

London reports that two squadrons of the independent air-forces have attacked the barracks and railways at Metz and that another squadron has dropped heavy bombs on the stations at Mézières.

October 23.—American bombing airplanes and aerial machine-guns attack enemy concentrations in the woods near Remonville and bring down five enemy machines.

October 28.—Paris reports that a fleet of 200 French airplanes, 120 bombing machines, and 80 scouts inflicted havoc during an attack on enemy convoys and depots near Seraincourt, north of the Aisne.

October 29.—On the Verdun front American aviators bring down three enemy airplanes and one observation-balloon.

A British official statement shows great activity of the independent air-forces behind German positions. The railway junctions of Longuyon, Ecouvies, and Thionville are attacked with "excellent results." Thirty-two enemy machines are destroyed and ten driven down out of control.

THE WAR AT SEA

October 17.—On arriving at an Atlantic port the army-transport *Amphion* reported a two-hours' running fight with a

TRADE MultiKOPY MARK

The Carbon Paper
That Gives Satisfaction

"These carbon
copies are
splendid"

WHEN your employer says that—you may be certain you are working in the right direction for advancement.

A carbon copy of a letter is often the sole record of an important business deal involving big sums of money. Carbon paper makes the copy.

Your employer wants copies that are as neat, clean-cut, clear and legible as the originals. It is annoying to any real business man to have copies that are streaky, blurred and hard to read.

MultiKopy Carbon Paper makes perfect carbon copies of letters, transfers the imprint of your machine on the carbon copies sharply, neatly and permanently. It is the cleanest carbon paper to handle.

Let us send you some samples
of MultiKopy

Send for sample sheets of MultiKopy Carbon Paper so that you can see for yourself how you can improve the quality of your work through its use.

For sale by principal dealers throughout this country and Canada.

Improve the appearance of your letters by using Star Brand Typewriter Ribbons—they give sharp, clear impressions.

submarine 800 miles off the Atlantic coast on October 12. Eight men on the American ship were wounded, two fatally.

Reports from the American naval base in France note that the record of submarine activity for the months of June, July, and August, the period most favorable to their operations, shows a steady fall in the Allied shipping sunk and a steady rise in the number of submarines destroyed.

October 19.—On the Belgian coast British war-ships are shelling the retreating Germans. Under cover of a smoke-screen, fire is drawn from hidden enemy batteries.

An unconfirmed report is current at an Atlantic port that the American steamship *Lucia*, which was equipped with buoyancy boxes and was supposed to be unsinkable, has been sunk by a submarine.

October 21.—Geneva reports Kiel Harbor unable to accommodate all the submarines which have returned from Zeebrugge and Ostend, and some are lying offshore.

The Irish steamer *Dundalk* was torpedoed in the Irish Sea, states a Belfast dispatch, and only thirteen of a crew of over thirty were saved.

October 22.—The Financial Secretary of the British Admiralty tells the House of Commons there is reason to believe that all German destroyers and torpedo-boats which had their bases at Ostend and Zeebrugge have escaped to German ports.

Secretary Daniels asks Congress to authorize a second three-year naval building program to provide ten additional dreadnoughts, six battle-cruisers, and 140 smaller vessels at a cost of \$600,000,000.

October 26.—London reports that, notwithstanding the usual number of U-boats lurking in the Atlantic and Mediterranean, German submarine activity reached "such a low state this week as to become almost negligible as a war-measure." The British Admiralty regards this as part of the German peace offensive.

Travelers arriving at an Atlantic port on two British liners report that an American destroyer of their escort sank a submarine on the third day of the trip.

October 27.—The Navy Department announces that all except four of the crew of the American steamer *Lucia*, which was torpedoed 1,200 miles from the Atlantic coast, October 19, were rescued.

The United States Navy Department attributes the sinking of the Spanish ship *Chatarro*, which occurred ten miles off Barneget Inlet with the loss of six of the crew, to either an internal explosion or contact with a floating mine.

AFFAIRS IN RUSSIA

October 16.—Stockholm reports insurrection spreading in the Ukraine, the German troops siding with the rebels in several places. A peasant force of 5,000 is moving on Poltava.

Despite protests made by neutral ministers, states a released British diplomat on arrival at Stockholm from Moscow, the Bolsheviks continue the wholesale slaughter of persons charged with counter-revolution.

A Russian wireless, dated Tsarskoe Selo, October 15, reports that the Soviet chiefs have condemned Nicholas Romanof to be shot during the night of the 16th. This Romanof is supposed to be Grand Duke Nicholas, former Commander-in-Chief of the Russian Army.

Stockholm has Russian advices that a congress of all the extraordinary com-

missions created to carry out the "Red Terrors" opened at Petrograd on the 15th to establish a general plan of action.

October 17.—American troops on the Dvina take an annoying trench from which a Bolshevik pompom had shelled their advanced positions.

The American-Russian Chamber of Commerce sends to civic, trade, and commercial organizations throughout the United States the outline of a plan for rendering practical and immediate aid to Russia.

Archangel reports that Allied troops on the Dvina have withdrawn over six miles in the face of an attack by greatly superior Bolshevik forces.

October 18.—A Moscow dispatch to the *Lokal Anzeiger*, of Berlin, reports that Vladimir N. Kokovsoff and Prince Shakovskoy, former Russian ministers, have been shot by the Reds.

A delayed dispatch states that Czechoslovak and Siberian forces have defeated Bolshevik troops advancing toward Ekaterinburg. The enemy lost 1,000 men, three armored trains, eleven locomotives, and 60 machine guns.

Vladivostok reports the Allied Intelligence Board doing excellent work in putting down German propaganda.

October 21.—Washington is advised that the Bolshevik command at Pensa is ejecting the bourgeoisie from their homes and installing workmen in the evacuated houses.

Archangel reports that Americans and Russians meet with little resistance in a seven-mile advance along the Onega River.

Replying to a protest by German and Austro-Hungarian consuls against the inhuman treatment of political adversaries, states another dispatch from Archangel, the Bolshevik Foreign Minister said: "Germany is not qualified to intervene in this question" in view of its own brutal record in France and Belgium.

October 23.—The Social Democratic League of America receives a cablegram asserting that the Social Democrats of Russia would welcome the coming of "republican troops of the United States" into Russia.

October 24.—A dispatch from Archangel reports that the Russo-Allied expedition has driven the Bolsheviks out of the district of Ugor, Province of Vologda. On the Dvina front Anglo-Americans defeat Bolshevik attacks, inflicting heavy losses on the enemy and capturing two machine guns and a number of prisoners.

A delayed message from Vladivostok notes the arrival of General Ivanoff, War Minister of the Omsk Government, to confer with the Allies in regard to systematizing the mobilization of Russians there for the new army.

Two delegates from the Lithuanian people are in Copenhagen appealing to the American, British, and French missions for protection against the Red terror which is following the German evacuation of the Lithuanian districts east of the Brest-Litovsk demarcation line.

October 25.—The official gazette of the Vladimir Soviet publishes a decree that Russian maidens under the jurisdiction of certain provincial Bolshevik Soviets become the "property of the state" when they reach the age of eighteen years and are compelled to register at a Government "bureau of free love."

THE TURKISH SITUATION

October 25.—A Constantinople dispatch received at Basel quotes the Grand Vizier as announcing that Turkey will accept peace on the principles of right

*Breaking all world's plowing records—
Fremont, Neb., August 18, 1914, 28-foot furrow*

FOUR American inventions have revolutionized modern warfare. Three—the airplane, submarine and machine gun—early appealed to military and naval minds and were perfected largely through official aid, both here and abroad.

The fourth, the "Caterpillar" Tractor, was invented, perfected and built for *farm* use by Benjamin Holt. Its ability to pull profitable loads over the most difficult ground, its high grade construction and dependable qualities, established it as a commercial success on every continent.

War proved the need for just such a tractor to tow the Allied heavy guns. The "Caterpillar" *alone* was ready—was *alone* chosen by expert army engineers. The very engine that broke all world's plowing records on the eighteenth day of the war was among the first of thousands of Holt agricultural tractors to be sent to the Allies.

After more than a decade of peaceful use the "Caterpillar" has met the utmost demands of military

transportation—breaking all records also in hauling heavy artillery—enabling the complete motorization of United States Artillery units.

This supermachine, conceived, designed and built only by Holt, is known the world over by the name "CATERPILLAR," Holt's registered trademark, which can be applied to no other tractor. The "CATERPILLAR" Tractor stands alone by name, quality and performance, exclusively the product of The Holt Manufacturing Company, Peoria, Ill., and Stockton, Calif.

"CATERPILLAR"
TRACTORS REG. U. S. PAT. OFF.

Cutting the Nation's Food Bill

Follow back to its source the foodstuff that comes to your table and in almost every case you'll find a common element—power.

Power plows the fields where great wheat crops flourish.

Power grinds and mixes the materials that fertilize the land.

Power cultivates, harvests, threshes—it stores grain in giant elevators and carries it to distant markets.

Power turns wheat into flour and corn into meal, hogs and cattle into pork and beef—transforming, refining, transporting.

Here again electricity makes a contribution of incalculable value to national well-being and progress, for it is today preeminently the power of the vast food industry.

On the farm, the ranch and plantation, electric power has followed electric light, so that gardens are irrigated, land drained, wheat threshed, fruit sorted and cleaned and various other tasks performed all by this versatile force.

Again and again on its way to the market the path of food is crossed by electric power, decreasing production cost here, cutting time in transit there, economizing and expediting everywhere so that your food bill may in the end be lower.

Study the simplest of breakfasts, and you'll find that electricity touches not once, but many times, almost every article of food. Perhaps no example more completely illustrates its application than the slice of buttered toast before you.

Electricity begins by grinding the wheat and wheat substitutes and finishes by toasting the piece right at your elbow.

Both the milk that moistened the dough and the butter you spread on the bread have probably met electricity on their way to you, for today cows are milked electrically and electric motors run the separator on the farm and the churn in the dairy. Even on their way to market these perishable products are kept fresh by ice made in electrically driven plants.

In the bakery, the loaf was probably kneaded, shaped, carried to the ovens and wrapped, all by electric power, then delivered in an electric truck, or one that depended on electricity for lighting and ignition.

As with this little piece of toast, so with the many other articles of food that enter into your daily menu.

Electric motors serve well the needs of the strictly regulated sanitary dairy. Here milk is being bottled by motor-driven machines.

Power for threshing is furnished in many cases by electric motors supplied with central station power.

Electric motors meet the flour mill's strict requirements of cleanliness and safety. Here is seen a line of motor-driven grinders.

In the bakery of today, bread is hardly touched by human hands. Electric motors mix, knead, carry—and even wrap the bread. This view shows a motor-driven dough mixer.

Power demand for the sugar mill is heavy and the need of reliability great, so electric motors here find wide use. View shows motor-driven crushers.

Westinghouse

ELECTRIC MOTORS AND CONTROLLERS

Westinghouse

ELECTRIC UTILITIES FOR THE HOUSEHOLD

Electric motors in the refrigerating plants provide the most certain means for uninterrupted refrigeration. This view shows a modern cooling system.

Electric motors are a vital part of the great meat packing industry. The grinding machines shown are driven by Westinghouse Motors.

Conserving the Nation's Fuel and Man-Power

In the application of electricity to the food industry, as to all other industries, especial service is rendered by its saving of those prime essentials—fuel, labor and time. No less apparent than the saving of coal is the enormous addition which electricity makes to the man-power and woman-power of the nation.

In making electricity serve in the production, preparation, preservation and transportation of food, Westinghouse engineers have always figured prominently.

Westinghouse motors are daily converting thousands of electrical horsepower into power that grinds and stirs, cuts and carries.

You'll find these motors in the packing house,

dairy, flour mill, sugar mill, bakery—in short, in practically every kind of plant that is a part of this great industry.

Westinghouse saving extends even into your own home so that you can cook electrically and can thus reduce waste and conserve food values in a way possible only with adequate electrical supply and efficient cooking apparatus.

How moisture affects ordinary brake lining

DO your brakes take hold too quickly after the car has been out all day in a driving rain? This often happens with ordinary brake lining.

When you find this condition, it means the dampness has worked in, causing the brake lining to swell. Brakes that work promptly are necessary, but brakes that are swollen from moisture are never dependable. Today after a rain-storm they "grab" and take hold too quickly. Tomorrow, after they have dried out, they act more slowly. With brakes in this condition you are never quite sure how quickly you can stop.

Brakes that swell from moisture wear out quickly. The asbestos breaks down and gives only a fraction of the service it should give.

Why Thermoid resists moisture

Thermoid Hydraulic Compressed Brake Lining is Grapnalized—an exclusive process which resists moisture, oil and gasoline. In addition to being Grapnalized, Thermoid is Hydraulic Compressed. This makes it uniformly hard all the way through.

Over 40% more material and 60% more labor are used in the manufacture of Thermoid than in any woven brake lining. This guarantees long wear.

Support the Brake Inspection Movement and have your brakes inspected today. If they need relining specify Thermoid, the brake lining that resists moisture and wear.

Every foot of Thermoid is backed by *Our Guarantee: Thermoid will make good—or WE WILL.*

and justice laid down by President Wilson.

The London *Daily Mail* publishes a Bern dispatch stating that the Turkish Minister to Switzerland has handed the British and French Ministers there an offer of peace virtually amounting to surrender.

October 27.—London announces that British cavalry and armored cars have occupied Aleppo. The British have also captured Kerkuk, 155 miles north of Bagdad, and the communications of the Turks in Mesopotamia are completely cut off.

October 29.—Copenhagen gets a Constantinople dispatch stating that Turkey has independently presented peace proposals to the Entente nations.

Athens hears that rioting has broken out at Constantinople and Smyrna. Germans being attacked in both cities.

Washington receives military intelligence that British scouts in Mesopotamia penetrated as far as Mosul a week ago, and that the capture of this strong Turkish base is momentarily expected.

THE CENTRAL POWERS

October 16.—Copenhagen reports the acceptance of an amendment to the constitution requiring the consent of the German Federal Council and the Reichstag for a declaration of war in the Empire's name. Another amendment requires the consent of the Council and the Reichstag to treaties of peace and treaties with foreign states.

Troops pour into Prague on account of threats by the Czechs to call a general strike throughout Bohemia.

A German note transmitted to the United States through the Swiss Legation protests against the confiscation and sale of German-owned enterprises and threatens to retaliate by seizing American-owned property in the Empire. The latter is worth about \$12,000,000; up to this time the United States has seized \$800,000,000 worth of enemy-owned property.

Copenhagen publishes a Berlin dispatch stating that Hungarian independence is declared by the Magyar Parliament. Announcements that Austria is about to be broken up into four federal states are made by both Austrian and Hungarian premiers.

The strike at Prague, which began as a peace demonstration, is reported spreading through Bohemia and Moravia.

October 17.—Steps for the organization of Austria on a federalized basis are proclaimed by Emperor Karl, states a Vienna dispatch. The plan does not include the union of Austrian Poland with the "independent Polish state," and the city of Trieste and the Trieste region will be treated separately "in conformity with the wishes of its population."

Washington receives a copy of the declaration of independence of the Czechoslovak nation by the Czechoslovak National Council, which is recognized by the Allies as a *de facto* belligerent Government.

October 19.—Washington receives information of intense dissatisfaction in Constantinople owing to the German Government's failing to meet its contractual obligations to Turkey.

According to a Berlin-dispatch to Copenhagen the Czechs are masters in Prague. Czech money is in circulation and the Czech flag floats over Hradsechin Castle.

October 20.—The Polish Associated Press Bureau announces that amnesty and full pardon from Emperor Karl have been declined by the 114 Polish officers and soldiers undergoing court martial at Marmaros-Szigeth.

October 21.—A Budapest dispatch states that Emperor Karl will soon issue a

manifesto announcing the independence of Hungary.

Washington makes public a resolution adopted at a conference of Polish, Czech, and Jugo-Slav deputies in the Vienna Parliament declaring an alliance between these three branches of the Slav race.

October 24.—The American Intelligence Department receives information that boy scouts in Hamburg and other German cities are being armed with machine guns and used in quelling strike outbreaks.

Washington learns that the famous belfry of Bruges was used by the Germans as a garage and workshop during their occupation of the city.

A German Government wireless received in London states that valuable works of art belonging to museums and private owners in the region of Cambrai, Douai, and Valenciennes, now in the hands of Germans, will be returned undamaged to their owners after the war.

The Berlin correspondent of the *Berlingske Tidende* reports that the democratization of Germany is spreading through the federal states.

October 25.—*L'Information*, of Paris, receives a Zurich dispatch stating that on the previous day an enormous crowd assembled before the Reichstag building in Berlin and clamored for the abdication of the Kaiser and the formation of a republic.

Basel reports an announcement in the Lower Chamber of the Hungarian Parliament that the Croatian soldiers of the 79th Regiment at Fiume had revolted, seized the city, and destroyed the railroad.

A Budapest dispatch states that Emperor Charles has accepted the resignation of Baron Burian and appointed Count Andrássy to succeed him as Foreign Minister.

Amsterdam gets a Berlin dispatch reporting that the Prussian upper house has passed *en bloc* the electoral bills as amended by special committee.

October 27.—A Copenhagen dispatch states that the German Reichstag has passed a bill placing the military command under control of the civil government.

October 28.—London receives a statement, attributed to German court circles, that the Kaiser has no intention of abdicating, but is willing, if it is for the good of the people, to ordain that his rights shall be reframed. He is ready to become the "hereditary president of a German republic."

Washington hears that General von Lossberg has been appointed successor to General von Ludendorff.

October 29.—The Hague correspondent of the *London Daily Mail* reports that civilian departures from the lower Rhineland and part of Westphalia, which began on a small scale when the first Allied bombs hit Cologne, have developed into a panic flight.

A Budapest dispatch says Archduke Joseph has issued a proclamation that Emperor Charles has charged him with the task of securing the complete independence of Hungary.

PEACE NEGOTIATIONS

October 16.—A Berlin dispatch says President Wilson's reply produced a most unfavorable impression in Berlin and caused a panic in banking circles and on the Stock Exchange.

Baron Burian tells the Foreign Affairs Committee of the Hungarian Delegation that the time is not far distant for the conclusion of a general, lasting, and just peace.

October 17.—A bulletin issued by the *Rotterdam Courant* declares that the High

DIXON

Pencils and flannel suits

LET us confess our debt of gratitude to the Government.
Working for America has been the finest thing that ever happened to the Cadillac.

It has inspired us to guard more jealously than ever the scrupulous character of Cadillac construction.

It has quickened our zeal to build a motor car worthy of the highest and most honorable traditions of the nation.

When fine motor cars are thought of after the war, we want America and the Cadillac to be forever linked together the world over.

Our ambition is that no motor car as fine as the Cadillac shall pass under the supervision of this or any of the allied governments.

We are vastly more interested, now, in continuing to deserve the approval of the Government, than in any new business that could possibly come to the Cadillac Company.

CADILLAC MOTOR CAR COMPANY • DETROIT, MICH.

Today's Gasoline

Less volatile product raises a new lubricating problem

Present day gasoline is less volatile than that formerly sold. It does not readily saturate the air in carburetion. Combustion of the explosive mixture is less complete.

This risk results. Liquid gasoline may be drawn into the cylinders and combustion chambers. The use of the carburetor choke valve to start the engine aggravates the trouble.

Once in the cylinders and combustion chambers, the gasoline tends to thin out the lubricating oil. As the pistons move up and down the gasoline tends to eat away the oil film on cylinders, pistons and piston rings.

On the compression stroke this liquid gasoline is forced down past the piston rings—into the crank case.

The amount of gasoline which reaches the crank case and mixes with the lubricating oil depends largely upon the correctness of the lubricating oil used. Oil must form and maintain a thorough piston-ring seal to prevent the escape of the fuel charge and liquid gasoline past the piston rings into the crank case.

To withstand the cutting effect of present-day gasoline, your lubricating oil must be of the highest quality and of the correct body. The Chart at the right specifies a grade of Gargoyle Mobiloids for your car which fits both these requirements. The use of the correct grade of Gargoyle Mobiloids will give you scientific protection against premature thinning out of oil in your crank case.

If you have not read the article on pages 19 and 20 of the booklet "Correct Lubrication," it will pay you to send today for a copy. This book contains valuable data in authoritative articles prepared by our Board of Engineers.

Address our nearest branch.

Mobil oils

A grade for each type of motor

In buying Gargoyle Mobilists from your dealer, it is advised to purchase in original packages. Look for the red Gargoyle on the container. If the dealer has not the grade specified for your car, he can easily secure it for you.

VACUUM OIL COMPANY, New York, U.S.A.

Specialists in the manufacture of high-grade lubricants for every class of machinery. Obtainable everywhere in the world.

Domestic Branches

Detroit Philadelphia	Boston Columbus, Ohio	Kansas City, Mo. Minneapolis	New York Pittsburgh	Chicago New Orleans
-------------------------	--------------------------	---------------------------------	------------------------	------------------------

Correct Automobile Lubrication

How to read the Chart

The four grades of Gorgoxole Mobilene, for engine lubrication, purified to remove free carbon, are:

- Gargoyle M: biloil "A"
Gargoyle Mobiloil "B"
Gargoyle Mobiloil "E"
Gargoyle Mobiloil Arctic

In the chart below, the letter opposite the car indicates the grade of Gargery McElbobb that should be used. For example, "A" means Gargery McElbobb "A." "Arc" means Gargery McElbobb Arctic, etc. The recommendations cover all models of both passenger and commercial vehicles unless otherwise noted.

This Chart is compiled by the Vacuum Oil Company's Board of Engineers and represents our professional advice on correct Automobile Lubrication.

[illegible]

Electric Vehicles.—For motor bearings and the load chains use Garcoyle Mobiloid "A" the year round. For open chains and differential, use Garcoyle Mobiloid "C" the year round. Lubrication for motor lubrication of passenger cars use Garcoyle Mobiloid "Arctic" for worm drive, and Garcoyle Mobiloid "A" for bevel gear drive.

Be suspicious of tender gums

Forhan's
FOR
THE
GUMS

BE suspicious of any tenderness or bleeding of the gums. This is usually the first stage of Pyorrhea—an insidious disease of the gums that destroys the teeth and undermines bodily health.

Gradually the gums become spongy. They inflame, then shrink, thus exposing the unarmored tooth buds to the ravages of decay. Tiny openings in the gums form gateways for disease germs to enter the system. Medical science has traced many ills to these infecting germs in the gums weakened by Pyorrhea.

They are now known to be a frequent cause of indigestion, anemia, rheumatism and other serious conditions.

So watch carefully for the first symptoms or bleeding of the gums. Try Forhan's, dentist's secret. It promptly prevents Pyorrhea. It keeps it away if used on time and used correctly.

And it prevents Pyorrhea—in guards against other ills.

Perhaps (For the Gums) seems really scientific at first. Brush your teeth with it. It keeps the gums white and free from tartar.

If your physician has already told you that you have Pyorrhea and needs a dentist immediately for special treatment.

LUDEN'S
MENTHOL COUGH DROPS

Command has ordered the German armies to cease devastating places unless absolutely compelled by military necessity.

Cables from Amsterdam state that the Berlin newspapers printed President Wilson's reply in full. Most of them were amazed at its tenor, and speak of it as "a trap," "Wilson's rude answer," "Wilson's evasion," etc.

Senator Lewis, of Illinois, introduces a resolution in the Senate expressing confidence in whatever course President Wilson may take in dealing with Austria and Germany in response to the demand for an armistice.

October 18.—A Basel dispatch says tumultuous scenes occurred at the meeting of the Hungarian Diet. Demands were made for peace, and it was announced that Austria is being organized on a federal basis.

Amid scenes of indescribable enthusiasm, says a Paris dispatch, Premier Clemenceau tells the Chamber of Deputies that "our peace does not spell revenge. Our victory and the victory of our Allies means the liberation of civilization and liberty of human conscience."

The Cologne *Volkzeitung* reports a demonstration by German Independent Socialists in Unter den Linden, Berlin, during which the "Marseillaise" was sung, and there was a clash with the police.

October 19.—President Wilson rejects the Austrian peace plea, stating that the United States Government has recognized the nationality of the Czechoslovaks and the aspirations of the Jugo-Slavs for freedom, and he is, therefore, "no longer at liberty to accept the mere 'autonomy' of these peoples as a basis of peace, but is obliged to insist that they and not he shall be the judges of what action on the part of the Austro-Hungarian Government will satisfy their aspirations and their conception of their rights and destiny as members of the family of nations."

Advices from Vienna note that the Austro-Hungarian alliance with Germany was attacked in the lower house of the Hungarian Parliament by Count Michael Karolyi, opposition leader, as "inimical to a league of nations." The Count admitted that the Central Powers have lost the war, and appealed to his countrymen to "try to save peace." A Budapest dispatch states that the draft of an address to Emperor Charles was read declaring that "Hungary must return to its autonomy and complete independence."

While thousands of workmen are holding peace demonstrations in Berlin, says a dispatch from Bern, patriotic and economic associations have passed resolutions urging the organization of a stubborn defense.

It is reported from Vienna that the Roumanian deputies in the Austrian Parliament have constituted a separate Roumanian national assembly.

October 20.—According to telegrams in the Dutch press, Denmark has sent a note to Germany suggesting that the plebiscite provision in the treaty of 1864, which ceded Schleswig-Holstein and Lauenburg to Prussia, should be carried out to decide whether the people prefer allegiance to Germany or Denmark. This report is later denied.

The Belgian Legation at Washington is advised by cablegram that the Council of Ministers has adopted measures for verifying claims for damages to civilian and public property in Belgium, so as to determine the total compensation to be demanded from Germany.

Dispatches from Zurich quote German newspapers as suggesting the abdica-

An "X" Liquid Repair in a Cracked Cylinder Will Stand 2000 Pounds Pressure

EVERYBODY has met the "know-it-all" type of man. When you tell him something extraordinary he's sure to say "it can't be done."

Maybe this kind of a car owner won't believe that "X" Liquid has repaired the inner wall of a cracked cylinder making it as good as new—and saving the car owner over \$150 in repairs.

Yet the facts are on record—and can be verified.

It is no unusual thing for "X" Liquid to repair cracks in valve packets—in waterjackets—in parts of the cooling system where for any reason welding isn't practical or economical.

And as for small holes in the radiator, pump, connections, etc.—"X" will repair one leak or a thousand—in ten minutes. And do a better job than can be had for \$25 worth of soldering.

"X" Liquid is the only practical, scientific method of repairing leaks without danger to the cooling system. It doesn't weaken the radiator as soldering does; nor does it choke the cooling system and make the cure worse than the disease—as is the case with radiator cements, flaxseed meals and such "dopes."

How "X" Liquid Reduces Upkeep Costs

MANY car owners keep "X" constantly in the water. This repairs all leaks before they give trouble.

And if "X" is kept in the water it loosens the rust and scale now present—and prevents new rust or scale from forming. This means a cooler, better working engine—plus a saving of oil and gasoline.

It's not going to be easy to get another car next year—so give your present car the care it deserves. Keep "X" Liquid constantly in the water. It works in alcohol or other reliable anti-freeze. One can last a season—and takes all the trouble out of the cooling system.

In preparing your car for the winter, use "X" Liquid to repair all the leaks. This will prevent the anti-freeze from leaking away—and save your engine.

Get "X" Liquid from your dealer—or we will ship direct on receipt of price and dealer's name.

Large Size, \$1.50 will do a \$25 repair job!

Ford Size, 75c will do a \$10 repair job!

Makes good—or your money back!

The Berlin *Vorwärts* indorses the resolution adopted by the Bavarian Socialists for the establishment of courts for sentencing all persons guilty of or responsible for the prolongation of the war.

October 21.—Germany's reply to President Wilson is received in Washington. It concedes that the conditions of an armistice should be left to military advisers, who should take the actual standard of power on both sides in the field as the basis for safeguarding arrangements, the German Government trusting that the President will approve of no demand irreconcilable with "the honor of the German people." Protesting against the "reproach of illegal and inhumane actions" made against the German land and sea forces, it denies that the German Navy has destroyed life-boats with their passengers, and claims that in retreat destructions on land have been carried out according to international law. Moreover, to avoid hampering the peace movement, instructions have been dispatched to commanders to preclude the torpedoing of passenger-ships. Recent changes in the constitution, the reply proceeds, have virtually abolished the autocratic power denounced by President Wilson and the responsibility of the Chancellor to the representation of the people is being "legally developed and safeguarded." Therefore, the German "offer of peace and an armistice has come from a Government which is free from any arbitrary and irresponsible influence and is supported by the approval of an overwhelming majority of the German people."

Senator Poindexter introduces a joint resolution proposing that Congress forbid further negotiations by the United States with Germany in regard to an armistice or peace until the German military forces surrender unconditionally.

The London *Daily Telegraph* publishes messages from the mayors of more than fifty English towns urging "no compromise with the foe."

October 22.—A Berlin dispatch to Copenhagen quotes Prince Maximilian as saying: "President Wilson's reply to the latest German note may perhaps bring definite certainty as to the result of the negotiations. Till then we must be prepared to resist a peace of violence."

Paris reports that the German propaganda service announces that a commission of neutral residents of Brussels has gone to the front to investigate charges of devastation and destruction during the German retreat in Belgium.

In a speech to parliamentary delegates at Buckingham Palace, King George declares that victory is in sight, and "we are all agreed that it must be a complete victory."

Washington hears from all sides that the country is dissatisfied with the German note and insists upon unconditional surrender. Senators Lodge and Reed make strong protests against further negotiations.

Vienna announces that the Austro-Hungarian Government will reply soon to President Wilson's note, and intimates that the President has not "replied to the question concerning conditions on which peace negotiations are possible."

October 23.—Replying to Germany's last note, President Wilson says that, having received the solemn and explicit assurance of the acceptance of his peace terms from ministers speaking for an overwhelming majority of the German people, and also the explicit promise that the humane rules of civilized warfare will be observed by

My good old Friend!

WHEN did I first smoke Robert Burns cigar? Well, let me see—I think it was in '82. And he was quite a youngster, even then—in 1857 he was born.

At that time strong cigars were much in vogue. More credit, then, to Robert Burns, for being first to demonstrate the folly of mere strength. He pioneered the way for mild cigars, so prevalent today.

And as the years have

passed along, good Robert Burns has found new ways and means to add to quality and fragrance. Never before was his appeal to moderate and modern men so great as now.

His full Havana filler gives him fine flavor. Special curing gives that Havana rare mildness. His neutral Sumatra wrapper *helps* that mildness.

A good old friend is Robert Burns to men who like Havana—but prefer it mild.

Have you tried one lately?

the German forces on land and sea, he can not decline taking up the armistice question with the Allies. But he deemed it his duty to again say that the only armistice he would feel justified in submitting would be one which should leave the United States and Entente Powers in "a position to enforce any arrangement that may be entered into and to make a renewal of hostilities on the part of Germany impossible." He has, therefore, suggested that the military advisers of the Allies and the United States submit the necessary terms for such an armistice as will protect the interests of the peoples involved and safeguard and enforce the details of the peace to which the German Government has agreed. The President also deemed it his duty to say that the nations of the world do not and can not trust the words of those who have hitherto been masters of German policy, and to point out that in concluding peace and attempting to undo the infinite injuries and injustices of the war, the United States Government can not deal with any but veritable representatives of the German people. If it must deal with the military masters and monarchical autocrats of Germany now or later, it "must demand, not peace negotiations, but surrender."

Reuter's learns that, as a result of continual communications, the Allied governments are perfectly acquainted with and agreed upon the terms under which it will be possible to enter into negotiations for an armistice.

During a speech in London, British Foreign Secretary Balfour declared that in no circumstances is it consistent with the safety, security, and unity of the British Empire that Germany's colonies should be returned to her.

In an address to the Reichstag, states a Copenhagen dispatch, Prince Maximilian gave his views on the peace movement and a resolution of confidence in the new Chancellor was passed.

The United Mine Workers of America telegraph President Wilson from Indianapolis that "nothing but the unconditional surrender of Germany ought to be considered."

October 24.—French official comment on President Wilson's reply to Germany, says a dispatch from Paris, "resolves the whole thing into a military question which can be decided by Foch, Haig, and Pershing."

According to a Vienna dispatch to the Frankfort Gazette, the speedy unconditional surrender of the Austro-Hungarian Monarchy is probable.

Military opinion in Washington is that the President has expressed the basic idea upon which an immediate armistice can be reached, but the terms to render the German forces on land and sea absolutely impotent must be worked out by the Supreme War Council.

A dispatch from Basel states that Deputy Karl Herold, in the name of the Centrist party, read a statement in the Reichstag asking that the reform of the constitution of the Empire be extended so that war can not be declared without the consent of the Reichstag.

October 25.—Col. E. M. House, personal representative of the President, and Admiral William S. Benson, Chief of Naval Operations, arrive in France to represent the United States in the consideration of the armistice question.

In an interview, Lord Robert Cecil, Under-Secretary of State for Foreign Affairs, says he can not conceive the possibility of any danger of disagreement between the British and American governments on the armistice question.

Ingersollite

IMAGINE yourself entering your home, office, store, workshop or anywhere else that is indoors. It is night. Pitch dark! You grope forward. You step timidly.

Where is the light chain? You raise your arm and start to feel around. Bang! You've hit your knee. You mutter, "Tut-tut!" etc.

Now imagine the same room—the same darkness. But through the gloom you see a bright spark—it's an Ingersollite on the light chain. You walk straight to it and turn on the light. No groping—no colliding—no "Tut-tutting!"

The Ingersollite is a little unbreakable glass tube containing the substance that makes the Ingersoll Radiolite Watches glow the time in the dark. You can see it across the widest room—and it lasts for years.

Easy to attach. Can be used on key switches, on gas jets and on oil lamps. If your dealer doesn't sell them, send us his name and we will supply you. Price 25c. In Canada 35c.

*The Little
Spark
You See in
the Dark*

and he refused to "contemplate anything so disastrous."

October 26.—In addressing the Reichstag on October 24, states a dispatch from Amsterdam, Foreign Secretary Solf said Germany will agree to the regulation of the Alsace-Lorraine question by peace negotiations.

October 27.—In reply to President Wilson's last note, Germany avers that her peace negotiations are being conducted by a veritable people's government, to which the military powers are also subject, and "in whose hands rests, both actually and constitutionally, the power to make the deciding conclusion." That government now awaits proposals for an armistice as the "first step toward a just peace."

London reports that General Ludendorff's resignation has been accepted by the Kaiser. A Bern dispatch says the resignation caused a sensation throughout Switzerland and the Central Empires and is commented on as a sign that German militarism is really abdicating.

October 28.—Washington receives a note from the Austro-Hungarian Government accepting the President's conditions for an armistice and peace and declaring its readiness, "without waiting the result of other negotiations, to enter into negotiations upon peace between Austria-Hungary and the states in the opposing group and for an immediate armistice upon all Hungarian fronts."

October 29.—Vienna reports that Count Andrássy has addressed a note to Secretary Lansing asking him to "have the goodness to intervene with the President of the United States in order that, in the interest of humanity, as in the interest of all those who live in Austria-Hungary, an immediate armistice may be concluded on all fronts, and for an overture that immediate peace negotiations for peace will follow."

A Basel dispatch quotes a semi-official note issued in Vienna which says that Austria's declaration does not "necessarily signify an offer of a separate peace. It means that she is ready to act separately in the interests of the reestablishment of peace."

FOREIGN

October 16.—A Constantinople dispatch received at Copenhagen notes that Izzet Pasha, a former Minister of War, has become Premier of Turkey, and also taken the portfolio of Minister of War.

October 17.—Washington advises state that negotiations for a rationing agreement with Holland are to be resumed in London. Holland has decided to release about 50,000 tons of idle shipping from her ports to carry the balance of grain due her under the terms of President Wilson's offer of March last.

Cablegrams from San Juan report that tidal waves, which followed the earthquake in Porto Rico, added to the death-toll and devastation. Mayaguez, the third largest city on the island, was practically destroyed, and Aguadilla, Anasco, Aguada, and Ponce badly damaged.

A dispatch from Melbourne reports that the Seventh Australian War Loan totals \$185,000,000 and further subscriptions are expected.

In a speech at London Dr. Christopher Addison, minister without portfolio in charge of reconstruction, declares that, with regard to punishment for Germany's crimes, the Allies should withhold raw material from her until full reparation has been made for mills and machinery destroyed in France and Belgium.

October 18.—Two hundred thousand cases of influenza are reported in Buenos

To Manufacturers Engaged in Essential Industries or in War Work

THE United States Government has found it necessary, in order to effect a general saving of fuel, iron and steel, to considerably curtail the business of *all stove manufacturing concerns*.

This leaves us, or will very shortly, with a large excess capacity available for war work, or work classed as "Essential" on which U. S. priority orders are available. This concern, one of the largest and best known in our industry, in the country, was established in 1846. We now have a big up-to-date plant, equipped in the most modern manner and backed by a corps of experienced men, capable of handling any proposition in our line which you can put up to us.

We especially solicit work from other manufacturers, in the following lines:

- 1—Vitreous Porcelain Enameling on Steel or Cast Iron—all colors.
- 2—Sheet Metal Work—all kinds.
- 3—Nickel Plating and Polishing.
- 4—Japanning on Steel or Cast Iron and Electro Galvanizing
- 5—Gray Iron Castings—all kinds.

For handling Vitreous Porcelain Enamel Work, we have a big capacity and one of the largest and best equipped enameling plants in the U. S.

For Sheet Metal Work, we have sheet steel and metal stamping machinery for employment of 100 men.

For Nickel Plating and Polishing, we have capacity for the employment of 100 men with all modern equipment.

For Japanning and Electro Galvanizing on steel or cast iron, our company is well equipped—has large capacity for both.

For handling Gray Iron Castings, we have 100 moulding machines with capacity for 250 moulders. Also cleaning mill capacity for foundry output including sand blast.

We are also in a position to make cast iron garbage incinerators and cast iron latrine incinerators (Conley Pat.). We have manufactured, at various times, a considerable line of Enameled Hospital Supplies and kindred lines and can handle any work of this nature required. The floor space available is about 360,000 sq. ft. We employ over 600 men and are in a position to serve you promptly and efficiently. We make a specialty of handling big jobs on short notice, and have a wide reputation for doing things *right* and *on time*.

Tell us about your needs and we will have our representative call—or will take the matter up with you by mail—and estimate on the cost, time of delivery, etc. **WRITE, TELEPHONE or WIRE US AT OUR EXPENSE.**

**Innumerable
Construction and Specialty Uses**

It is a far cry from the storage battery separators of U. S. submarines to the leaching vats of a Montana mine, then to the clock hands on the Boston Custom House, but these merely suggest the wide variety of the uses of California Redwood.

Because of its remarkable resistance to rot, fire and the action of the elements, its permanence of shape under most trying conditions, its light-weight and ease of working, California Redwood is "indicated" for innumerable construction and specialty purposes.

Industrial construction—foundations, framing, siding for factory, warehouse and cantonment buildings; industrial housing; fire walls and fire-door cores; block flooring and street paving; insulation in cold storage plants; concrete forms; incubators, organ pipes, fireless cookers, venter cores, ship interiors—and so on without end.

Manufacturers, engineers, architects, all users of wood are invited to write us for full information regarding Redwood for specific purposes. Ask for "Redwood for the Engineer," "Specialty Uses of Redwood" and "Redwood Block Flooring and Paving."

October 23.—A dispatch from Buenos Aires states that South America is to be organized for Y. M. C. A. war-work along the same lines as the European countries.

The British House of Commons adopts a resolution in favor of women sitting in Parliament.

October 24.—London reports that Spanish influenza of the most virulent type yet experienced is causing many deaths in England, Ireland, and Scotland. Schools are being closed all over England. The epidemic is reported very severe in Germany, and all schools, theaters, and cinemas have been closed in Copenhagen.

October 25.—Dutch newspapers report Holland shipping firms taking steps preparatory to resuming regular trips to England and America in consequence of the withdrawal of the U-boat menace.

October 26.—Vancouver reports the foundering of the steamship *Princess Sophia* on Vanderbilt Reef with the loss of 268 passengers and crew of 75 men.

A dispatch from London notes that the crew of the vessel on which Arthur Henderson, British labor leader, and Camille Huysmans, Belgian Socialist, had booked passage for France, refused to sail with "pacifists and pro-Germans," and the trip was abandoned.

Washington receives an official telegram from Basel stating that the National Jugo-Slav Council has taken over the Government of Croatia.

Copenhagen cables Washington that in the course of a joint secret session of the Danish Riksdag, a resolution was adopted demanding the recession of Schleswig to Denmark.

A resolution adopted by the Council of the Chamber of Shipping of the United Kingdom declares that German ships should not be set free after the war "to extend their share of the world's carrying trade, and so profit by the losses which their Government, by means mainly piratical, had inflicted upon the ships of the Allies."

According to advices received from Rotterdam by the Commission for Relief in Belgium, 32,000 civilians have refused the request of the Germans to evacuate Tournai, which is being approached by the British forces.

October 27.—Amsterdam gets a telegram from Kiel stating that a new Ukrainian Ministry has been formed with Mr. Lisogub as Premier.

October 28.—Announcement is made in the House of Commons that since the beginning of the war the British have

SINCE 1881

"The NIGHTwear of a Nation!"

The Cough that Lost a \$1,000 Order

"Take it from me," said the crack salesman, "that buyer was the founder of the Show-Me Club. He was the Prince of Listeners and King of the Mutes. He just sat there and stared at me with a fishy eye. He had a thousand dollar order tucked under his blotter. I went to it, in all the seven languages of salesmanship, ancient and modern. I sure did spray him with speech. And boy, he began to *come*. His cigar went out. His jaw dropped.

His fingers began to worry the ends of that pink order-blank. And just as I was about to give him the closing hymn, that blamed tickle in my throat got me good—and I *coughed*—once, twice, and then some. When I could open my eyes again, he was sort of shaking himself, as if he'd just come out of a trance—and he had, too. The pink sheet was gone again, and he just said 'Nothing doing.' What do you know about that?"

It isn't fair to yourself or anybody else to go round coughing. The worst of it is, it's so unnecessary.

Smith Brothers S-B Cough Drops relieve coughing. And they often keep a cough from developing into a sore throat or cold. Keep a box in your pocket, another in your desk, another at home.

Pure. No drugs. Just enough charcoal to sweeten the stomach.

One placed in the mouth at bedtime will keep the breathing passages open.

Drop that Cough
SMITH BROTHERS *of Poughkeepsie*

'Ever-Ready'

ARMY RAZOR

The 'Ever-Ready' Safety Razor follows the flag of every allied nation.

From the Alps to Siberia, from Belgium to Palestine, it is there, —the most handy, the most useful, the most indispensable part of the soldier's and sailor's personal equipment.

The new case is made of staunch, waterproof, khaki fabric, with compartments for holding the 'Ever-Ready' frame, handle and two metal blade sheaths with blade supply.

'Ever-Ready' Blades are the keenest, cleanest, finest blades made. The harder your beard and the more tender your skin, the more you appreciate the "Radio" blades that come in each 'Ever-Ready' set. Sold the World over.

This Home Repair Guide Free

To Every Tire User

No matter what kind of tires you
use, send us your address and we will
mail you, without cost, one copy of
this valuable repair guide—"Guide to
More Tire Mileage."

Now that most service stations are
running on short hours and tires are
costly and hard to get, it is more im-
portant than ever that you repair your
own and make them work out every
dollar that you put into them. "Guide
to More Tire Mileage" tells just what
you've always wanted to know about
repairing.

Inner tubes—tube punctures—tube
blowouts—valves—rut worn casings—
misapplication of chains—under in-
flation—rim cuts—bad alignment—
street car track wear—tread blowouts—
plain cuts—small inside fabric
breaks—fabric breaks near bead—
tread patches, etc.

Many Illustrations Shown

These and many other causes of
tire wear illustrated in halftone repro-
ductions of actual worn tires. This
valuable information all free to you
regardless of what kind of tires you
use. Don't wait. Send your address for
one of these valuable books while the
edition lasts. No obligation whatever.

This educational booklet on Pyorrhea together with sample of Pyorrhoeide Powder, sent free on request.

PYORRHEA
(RIGGS' DISEASE)

Its Causes, Effects,
Treatment, and
Prevention

Prevent Pyorrhea

- do not neglect the warning symptoms
- tender, spongy, bleeding or receding gums

The prevention of pyorrhea requires that the gums be kept firm and healthy, and the teeth free from mucoid deposits and the daily accretions which burden and form tartar. A dentifrice to be effective must increase the vitality of the gums and establish greater resistance to the destructive germs ever present in the mouth, as well as thoroughly clean and polish the teeth.

Pyorrhoeide Powder is specially compounded to meet these requirements. It is not simply the product of a chemist's laboratory; it has been scientifically developed and tested, since 1908, at clinics devoted exclusively to pyorrhea research and oral prophylaxis.

Thousands of leading dentists prescribe and employ Pyorrhoeide Powder because these tests have demonstrated that it is a most effective means for correcting sore, bleeding, spongy and receding gums. It is unequalled as an aid

in the prevention and home treatment of pyorrhea.

Pyorrhoeide Powder removes the mucoid plaques or films and the daily accretions which form tartar (tartar is the principal, initial cause of pyorrhea). Its use helps to make soft, spongy gums hard and firm and to heal bleeding gums. It is of the highest efficiency as a cleanser and polisher of the teeth. Its superiority for general use as a dentifrice has been abundantly demonstrated.

If pyorrhea symptoms exist in your mouth, buy a box of Pyorrhoeide Powder. Its soothing and healing action will show you why it has received the endorsement and confidence of the dental profession and of thousands of users.

All good drug stores and dental supply houses sell Pyorrhoeide Powder. It is economical because a dollar package contains six months' supply.

Send for Sample and Booklet The booklet illustrated above gives, in non-technical language, the important facts about the prevention and treatment of pyorrhea which have been discovered through years of research in the Pyorrhoeide Clinic. It makes clear the best method of co-operating with your dentist by the proper daily care of your gums and teeth.

We will be glad to send this booklet to you without charge, accompanied by a sample of Pyorrhoeide Powder.

The Three Stages of Pyorrhea

Beginning

Deposits form on teeth at and under the gum margins, causing the gums to become inflamed, red and somewhat swollen. Teeth are firm but the gums are tender and bleed easily when tooth brush is used or coarse food masticated.

Intermediate

Considerable gum tissue becomes destroyed, exposing the roots of the affected teeth. The gums are much swollen and have a purplish color. The walls of the tooth sockets break down, causing the teeth to become loose. Teeth are quite tender on mastication. Pus oozes from around the affected teeth.

Advanced

In the advanced stage there is an extreme loosening of the teeth, a great loss of supporting bony structure and extensive pyorrhea pocket formation and copious flow of pus. The system absorbs this disease-producing pus. The entire health is often undermined.

The Dentinol & Pyorrhoeide Company
1476 Broadway, New York City

show a death-rate in army-camps, when the epidemic was nearing its peak, of 206.4 per thousand of those stricken, an increase of 150 per thousand over the previous week. Before the outbreak the rate was between two and three per thousand.

General March states that every American soldier wounded in France, and all who become ill or are gassed, will be reported and their parents, relatives, and friends notified.

General Pershing cables a stirring appeal to miners to stand behind the American soldiers, telling them that "the more coal you produce the sooner we shall have peace."

The National Security League reports the enrolment of 500,000 women in its patriotic educational campaign.

October 20.—It is estimated that the Fourth Liberty Loan has exceeded the \$6,000,000,000 mark and that the subscribers number nearly 25,000,000.

Figures given out by the Geological Survey show that coal production during the first six months of the 1918 coal year fell short by over 11,000,000 tons of meeting the estimated war-fuel needs.

Forty-five influenza relief-stations are established in New York City.

October 21.—The Enemy Property Custodian announces the seizure of Gustendorfer Brothers, Inc., a \$1,000,000 corporation engaged in the manufacture of bronze paints, varnishes, and enamels. Ninety per cent of the stock is enemy owned.

The Shipping Board asks Congress for an additional \$120,000,000 for ship construction, making a total of \$3,004,000,000 for that purpose.

The Public Health Service receives reports of an improvement in the influenza situation in six States, but it is still spreading in twenty-seven other States. There is also a slight increase in both influenza and pneumonia in army-camps.

Food Administrator Hoover takes steps to feed nearly 10,000,000 repatriates who, it is expected, will be released from the areas evacuated by the retreating enemy.

October 22.—Army chaplains with the American Army have been informed officially that all the American dead in France will be brought home after the war.

The Railroad Administration has awarded contracts for its first towing steamers and forty steel barges for use on the Mississippi and tributary rivers. The total price is \$6,170,000.

Out of 10,000 soldiers who voluntarily took the new vaccine treatment as a preventive against pneumonia, reports Lieutenant-Colonel H. B. Beery, surgeon at Camp Dix, N. J., not one has contracted the disease.

October 23.—Secretary Daniels tells the House Naval Committee that 200,000 recruits for the Navy will be needed during the coming year, mainly to man merchant ships in the government service.

The War Department prohibits for the duration of the war all activities connected with fraternal organizations in colleges and universities at which student army-training corps have been established.

The annual report of the Red-Cross War Council shows that one-fourth of the entire population of the United States is included in the organization's membership. Through paid-in gifts and pledges they brought in last year a net total of \$325,000,000. At Christmas, states the report, "we shall ask the whole American people to answer the Red-Cross roll-call."

October 24.—Postmaster-General Burle-

National Savings Bank of Boston. Established 1887. Capital and Surplus, \$19,500,000.

Protectograph Check Writer

TEN DOLLARS SIX CENTS

The World's Standard of Protection

Writes and protects the full amount in the body of the check, in dollars and cents (words, not figures) exact to the penny, in two vivid colors "shredded" through the paper. A complete word to each stroke of the handle. Quick, Legible, Uniform. Standard model as illustrated \$50. Other models in all sizes and prices up to \$75.

**GWTCO
PROTOD
BOND**

PROTOD Forgery-Proof Checks and Drafts are printed or lithographed to order only for owners of Todd machines only.

PROTOD defeats the "professional" forger. Chemicals in the fibre of the paper prevent changing the name of payee to some other name or to "cash" or "bearer," etc.

Every sheet of PROTOD is checked and safeguarded like U. S. bank-note paper, so there is no way for a crook to duplicate a genuine PROTOD Check.

World's largest makers of checks and check protecting devices

How Much in the Bank?

That's the "question of the hour" in most any office.

Not, how much are you worth, but how much *in the bank*, subject to check.

It's the bank balance that furnishes the vital spark—to meet payments, to keep things moving. If something goes wrong with your checks the "spark" goes out. That involves negotiations with your banker and maybe a whole lot of trouble to get things going again.

In these days, when practically everything is done through banks, by check, there is no excuse for failure to use—

TODD SYSTEM of Check Protection

Protectograph Check Writer to prevent "raising" of the amount on any genuine check. PROTOD to prevent tampering with checks and common forms of forgery. The Todd System carries a valid Indemnity Bond legally insuring the user and his bank, jointly. It is iron-clad and leak-proof. It means *real security* for every going concern.

A famous forger known as "Scratcher," now in State Prison, has just written a little book telling the sad story of his downfall through easy money on checks—"inside information."

Pin this coupon to your business letter-head and you will get a copy free.

Old Virginia Fruit Cake

FOR the family dinner, the unexpected guest, the holiday treat, there is nothing so good as Bromm's Old Virginia Fruit Cake, made for 52 years from the same old recipe, which calls for quantities of the choicest fruits, nuts and other good things. Packed in the wax tin box, it keeps indefinitely, like old wine, and is always deliciously fresh. We ship prepaid, by parcel post, delivery guaranteed, to any address in U. S. Prices: 2-lb. tin \$2.33; 4-lb. tin \$4.66; 6-lb. tin \$6.99. Order today for your own table, and let us send one for you to a friend, or your soldier boy as a holiday gift.

L. BROMM BAKING CO.
512 E. Marshall Street Richmond, Va.

Sold in New York by Park & Tilford. Exclusive selling rights in other cities open to high-grade fancy grocers.

son announces that arial mail-service between New York and Chicago will be started between December 1 and 15.

Richard M. Hurd, chairman of the boycott committee of the American Defense Society, declares that the 10,000,000 pounds of German-made toys which arrived in this country October 23 constitute the advance-guard of a German commercial invasion of the United States.

The War Industries Board issues regulations restricting the production of lumber to the filling of essential requirements.

San Francisco passes an ordinance compelling the wearing of gauze masks by every person in the city as a means of preventing the spread of the influenza epidemic.

October 25.—President Wilson issues an appeal to the country for the election of a Democratic Senate and House. Many critical issues depend upon the people's verdict, he says, but he has "no thought of suggesting that any political party is paramount in matters of patriotism." Yet "the difficulties and delicacies of our present task are of a sort that makes it imperatively necessary that the nation should give its undivided support to the Government under a unified leadership and that a Republican Congress would divide the leadership."

In a joint statement Republican leaders in Washington object to the President's contentions, announce their unswerving loyalty to the nation's war-aims, and commit the Republican party absolutely to the unconditional surrender of the Germans.

All organizations seeking funds for war-relief work, should, if possible, states Secretary of War Baker, be absorbed in the following agencies recognized by the President: Y. M. C. A., Y. W. C. A., the Salvation Army, the Knights of Columbus, the Jewish Welfare League, the War Community Service, and the American Library Association.

Connecticut and Massachusetts munition-manufacturers are officially advised to speed up production because of a crisis that calls for unlimited exertion.

October 26.—The New York Federation of Women's Clubs announces that thousands of clubwomen are determined that the German toys recently received here shall not be placed on sale in America, and that plans are afoot to send them back to Germany or have them destroyed.

Professor Masaryk, president of the Mid-European Union, reads from the steps of Independence Hall, Philadelphia, a declaration of independence in behalf of the 65,000,000 people of the oppressed nations of Middle Europe.

The Senate Military Committee is told by the War Department that the total world's shipping tonnage is only seven per cent. less than at the beginning of the war.

Between September 2, 1914, and October 15, this year, the War Risk Bureau wrote \$1,846,497,000 insurance on ships and cargoes, on which premium payments amounted to \$45,825,000 and losses paid totaled \$29,775,000, giving a profit to the Government of \$16,050,000.

October 27.—Clocks are turned back one hour at 2 A. M. and standard time resumed throughout the country.

Will H. Hays, chairman of the Republican National Committee, issues a reply to the President's appeal for the election of a Democratic Congress. Assuming that the President has impugned the loyalty and denied the patriotism of the Republican party, he urges Republicans to accept the challenge and fight back.

Fuel Administrator Garfield states that

The Coward Shoe

for Foot-Wise Army Men

Here's a shoe by Coward that is equal to the rigors of military service. Army men find that it meets its duties willingly and persistently. It is as good in the field as at inspection.

True to the regulation last but put together of excellent leathers with particular care as to joining and stitching. It is as waterproof as a leather shoe can be made. Hard or soft toe-cap. We are experienced in fitting by mail.

THE HOUSE OF
DAVOL

**"My Father,"
said the Druggist,**

*"began selling Davol Rubber Goods
over this very counter nearly 50 years ago.
He built up a great business because of their
wonderful Quality and Service. You can safely
buy this water bottle (or any other Davol product) on
this manufacturer's reputation for making honest merchan-
dise. Our own reputation goes along with all rubber goods
bearing the Davol trade mark."*

"Davol" stands for Quality and Service

Rubber Goods are generally needed in times of stress — sudden sickness — therefore it never pays to buy the "cheap" kind. The House of Davol has won its place to leadership through its steadfast determination to give the great American public a square deal by using the best materials and expert workmanship that money can positively buy. Quality and Service are and have been the backbone of this great institution for almost half a century. Never buy rubber goods on looks or price — you can always trust the name "Davol" to protect your interests. The goods listed below comprise our No. 59 Ear and Ulcer Syringe; No. 682 Water Bottle; No. 672 Fountain Syringe; No. 502 Ice Cap; No. 147 Anti-Colic Nipples; No. 52 Nasal Douche, and No. 210 Breast Pump.

Whitman's
Chocolates

there is no danger of a coal-famine this winter.

The Federal Food Board opens a campaign for more intensive voluntary conservation so that the pledge to provide our Allies with 17,550,000 tons of food this year shall be kept.

October 28.—In a letter to Senator Simmons, of North Carolina, President Wilson disavows any intention, through paragraph 3 in his fourteen peace terms, of advocating free trade for the world, irrespective of the wishes of the nations. Colonel Roosevelt attacks the President's appeal to the country in a speech in New York City. The "appeal" is also vigorously discussed during a partisan debate in the United States Senate.

New cases of influenza, numbering 2,812, are reported in Greater New York, a decrease of 2,085 from the preceding day's figures.

Fifteen thousand workers in Manhattan and Brooklyn clothing factories walk out on strike for a 20 per cent. increase in wages and a forty-four-hour week.

Shocked at the admittance of German toys into this country, and "mindful of the unspeakable outrages upon children perpetrated by the bloody hands that fashioned these toys," the Toy Manufacturers of the United States pass a resolution asking Congress to prohibit the further entry of German-made toys or other goods until the Central Empires have submitted to an Allied peace.

October 29.—Charles Evans Hughes delivers an address before the Union League Club criticizing President Wilson's appeal to the nation. The League of Republican Clubs, of New York, issues a declaration of its attitude toward the appeal.

The Republican National Committee's report on pre-election expenses shows receipts of \$469,345 and expenditures of \$469,096.

Try Brushing Teeth In This Efficient Way

All Statements Approved by High Dental Authorities

The Old Ways Leave a Film

A million people are now brushing their teeth in a new way. And countless dentists are constantly urging others to do so.

It is recognized generally that old methods were unsatisfactory. Teeth discolor and decay despite the daily brushing. Tartar forms, pyorrhea starts. In fact, tooth troubles have constantly increased.

Now science knows the reason. It lies in a film—a slimy film—which constantly forms on the teeth. It clings to the teeth, gets into crevices and resists the tooth brush.

Old-time methods removed debris. They made the teeth seem cleaner. But they did not end that film.

That film absorbs stains and discolors. It hardens into tartar. It holds food which ferments and forms acid. It holds the acid in contact with the teeth to cause decay.

Millions of germs breed in it. They, with tartar, are the chief cause of pyorrhea. Thus, nearly every tooth trouble is now traced to this clinging film.

A way has been found to combat that film. For general use it is embodied in a dentifrice called Pepsodent. Many able authorities have proved its effects in four years of clinical tests.

We now ask you to prove them by using a special tube. See for yourself—in your own home—what even a short use can do.

This Test Will Convince You

Analysis shows that the film is albuminous. So Pepsodent is based on pepsin, the digestant of albumin.

The purpose is to dissolve the film, then to constantly prevent its accumulation. At the same time Pepsodent applies to the teeth an ideal polishing agent.

Pepsin long seemed impossible. It must be activated, and the usual agent is an acid, harmful to the teeth.

But science has solved this problem. A harmless activating method has been found. Five governments have already granted patents. That method—used in Pepsodent—makes possible this pepsin application.

Thousands of dentists, including high authorities, have put Pepsodent to test. They have watched its results for four years. Its effects have been proved beyond question. So now we enable all to prove them by a home test.

Send us the coupon with 10 cents for a special tube. Use it like any tooth paste and watch the results.

Note how clean your teeth feel after using. Mark the absence of the film. See how teeth whiten—how they glisten—when the fixed film disappears.

This test is important to you—don't delay it. When you see the results and know what they mean, you will never return to the old ways.

Cut out the coupon now.

Return your empty tooth paste tubes to the nearest Red Cross Station

BUILDING RETURNS FROM MANY AMERICAN CITIES

REFERENCE was made in a recent issue of THE LITERARY DIGEST to building returns for September from 142 American cities, as given in *Bradstreet's*, and as showing "only half speed, with little prospect of any immediate change." The statement "half speed" was an average that had been obtained from a computation in which all the 142 cities were included. Returns for individual cities were also given in *Bradstreet's*, and will interest readers:

* New work. † Alterations.

RAILROAD EARNINGS NOW HEAVY

For the month of August the operating revenues of American railways reached \$502,759,622, which was a record surpassing that of any previous month. It was a sum greater by 7 per cent. than the showing made in July, and disclosed a gain of 37.3 per cent. over the figures for August, 1917. On the other hand, as *Bradstreet's* points out, the total of net revenue from operations, viz., \$143,771,957, was somewhat less in amount than for July, tho it was a rise of 20.5 per cent. over August of last year. After deducting what may be termed ordinary taxes, as distinguished from war-taxes, net operating income for August of this year amounted to \$128,123,081, the increase over August, 1917, being 22 per cent. Operating expenses, aggregating \$358,987,665, increased 45 per cent. over August of last year, expenditures for maintenance of equipment having advanced 93 per cent., and charges for transportation 33 per cent.

Bradstreet's remarks that it is needless to say that the increase in freight as well as passenger-rates "played an important part in expanding operating revenues for the month of August last." The earnings derived from freight amounted to \$349,816,570, the increase over August last year being 39 per cent., while the income from passenger service brought in \$113,651,976, the advance over August, 1917, being approximately 40 per cent. Further:

"Operating revenues for eight months of the calendar year amounted to \$3,051,828,939, an increase of \$440,707,552, or 16.8 per cent., over the corresponding time in 1917; but as operating expenses absorbed \$2,489,862,562, or \$652,607,815 more than in the first eight months of last year, net operating revenues show up at only \$561,966,377, this sum reflecting a

EVERY keen, discriminating man and woman knows what an asset—and comfort—a clear healthy skin is, and in adopting Resinol Soap for their toilet and bath, they find the skin automatically cared for.

Resinol Soap has an unusually cleansing lather, a mild refreshing odor and just enough of the soothing, healing Resinol medication to relieve clogged, irritated pores, and to give the skin that healthy outdoor look which goes with a clear eye and a clear brain.

The same properties in Resinol Soap which make your complexion so clear and fresh, will keep the skin of the man in service healthy and comfortable.

No one appreciates—and needs—the aid of Resinol Soap more than he does. Whether ashore or afloat, "Over There" or still in the United States, his skin and scalp are subject to irritating conditions which make its rich, cleansing lather, and its soothing Resinol medication more than ever welcome. Mail him a three-ounce box today, and see what he says about it in his next letter.

Resinol Soap is sold by all druggists and dealers in toilet goods.

You are enjoying comforts at home. Help the Boys get comforts overseas. Donate to the Y. M. C. A.

Resinol Soap

Your Investment Problem

UNDER present conditions sound investment securities are available at prices which yield unusually attractive returns. In solving your investment problem—in placing your funds or in re-investing your holdings to the best advantage—the Bond Department of this Company can be of service to you.

This department is a complete investment organization, with every modern facility for service to investors. It investigates, examines, and underwrites bond and note issues; buys and sells securities; and furnishes information relating to investments. Through our correspondents in various cities, these facilities are placed at the convenient disposal of our customers outside of New York.

This Company is an organization—of which the Bond Department is a part—covering completely the field of banking and trust service.

Through its Banking Department, the Company transacts a general commercial banking business. As a member of the Federal Reserve System the Company is enabled to extend to its customers the credit facilities and rediscount and collection privileges of a member bank.

Through its Foreign Department and its affiliations and connections throughout the world, the Company affords a complete foreign banking service. It also gives special attention to the banking needs of officers and men in the American Expeditionary Force and other recognized organizations abroad.

Through its Trust Department the Company acts in every fiduciary capacity for corporations and individuals.

Your inquiries as to how we may serve you will be welcomed.

December		270,128,331	224,214,271
Total		\$3,061,496,499	\$2,534,147,670

The operating contracts between the railways and the Director-General of Railroads are still pending. *Bradstreet's* notes that, according to latest accounts, the Interstate Commerce Commission "is largely responsible for the present delay," that body having been charged with the important duty of computing and certifying the amount of rentals based on net operating earnings of the various railways during the three-year test-period. While some delay would naturally be inevitable in a matter of this sort, "the commission seems to have unduly protracted what would seem to be a matter of preparing statistics from its own records."

The distribution of new standard equipment ordered by the Railroad Administration and allotments of its cost among various roads have led to more or less difficulty. Some of the railways were not in need of the new equipment, and could not employ it even if its acceptance was forced upon them by the railroad control. Corporate officials of various companies in consequence opposed the plan, holding that by its adoption they would be charged with, and become responsible for, the cost of large amounts of additional locomotives and cars "which were not necessary for the operation of their own lines and over the use of which elsewhere they would have no jurisdiction." This matter has been "regarded as too important to justify acquiescence by the railway companies without at least a protest."

TOPICS - OF - THE - DAY

THE GERMAN COLLAPSE

WITH THE AMERICAN ARMY AT SEDAN and the British approaching Waterloo, and with the whole southern frontier of Germany open to Allied armies through the surrender of Austria, Germany was doomed from a military standpoint when her representatives met Marshal Foch and Admiral Wemyss to agree on an armistice. Even so, the defeat might have been put off for a short time, perhaps until spring, but for the "red" menace at home. The haste of Germany's rulers to seek an armistice was primarily caused, many of our editors are now convinced, not so much by the foe before them as by the fear of the rising sea of revolution behind them. "These titled murderers," to use the Socialist New York *Call's* apt characterization, "had in their rear the rising rage of the millions of people who had suffered under their autocratic rule, and this rage made any terms that the Allies might propose seem mild compared with the penalties that the German people were preparing to exact from the Junker class, who had sent millions of their sons to slaughter and maimed millions more, consigning them to the horrors of a living death." Germany was a besieged fortress, with no hope of relief and no chance for a successful sortie. Surrender was inevitable. But, as the New York *Evening Post* points out, "if the hopelessness of military victory brought the German Government to the verge of surrender," the need was reinforced by "mutiny in the German Fleet and revolt in the streets of Hamburg." The German Socialists were threatening revolution if their plenipotentiaries came back without an armistice. Here *The Evening Post* finds justification for that policy of delay, that "dangerous" policy of "negotiation" against which President Wilson's critics have cried out. It is now clear enough, at least to this editor, that "it is not the morale of the Allies that has been imperiled, but the morale of the German people that has been broken." And the peace offensive worked hand in hand with the military offensive which has so nearly cleared France of the Teuton invader. "Foch, the master, has played with skilled touch on the keys of a mighty organ from the North Sea to the Meuse; and in the final harmony the American Army has rung true." To the New York *Globe* the capitulation of an isolated and defeated Germany seems to come after all "through a military decision." It says:

"The brave men, living and dead, who have appeared on the battle-field have created the conditions of peace. . . . The toast of the hour is to the soldiers and such decisions as to introduce conscription in this country and to send a great American Army across the seas. Joffre saved civilization at the Marne by his military skill. He saved it again by his robust common sense when he induced our Government, when minds were not made up, to dispatch armed men across the seas."

If Joffre and Foch won the battle for civilization, Germany's generals must be held responsible for losing the battle for *Kultur*, in the opinion of the Brooklyn *Citizen*, which sees in the inferiority of German military leadership the chief reason why Ger-

many accomplished "downfall" and not "world dominion." As we read:

"It was said of the French armies in 1870 that they were lions led by jackasses. The German armies in this war have proved their courage and iron discipline. They, too, were lions in the field, but their generals were jackasses."

Yet, tho the German may have been a lion in the field, he was getting to be a very tired lion. An appeal to the German people from the Berlin Government admitted that the commanders of the Army and Navy as well as the men wanted peace, and the soldiers and sailors were told that continued discipline and order would help to bring it speedily to pass. But the sailors at Kiel thought otherwise and precipitated an outbreak which resulted in the mutiny of practically the entire German Fleet and was a signal for revolutionary outbreaks throughout all northern Germany. There was an unconfirmed report that the immediate cause of the mutiny was an order to sail out and attack the British Fleet in a "forlorn-hope" battle. But Mr. William L. McPherson reminds us in the New York *Tribune* that

"The German Navy has been honeycombed for a couple of years past with disaffection. There was a serious mutiny at Wilhelmshaven in 1917. And it was developed by a debate in the Reichstag that the Admiralty had accused certain Minority Socialist Deputies of complicity in an effort to Bolshevize the fleet. Conditions in the Navy made such propaganda fruitful. Most of the sailors were inactive. Morale decayed while the ships lay idle in port. Volunteering failed to supply crews for the submarines, and the Admiralty had to resort to drafts for this service, which carried with it a practical sentence of death."

Orderly progress toward either a constitutional monarchy under William II. or some other Hohenzollern or a Wittelsbach or toward a republic seems rather unlikely to our editors as they note the raising of the red flag in the great industrial centers of northern Germany. They remember what happened in Russia and what is happening in Austria and expect to see a spread of Bolshevism to Germany. The Newark *News* reminds us that "it has been the history of countries when their defeat was so utter as to produce a revolution that the transition was accompanied by the temporary ascendancy of an extremely radical element." The New York *Call*, a spokesman of the American Socialist party, sees a race between reform and revolution in Germany and believes that power is drifting toward the Socialists. It calls attention to the influence of revolutionary movements in Austria, Bulgaria, and Bohemia, and notes a report that "the Russian revolutionists have been sending an average of fifty revolutionary propagandists over the German frontier each day." Not the least of these propagandists, apparently, was the Bolshevik Ambassador at Berlin, whose activities in this direction recently led to his dismissal by the German Government and the rupture of diplomatic relations between Berlin and Moscow. While this Socialist paper naturally welcomes these developments, other journals of more conservative views are

somewhat apprehensive of the "dread specter" of anarchy in Central Europe. The New York *Evening Sun* admits the general supposition that the Germans are "too enlightened, too thoroughly disciplined" to go Bolshevik. But this danger, it declares, exists in Germany in a most real form. We read on:

"Throughout the war riots and strikes have proclaimed its

GERMAN "REPENTANCE."

—Knott in the Dallas News.

presence, and none the less loudly because suppressed by the ruthless hand of militarism. Germany has long been the home of radical ideas, and from Germany have gone out leaders in the radical movements of other lands.

"Nor can we close our eyes to the fact that the German people, who now must take into their hands the control of the state, are almost entirely untrained in self-government, that they have throughout their history displayed no capacity for managing their own affairs."

But whatever the immediate cause of her downfall, whether we think of Germany as yielding to the threat of Foch's victorious armies on the west, or of the British blockade on the north, or of Bolshevism in Russia on the east, or of Austrian anarchy on the south, the hour had come, declares Mr. Frank H. Simonds in the New York *Tribune*, when "Germany must surrender or die; die as Russia has died, and as Austria is dying." Mr. Simonds continues:

"Whatever Germany saves from the wreck now she will save by negotiation and not by fighting. The military phase of the war is already over, and the problem which remains is whether Germany in the peace conference can repeat the triumph of Talleyrand at the Congress of Vienna and save by diplomacy what she has lost by arms. This is the great peril; this is the remaining danger for our alliance."

While the armistice terms were doubtless formulated by the Versailles conference some days before the meeting of Marshal Foch with German representatives, they were not given out, but a statement was made public which contained the chief conditions of peace with Germany. Thus the country knew the broad conditions of permanent peace before it knew the terms on which the fighting was actually to stop. In a note sent to the Swiss Minister for transmission to Germany, Secretary Lansing quoted the following memorandum from Versailles:

"The Allied Governments have given careful consideration to the correspondence which has passed between the President of

the United States and the German Government. Subject to the qualifications which follow, they declare their willingness to make peace with the Government of Germany on the terms of peace laid down in the President's address to Congress of January, 1918, and the principles of settlement enunciated in his subsequent addresses:

"They must point out, however, that Clause 2, relating to what is usually described as the freedom of the seas, is open to various interpretations, some of which they could not accept. They must, therefore, reserve to themselves complete freedom on this subject when they enter the peace conference.

"Further, in the conditions of peace, laid down in his address to Congress of January 8, 1918, the President declared that invaded territories must be restored as well as evacuated and freed. The Allied Governments feel that no doubt ought to be allowed to exist as to what this provision implies. By it they understand that compensation will be made by Germany for all damage done to the civilian population of the Allies and their property by the aggression of Germany by land, by sea, and from the air."

The Secretary of State added that the President had instructed him "to say that he is in agreement with the interpretation set forth in the last paragraph of the memorandum above quoted," and to notify Germany that Marshal Foch was authorized to meet representatives of the German Government "and to communicate to them terms of an armistice."

The two amendments to President Wilson's fourteen points, insisting on reparation and limiting the "freedom of seas" clause, seem altogether satisfactory to our press. In insisting on its own interpretation of the "freedom of the seas" the Versailles Council, notes the New York *Evening Sun*, "has avoided the subscribing of a pledge to a catchword that Germany long used as a cloak for its own commercial and naval propaganda." Furthermore, this New York daily can see no reason why the right to collect indemnity for damages sustained from a defeated enemy was not recognized from the start. "Peace without victory might have eliminated the restitution due to victims," says *The Evening Sun*; "but we are to have peace with victory." This note of President Wilson's is "acceptable to the advocates of a strong and just peace," the New York *Globe* believes, because it is "not a dialectical one and makes no attempt to camouflage what it means." The New York *Evening Post* is convinced that it was "good sense and good tactics" for the Allies before imposing upon Germany an armistice which was to leave her at their mercy to announce "that the peace

FRAMING THE TERMS OF PEACE.

—Orr in the Chicago Tribune.

terms which they are to exact will be in general only those to which Germany had professed willingness to submit."

The armistice terms to be submitted to Germany were foreshadowed by those granted to her subordinate accomplices. The beginning of the end of the war was seen when Bulgaria

threw up the sponge on September 30 and gave the Allies full military use of her territory and means of transportation. Almost exactly a month later, at noon on the 31st of October, the terms of the armistice between Turkey and the Allies went into effect. They were described by Lord Robert Cecil as "complete and unconditional surrender," and Turkey was at once reduced to military impotence. The Dardanelles and the Bosphorus with their fortifications were opened to the Allies, who entered Constantinople a few days later. All Allied prisoners were to be handed over to the Allies without reciprocity; the Turkish Army was demobilized, and her Navy surrendered. Turkish troops were to withdraw from northern Persia and other occupied non-Turkish territory. The Allies were given the use of all means of transportation and communication; all garrisons in Arabia, Syria, and Mesopotamia were at once surrendered. Turkey was to cease all relations with the Central Powers; the Allies were, of course, given such rights and facilities as were necessary to enforce all the provisions of the armistice.

The collapse of Turkey gave the Allies at once a new responsibility, as the *Newark News* points out. There are four million utterly destitute people whom we must care for and several new nations which must be started on the road to self-government. The great and crying need of the situation, says the *New York Evening Post*, is that these races be given the assurance at the peace table that they will have the separate and independent political life they have for generations been fighting for. France and Great Britain have officially stated that their aim "is the complete and final liberation of the peoples so long oppressed by the Turks and the establishment of governments and administrations deriving their authority from the initiative and the free choice of the native populations," and have announced that they will encourage and help the establishment of native governments in Syria and Mesopotamia.

American responsibility in the old Turkish Empire is recognized by a number of authorities. A former American Ambassador to Turkey, Mr. Oscar S. Straus, thinks "it will be to the welfare of the Turkish people if Turkey would be apportioned among England, France, and Italy, and be ruled in the same manner as Egypt is ruled." Another former American representative at the Porte, Mr. Henry Morgenthau, has publicly asserted that America must play a large part in rebuilding Turkey. Dr. James L. Barton, a missionary authority on the Near East, hears that Viscount Bryce favors the United States taking the major part in reorganizing and reshaping the government of Turkey, Bulgaria, and the Balkan peninsula. For one thing, says Dr. Barton, this nation is not suspected of colonial ambitions in that part of the world, and would not be likely to stir up jealousy. Furthermore, "there is no country in the world which stands so close to Turkey as does the United States, as a result of missionary work which it has done there."

Austria's defeat in the field at the hands of the Italians and their Allies was accompanied by the break-up of the Hapsburg Empire and appearance of the red flag in Vienna, Budapest, and other Austro-Hungarian cities. Austria was in no condition to object to the drastic terms submitted to her, altho Emperor Charles refused to sign them as humiliating and dishonorable, and the armistice finally received the signature of the Austrian Chief of Staff. The Austrian terms, which went into effect on November 4, included the cessation of hostilities, the demobilization of the Austrian Army, the withdrawal of all forces on the Italian front, and the surrender of half the Austrian military equipment. Besides evacuating invaded territory, Austria was to withdraw from the Trentino and part of the Tyrol, and from Istria, Dalmatia, and most of the Adriatic

islands. Thus the *irecudenta* is in Italy's grasp and the Allies control the shores of the Adriatic. The armistice gave the Allies free use of all roads, railways, and waterways in Austria and the control of all necessary strategic points. As in the case of Turkey, Austria was obliged to give up all Allied prisoners without reciprocity. The naval conditions of the armistice included the surrender of most of the Austrian Navy and the laying up of the rest, and the freedom of Allied navigation in Austrian waters, without any modification of the Allied blockade.

The terms to Austria, as several American editors remarked,

From the *New York Tribune*.

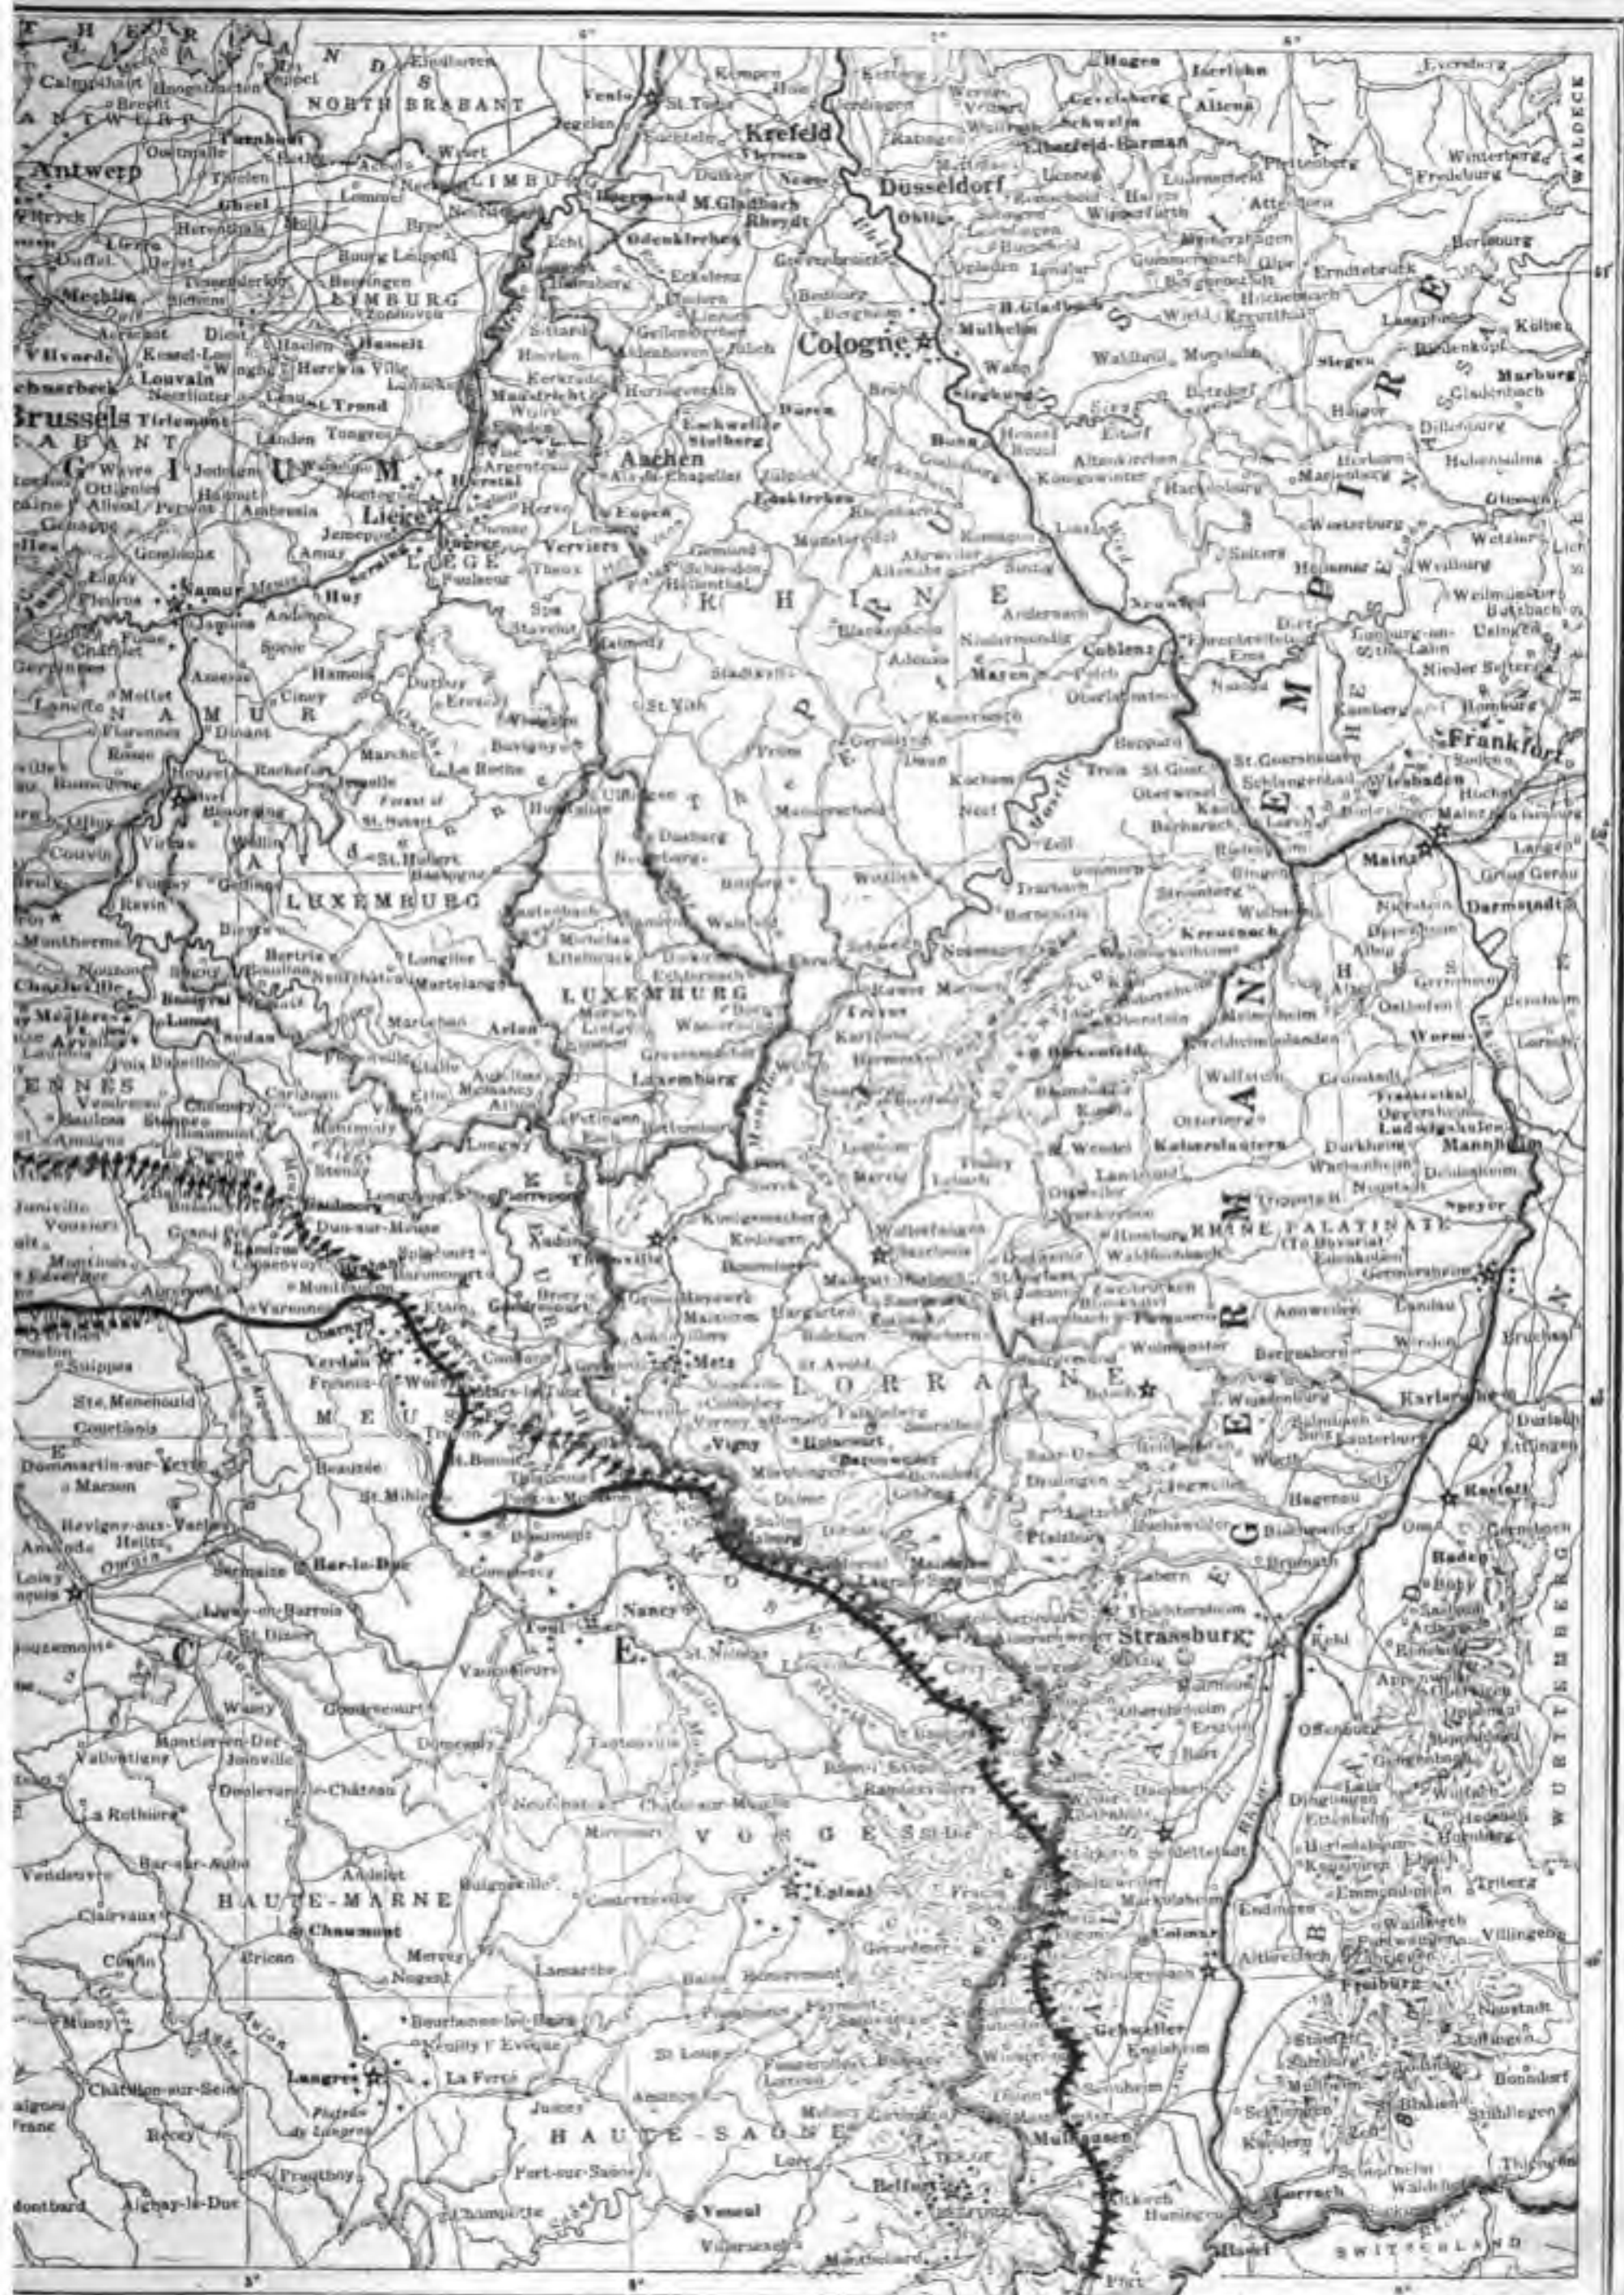

THE AFTER-WAR MAP OF EUROPE.

As envisaged by Mr. Frank H. Simonds, of the *New York Tribune*.

were drastic enough to please everybody. After their publication it was learned that in the last Italian offensive Austria had lost 300,000 men in prisoners alone and not less than 5,000 guns. The retreat developed into a rout, and after the armistice was signed dispatches told how for many days the hungry, disorderly soldiers of what was once the Austrian Army poured through the passes of the Alps, while the citizens of Vienna feared that they would sweep down into the capital as a destroying mob.

It has been difficult to keep up with the dissolution and democratization of the Austrian Empire. The most important fact is the split into Hungarian, German, Czech, and Slav nations. In Hungary, Count Tisza, the former Premier and a leader in the moves which brought on the war, was assassinated by soldiers, according to one story, in his own home. Count Karolyi, whose grandmother's famous curse on the Hapsburg has found complete fulfillment, seems to have resigned his leadership of the new Hungarian Government and a plebeian is promised to determine the permanent government régime. Both Czechs-Slovaks and Jugo-Slavs have adopted the republican form of government and have elected presidents. In Bulgaria, King Boris, who succeeded his father, Ferdinand, on the latter's abdication, was deposed after a few weeks' reign and made way for an agrarian republic headed by the peasant leader Stambuliwsky. In German Austria a socialist republic was proclaimed, altho there seemed to be no great haste in getting rid of Emperor Charles. The *New York Tribune* reminds us that German Austria is itself as much of a mosaic as was the Austrian Empire. Vienna may be "red," but the Tyrol and upper Austria are even now "antisocialist and monarchial," serving "as a makeweight against excesses of radicalism and Bolshevism" in the industrial centers. Whatever happens to Germany, concludes *The Tribune*, "the end of the war will see Central Europe turned into a vast proving-ground for the democratic experiment."

WILL IT WORK?

PRESIDENT WILSON TO FACE A REPUBLICAN CONGRESS

PRESIDENT WILSON'S APPEAL for the unconditional surrender of partizanship in politics has been answered by the country, but with implications and under conditions capable of almost as many interpretations as there are party managers, great national leaders, and others who can command a newspaper hearing. "If you have approved of my leadership, and wish me to continue as your unembarrassed spokesman in affairs at home and abroad," wrote the President in a general appeal to his "fellow countrymen" on October 25, "I earnestly beg that you will express yourself unmistakably to that effect by returning a Democratic majority to both the Senate and the House of Representatives." A Republican majority in the House, and apparently also in the Senate, is the answer, but, even in the moment of victory, the *New York Evening Sun* (Ind.) cautions these new Republican members:

"They are not put in power by the people to run amuck against the President or the Democracy. They are not sent to Washington to undo anything that has been well done. Above all, they are not chosen to obstruct or harass the Administration in any way.

"Their mandate is to add their energy and their efficiency to those of the President and his advisers."

The Republican *New York Tribune* accepts the Republican success rather as a "rebuke" to the President's desire for a "complete subordination of the legislative branch to the will and mind of the Executive" than as a repudiation of Mr. Wilson's leadership, and both independent and Democratic organs are strongly of the opinion that the country's Republican answer to Mr. Wilson's request for approval applies to matters less vital than the Presidential leadership. Says the *New York Globe* (Rep.):

"The election, altho it repudiates the proposition that it is improper for any citizen to differ with the President in the domain of ideas and that all Americanism and wisdom are inside his head, is not a repudiation of the war-policy of the Administration or even of its peace policy, now that he has ceased lone-hand playing and consented to clarifying interpretations of his fourteen articles."

An "all-American Senate and House" is the one result most

generally admitted, with mutual felicitations, by Republicans, independents, and Democrats alike. "I consider it a victory for Americanism rather than for Republicanism," declared Mr. Roosevelt, in his after-election statement, and the *New York World* (Dem.) publishes tidings of the same import from its Washington correspondent. Even in the case of this one point of agreement, however, some are pointing out that Victor Berger (Socialist), of Wisconsin, under indictment for war-obstruction, has been elected over his more patriotic opponents, and, in the words of the Democratic *New York Times*, "Senator Norris (Republican), of Nebraska, is borne back to the Senate in the rejoicing arms of the solid pro-German vote."

Republican explanations of their own success fall generally under the head of their unqualified support of the war, including a policy of unconditional surrender. The state of opinion in the West, where the swing from Democracy to Republicanism was one of the surprising features of a generally surprising election, is indicated in some measure by frequent editorials calling for that same "unconditional surrender" which was to come sooner than any of the editors seemed to suspect. Says the *Denver Rocky Mountain News* (Ind.), one of the papers which feared most lest the "fruits of victory might be lost by diplomacy":

"If President Wilson had gone into the innermost vault of the Treasury building and filled his ears with insulated cotton he would have heard the sound of the American Voice. . . .

"That vibrant Voice spoke in measured terms against note-writing or having dealings with a government and a people that had committed the Unpardonable Sin. It warned Diplomacy that it must not turn into Duplicity or there would be a terrible accounting."

"The Voice was heard in New England and it gathered strength and took its way out across the nation, into the great manufacturing cities, into the prairie States, out into the West and over the Rocky Mountain regions to the Pacific coast. As it passed with the swiftness of lightning it said in a single American sentence, 'Unconditional Surrender!'"

An English interpretation, following this current of American

opinion, is given in the cabled editorial comment of the London *Daily Express*:

"The victories of the Republican party show that the American people are not only ready to follow Wilson, but anxious to get in front of him. America is for victory unqualified and complete. America is determined to see the end, once and for all, of Prussian militarism."

The New York *Times* differs with all such critics when it declares that "the fear that he (the President) would be too lenient with Germany had nothing to do with the return of the Republican majority to the House." Nor was his "appeal to the country for a Democratic House the cause of the reversal. It is more probable that by that appeal he saved many districts to his party." One "great cause," at least, was taxes:

"That party must be powerful indeed that could withstand the dissatisfactions necessarily flowing from the imposition of such gigantic levies. Still, it may be Mr. Claude Kitchin's talk rather than his taxes prompted the rebuke. Laying taxes in billions, the author of the bill would be wise to temper his budget speeches with a note of sorrow; Mr. Gladstone often did that. The present Chairman of the Ways and Means Committee always exulted. He had a fierce joy in taxing wealth, not merely wealth as commonly understood, but wealth in the most modest degrees, represented, for example, by the ability to own a shirt costing more than \$1.50. He openly expressed his purpose to put his taxes chiefly upon the North, because the North had wanted us to go into the war. That was more resented, perhaps, than the taxes themselves. It was an amazing blunder, and we think the regret most prevalent in the country to-day is that Mr. Kitchin could not pay the penalty for it by defeat in Scotland Neck."

While Republican papers throughout the country, which have been howling for Mr. Kitchin's scalp for some months, speak with less restraint of the coming end of his financial reign, "the present Congress," admits the Democratic (New York) *World*, "acquitting itself admirably in many ways, is chargeable with grievous sins of omission and commission. . . . Condemnation was invited." After mentioning its disapproval of the President's "interference with the nomination and election of members of Congress," this staunch supporter of the Administration continues:

"We shall have no more Democratic Congresses until the people of the Northern States have some reasonable assurance that such bodies will not be controlled by vengeful and parochial politicians from the South who pose as Democrats, but in fact are political nondescripts."

"In three or four Northern States there are more Democrats than in all of the Old South. How are these Democrats, devoted to correct principles and yet progressive in the truest sense, to gain victories under the leadership of men who trim and dodge on bed-rock principles and are true to nothing but their demagoguery and their all-controlling desire in the presence of anti-Democratic fanaticism to save their own political hides?"

"This Democratic Congress has at least one hundred working days in which to show that it is a Democratic Congress. It can persist in measures calculated to wipe out the States and the rights of individuals. It can reaffirm its inexcusable sectionalism in matters of taxation and otherwise. It can adhere to policies as to the press and the mails notoriously despotic and discriminating. It can deal with the North as in most of the Southern States the so-called Democratic party deals with the 'nigger'—if it will. But it will write *Finis* on the career of the Democratic party."

"If we are to have a Democratic party hereafter, it must not by its classism belie its name."

"If the South is to remain sectional, it must beware of a sectional North."

The New York *Evening Post* (Ind.) is equally sure that Congress itself was responsible for the results of the Congressional election. "The fact of the matter is," telegraphs the Washington correspondent of this daily, a man who has frequently shown evidence of being close to Administration councils, "it was confidentially whispered by those in touch with the outlook for the Democrats that they had no chance to hold Congress." These men, in common with numerous other Democratic sympathizers throughout the country, "confidently

believe the President's appeal saved the situation from being a landslide." The *Post* correspondent thinks that the seniority rules had most to do with turning popular resentment against the present Congress. These rules resulted in the President finding himself with important committee chairmen who did not agree with him. "He attempted to translate his strength to the membership of his party without regard to the many

Copyright, 1918, by the Philadelphia Inquirer Company.

THE TEMPTATION OF ST. ANTHONY.

—Morgan in the Philadelphia Inquirer.

eases of individual weakness in that membership." Particularizing, this authority declares:

"Resentment against Representative Claude Kitchin, the Democratic chairman of the Ways and Means Committee, was strong in Northern States. Mr. Kitchin himself disagreed often with the President. Yet Mr. Kitchin's leadership swung many Democratic votes in the House, and the country judged the individual Congressmen not by what they might do in the future, but by what they did in the past. Mr. Wilson's name was not on the ballot. The names of the individual Senators and Representatives known intimately to each community were before the voters. They were unable to recognize Mr. Wilson's appeal for an indirect vote of confidence."

Forgetting those things which are behind, and taking a hopeful view of those things that are before, the New York *Evening World* (Dem.) invokes our present need for unity, in the interest both of our national and international destiny:

"Whatever political leaders may profess to believe, Americans generally, at the present time, are not markedly inclined to number themselves as Democrats, Republicans, or members of other political groups. They tend much more to think of themselves as citizens of a nation which has been unified—politically as well as morally—to an unwonted degree and for a great purpose."

"Instinctively they feel the nation would do well to be in no hurry to divest itself of that unity while so many questions of moment affecting the combined interests of all Americans remain to be dealt with."

"Allowing for the exigencies of the party system, and the habits developed thereby, something of that feeling has undoubtedly expressed itself, paradoxically, in the close balance between Democrats and Republicans just elected to Congress."

"Re-elected and newly elected members of Congress should so read the result."

"All the people of the United States, of all parties, have felt themselves represented in the war."

"All the people of the United States, of all parties, wish to feel themselves represented in the victory and in the reconstructive program to be entered upon with peace."

NATION'S RICHES SEEN IN THE LOAN

A HOPEFUL SIGN for the reconstruction days coming is clearly seen in the magnificent display of national wealth evidenced in the overwhelming success of the Fourth Liberty Loan, which was oversubscribed in each Federal Reserve District by from 5 to 26 per cent. The unprecedented sum of \$6,000,000,000 was asked, and it was not only paid in full, but the oversubscription is credited by the Treasury Department at \$866,416,300. In addition, it is estimated by Secretary McAdoo that more than 21,000,000 subscribers participated in the Fourth Loan, whereas in the first three the buyers numbered 4,500,000, 9,500,000, and 18,300,000. A graphic statement of the nation's riches is afforded by Mr. S. L. Frazier in *The Northwestern Banker* (Des Moines, October), who says: "Our resources are well up toward \$300,000,000,000, or about equal to the combined resources of France, England, and Germany. Our annual production is close to \$50,000,000,000, amounts that stagger the imagination. Why it would take ten thousand years to count the dollars representing our country's resources, counting one each second, and working day and night and Sundays."

A financial contributor to the *New York Evening Post* points out that a six-billion-dollar loan would have been by far the largest public borrowing in the history of the world, for the high record to date was England's \$4,943,000,000 loan of February, 1917. This "most gigantic feat in world finance" is called "a national victory of no mean proportions" by the *St. Louis Globe-Democrat*, and it will stand in all likelihood for decades, according to the *Des Moines Register*, as the "high-water mark of financing for all the nations of the world." If ten years ago, remarks the *New York Tribune*, any learned professor of economics had predicted that, on top of ten billions of government loans in one year a Fourth Liberty Loan would reach nearly \$7,000,000,000, we know what we all would have thought. Yet this paper suggests that the Secretary McAdoo calls it the greatest single event in financial history, it was probably no greater than floating what now seem the very modest loans of our Civil War. They too, were "the greatest in history" and incredibly more difficult to achieve. The real miracle is not the present outpouring of the nation's wealth, *The Tribune* thinks, but the vast expansion of that wealth in half a century and its "wide diffusion among a nation of a hundred millions." In the *New York Times* Mr. George E. Roberts, of the National City Bank, is quoted as saying that we have become richer through the war, tho if there had been no war we might have been still wealthier. That is another question, but the fact is "we have changed over from a debtor to a creditor nation, and I believe that in capacity for wealth-production—that is to say, in capacity to turn out a stream of products and services which minister to the comfort and welfare of our people—we are decidedly ahead of where we stood at the beginning of the war." The wealth-producing equipment of the world is only slightly impaired, and of this country it is greater than ever, according to Mr. Roberts, who is further quoted as saying:

"We are going to be peculiarly situated in our foreign relations after this war. We have paid off the greater part of what we owe abroad, and we have lent to foreign governments some \$7,000,000,000 or \$8,000,000,000. Including all loans by the time the war is over, probably there will be annual interest payments coming to us amounting to \$400,000,000 or \$500,000,000. How are we going to receive our pay? I am not questioning the ability of our debtors to raise this amount from their people. I have no doubt they can do it, but in what manner are they going to make payment to us? They can't pay it in gold; they haven't the gold to do it, and the total production of gold in the world outside of the United States wouldn't be enough to do it. We won't want them to pay it in goods, for that would interfere seriously with our home industries. . . .

"There is only one way out, and that is by extending more

credit to them. We will have to capitalize the interest payments and reinvest them abroad. And if we want to sell goods to them we will have to take their bonds and stocks. In short, we will have to play the part that England has played in the past, of steadily increasing our foreign investments."

While the great sums subscribed for the Fourth Loan by banks, corporations, and individuals had a spectacular interest, observes the *New York World*, it is the plain people who have made the loan a conspicuous success, and the twenty-one million subscribers mean in effect the purchase of a new Liberty Bond by "every American family." Washington dispatches quote from Secretary McAdoo's statement of the oversubscriptions estimated by the Federal Reserve Banks according to districts, as follows:

District	Quota	Subscription	Per Cent. of Subscription to Quota
Boston	\$500,000,000	\$632,221,850	126.44
Richmond	280,000,000	345,000,000	123.22
Philadelphia	500,000,000	598,500,000	119.68
Cleveland	600,000,000	696,536,000	116.04
Minneapolis	210,000,000	239,616,350	114.00
St. Louis	260,000,000	295,117,900	113.50
Atlanta	192,000,000	215,653,250	112.32
Dallas	126,000,000	140,744,600	111.69
New York	1,800,000,000	2,000,000,000	111.11
Chicago	870,000,000	959,529,250	110.29
Kansas City	260,000,000	284,958,350	109.59
San Francisco	402,000,000	426,000,000	105.97
Treasury		32,538,750	
Total	\$6,000,000,000	\$6,866,416,300	114.44

AIRCRAFT "DISHONESTY AND DISORDER"

DARK HINTS OF "CRIMINALITY" that might reach into high places, of the waste of nearly \$600,000,000 in "ill-considered experiments, or swallowed up in plain graft," are recalled by various publicists as they size up the report of the aircraft investigation conducted by Charles E. Hughes. Since the days last spring when Mr. Gutzon Borglum's accusations helped to start three aircraft investigations there have been many gentlemen, as the *New York Evening Post* remarks, "licking their chops over expected scandals, graft, speculation, corruption." "To these allegations," confesses the *Brooklyn Eagle*, "the report of the Senate subcommittee of some months ago lent a certain amount of plausibility." Even the Democratic *New York World*, while alleging that the Senate committee was made up of "professional critics of the war," admitted, at the time when the excoriating Senate report appeared, that our aircraft had been "the one distinct American failure of the war." The *World's* revised, up-to-date conviction, based on Mr. Hughes's analysis, is that the record points to "two great failures." "These are the failures of the facts in the situation to support the chief charges from which the investigation started, and of Henry Ford to function well politically." The *New York Tribune* and most of its Republican contemporaries are substantially in agreement with this verdict, even tho they are more perturbed by Mr. Ford's shortcomings than are *The World* and others of its political faith. Authorities so widely separated in space and opinion as the *Springfield Republican*, the *Des Moines Register*, the *Newark Evening News*, the *Philadelphia Press*, the *New Haven Courier-Journal*, the *Spokane Spokesman-Review*, the *Syracuse Herald*, the *Baltimore News*, and the *Boston Christian Science Monitor* are ready to agree that while "dishonesty and disorder" have been revealed, "the aircraft fiasco turns out to be not nearly so bad as the nation for a while was, perhaps, too ready to believe."

The report, reduced to its lowest terms, states that "progress has been made in gratifying measure" under the direction of the reorganized Air Board, but delay, waste, and questionable practices have been revealed in carrying out the program. Of the five men specifically accused in Mr. Borglum's famous letter to the President, Mr. Hughes dismisses Major-General Squier, head of the original Board, as no worse than "incompetent,"

exonerates Howard E. Coffin and Colonel Montgomery, and recommends the court martial of Colonel Edward A. Deeds, present head of the Equipment Division, for his business relationship with the Dayton-Wright Airplane Company, and for his giving out of a misleading statement regarding the progress of aircraft production. Criminal prosecution is urged against three army officers, Lieut.-Col. Jesse G. Vincent, a former vice-president of the Packard Motor Company; Lieut.-Col. George W. Mixter, and Second Lieut. S. B. Vrooman, Jr., for financial connections with the Packard Motor Company, the Curtiss Aeroplane Company, and the S. B. Vrooman Company, respectively, while dealing with them as agents of the Government. It is set forth that the actual loss from condemned types of planes and engines will amount to perhaps \$20,500,000, which sum may be reduced by the salvaging of many condemned planes. The Liberty motor is declared to be "a great success for observation- and bombing-planes, and for this purpose has found high favor among the Allies." In one paragraph, Henry Ford is censured for a sympathetic attitude toward enemy aliens employed in his Detroit plant. The report as a whole covers 182 printed pages, and is the result of five months' work, during which time more than 280 witnesses were examined and some 57,000 pages of testimony were taken.

The report on Colonel Deeds, covering thirty-one printed pages, takes up in detail the Colonel's connection with the United Motors Corporation, Dayton Engineering Laboratories Company, Domestic Building Company, the Wilbur Wright and McCook Aviation fields, and other activities. Many telegrams and letters which passed between Colonel Deeds, H. E. Talbott, and C. E. Kettering of the Dayton Wright Airplane Company, are introduced, purporting to show what Mr. Hughes calls "highly suggestive business transactions with his former business associates at Dayton." The report recites that Colonel Deeds, working through the Domestic Building Company, was largely instrumental in the location of the Wilbur Wright Flying Field at Dayton, for which the Government acquired 2,500 acres, nearly twice as much land as was necessary, buying much of it from a real-estate man named Ezra M. Kuhns, who was directed in the securing of options by Colonel Deeds.

Of another connection the report says of Colonel Deeds:

"His statement to the Aircraft Production Board on August 28, 1917, that he had made a *bona-fide* transfer of all his stock in the United Motors Corporation when the stock had not been transferred, and at most he contemplated a gift of the stock to his wife, was neither candid nor truthful and is certainly not to be regarded as a 'full and complete disclosure.'"

"The extent to which activities were centered at Dayton," says the report in another place, "the profitable contract promptly given to Colonel Deeds's former business associates, and the preference of a small group of manufacturers in the allotment of the large contracts, created a feeling of distrust which finds frequent expression in the record of this inquiry."

Attorney-General Gregory, in his letter submitting the report

to the President, states that "the evidence does not disclose any violation by Colonel Deeds of the criminal laws," but the Attorney-General acquiesces in Judge Hughes's recommendation that the facts be submitted to the Secretary of War, "to the end that Colonel Deeds may be tried by court martial."

As for the more general charges of "wide-spread graft," the report notes "gross improprieties" in the conduct of "some civilians" taken into the Signal Corps, who received salaries from manufacturers as well as from the Government, but, on the authority of Mr. Gregory, these were not criminal acts

COL. DEEDS AND LIEUT.-COL. VINCENT UNVEILING LIBERTY MOTOR NO. 10,000.

This ceremony took place in Detroit, shortly before the appearance of the Hughes Report, with its recommendation of court martial and criminal prosecution for two of the officials here pictured. From the reader's left (not counting the soldier on guard) the men are: Col. E. A. Deeds, Lieut.-Col. J. G. Vincent, Lieut.-Col. L. S. Horner, Mr. H. E. Coffin, original head of the Bureau of Aircraft Production; Major James O. Hensley, Lieut. Harold H. Kimmons, U. S. N.; Mr. Alvan Macaulay, Mr. H. H. Collins, Mr. F. E. Moscovitz, Mr. G. E. Hunt, Mr. W. C. Leland, Mr. T. P. Myers, and Mr. A. A. Landon.

unless "cases of bribery or conspiracy to defraud were proved." Of sabotage in factories, concerning which rumors have been abroad from time to time, Mr. Gregory says seven men have been indicted, two pleaded guilty, and five are on trial.

In the course of a survey of labor conditions, and the risk of employing German sympathizers, there is mention of the case of a German-born designer in the Ford plant who was suspected but in whom Mr. Ford said he had "absolute confidence." The report states:

"There has been a laxity at the Ford plant with respect to those of German sympathies which is not at all compatible with the interests of the Government. In deference to Mr. Ford's view, those in direct charge of production, who were alive to the situation, have had to pursue a policy of constant watchfulness and supervision, instead of being free to take the precautions which the exigency demanded."

Turning from personal to financial considerations, especially to the consideration of money spent without due return, Mr. Hughes says that \$17,500,000 was paid out for the J-1 training plane, which was condemned because of the Hall-Scott A-7-A motor. The investigator says new motors may be put in these planes at a cost of about \$2,000 each. There were 1,000 ordered.

The estimated cost of the Bristol Fighter, which was declared unsafe, Mr. Hughes says, was \$22,970,100. There were contracts for 2,000 planes, but only twenty-seven were delivered before cancellation. There is a plan on foot to salvage the Bristols by using certain parts in other planes.

Taking up the sums actually handled and the results produced, the report points out that \$691,801,806 was appropriated for the fiscal year, beginning July 1, 1917, and obligations were contracted amounting to \$933,948,959, leaving an excess obligation of \$176,924,903.

Up to June 30 of this year \$430,234,316 was actually spent, and of this \$155,535,946 went for airplanes and engines. More than \$25,600,000 was spent abroad. The sum of \$106,741,490 was spent for production in the United States.

As for the Liberty motor, as used in combination with the de Haviland airplane, Mr. Hughes considers it "conclusively established that it is a great success for observation- and bombing-planes, and for this purpose it has found high favor with the Allies. It is too heavy for the lighter pursuit-planes." Similar praise is quoted in the report from members of the British Air Ministry.

Figures in the report show that up to June 30 last 1,615 Liberty twelve-cylinder motors were produced for the Army and 775 for the Navy. According to John D. Ryan, Director of Aircraft Production, 4,000 Liberty motors were turned out in October. Production to date has reached about 12,000.

Few authorities seem to have been made really down-hearted by the report as a whole, especially since, by general agreement, it must be considered in the light of present accomplishment and future promise. The Washington correspondent of the New York *Evening Post*, taking up these more pleasing phases of the situation, telegraphs his paper that it "may be a surprising statement, but it is nevertheless supported by an examination of records from the Western Front as well as production charts in

the United States that the Liberty motor and the De Haviland airplane are the sensation of the year."

He continues in the same congratulatory vein:

"All thinking about airplanes must be considered in the light of knowledge that on July 1 of this year there were not more than 10,000 machines of all kinds on both sides of the Western Front, and the Allied supremacy in the air is now being maintained with a proportion of that number which, for military reasons, can not be disclosed, but it is not above ten thousand.

"Some idea of the remarkable production of America may be obtained when it is considered that America built more engines this year than England built from the time she entered the war until the end of 1917, and the same is true of France. The United States has built more planes this year than England did from 1914 to the end of 1916.

"More than 11,000 airplanes of all kinds have been built, of which at least 3,000 are battle-planes, or the equivalent of one-third of the total number of such types on the Western Front.

"America's program was slow in getting started, but it was shaped right, and the results to-day are due to the fact that John D. Ryan, Director of Aircraft Production, refused to be swerved by hostile criticism. . . .

"Mr. Ryan's achievement is that he refused to be misled by amateur critics and the cries of interested persons that America should suddenly change her tactics and adopt a number of foreign types, discarding her own Liberty motor and De Haviland plane. The French are supplying us with *Spada*, or pursuit battle-planes, in rapidly increasing numbers, and we have enough machines for all fliers to-day."

However fair this consummation may seem, nevertheless the New York *Sun* reminds us, it has been shown that there was an "airplane scandal," that it "centered at Dayton," and that "the most conspicuous figure in it was Colonel Deeds." The Providence *Journal* insists that a "scandalous betrayal of the nation's confidence" is apparent, and the New York *World*, as a proper way of rounding up the matter, advises that the men named by Mr. Hughes "be given a day in court."

TOPICS IN BRIEF

"GOTT" said, "I am tired of kings."—*Springfield Republican*.

We must not forget that our business is to end war as well as this war.—*Boston Herald*.

GERMANY doesn't go quite so far as to claim the Belgian babies committed suicide.—*Toledo Blade*.

FOREIGN - COMMENT

From Underwood & Underwood. Appropriated by the Committee on Public Information.

OUR BOYS IN THE TRENCHES DONNING MASKS TO MEET A GAS-ATTACK.

GERMANY NOW FOR WORLD-WIDE BROTHERHOOD

CLUTCHING AT STRAWS to save herself from drowning, Germany is announcing in strident tones her conversion to any and every panacea for the salvation of the world that has been proposed on the Allied side. Her latest change of heart is with regard to the League of Nations, and the official *Norddeutsche Allgemeine Zeitung* gravely assures us that, all along, Germany has been a consistent supporter of an idea which, until President Wilson imported it into the realms of practical politics, was regarded by friend and foe alike as belonging to the visionary rather than the real. This political doctrine of a league of nations, which is, of course, fundamentally based on the brotherhood of man, is something the noble German soul has always yearned after. Of course, the magnanimous German has been misunderstood. Hear the *Norddeutsche* on the subject:

"For a long time past enemy statesmen have been speaking as if Germany by its highly developed military system had brought this war into the world and would never renounce her theory of force until she was completely vanquished. . . . It was understandable that we did not meet the enemy's will for destruction with declarations of lasting friendship and eternal brotherhood between nations."

While the statesmen of the Fatherland were thus successfully camouflaging the brotherly desires which underlay the war-mask of the German nation, that pernicious man, Lord Northcliffe, became director of British propaganda, and with insidious arts made a reluctant world believe that our German brother never had any desire to live in fraternal peace with his neighbor. The success of that perfidious Britisher is admitted even by the Germans themselves. With all the solemnity of its official status, the *Norddeutsche Zeitung* gravely remarks:

"It is an undeniable proof of the power of British propaganda that it has succeeded in imposing the belief on the world that Germany was hostile to a league of nations, altho all the official utterances on the German side have shown her willingness to comply with every plan of a real league of nations. . . . We have not missed any opportunity of showing our sympathy for such

measures as might terminate this war and prevent the recurrence of other bloody wars in the future."

The official organ points with pride to the speeches of Dr. von Bethmann-Hollweg, to the Reichstag July 17 Declaration, to the German answer to the Pope's peace plea, and so forth, and we are told that—

"The reason that this and similar declarations remained a mere aspiration and that all discussions have not produced a single preparatory step, is no doubt principally this, that the league of nations which our enemies wish to form is not based on justice and mutual unselfish esteem, but is designed to bring about—with the exclusion of the Central Powers—a permanency of the present state of affairs, to carry with it the root of new and bitter warlike developments."

A most impassioned plea on behalf of the league of nations is made by Dr. von Gerlach in the *Berlin Welt am Montag*. That great man weeps salt tears because we can not understand the Germans, nor they us. We have only to kiss and be friends, form a league of nations—with the Germans inside, of course—and the millennium will arrive:

"Each side deems the other capable only of wickedness, and above all of dishonesty. When we make an offer of peace, the enemy call it a trap. When they propose a league of nations, we say over here, 'We are not going to be caught in your snare.' Mutual distrust is the greatest, perhaps the sole, obstacle to peace. Increasingly few people believe that arms alone can bring about the victory, and even if they could, the so-called victory peace would be one continuous mobilization on the part of victor and vanquished, the one to maintain his strength, the other seeking to regain it. . . . An understanding, a league of nations, is imperative. All must modify their point of view—we Germans, too."

Dr. von Gerlach wants the German Government to put itself on record:

"It is high time that the Government and public should declare themselves absolutely and fundamentally in favor of the league of nations. . . . What miserable trifles are any other

war-aims compared with the one great question for humanity: How is the condition of war, or the condition of armed peace . . . to be replaced by a permanent peace, and armaments by judicial decisions? To be sure, all selfish wishes must then be buried. We must give up Central Europe just as much as the English jingoes must give up their imperialist ideas with preferential duties and raw-material monopolies. The league of nations is not to be reconciled with groups of Powers on one side and on the other . . . There are many people who are glad when they read a good *communiqué* from the front, and sad when now and again they get a less good one put before them. From the very first day I have only had one thought in reading the military *communiqués*: how can I help toward bringing it about

GREAT EXPECTATIONS

—Paxton Shaw (London).

that our children, our grandchildren, and our great-grandchildren may be protected from ever having to read any *communiqués* at all? There is only one way to this: a League of Nations."

There are, however, in Germany a number of desperate characters who are not overflowing with the milk of human kindness, and therefore do not trust their enemies when they offer gifts in the shape of an international league. One of the unregenerate is the *Kölnische Zeitung*, which is prepared to love every nation on earth except the Anglo-Saxon:

"According to the Anglo-Saxon conception, freedom is nothing but the right of the strong to exploit the weak . . . even in the political life of America this holds good and is repeated in the words 'to the victor belong the spoils.' In the Anglo-Saxon shibboleth, the league of nations, we find the same right of the strong. Equality of rights is as little to be expected in this family of nations as it is enjoyed by the negro in America. England and America would never consent to enter a league in which they would be obliged to have intercourse with others on a basis of equality. The Wilson-Grey League of Nations would be nothing but an Anglo-Saxon fraternization for the exploitation of humanity. The Anglo-Saxon does not do business from love of his neighbor. He may perhaps for the sake of appearances let a few miserable fragments fall from the master's table, but the great business transactions must remain in his hands. The moral and philosophical reasons which he puts forward are nothing but baits for credulous mice and anodynes for his own conscience. What the Allies in their despair are now perpetrating in Russia should stamp them as impossible in the Council of Nations and stamp them as international incendiaries."

WHAT CANADA AND BRITAIN HAVE DONE

GENEROUS APPRECIATION is shown in the British press of the part the Overseas Dominions have taken in the war. Recently London celebrated the fourth anniversary of the arrival in England of the first Canadian contingent, and the *London Times* seized the opportunity to present Canada's record, and it is indeed a notable one, when we consider how small a population Canada has, just a little more than seven million, all told. *The Times* tabulates Canada's contributions thus:

Regular Canadian troops at outbreak of war	3,000
Number of 1st Contingent	33,000
Canadian soldiers sent overseas up to September 1, 1918	400,000
Troops in training	60,000
Canadian soldiers killed in action	50,000
Casualties, over	175,000
Wounded returned to the front	40,000
Returned to Canada	50,000
Number who have received decorations	10,000
Awarded the Victoria Cross	40

Carrying on the tale, we are told that—

"Apart from her fighting men, Canada has furnished various special corps which have proved of inestimable value to the British Armies—the Canadian Forestry Corps, the Canadian Corps Salvage companies, and the Canadian Railway troops.

"The splendid health in which the Canadian Corps has been maintained is due to the unceasing vigilance and tireless efforts of the Canadian Army Medical Corps, supported by a highly efficient system of baths and laundries. The bacteriological work of the mobile laboratory and the regulations rigidly enforced by the sanitary sections contribute materially to this gratifying condition. It is estimated that seventy-five per cent. of the medical profession in Canada are engaged in some professional capacity in connection with the armed forces of Canada, either at home or overseas. Canadian hospital units have also seen service with the Imperial Forces at Mudros and at Saloniki, where they earned the warmest commendation from all the Imperial authorities under whom they served."

Not to be outdone in appreciation, the editor of the *Toronto Daily News*, just back from the front, tells us that Canada's share is as nothing compared with what the mother country has done. He says, and it is worthy of note, that this is, after all, a naval war:
